(48) This work of emigrating poor persons at the public expense falls well within the functions of the Public Assistance Authority, which would, however, naturally co-operate with established emigration agencies, and would be—either through those agencies or immediately—in close touch with the responsible authorities in the country of destination (663).

XV.—Disfranchisement of Able-bodied receiving Public Assistance.

(49) Only persons receiving Public Assistance (other than medical relief) for not less than three months in the qualifying year shall be disfranchised on account of such Assistance. (667.)

XVI.—Discontinuance of Unemployed Workmen Act.

(50) The Unemployed Workmen Act, 1905, should expire so soon as the new system of Public Assistance has come into operation. (677.)

(C.) TRANSITIONAL MEASURES.

XVII.—Special Works and Loans for times of Exceptional and Protracted Distress.

(51) For a strictly limited period during the earlier years of the reforms which we suggest (678), the following arrangements should be made :—

(a) The various existing Local Authorities (692) should draw up, either singly or in co-operation, and submit to the Local Government Board for approval (702) schemes of works of public utility (703) which might be put in operation in times of exceptional and protracted distress due to severe industrial depression. (695.)

(b) If the Local Government Board is satisfied, after consultation with the Board of Trade (697, 703), that there exists exceptional and protracted distress, to meet which the resources of the Voluntary Aid Committees and Public Assistance Authorities are inadequate (698), then the local authorities affected may obtain loans from the Public Works Loan Commissioners at the rate of interest at which the Imperial Government can borrow, so as to enable special works approved under (a) to be carried out. (695, 703.)

(c) The Special Works should be carried out on ordinary commercial lines, by contract, and the fitness or unfitness of workmen for the work shall be the main consideration in engaging or dismissing them, and in determining the conditions of their employment. All workmen employed shall, as far as practicable, be taken from the register of the Local Labour Exchange. (703).

(d) The wages paid will be the ordinary market wages for the kind of work done—whether piece-work, or time rates. (703).

PART VII.

CHARITIES AND THE RELIEF OF DISTRESS.

1. The charities of the country, endowed and voluntary, represent a very large force and considerable means, which are at the disposal of the community for the relief of distress. Many of them have the services of skilled and experienced workers. Their aggregate income is great. They are centres at which groups of persons of many kinds and classes are brought into direct communication with those who are in need or distress; and their aims and methods indicate generally, what are the thoughts and conceptions of the people in regard to charitable relief. Men and women, so far as they learn to consider and deal with the problem of relief seriously, find their training and guidance in part, no doubt, at boards of guardians, but chiefly in connection with these bodies. Every year new foundations are established and large amounts are bequeathed as endowments or left by bequest to voluntary institutions. The force represented by the charities is thus a growing force, which is affecting the well-being of the recipient classes in many ways for good or for evil.

In this Part we propose first to trace the relation between voluntary aid and public assistance and the institution of methods of control and revision in regard to endowed charities and of registration in regard to voluntary charities; then from the evidence at our disposal to state what is the general condition of the poor at the present time as indicating in some measure the problem with which we have to deal; next to summarise the evidence which we have received about dole charities, the suggestions which have been made to us and the proposals which we desire to make for the formation of a more responsible administration of voluntary aid than that which now prevails; and, lastly, to show how these proposals may be applied to the conditions of rural and urban districts.

I.—GENERAL CONDITIONS OF CHARITIES AND THEIR CO-ORDINATION.

2. As in the case of Poor Law administration, and especially in the distribution of outdoor relief, we have found great varieties of practice and sometimes a slipshod and purposeless giving which was altogether wasteful and very injurious; so in the case of the charities we have found instances of quite useless and ineffective gifts. The charities, both endowed and voluntary, are often checked and hampered by regulation, tradition and procedure in such a way as to render them, like the boards of guardians, self-centred and exclusive. They are not regarded and utilised as parts of a common organisation, though, however scattered and disconnected they appear, they have by intention been created to fulfil what is after all a common social purpose in many ways and subject to many differences. They continue to exist, just as they have come into existence, individual entities, each independent of the other, each fulfilling in separation its larger or lesser functions. They do not exchange information and have no common centre of inquiry and registration, except in so far as in some towns they may use the facilities which are placed at their disposal by Charity Organisation Committees. They stand aloof from each other and from the Poor Law, and the Poor Law from them. No doubt, like the Poor Law, they are, as we have said, tied and bound in many ways. But this state of things should not, we think, continue, and it need not do so. We are convinced, and the evidence has, in our opinion, amply shown, that the charities should be brought into the field of public work and responsibility, and that, expressly or tacitly, obligations should be imposed on them which are consistent with the purposes for which they were established; and we believe that if they are pressed and stimulated to fulfil these purposes vigorously in accordance with some accepted scheme of co-ordination, they will in their degree form a very real and effectual barrier to want and distress. It may be said, of course, that established casually, as various waves of thought and sentiment have passed over the country, they cannot now be endued with unity of purpose, and cannot, therefore, now take a responsible part in the administration of poor relief; and without question, to give coherence to the charities and thus augment their usefulness by co-operation, would entail the adoption of a definite constructive policy which would have to be carried out with very great patience and perseverance.

Yet so satisfied are we that the charities may become of infinitely greater service than they now are for the prevention of distress and degradation, that we propose to submit suggestions by the adoption of which they may, we think, find their place by degrees in a widespread auxiliary organisation or federation, which, working parallel to the official administration of poor relief, may assist the community very materially in the relief of the poor, the promotion of health and independence, and in much other cognate work.

3. As we shall show later on, the principles and methods of the administration of relief have been the subject of study and experiment during a large part of the past century in this country, in the United States of America and on the Continent; and as a result, among those who have been engaged in charitable work personally, and have followed the development of thought respecting it, there is a general agreement in regard to the main issues. It is now generally agreed that if charitable relief is to be of lasting service to the individual and his family and is to promote the well-being of the community, some such lines as the following should be adopted. Each application for aid or each case of distress should be considered individually, not merely in relation to the possibility or desirability of granting an allowance or making a gift—and so closing the matter, but in relation to some purpose or plan, which, if it be properly carried out, should produce lasting results. To effect this, the material facts that bear upon the question have to be ascertained either personally by voluntary workers, or in part by them, in part by paid or official assistants. The causes that have led to distress or want or degradation have to be learnt—not roughly generalised causes merely, such as widowhood, the largeness of a family, illness and the like, but causes, often more potent and less obvious, which lie in the character, habits and health of the family itself. From these data some plan of help should be formed, so far as it can be foreseen, sufficient to cope with the difficulties which have been ascertained; and with this object, according to the requirements of the case, assistance should be given, often with the help of friendly visitors who, being prepared to give time and thought to this branch of work, are also more or less systematically trained to do it well. By this method care is taken that whatever aid may be granted, it is, as far as possible, turned to good account. The visitor, wherever his services are necessary, may prevent want in many ways. He may continue to advise and to supervise, as occasion arises, until relations, who should assist, actually do so, or until, for instance, by forming new habits, the applicant becomes clean in house and person; or until, as circumstances alter, the family moves to other quarters, and new arrangements become possible for the well-being of parents or children. All this may be done according to the strength and quality of the force available, so long as the question is one of temporary help, or of the alteration or reform of the conditions of life in the home, and not a question of maintenance merely, under conditions in which improvement is impossible. In such circumstances, in many countries, if help is forthcoming at all, it is help which is given by way of maintenance in a poorhouse or some other similar institution, or in suitable cases by some form of continuous allowance.

The generally
accepted method
of charity.

4. Whether the relief be furnished from charitable sources or from a rate, and whether the visitors be voluntary or paid, this system of inquiry, purpose, plan, effectual aid and personal work, combined with the preservation of family ties and obligations, is equally applicable. And further, it is recognised that in any single case many remedies may be required. These remedies lie in many hands; and success may depend on their being used in conjunction. Hence action and fitting co-operation between the agencies which are suitable in the particular case, whether they be voluntary or official, is indispensable. And in this way the bodies, whatever they be, which administer general relief, become incidentally, by the mere expansion of their work, the active organisers of the relief of the community. They bring the relief in the forms in which it is required within the reach of individuals in distress; and whether the diversity of the charities be caused by the varying intentions of their founders or by the self-imposed regulations and procedure of their governors, they endeavour to neutralise its effect by stimulating and guiding the instinct of association in the direction of mutual help and united action. Thus in our discussion of the subject of charity and the relief of distress, we have before us a widely accepted method and standard of work, which may guide us in the development of a system of charitable relief as an adjunct and aid to the system of public relief.

II.—THE PARALLELISM OF CHARITY AND THE POOR LAW.

The parallelism
of charity and
the Poor Law.

5. The administration of poor relief drawn from the rates and the administration of charitable relief run naturally parallel one to the other; and in view of our recommendations it is desirable to trace this parallelism. The Act entitled "An Act to redress the misemployment of lands, goods and stocks heretofore given to certain charitable uses," the 43rd of Eliz., c. 4, was passed in the same year as the "Act for the Relief of the Poor," 43rd Eliz., c. 2.¹ The preamble of the former Act, which defines the charities to which it applies, is still in force. It defines them by a kind of rough enumeration:—

"The relief of aged, impotent and poor people; the maintenance of sick and maimed soldiers and mariners, schools of learning, free schools and scholars of universities; the repair of bridges, ports, havens, causeways, churches, seabanks, and highways; the education and preferment of orphans; the relief, stock, or maintenance for houses of correction; marriages of poor maids; supportation, aid, and help of young tradesmen, handicraftsmen, and persons decayed; the relief or redemption of prisoners or captives; and the aid or ease of poor inhabitants concerning payments of fifteens,* setting out of soldiers, and other taxes."

6. With this definition may be compared the objects of the Act of the same year for the relief of the poor (43 Eliz., c. 2):

"For setting to work the children of all such whose parents shall not . . . be thought able to keep and maintain their children; for setting to work all such persons, married or unmarried, having no means to maintain them, use no ordinary and daily trade of life to get their living by; to set the poor on work; the necessary relief of the lame, impotent, old, blind and such other among them being poor and not able to work; for the putting out of such children to be apprentices."

3, William and
Mary, c. 11, 12.

The method of meeting the wants of the poor by voluntary relief only had proved insufficient. But the aim of the act of Queen Elizabeth was not substitute a poor rate for voluntary relief, but to supplement it by a rate; and the churchwardens and overseers for a long time made voluntary collections for the purposes of relief under the Act.

7 James, c. 1,
sec. 3.

7. Parallel to "the necessary relief of the lame, impotent, old, blind and others" who are "poor and unable to work" comes on the charitable side "the relief of aged, impotent and poor people"; and while in the Poor Law Act the children in large families are to be furnished with work, the Act on Charitable Uses refers to the education and preferment of orphans and the aid of poor maids and young tradesmen. In it no reference is made to apprenticeship; and "the relief, stock and maintenance for houses of correction" is set down as an object that falls within the province of charity, while the provision of employment for the men who have no "ordinary and daily trade of life" and for the poor is left to the Poor Law. These differences suggest a vague division of labour between charity and the Poor Law, according to the several provinces which were assigned to each at the time.

8. The administration of the Elizabethan Poor Law may also be compared with the administration of these charities. The charities were in general administered by the churchwardens of the parish or by the churchwardens and overseers, who were the authority for deciding upon cases under the Poor Law Act. Thus it may be said that the administration of poor relief for which a rate was paid was to a great extent in the hands of those who distributed the parish charities. The "oblations and alms" of the parishioners "for their poor neighbours" were also, it would seem, "in the custody of the parson, vicar or curate" and of "the churchwardens or any other two honest men to be appointed from year to year."² Thus the administration of Poor Law relief and of charitable relief in the parish, whether endowed or voluntary, was to a great extent in the hands of the two-fold authority of churchwardens and overseers.

9. And, further, for the better preservation of the endowed charities the Charitable Uses Act provided a method of investigation and order. Commissioners were appointed by the Lord Chancellor who were authorised to summon a jury of the county, in which

* A tax on personal property levied for the last time in 1626.

¹ Cf. the three Acts of 39 of Eliz. for the relief of the poor, for charities, and for the repression of rogues and vagabonds. ² Cf. The Royal Injunctions, 1559, Sec. xxv. Report of the Select Committee of the House of Commons, 1715, to inspect the Poor's Rates and Scavenger Rates, within the Cities of London and Westminster, and the Weekly Bills of Mortality. Journals, Vol. xviii., p. 392. Some account of the hospital and Parish of St. Giles-in-the-Field, Middlesex, by the late Mr. John Parton, 1822, pp. 259. 265. 281. Cf. Heale 69055-69063, 69068.

the property of the charity lay, with a view to the facts respecting the alleged misuse of the charity being ascertained and the "setting down" of "orders" to ensure its proper use in the future. And these orders had to be executed by the parties concerned and were registered in Chancery. As the management of the charities was a question of the administration of a trust, petitions in regard to their mismanagement came before the Court of Chancery; and eventually in 1853 the Charity Commission was created as an administrative tribunal for the quicker and more economical settlement of many questions relating to endowed charities, for the supervision of their accounts and the better observation of their trusts. The control of the poor rate on the other hand was given to the justices to whom the churchwardens and overseers at the end of each year had to render their "account of all sums of money by them received, or rated and sessed and not received." Eventually in 1834 the general supervision of the Poor Laws was placed in the hands of the Poor Law Commission, now the Local Government Board, and officers appointed by them and acting under their Orders audited the accounts of all boards of guardians; and "the allowance of the poor rate by the justices is now deemed a mere ministerial act, which the justices cannot legally refuse, if the rate be presented to them in proper form by the proper officers."¹ In both cases the supervisory control, general and financial, has passed to a permanent central department.

10. In different places at different periods, after the passing of the Act of Queen Elizabeth, the comparative importance of the parochial charities in relation to poor relief dwindled. The expenditure on poor relief from the rates becomes larger and larger, and the responsibilities of the churchwardens became relatively insignificant; and later when the Poor Law Amendment Act of 1834 was passed and unions instead of parishes became the area for the administration of the Poor Law, all direct connection between it and the administration of the parochial charities became impossible.

11. It is our duty to consider how the correlative action of the Poor Law and of the charities, whose field of work has now very largely increased, can be revived and resettled on the terms and conditions which are necessitated by the altered circumstances of the present day. The policy of charitable administration, it is evident, is to endeavour to draw into associative unity and consistency of purpose the energy, devotion, and resources of the trustees, managers, and officers of charitable bodies, and to create, as far as may be possible, an outer circle of friends and assistants whose duty it may be to prevent distress and on some settled plan share with the local authority for poor relief the responsibility of dealing with it.

III.—THE POOR LAW COMMISSIONERS OF 1834 AND RELIEF AT THE HOME.

12. The desirability of voluntary help and the necessity of outdoor relief or allowances in certain classes of applicants is frankly recognised by the Royal Commissioners of 1834.

13. In regard to this policy, however, a question arises at the outset, and we may conveniently consider it here. It covers the whole field of co-operation between charity and the Poor Law; and upon our decision in regard to it will depend the possibility of our acceptance of any general scheme of co-operation such as we have suggested. It affects town and country districts alike, but at the present time, when pauperism is to so large an extent urban, it especially affects the towns. The question is technically that of "partial relief," as it was termed by the Commissioners.

14. To the principles affecting indoor and outdoor relief we have referred elsewhere. But, as we have said, we now propose to constitute a system of voluntary aid parallel to that of the Poor Law or Public Assistance, and the question which the Report of 1834 suggests is, Under what conditions, if any, can there be such a supervision or control over relief at the home as would prevent its becoming partial, purposeless and injurious?

15. Institutional relief includes the whole maintenance of the person assisted and in that sense cannot be 'partial.' But can the administrators of relief at the home, whether

¹ Poor Law Statutes, Vol. I., p. 541. J. Brooke Little.

it be provided from rates or from voluntary sources ensure the assertion of a similar sufficient or complete control? On this the efficacy of relief at the home depends, whatever be the form that the relief itself may take.

Cases to be dealt with by charity or by outdoor relief.

"Hard cases" of the "able-bodied."

16. First, the Commissioners refer to the hard cases of the able-bodied; and "where cases of real hardship occur, the remedy," they say, "must be applied by individual charity, a virtue for which no system of compulsory relief can be or ought to be a substitute." Accordingly, in their judgement individual and voluntary charity should deal with all exceptional cases of this kind, and should be so administered as to be capable of doing so.

The "partially disabled."

17. Another class, to which the Commissioners refer, is the "partially disabled" persons who are not "indigent and helpless" but who, being "not able-bodied," are "from age or infirmity deemed unable to maintain themselves entirely."¹ For these, as well as for the able-bodied, the Commissioners considered partial relief undesirable.

"They should either be set to work by the guardians in such a manner as may be suitable to their condition, or should not be suffered to do any work on their own account." "When the guardians feel under the obligation to provide entirely for these persons, they will be more likely to obtain adequate relief than when partially assisted, inasmuch as where relief is given in aid of earnings there is a constant desire to give the least possible amount, and the workhouse is made use of not for its legitimate purpose only, but is offered to the applicant with the view of inducing him to accept in lieu of it the smallest pittance."

18. Our investigations have proved to us that this result is not only quite possible but that it actually obtains at the present time. It does not, indeed, appear that wages given to the partially disabled and partially assisted tend to keep down the general level of wages in any particular trade or business. The gross effect of such subsidies is too small to influence the general trend of wages. But on the administrative side the objection remains and has still to be met. It is difficult to ascertain the facts, the amount of the income or earnings from other sources, and to control the conditions of relief. "For the able-bodied the remedy set forth in the statute [of Queen Elizabeth] was to make the indolent industrious," and "in proposing further remedial measures" the Commissioners kept "that object steadily in view";² but in the case of the partially disabled, the proposal to apply seclusive treatment has hardly been pressed, though on various grounds it is now proposed for a large number of the class as, for instance, for the feeble-minded;³ and it may well be extended to others. Hence we may say that the partially disabled remain in great part, at least, applicants for treatment either by public or by private relief at the home. And the difficulty of ascertaining the facts and controlling the conditions of relief must be solved, as far as may be on "out-relief" lines.

19. Of widows, too, the Commissioners of 1834 wrote, treating them as an exception.⁴ And in "the form of the Consolidated Order" published in the Second Annual Report of the Poor Law Commissioners, that for the year 1836, widows are included as one of the classes for whom the guardians may order relief—"widows," that is, "who are destitute and are burthened with children incapable of working." They are referred to, not as "indigent," but as "destitute," for destitution is a state consistent with ability to labour, and thus, in their case also, the uncertainties and inconveniences of "partial relief" arise.

The indigent and helpless.

20. Lastly, there are the "impotent, using that word as comprehending all except the able-bodied and their families."⁵ In regard to these, the Commissioners in the same Report write:—

"No use can be made of the labour of the aged and sick, and there is little room for jobbing, if their pensions are paid in money. Accordingly . . . even in places distinguished in general by the most wanton parochial profusion, the allowances to the aged and infirm are moderate."

¹ Report on the Further Amendment of the Poor Law, 1839, pp. 71, 72. Also pp. 147-149, 153, 155, 156. ² Report of 1834, p. 262. ³ Report of the Royal Commission on the Feeble-minded, 1908 [Cd. 4202]. ⁴ Report of 1834, p. 42. ⁵ Report of 1834, p. 42. Report on the Further Amendment of the Poor Law, 1839, pp. 61 and 71; and Second Report of the Poor Law Commissioners, 1836, p. 92.

And to the "impotent" as "indigent" the guardians under the form of the Consolidated Order of 1836 were enabled to give relief, for "indigence [is] the state of a person unable to labour or unable to obtain, in return for his labour, the means of subsistence." The words of the form are:—

"In the following cases of persons who are . . . paupers . . . namely:

Persons who are indigent and helpless from age;

Persons who are indigent and helpless from being crippled or from incurable disease;

Persons who are indigent and helpless from temporary sickness;

Widows who are destitute and are burthened with children incapable of working;

the guardians may order weekly relief to be given, partly in money and partly in kind; that is to say, in articles of food, clothing, fuel, medicines or other articles of absolute necessity."*

21. These two classes of applicants, the widows and the indigent and helpless, might, the Commissioners suggested, receive outdoor relief or relief at the home; and the partially disabled, in fact, did so very generally, contrary to their advice. But, whether the relief be from the rates or from voluntary sources, in all these cases it is "partial," not necessarily in the economic sense, but in an administrative sense. For, as has been proved to us abundantly, most outdoor relief is "partial." As usually administered, it is not a subsistence, but a grant towards subsistence. There is often little or no evidence, whether it is too much or too little, and it is frequently given on the assumption that it is supplemented by aid from other quarters. It is often, indeed, a speculative gift made towards meeting an unascertained need. We have to ascertain, therefore, in regard to outdoor relief or relief at the home, by what method may this "partiality" of relief be avoided and adequacy take its place.

22. The Commissioners, as we have shown, supported their opinion that the relief of the able-bodied should be indoor or seclusive relief, on the ground, amongst others, that such relief was adequate.¹ "Even if the condition of the independent labourer were to remain as it now is, and the pauper were to be reduced, avowedly, below that condition, he might still," they said "be adequately supplied with the necessaries of life." Following out this thought, the Commissioners recognised the good results achieved by voluntary institutions, which adopted this principle and which gave no partial relief. The lesson of voluntary institutions that give no partial relief.

"The circumstances that conduce to the success of these excellent institutions," they said, "appear to be, first, that by classification of the objects of relief, the appropriate course of treatment is better ascertained, and its application and the general management rendered less difficult; and secondly, that the co-operation of persons of leisure and information, is obtained."

23. In fact in institutional relief there is under good management a continuous and comparatively adequate control over the person assisted, with classification and appropriate treatment, and co-operation. If these be the conditions of success in institutional relief, it would seem that *mutatis mutandis* similar conditions might have been sought for and proposed in regard to relief at the home; but the question was not worked out. A reference is indeed made to selection by merit.² If merit was to be the touchstone of relief, the Commissioners said very rightly:—

"We see no possibility of finding an adequate number of officers whose character and decision would obtain sufficient popular confidence to remove the impression of the possible rejection of some deserving cases." Possibilities of supervision and investigation.

But even if merit were not the touchstone, experience gave no prospect of success on other lines. The contrary, rather. Independent labourers in the administration of the funds of their friendly societies had "long acted on the principle of rendering the condition of a person receiving their relief less eligible than that of an independent labourer." They gave allowances, but avoided "partial

*It will be noted that the Commissioners apply the word "indigent" to those who are helpless—to the "impotent" of the Act of Queen Elizabeth who are "unable to work." But the widow who, like the able-bodied generally, is presumably able to work, is called "destitute."

¹ Report of 1834, pp. 228, 229, 308.

² Report of 1834, p. 272.

relief," not allowing members to remain on the sick list after they had become able to work; and this result they secured by "incessant vigilance." "It was generally provided by the rules that a domiciliary visit should be paid by the stewards, or by a member, generally every day; these visits have to be paid at uncertain times, that they may increase the chances of detection." And yet these precautions were "ineffectual." If this investigation failed, what conclusion could there be but that "the only definite ground for relief is utter inability to work"¹; and to this utter inability to work, as we have seen, to the assistance of the indigent and helpless, the Commissioners desired to limit outdoor relief almost entirely. And thus the question was closed. Outdoor relief was to be definitely limited to particular classes. In that limitation, it was hoped, safety would lie. Subject to the terms of the Poor Law Amendment Act, the guardians were entrusted with "the direction and control within the union" "of all relief to the poor," and, in spite of the admitted difficulties of investigation on these lines, paid relieving officers were appointed to "receive all applications for relief, and to examine into the merit and circumstances of each case, and report the same to the guardians at their next weekly meeting."²

24. Thus the Commissioners in carrying out their scheme in 1835 and 1836 had, after all, to give scope for outdoor relief, including, in fact, the outdoor relief of the partially disabled, and to check it, as far as it was possible, by investigation; and it may fairly be urged, that they pressed their argument as to the impossibility of establishing a sufficiently vigilant administration too absolutely. The precautions adopted by friendly societies to prevent malingering may be ineffectual; but they are so only in a lesser degree. They have not failed seriously. The societies themselves are evidence to the contrary. Under good management they have prospered in spite of the difficulty of stopping all malingering. The human material and conditions with which the Commissioners were concerned did not admit of so absolute a judgment as they formed and pressed home. And allowing for some margin for mistake and aberration we may say that with good organisation and management, in spite of great difficulties, there may be a sufficient supervision and control of cases, which, after proper inquiry, are found suitable for relief at the home.

25. What method then should be applied? If the persons suitable for public assistance or "outdoor allowances" should generally be the indigent and helpless of the three classes mentioned above—persons who require "necessary relief" and are unable to work, there is a great mass of miscellaneous cases, which do not come under this category or do so only in part. For these voluntary methods of assistance, which are more easily adaptable than the methods of public assistance, may well be forthcoming; and thus on the general lines of the Poor Law Commissioners of 1834, a division of labour may be adopted with "classification," "appropriate treatment" and co-operation "with persons of leisure and information," in fact, on the same conditions as those which the Commissioners found to prevail in effectual institutional relief, but applied in other ways.

The Commissioners limited the classes eligible for outdoor relief and centralised its operations. Charitable administration even at the time had taken a different line of development. The theory of the day was in urban areas to divide parishes into districts and to appoint a deacon or visitor to each district; and this was consistent with the older traditions both of voluntary and municipal organisation.³ But beyond the formation of relief districts as the areas for the work of relieving officers, outdoor relief, like indoor relief, was centralised in unions, and the forces of general charity were almost entirely ignored. Apart from Mr. Goschen's Minute and from special developments to which we shall refer later on, the entry in the Application and Report Book,⁴ which we have most often found to be quite insufficiently filled up:—

"If receiving regular or temporary relief, and any other, and what relief from clubs, charitable institutions, Government pensions or otherwise; such relief, pension, or allowance, or contribution to be described and the amount stated."—

Methods applicable to relief at the home.

remains as an indication of the utmost that has been done in this direction. On the other hand, in regard not only to official but also to voluntary relief at the home, the principles of administration now almost universally accepted, in order to obtain advantages similar to those which the Commissioners had noted in the case of voluntary institutional relief, are decentralisation, individualisation, and co-operation. We have to consider how far these principles have been applied in actual administration in this country and elsewhere, and whether or how far they meet the difficulties, which the Commissioners thought were inherent in the system of outdoor relief, except in the case of the "indigent and helpless."

IV.—THE CLASSES OF CHARITIES.*

26. Charities, as a whole, endowed and voluntary, have to be considered for our purpose from different points of view; and they may be classed according to the origin and source of their income, according to their *status*, and in practical administration, according to their objects. Charities classed by reason of the sources of their income.

27. Considered in relation to the sources of their income there are endowed charities, with, as subordinate groups, ecclesiastical and non-ecclesiastical charities; mixed charities partly endowed and partly voluntary; voluntary charities, which include subscription charities in which the members pay contributions for the assistance of those who are in want either generally or in relation to some particular form of help; and benevolent societies, in which the members pay contributions for other members of their own craft or trade, institutions which may be described as partly charities, partly friendly societies.

28. These charities may also be classified according to their public *status*, to which we will refer later: as eleemosynary or charitable corporations "established for the perpetual distribution of the free alms or bounty of the founder"—"created solely to fulfil a charitable purpose and holding their property in every case as trustees for the accomplishment of that purpose;" as charities held in trust by civil corporations; as charities held in trust by private trustees;† as charities registered under the Friendly Societies Acts; as charities registered under the Companies Acts; as voluntary charities unregistered, whose managers are responsible to their contributors only.¹ Charities classed according to their *status*.

29. But broadly "What is a charity?" With the limitations in which the word is here used, the general answer may be given—an institution or society founded and supported for a public, benevolent or eleemosynary purpose by free donation; and a "charity" thus stands contrasted with all institutions founded and supported by compulsory donation in the way of rates or taxes. Definitions of "charity" generally endowed or not endowed.

* NOTE.—To prevent misunderstanding, it should, perhaps, be said here that in the following pages we are not concerned with educational charities, whether ecclesiastical or not ecclesiastical, but with eleemosynary charities; and further, neither here nor elsewhere in the discussion respecting registration do we make any reference to the endowed or the voluntary charities of churches or congregations granted for religious purposes, nor to the voluntary charities of churches or congregations provided for eleemosynary purposes. To charities of any kind it would be left open to register, if they so desired, and if otherwise eligible under paragraph 229.

† The definitions of "charity" under the Charitable Trusts Acts are:—

(1) "The expression 'charity' shall mean every endowed foundation and institution, taking, or to take, effect in England and Wales, and coming within the meaning, purview, or interpretation of the statute of the forty-third year of Queen Elizabeth, chapter four, or as to which, in the administration or revenues or property thereof, the Court of Chancery has or may exercise jurisdiction. Definitions of endowed charity. Charitable Trusts Act, 1853, Sec. 66.

(2) "In the construction of the principal Act and this Act [the Charitable Trusts Act of 1855] the word 'charity' shall include every institution in England and Wales endowed for charitable purposes, but shall not include any charity or institution expressly exempted from the operation of the Act of 1853, and words applying to any person or individual shall apply also to a corporation, whether sole or aggregate." Charitable Trusts Act, 1855, Sec. 48.

"Endowment" includes all property of any description belonging to or held in trust for a charity, whether held upon trusts and conditions which render it lawful to apply the capital to the maintenance of the charity, or upon trusts which confine the charitable application to the income. Re Clergy Orphan Corporation [1894], ch. 3, 145, 150, 151.

¹ The Law of Charities and Mortmain, being the fourth edition of Tudor's Charitable Trusts, 1906, pp. 62 and 63.

30. As we have seen, there is a very great variety in the form and *status* of charities. In point of fact, however, considered as parts of a common organisation of relief, or as affording assistance of different kinds for persons in distress, the division of charities into classes proceeds in another way, irrespective of whether the charities be, for example, eleemosynary corporations or charities supported by voluntary contributions. They are classified according to their purpose, the class of persons whom they assist, as for instance, the blind, the epileptic, the orphan, the homeless, etc. And the problem before us consists largely of a recognition and practical enforcement of this side of the question. Side by side with this practical administrative classification come the Poor Law or, speaking more generally, the rate or tax-supported institutions, which also have to be taken into account as fulfilling certain specific purposes.

Charities classed according to purpose.

V.—ENDOWED CHARITIES.

31. To return to the endowed charities.

To be allowed to alienate land or other property in perpetuity for some particular purpose is to enjoy what is in the nature of a privilege. To alienate land was to free it from obligations which, if it were not alienated, would remain due from the possessor to his superior lords. They, by reason of the alienation would lose "their escheats, wardships, relief and the like." Accordingly for the alienation of land in mortmain the licence of the King ultimately became necessary. And, justified by a public policy which aims at preventing land from passing out of private use and control, the principle of the disutility of alienation in perpetuity still holds.¹ Accordingly the most recent Act, the Mortmain and Charitable Uses Act of 1891, leaves all kinds of property, except lands and tenements and hereditaments, capable of being disposed of in favour of charity, as freely as to an individual. If lands, tenements and hereditaments are given by will to charity they have to be sold, though the benefit of the gift, the money realised, remains to the charity. But it is "lawful . . . for the Charity Commissioners, if satisfied that land assured by will to or, for benefit of, any charitable use, or proposed to be purchased out of personal estate by will directed to be laid out in the purchase of land, is required for actual occupation for the purposes of the charity and not as an investment, by order to sanction the retention or acquisition, as the case may be of such land." If lands, tenements and hereditaments are given by instrument *inter vivos* the gift is subject to certain restrictions which are set out in Section 4 of the Mortmain and Charitable Uses Act of 1888.

Alienation in perpetuity in the nature of a privilege: hence permissive only and controlled.

32. On the other hand if the State desires to encourage gifts for public purposes, as sometimes it has done, it has to provide means for protecting the gifts in perpetuity. It has to secure that the property itself is not turned to other purposes, and that the conditions imposed upon the gift by the donor will be observed. It is with this object that the Charity Commission was established. Between the years 1819 and 1837, while the administration of the Poor Law was being reconsidered and ultimately resettled, investigations in regard to endowed charities were made by what are known as Lord Brougham's Commissioners.² They found that "funds, and even lands, were being lost from time to time; and that administration was not always strictly in accordance with the trusts; and that various trusts were either incapable of being carried out or were doing more harm than good."³ These words "not always strictly in accordance with the trusts" hardly convey indeed the impression of waste, confusion, and misdirection which the Reports themselves leave on the mind of the reader. Hence, finally on the Report of a Royal Commission appointed in 1849 the Act of 1853 for "the better administration of charitable trusts" was passed and the Charity Commission was founded as a permanent body.

¹ Tudor on Charities and Mortmain (1906), pp. 8, 18. ² Report of Select Committee appointed to examine and consider the Evidence in the several Reports presented to the House from the Commissioners, 1835 [449]. First Report of the Commissioners, 1850, p. 4. ³ Sir George Young, 31109, 31190.

VI.—THE CHARITY COMMISSIONERS.

33. The field of work of the Charity Commission is represented by those foundations or trusts which have a charitable purpose.

34. The purposes which have been held to be charitable are indicated by the 43rd Charitable Eliz., c. 4, which has been quoted above, and by analogy the definition by enumeration there set out has been applied to other purposes not there specifically mentioned.¹ Now generally they are placed under one or other of four heads:—

(1) “The relief of poverty and disability,” including “the relief of sickness”;

(2) “Children who are under legal disabilities.” These are, “it is said,” the special objects of charity, and the charity in their case now takes the form of apprenticing and of education,” but “education is now transferred for all purposes from the Charity Commissioners to the Board of Education.”

(3) The promotion of religion; and

(4) “The benefit of the public.”

In general “a purpose, in order to be charitable, must be directed to the benefit of the community or a section of the community.”²

35. In order to carry out the objects of the Charitable Trusts Acts and to secure the due administration of charitable trusts,³ the Commissioners have power: to examine and inquire into all or any charities, and the nature and objects, administration, management, and results thereof, and the value, condition, management, and application of the property; to require accounts and statements of all trustees or persons concerned in the administration of any charity; to require trustees and others to attend and to be examined; to take evidence on oath either by themselves or by their Assistant Commissioners.* They have also to receive and consider applications for advice from trustees and others concerned in the administration of a charity; and persons acting on the advice of the Board are indemnified. The Commissioners have thus very large and independent advisory powers. They have powers also for preventing unnecessary legal proceedings on the part of charities; and they may authorise proceedings, and, in relation to such proceedings, they may have local inquiry made by their Assistant Commissioners.⁴ They may empower the trustees of a charity upon satisfactory proof to discharge any officer who is negligent, unfit, or incompetent. Upon representations made to them by the trustees they have power to make order under their seal for the granting of leases, and for the making of roads, laying down of drains, building or repairing, rebuilding or removal of houses, “although such leases or acts respectively shall not be authorised or permitted by the trust.” “Under special circumstances” also they may authorise the sale or exchange of the land of a charity. Through their agency the lands of charities may be vested in the Official Trustee of Charity lands and stock and securities in the Official Trustees of Charitable Funds; and the capital of the charity, whether land or securities, is thus secured in trust for the use of the charity, while the income is expended by the trustees themselves.⁵ Subject to appeal the Commissioners have also a definite and prescribed power of making orders. They may, for instance, remove or appoint trustees or make an order for a scheme. In case of abuse they certify the Attorney-General, with a view to proceedings. “They do not act on their own power; they are not a court of law, nor are they prosecutors in their own person; they certify the Attorney-General and the Attorney-General has, of course, full power to say: ‘The

Powers of the
Charity
Commission.

¹ Young, 31114. ² Tudor on Charities and Mortmain, p. 37. ³ Young, 31133, 31140; Charitable Trusts Act, 1853, Secs. 9, 10, 11, 12, and 1855, Secs. 6, 7, 9. ⁴ Charitable Trusts Act, 1853, Secs. 16, 17, 23. ⁵ Charitable Trusts Act, 1853, Secs. 48, 49, 50 and 51, and 1887, Sec. 4.

Commissioners are wrong in this, and I will not proceed' or 'the Commissioners are making too much of a small matter, and I do not think proceedings ought to be taken; but when the Attorney-General does move it is generally sufficient.'" Thus the Commissioners supervise the management of estates under powers delegated to them from the Court of Chancery and similar in many ways to those applicable to trusts in general.¹ Their office is also a centre of investigation and registration, advice, and control. Indeed, we may say that where the voluntary charities are weak the endowed charities are strong. The latter have a centre for registration, the former have none. The endowed charities have, the voluntary charities have not, the advantage of an official trustee; and, as we shall show, instances occur in which property purchased by voluntary contributions surreptitiously into private hands. For endowed charities there is a recognised centre for the receipt of statements and accounts, for the voluntary charities there is none. And besides these, legislation, we think, might produce many indirect results that would be very beneficial.

36. Before passing to a discussion of the present position of endowed charities and to the conclusions that we may submit with a view to increasing the utility of these charities as parts of a common organisation for the relief of distress, we would draw attention to two questions—namely, on the one hand, the limitations imposed on the intervention of the Commission, and, on the other hand, the power of the Commission to make schemes and to adapt old gifts to new purposes of a kindred nature.

VII.—THE LIMITATIONS ON THE WORK OF THE CHARITY COMMISSION.

Limitations
imposed on the
intervention of
the Commission.
The £50 limit.

37. The first limitation is due to a desire to exclude large and important charities from the intervention of the Commission unless the trustees themselves wished them to intervene.² If the gross annual income of the charity, exclusively of the yearly annual value of any buildings or land used wholly for the purposes thereof and not yielding any pecuniary income, amounts to £50 or upwards, the Commission can make no order, except upon application of the trustees. The Commissioners have full power to inquire in regard to all charities, but this limitation ties their hands in the case of many charities in which on other grounds their intervention would be most desirable; and it seems reasonable that the income of the charity should not be the sole condition by which they should be guided in making orders under the jurisdiction vested in them by the Charitable Trusts Acts.³ If the policy is adopted of bringing the charities together for co-operative work, this proviso should, we think, be withdrawn. It would seriously interfere in the development of such a policy.

38. Next under Section 62 of the Charitable Trusts Act of 1853, there are limitations rather roughly defined by which certain classes of institutions are excluded, institutions that are educational and religious rather than eleemosynary.⁴ Educational endowed charities are all now under the supervision of the Board of Education.⁵ Friendly or benefit societies and savings banks belong to another Department and are excluded. Societies for religious or charitable purposes wholly maintained by voluntary contributions are excluded. In the case of charities partly maintained by endowments partly by voluntary contributions—the voluntary income is excluded from the cognisance of the Commission; so are donations or bequests legally applicable as income in aid of voluntary institutions; so are such moneys if appropriated or invested for some definite object or purpose connected with the charity under any rule or resolution of the governing body; so are donations or bequests in aid of any fund set apart for such a purpose.⁶

39. Thus, though possessed of property and having to that extent the element of perpetuity which would justify its treatment as an endowed charity, a voluntary institution may escape obligations similar to those imposed by the Charitable Trusts Acts, may send in no accounts and be liable to no supervision. We are inclined to agree with Sir

¹ Charitable Trusts Act, 1860, 23 & 24 Vict., c. 136, Sec. 2, and Charitable Trusts Act, 1853, Sec. 2 & 3. Young, 31133. Young, 31125. ² Charitable Trusts Act, 1860, Sec. 4. ³ Young, 31131, 31209.

George Young that in these cases the question should not be "What is the origin of the property?"¹ But "What is the nature of the property now?" Is it a property in the nature of an endowment at the present time? We think that on the acquisition of land for the purposes of the charity the voluntary charity should *ipso facto* come within the jurisdiction of the Charity Commission. Several cases, the details of which are furnished to us in a Memorandum drawn up by the London Charity Organisation Society, confirm this view.² Some of them are as follows:—

(1) F. has founded and maintains a large number of institutions out of charitable contributions. The properties have been acquired in his own name, or in the names of members of his family. He has declared his intention of handing them over to trustees for public purposes, as soon as they are free from debt, and in one instance this has been done.

(2) The Society was started many years ago by the late Mr. G., described as founder and sole manager.

In 1891 he purchased a house at the sea-side for the purposes of a convalescent home by means of public subscriptions and the issue of seventy mortgage bonds of £100 each. In 1900 he disposed of this house to a company for £14,000 or £15,000. The company's accounts soon got into confusion and a winding-up order was made on April 14th, 1908, upon a creditor's petition presented March 31st, 1908.

(3) This hospital was established in 1887 by Mr. H., a medical man, and his brother.

The institution had no treasurer, and year after year the balance sheets showed substantial deficits, which were said to be liquidated by advances from Mr. H. himself, until his claim against the hospital reached the amount of £3,207. The accounts, which disclosed "Cash advanced in 1887, 1888, 1889, and 1890, £2,425 8s. 10d." were not audited until 1891, when they were certified by a chartered accountant not in private practice. Mr. H. admitted that he had no documentary evidence of his claim, and formally cancelled the alleged debt. It did not appear, however, that he was ever in a position to make these advances, since during the period in which they were said to be made, three county court judgments were registered against him, while within a few months of his making the institution a formal present of £3,207, he had a distraint in his house for rent.

(4) These Homes were founded in 1875 by Mr. J., for the maintenance of deaf mute children from four years of age in the neighbourhood of elementary schools, where special instruction was given on the oral system. They were supported by voluntary contributions, and were under the personal superintendence of Mr. J., who was treasurer, and managed the finances, under which there was an ever increasing debt to him.

In January, 1898, negotiations were entered into between the London School Board and Mr. J. for a transference of a portion of the Homes to the Board, but the accumulated debt and the length of the leases presented insuperable difficulties.

On Mr. J.'s death, in April, 1898, the debt amounted to over £3,000. The Homes, with one exception, were then closed, and the executors under his will sought to dispose of the property as his private estate. This claim was resisted by the committee of the remaining Home, and by an Order of the Court of Chancery an Honorary Receiver was appointed. The Receiver died in March, 1900, and the Home had then been closed for a year.

40. In all these cases, and others also might be quoted, sums of money have been raised by widespread charitable appeals. They have been in part applied to the lease or purchase of houses, which remain the private property of the founder, and they are, or may be, treated as private property by himself in his will or by his creditors in the event of his incurring debt or becoming insolvent.

41. We conclude that Section 62 of the Charitable Trusts Act of 1853 should be Conclusion. amended; that in all cases in which money is raised by charitable gifts and is invested wholly or in part in property by purchase or by lease of premises, the society or institution, on whose behalf the charitable gifts are received, should come within the terms of the definition of charities dealt with by the Charity Commission.

42. Other limitations depend upon the *status* of a charity. An eleemosynary cor- Incorporation
poration created by Act of Parliament can only be altered by Act of Parliament unless, by Act of
or in so far as, the powers of the Charity Commission are expressly reserved by the Parliament.
Act.³ Accordingly the Charity Commission in these cases have to put in operation the old
jurisdiction which the Commission possess under the Charitable Trusts Act of 1853 to

¹ 31166.² Charities Appendix.³ Young, 31129, Charitable Trusts Act, 1853, Sec. 54.

make Parliamentary schemes.¹ "That has been done and several excellent schemes have been passed," Sir George Young told us; "although, of course, the usefulness of the provision is limited by the very small amount of time which Parliament has to give to such matters; and also by the fact that, unless a scheme is unanimously accepted, so long as there is any objection at all, owing to the forms of the House of Commons, it cannot get through." By this relatively cumbrous method of an amending Act, the exclusion of outside control which the Act of Parliament confers on the corporation is through the agency of the Charity Commission in some degree neutralised, to the great benefit of the charity.

Incorporation
by Charter.

43. The constitution of a charity incorporated by the grant of a Charter or by Letters Patent cannot be altered by the Charity Commission, except in so far as their powers are expressly reserved in the Charter itself.² "It is the custom now," Sir George Young said, "on the recommendation of the Commissioners, to whom private Acts affecting charities are always referred, to insert clauses reserving the jurisdiction of the Commissioners, but in former days that was not done, and in the result a great many charities find themselves with a far too stereotyped form of constitution." The same comment applies to charities incorporated by charter; and in their case the only means of preventing a like result has been "to obtain from the Privy Council a promise to consider the insertion in all future Charters of a reservation of the jurisdiction of the Charity Commissioners." It no doubt adds to the dignity of a charity to receive a Charter; but in the interests of the progress of charitable administration, we would urge very strongly that ample consideration should be given to the question which has been submitted by Sir George Young to the authorities of the Privy Council.

"Everything," he said, "which once admits the interest of the unborn ought properly to be under the supervision and the protection of a centralised body, like the Charity Commissioners, independent of popular election, who can secure that those interests are not overlooked. . . . All the interests, all the influences, and all the associations of bodies and companies of people at present in existence are on one side in this matter, and on the other side is the interest of those for whose sake the endowment is permitted to be an exception to the general rule of English law against perpetuities."

44. In regard to these two limitations, then, in affecting eleemosynary corporations created by Act of Parliament and those incorporated by Charter, there should be reservations to give the Charity Commission power to act in the future on the lines of the Charitable Trusts Acts. A private Act in a matter of large public importance should not practically override a public Act, unless for some conspicuous and altogether exceptional reason. In the main the duty of bringing all charities into a common relation one with another on the administrative side is of paramount public importance, for only in this way can that common spirit and purpose prevail amongst them which may make them responsible agents for the service of the community. To have in the Charity Commission a common central authority for the protection of their property and for their general assistance is one method of promoting this. If the Commission does not fulfil this purpose, as it is at present constituted, endeavours should be made to revise its constitution and to equip it thoroughly well for its task. And we would urge that this policy and not a policy of exemption and limitation should be adopted in regard to it. To leave it in charge of a large branch of most useful work, but not to enable it to do that work thoroughly, is the worst policy of all.

VIII.—THE APPLICATION OF THE DOCTRINE OF CY-PRES.

45. In the course of time the objects for which endowments have been made may change greatly. Objects beneficial, when, for instance, there is no Poor Law, may be deemed to be sufficiently met when outdoor relief is generally available; and new legislation, as in the case of education, may in many ways supply from the rates or taxes what was formerly in its measure supplied by endowed charities. The population, too,

¹ Thirty-seventh Report of the Charity Commissioners, 1890, Sec. (17) [Cd. 5986].

² Young, 31128,

may move from one district to another and a wealthy endowment established for the benefit of many may in the course of time be used with doubtful advantage for the relief of a few. Hence "courts of equity have always exercised the power of varying the means of carrying out the charity from time to time, so as to secure more effectually the benefits intended."¹ This process of adaptation is now largely enforced by the schemes of the Commissioners.

46. Sir George Young described the application of the principle of *cy-pres* in the revision of charities, as follows²:—

"In the first place," he said, "the main intention of the founder is to be regarded, and for the purpose of giving effect to the main intention the means prescribed by the founder may, if necessary, be altered; secondly, where the design itself requires modification, there are various ways in which it may be modified. Amongst others, to take the case of a charity which has largely increased in wealth, the class of beneficiaries may be enlarged; another class would not, however, be substituted, nor would another be allowed by force of circumstances, or, as a consequence of general legislation, to acquire the benefits. . . . Purposes found harmful or liable to abuse, and purposes of no practical benefit, or of benefit small in proportion to the funds expended, may be modified or superseded."

47. In using these adjustive powers for the resettlement of charities on new lines,³ it has been the policy of the Commissioners to suggest that, not the one or two charities only, in regard to which application may have been made to them, but all the several charities administered by trustees for the same parish or in the same place should be dealt with under a common scheme. After inquiry the funds which are available are then consolidated and allotted to different purposes according to a general interpretation of the doctrine of *cy-pres*. This doctrine is applied specially to doles—gifts payable, generally speaking, to the poor of a parish, sometimes given or bequeathed before the establishment of the Poor Law of Queen Elizabeth, but very frequently after that date.⁴ The conditions under which these doles have been provided as gifts to the poor are very various, and, distributed merely as a supplement to the small resources of poor persons, they have been shown to be very injurious, as the evidence which we will submit later on indicates. Accordingly on the principle of *cy-pres*, since Poor Law relief, it was argued, had taken the place of doles, doles were assigned to "the second poor," as the poor who were not in receipt of poor relief were called; "and the doctrine was introduced that paupers were not entitled to the benefit of the charity, but the second poor only." This *cy-pres* application runs through the whole scheme-legislation of the Commission, and has initiated and promoted a division of labour between the Poor Law and the charities. It may be said to be both a rule of law and a settled policy that persons in receipt of Poor Law relief ought not to receive relief from endowed charities also.⁵

Consolidation of charities.

Separation of charities from Poor Law administration.

48. Thus, local endowed charities have been consolidated and the income of the dole charities has been made applicable to certain purposes set out in schemes, coupled with the condition that the benefits of relief under the schemes should be restricted to those who, at least, for a specified period, had not been in receipt of Poor Law relief.

49. But, while a clear line has been drawn between the Poor Law and endowed charity, the conditions under which endowments of the nature of doles may be used for other purposes have not been clearly marked.⁶ Doles, indeed, have been freely applied to other purposes. Already in 1869, under the Endowed Schools Act, the *cy-pres* method was pushed very far indeed, and that, not with a view to the expansion of particular charities for the better fulfilment of the objects for which they were established, but with a view to the application of the charities to a new purpose altogether.⁷ As the 30th Section shows, to receive education was counted a benefit equivalent to any benefit that might be conferred upon the people even by a revised application of the charities, which were diverted to educational uses. That section is still in force. It is as follows:—

"In the case of any endowment, which is not an educational endowment as defined in this Act, but the income of which is applicable wholly or partially to any one or more of the following

¹ Tudor on Charities and Mortmain, p. 202. ² Young, 31153. ³ Young, 31142, 31143. ⁴ Young, 31166 and Appendix to Evidence, Vol. III., p. 621. ⁵ Tudor on Charities and Mortmain, p. 167. ⁶ Report of Select Committee on Charitable Trusts Acts, 1884, p. viii., and Appendix No. iii. ⁷ The Endowed Schools Act, 1869, Sec. 30. Young, 31154.

purposes; namely—doles in money or kind; marriage portions; redemption of prisoners and captives; relief of poor prisoners for debt; loans; apprenticeship fees; advancement in life; or any purposes which have failed altogether or have become insignificant, in comparison with the magnitude of the endowment, if originally given to charitable uses in or before the year of the Lord 1800, it shall be lawful for the Commissioners, with the consent of the governing body, to declare, by a scheme under this Act, that it is desirable to apply for the advancement of education, the whole or part of any such endowment, and thereupon the same shall, for the purposes of this Act, be deemed to be an educational endowment.”

50. So far-reaching is this clause that it may be said to express not so much an application of the doctrine of *cy-pres*, as an application of the doctrine of appropriation.¹ The general end of benefiting the class of poor “by all or any forms of relief” was set aside for “the general end of benefiting” them, and others not poor, by the education of their children. “In fact, alteration of the manner in which the benefit has been conferred has been expanded . . . to an alteration of the benefit. . . . A considerable change has been made both in the nature of the benefit and in the class to whom the benefit came.” Probably by the operation of Section 30 about £19,788 of the annual income of charities has been transferred to education, and a capital sum of £89,713 diverted to educational purposes.²

51. In 1892 the Commissioners wrote in their annual Report:—

The extended use, application of dole charities to other purposes.

“Following the example set in more recent times by the Court of Chancery, and fortified by the high authority of this judgment [that of the late Sir G. Jessel, in 1881, when Master of the Rolls, in the case of the Campden Charities at Kensington], we have for many years made it our first object, in framing *cy-pres* schemes for dole charities, to prescribe such an application of their funds as may tend in some degree to confer real and lasting benefits upon the poor, consistently with a due regard for the main intention of the founders of those charities.³ We conceive, and in this view we have the support of the highest authority, that the particular directions of a founder, for the distribution of funds in the form of doles, are but means to the general end of benefiting the class of poor sought to be helped; and that subsequent changes (to use the language of Sir G. Jessel in the course of the above-mentioned judgment), in the value of endowments, in the circumstances of the locality within, [or of the population] for the benefit of which, the charity is administered, in the times, in the habits of society, or in the ideas or practices of men, are sufficient to justify the substitution of other and improved means for the attainment of the object proposed.”

52. On this principle, in the case of the city parochial charities the application of the parish charities were by statute diverted even more widely.⁴ The total income of the Central Fund of the City Parochial Foundation is £52,654, and only £5,000 is made applicable for charitable relief—for pensions. A sum of £152,959 was paid out of the capital of the City Parochial Foundation, as grants towards the building of polytechnics and institutes, which now receive grants from the State like other technical schools. Of the principle of extending the area of benefit, the scheme was a signal illustration. The charities previously restricted to residents of parishes in the city were extended to the whole police area of the Metropolis. A still further departure from the doctrine of *cy-pres* was permitted by the Allotments Extension Act, 1882, Section 14, where it is enacted that if part of the endowment of a charity in regard to which the Commissioners make a scheme is in land, they *shall* authorise the trustees of the charity to set apart a portion of the land for allotments.

Conclusion.

53. It may be concluded, therefore, that, while the doctrine of *cy-pres* has been applied in very many cases of particular charities, the State has adopted the plan of wholesale transference of dole and other charities to educational uses, or, as in London, to general philanthropic purposes—if the objects of the polytechnics may thus be described—or, as in the case of allotments, to meeting what was held to be a general want in country districts. The gravity of the assumed social demand has thus broken through the technicalities of normal procedure. For the doctrine of *cy-pres* has been supplemented by a doctrine of beneficial appropriation; and perhaps in the case of doles there was at the time administrative justification for this. There was a general consensus of opinion that doles were injurious when administered on the conditions usually attached to them; but even if they were freed from those conditions there was generally neither in the unions nor in the parishes any such administration

¹ Young, 31153.

⁴ City of London Parochial Charities Act, 1883. Return: Endowed Charities (County of London), 1894-1904, Vol. 8., p. 322, Vol. VI., pp. 936, 940, 954. Hayes Fisher, 30936 (7).

of relief as would turn them to good account. Hence resulted their diversion, as we have pointed out, to purposes quite unlike those for which they were founded. Had an administration suitable for their proper use and management under altered conditions been forthcoming, instead of being diverted to entirely different purposes, they might reasonably have been placed at the disposal of a suitable authority for continued application to the relief of the poor on new lines.¹ Such an authority we would desire to create. And in view of this, and since we believe that doles may be turned to good and proper account for relief purposes, we would strongly recommend that Section 30 of the Endowed Schools Act of 1869 should be repealed.

IX.—THE SCHEMES OF THE CHARITY COMMISSION.

54. Now, to turn to the schemes themselves. In the re-settlement of dole charities The purpose under schemes it was desired to fulfil two objects:² “First, the encouragement among the poor of habits of providence, thrift and self-help; and, secondly, the concentration of these endowments upon assistance to the poor at the times of their special and certain need, namely, in sickness and in old age.” With these objects the schemes usually enable the trustees to apply the funds of the charity under their care in the following ways: (1) They may make subscriptions or donations:—

(a) In aid of dispensaries, hospitals and convalescent homes or any institution in which persons suffering from any bodily infirmity are taught a trade or employment so as “to secure the benefits of these institutions for the objects of the charity.”

(b) In aid of any provident club or society established in or near the said parish for the supply of coal, clothing or other necessities.

(c) Any duly registered and accessible provident or friendly society.

The clause respecting medical relief has been useful it is stated and has led to good results. The clause respecting friendly societies has not been so operative.

(2) The trustees may also make contributions for the following purposes: the supply of nurses; the payment of the expenses of travelling to hospitals or convalescent homes; the purchase of annuities; the cost of outfit on entering a trade, or occupation, or service; passage money for emigration; the provision of “proper care and supervision for poor persons requiring temporary change of air or special protection or treatment”; the provision or maintenance of recreation grounds; the acquisition of open spaces or the maintenance of any reading room, library, or workman’s club; the support of any accessible museum, art collection, or art and industrial exhibition; and the provision of technical or art instruction.

In this class “the provision of emigration,” Sir George Young says, is “liable to a good deal of objection.” “The conversion of eleemosynary funds to the provision of recreation grounds or the maintenance of workman’s clubs, is,” he states, “obviously open to difficulty, and is probably only possible in special cases, and only expedient where there is plenty of money.” And this applies still more to the clauses relating to museums and art collections.

Finally, (3) as a third class of permitted expenditure, there come:—

(a) The supply of clothes, linen, bedding, fuel, tools, medical or other aid, including surgical appliances, in sickness, disability or infirmity, food or other articles in kind to an amount not exceeding £ in any one year;³ and

(b) Temporary relief in money, by way of loan or otherwise, in the case of unexpected loss, or sudden destitution, to an amount not exceeding £ in any one year.

¹ Fortieth Report of the Charity Commissioners, 1893, Secs. (24), (25), and (26). No. xiii., Vol. III., pp. 615 and 621. ² Young, 31141. App. ³ Vol. III., App. p. 619.

There is also sometimes a clause which permits the payment of contributions towards apprenticeship. The first of the two clauses (a) and (b) represents "the limit to which the Commissioners consider themselves able to cut down the pernicious operation of promiscuous dole charities." Of the second clause (b) it is said that "the standard represented by the clause is still a little higher than that which can be ensured in all cases throughout the country."

Relative utility of the purposes allowed in schemes. The better plan of general uses for distress.

Provision of means of inquiry.

55. On these statements we would make some comment. Of the ways of spending permitted by the schemes, that for the encouragement of habits of providence, thrift and self-help does not appear to have succeeded. Only wealthy charities can help to provide recreation grounds or open spaces, or to maintain working men's clubs and museums. "Emigration" is liable to objection. The "temporary relief," clause (b) works fairly well. But considered from the point of view of useful co-operative charity these many divisions, we must say, appear to us to be of very doubtful advantage. The requirements of particular cases of distress properly understood and provided for, personally and otherwise on some reasonable plan, are in our opinion the true guide to the best use of the resources of a charity. And as has been shown in the evidence the co-operation of the endowed charities with the charity of voluntary societies and private individuals will add greatly to the sufficiency of the assistance which they give; and further, this co-operation is often the means of connecting the administration of the endowed charity with actual personal work. To prevent the trustees reverting to doles the purposes for which the money available under the scheme might be used has been stated in very great detail. What is required is money applicable to any of the needs of distress as they arise, subject to the main principle "the encouragement among the poor of habits of providence, thrift and self-help, but not applicable for doles."

56. If sufficient inquiry is not forthcoming to ascertain the data necessary for such a purpose, it were better that the income of the charity should be reserved till means for making proper inquiry are arranged. But provision should be made expressly for this, as to a certain extent it now is, by the terms of the scheme itself. In the case of almspeople and pensioners the trustees are now required to make inquiries in regard to applicants for appointment; and it is said that "in the less populous parishes and places the means of securing inquiry are sufficient or might easily be made so."¹

"If a body of trustees came to us," Sir George Young stated,² "and said there is more work than we can do, we could reinforce them, of course, or we could give the powers, which after all they could take without assistance or leave, to act by agents or by committees to obtain information, or to utilise the services, whether of clergy, medical men, benevolent persons, district visitors, and others. . . . In various old towns whose charities are numerous, abuses are very apt to exist, but even there it is not for want of power that proper inquiry is not made. . . . It is notorious that charities in past times and probably in present times have been made the means of political influence, or have been utilised for the purpose of private interest. . . . Any reasonable expense for making inquiries would be allowed by the Charity Commissioners. . . . In very populous places the difficulties are, of course, greater, and there we have always been on the watch for suggestions as to the best way of meeting them; thus we have given power to the trustees to avail themselves of the local Charity Organisation Societies."

Means of visitation necessary. Insufficient staff of the Commission for these and other purposes.

57. To ensure that the standard of work is such as we have deemed reasonable, another condition also has to be fulfilled. Some method of visitation should be adopted in order to ascertain that the work of the charities for which schemes have been made is well and usefully conducted. But the staff of the Charity Commission does not at present permit of their making any except casual inspections.³ This deficiency affects the whole administration.

"The Commissioners ought to have power to see that all their schemes are carried out, but they have not sufficient staff or power to do so. There is no sufficient means of supervising the action of trustees to ensure that they will obey the scheme. A good deal of correspondence might be saved and some differences which are not now settled might be settled if we had rather more staff to deal with cases of complaint. We have a department which classifies the annual accounts carefully and produces them as wanted, whenever a case is taken up, and examines them so far as possible; but there is no sufficient staff provided for proper examination of the accounts.⁴ Still less have we power to audit or surcharge."

¹ Appendix. Vol. III., p. 616.
431178. 31209.

² Young, 31151, 31152.

³ Young, 31145, 31149, 31150.

Thus, however carefully drawn the schemes may be, the staff necessary to ensure that the system of supervision set in force by the Charitable Trusts Acts is properly applied is lacking, and still more is the staff insufficient to meet the demands of any large and well-directed extension of that system.

58. We are of opinion then, that under proper safeguards "doles" and other similar charities should be used more definitely for eleemosynary purposes proper than the schemes suggest—extremely useful as these schemes have often undoubtedly been; that the Commission should have power to audit*; and that the Commission should be staffed sufficiently well to enable it to supervise the working of the schemes and, when necessary, to revise them.

X.—BOARDS OF TRUSTEES.

59. In the draft schemes for the administration of endowed charities submitted to us by Sir George Young it is arranged that the body of trustees should when complete consist of a certain number of competent persons appointed as *ex officio* trustees, as representative trustees, and as co-optative trustees.¹ The *ex officio* trustees consist generally of local persons specially concerned in the administration of the charity by reason of their office, as for instance, the rector or vicar of the parish or parishes to which the charities belong, or the mayor of the borough, or the chairman of the parish council.² The representative trustees are appointed direct by the bodies that are given the right of representation, such as the parish council or a town council. The co-optative trustees are appointed for a term of years by the resolution of the trustees. On this method some comments are made by Sir George Young. He says:—

"There is no doubt that many of those who serve upon parish councils or town councils are not on a line with the Charity Commissioners in their opinion as to the comparative effects of dole charities and of the substituted provisions. Therefore, the representatives of these bodies very often take a line, which becomes of more importance owing to their representative position, in opposition to the principles which have been recommended by the experience of the Charity Commissioners, and there are indications that these matters are being introduced into local elections, and that an amount of what I fear I must call popular prejudice is not an altogether unheard-of method of commending a candidate to the electors. . . . I confess that I regard the general effect of the introduction of representatives into the Board of Trustees as beneficial; . . . it is necessary to bear that in mind, for instance, when the Commissioners are being pressed, as they are being pressed by a resolution of the House of Commons, though not by an Act, to constitute in all cases as a majority of the trustees representatives of the local authority.†. . . Without raising objections to this . . . I would very strongly urge that my successors should be left to exercise the discretion that they have hitherto enjoyed, and that undue pressure should not be brought to bear upon them to proceed too fast in this direction. . . . It must be remembered that persons are elected to town councils and parish councils for certain purposes, and those purposes are not in general the administration of charity."³

60. And in answer to the question, Who are the local authorities who would be consulted upon the draft of a scheme? the answer was:—

"The district councils frequently, the parish councils invariably, and town councils invariably. . . . boards of guardians we should not consult as such. We should consult them in the form of local district councils and corporations which cover the same ground, but boards of guardians as such we do not, as a rule, consult; they would not be considered a local authority for the purpose."

61. This evidence suggests two points of difficulty which would have to be met in any reorganisation of endowed charities with a view to meeting distress. The witnesses, as we shall see, state again and again that there is no co-operation between the endowed charities and the Poor Law Guardians. This might, we think, be in some measure prevented if boards of guardians were consulted with a view to the administration of the charity being an independent but recognised part of the local arrangements for the purposes of relief and assistance. And next it is evident that to carry out a scheme, the election upon the board of representatives of bodies created for quite other purposes

* It may be mentioned that under Sec. 58 of the Local Government Act of 1894 it is held that the auditors of the Local Government Board have the power of auditing the accounts of charities of which the parish council are the trustees.

† No resolution was passed. A motion was proposed that in their schemes the Charity Commissioners should "provide for the election of a majority of the Trustees by representative Authorities"; but the debate was adjourned and no motion was adopted.

¹ Young, 31142-31148. Report of Select Committee on Charitable Trusts, 1884, p. ix., No. 306; and Extracts from the Fortieth (for 1892) Annual Report of the Charity Commission, reprinted on p. 325 of the Report of the Select Committee on Charity Commission. 221. ² Vol. III. of Evidence, Appendix, p. 613. ³ Young, 31145, 31146, 31147.

must prove to be a very unsuitable method.¹ In practice, such an election may be a merely indiscriminate appointment of persons who are not in any way specially qualified to fulfil the duties of charitable administrators. To administer charitable help usefully, it would be better, we think, that the trustees should have comparatively large powers of co-optation on the settled understanding that, as far as possible, the persons co-opted should be qualified to be suitable members of the board, by their general knowledge of the subject or by their cognate knowledge of some department of work.

XI.—OTHER METHODS OF REGISTERING CHARITIES.

62. Before passing to the evidence submitted to us respecting the working of endowed and other charities, we may conveniently refer here to methods of registering charitable societies other than those connected with the Charity Commission.² Charitable societies can register under the Friendly Societies Act of 1896, Section 8, as "Societies other than friendly societies (in this Act called benevolent societies) for any benevolent or charitable purpose." Every registered society is required to have a registered office, to appoint trustees, to submit its accounts to audit annually, to make an annual Return showing separately its expenditure in respect of the several objects of the society, to deliver to every person on demand copies of rules; to supply copies of its annual Return; and to allow the inspection of its books. With these duties it has certain privileges. It can legally hold property (in the case of benevolent societies, not exceeding one acre) and other kinds of property in the names of trustees. It has remedy against fraud on summary conviction "whilst the only criminal remedy against fraud by its members open to an unregistered society is confined to cases of larceny or embezzlement."

"If the society has stock in the funds in the names of trustees and the trustee is away from the United Kingdom, becomes bankrupt, etc., instead of having to apply to the High Court of Justice or to take any other proceedings which it would have to do if unregistered, it can have the money transferred by direction of the Chief Registrar on payment of £1 fee."

And there are provisions for the settlement of disputes by reference to the Chief Registrar or to a County Court or a Court of Summary Jurisdiction.

63. The Act, it will be noted, does not interfere with the decisions and work of the registered society. The rules of the society must be consistent with the terms of the Act; and the forwarding of accounts and Returns and the opportunities afforded by this and other business lead to the Registrar becoming both an inspector of accounts and a friendly advisor. But his powers cease there. The society remains independent. He does not control its investments nor require it to adopt one set of rules and one only, nor in the case of a friendly society does he fix and determine the scales of payment and the range of benefits. He stands as a kind of official guarantor to the members of societies and to the public that the work of the societies will be conducted in a businesslike manner. If a society does not register, it is not compelled to do so. But the general *status* obtained by registration is an advantage to a society, in addition to the privileges and the support and security which the Act affords.

64. We may compare the system of registration enforced by the Friendly Societies Act with the system of accountancy and supervision, adopted under the Charitable Trusts Acts. In the former case members, officials, and trustees, who may be ignorant of actuarial methods necessary to their business and who may need protection against fraud, are guided by the procedure of the Act and by the counsels of the Registrar. In the latter case the recipients of the charity and those who may claim under its conditions may be inclined to guard its bounty jealously as against all outside interference. But they can have no part in its government as members. Their interests are in the hands of the trustees of the charity. And *mutatis mutandis*

¹ Cf. Report made to the Royal Commission on the Poor Law respecting endowed and voluntary charities, by Mr. A. C. Kay and Mr. H. V. Toynbee (1908), p. 59
² Friendly Societies Act, 1896, 59 and 60 Vict., c. 25, Sections 8, 24, 25, 26, 27, 39, 40, 47, 55, 68.

the Charity Commission is like the Chief Registrar the authority for seeing that the trustees do their duty; and similar machinery is required both in the one case and in the other. The Charity Commission deal only with endowed charities—with the trustees of the dead hand. The Registrar deals with, and through, responsible trustees who hold office for the enforcement of interests in which all the members are directly concerned. But in both cases, there is the condition to which Sir George Young drew attention. The institution is dealing with the interests not of the passing generation only, but in a great measure with the interests of its successors. The claims of one generation are closely involved in those of another; the investments are held in common for all members; the society, by the nature of its privileges and by its registration, assumes a kind of civic personality. Its property has for these reasons to be safeguarded from the point of view of its members and of the community. There must be continuous accountability, and the society cannot dissolve except formally and on certain terms. That this is an argument applicable to other than endowed charities is proved by the fact that not friendly societies only but “benevolent and charitable societies” take advantage of the Act.¹ These societies, however, in London at least, are with one exception—a hospital—benevolent societies, whose members are eligible to receive charitable benefits under various conditions by reason of their payments to a common fund, and not societies for the grant of eleemosynary benefits to outsiders who have paid into no such fund. But in spite of this difference, the argument in favour of some continuity of public supervision may be pushed one step further and applied to yet one class more. If it applies to voluntary “benevolent” societies it applies, though on rather different grounds, to voluntary eleemosynary societies. They, too, are in most cases managing their funds and carrying on their work for others than the members of the passing generation. Their organisation involves considerations that affect their future administrators very greatly. Sir George Young said ²:—

“It has appeared to me that a line might be drawn in regard to endowments arising out of voluntary contributions, of which the principal intention at the time seems to have been that they should have been spent as received, namely, if the administrators at the moment said: ‘With regard to this sum that has now come in, we will not spend it this year, or next year, but we will put it by and use the income of it,’ and, if that continues, that it might be considered that they had power to confer upon it, and that they did confer upon it, the nature of an endowment. It would seem rather hard, after one generation of prudent administrators, taking advantage of a windfall or of a wind that filled their sails and filled their coffers with money, had abstained from dispersing everything that came in, and had formed a nucleus which would enable the charity to tide over bad times in future, that that nucleus, that accumulation should still so far retain the character of a voluntary contribution in the eyes of the law, as to be liable to expenditure in any year that a body of administrators who had more extravagant or less cautious ideas happened to find themselves in possession of it.”

65. There are many societies which have investments which are in the nature of an endowment, that is to say, the income drawn from their investments is used to supplement voluntary contributions; and the capital itself is seldom realised and used for current purposes. And it may be thought that to treat this capital as an endowment and make it impossible for the managers to realise it without the permission of the Charity Commissioners would be to impose too great a restriction on the charity; but intervention need not be pushed so far. Charitable societies in want of the kind of security that Sir George Young would desire to give them are using as sufficient for their purpose the registration which is placed within their reach by the Companies Acts. Under Section 23 of the Companies Act, 1867, an association for the purpose of “promoting commerce, art, science, religion, charity, or any other useful object, which does not involve the division of profit, may, if it obtains the licence of the Board of Trade, be incorporated by registration with limited liability, but without the addition of the word ‘limited’ to its name.” Here, as in the case of eleemosynary charities, the benefits of the charity are available for the common good, not, as is usually the case in benevolent societies, for the charitable advantage of particular members. Under the Companies Acts by the Memorandum of Association the association provides for the proper application of its funds and for the liability of members in the event of the association being dissolved. True accounts have to be kept, and to be open to the inspection of members. Once a year the accounts have to be examined, and the correctness of the balance sheet ascertained

¹ Reports of the Chief Registrar, Part A., App. ii., p. 78, London, 1905.

² Young 31243.

by one or more properly qualified auditors. On the other hand the subscribers of the Memorandum, together with such other persons as may from time to time become members of the company, are a body corporate by the name contained in the Memorandum of Association, capable forthwith of exercising all the functions of an incorporated company and having perpetual succession and a common seal, with power to hold lands.

66. The number of charitable associations registered under Section 23 were four in 1904, eleven in 1905, ten in 1906, and seven in 1907.

Conclusion.

67. Subject, then, to the further consideration of the question, which must follow our examination of the present position of endowed and voluntary charities, we would conclude that the presumption is that some registration and supervision of voluntary charities is desirable, at least on the lines common to the Charitable Trusts Acts, the Friendly Society Act of 1896, and the Companies Act of 1867. In these cases registration carries with it requirements that tend to secure careful and business-like management, combined with privileges which give to the society which registers some of the advantages of incorporation.

68. But to set out the facts fully for our purpose, we have still to refer to one or two legislative provisions that bear upon charities.

XII.—FURTHER ACTS AFFECTING THE REGISTRATION OR ADMINISTRATION OF CHARITIES.

Registration of
endowed charities
at County
Councils and the
Councils of
County
Boroughs

69. The Local Government Act of 1888 transferred to the county councils and the councils of county boroughs the registration of charitable gifts, which was conducted formerly at the office of the clerk of the peace of the county or city or town being a county in itself, under 52 Geo. III. c. 102.¹ The registration was made by a memorial or statement of the real and personal estate and the income, investments, and objects of charities and charitable donations for the benefit of any poor or other persons in any place in England or Wales, with the names of the founders or benefactors and the persons having custody or control of deeds and other documents. The Act extends only to endowed charities as defined in Section 10,* and is, it would seem, practically obsolete.

70. In 1892 a Charities Inquiries (Expenses) Act was passed “to authorise the councils of counties and county boroughs to contribute to the expenses of inquiries into certain charities.”² These inquiries were “conducted by the Charity Commissioners into any charities which are by the trusts governing their administration expressly appropriated in whole or in part for the benefit of their county or county borough or of any part thereof.” They were made in regard to London and to thirteen counties and the West Riding of Yorkshire and in some county boroughs. But the method has not been generally applied. Yet, if it were managed on economic lines, it would, with the information already in the hands of the Commissioners provide the data for a most useful and handy scheme of reference and registration. The Charitable Trusts Acts indeed do not require the Charity Commissioners to keep a register of charities, but it appears that by the necessities of their work a register has been compiled. We have already, therefore, a central register at the Charity Commission and a method which might be utilised for its extension for practical purposes; and the question arises how we may best turn these to account for the better administration of charity generally.³

* That is, it does not extend to any charity or charitable donation not issuing out of or secured upon lands, tenements, or hereditaments, or directed by the donor or founder to be secured thereon, or to be permanently invested in Government, or public, stocks or funds, or to any charitable donation which, by the direction of the donor or by the lawful rules of any charitable institution may be wholly or in part expended in and about the charitable purpose to which the same may have been given, at the discretion of the governors, directors, managers or trustees of such charitable institution.

¹ Local Government (England and Wales) Act, 1888, 51 and 52 Vict, cap. 41, Sec. 3 (xv.). Tudor on Charities and Mortmain, p. 307. ² Charities Inquiries Act, 55 and 56 Vict., c. 15. Thirty-sixth Report of the Charity Commission for England and Wales [Cd. 5685], pp. 12 and 13, and references in subsequent reports, especially App. B: Forty-fourth Report, p. 48. [Cd. 8413]. ³ Thirty-seventh Report, p. 13; and other subsequent Reports. [Cd. 5986].

71. It should be added, that the results of the co-operation of the Commission with the county and borough councils has been the discovery of unknown charities, the rescue of charities which were in danger of being lost, and the ascertainment of cases of improper administration on the part of trustees of charities.¹ These results suggest that an altogether closer relation between the Charity Commissioners and local administration would be desirable; and if local committees were formed in some definite relation to the endowed charities and to the Charity Commission—especially, so far as it may be possible, in some friendly and even informal consultative relation, the wish expressed to us by Sir George Young might be yet further realised. “We court,” he said, “the opportunity of utilising the best experience of those engaged in charity work. Anything which would tend to increase the relationship between the Charity Commissioners and those who are engaged in personal charity work ought to be encouraged.”

XIII.—CORPORATION AND PARISH COUNCIL TRUSTEES.

72. Next as to municipal corporations. By the Municipal Corporations Act of 1835 under Section 71 the policy was adopted of divesting the corporations of estates held by them under special charitable trusts and of providing other Trustees in their place.² The administration of the Charities was kept “entirely distinct from that of the public stock and borough fund.” Again, under the Corporations Act of 1883, if a municipal corporation was dissolved, the Charity Commissioners were “empowered by means of schemes to vest their property in the charities in other persons or bodies corporate, as they might think right for the benefit of the inhabitants.” Thus municipal charities have been freed from the corporations that formerly controlled them. Both legal estate and administration are in other hands. The point is of importance. If the charities in towns were reorganised, the trustees might be appointed by a local board of charities and the direct connection with the municipality would then cease.³

73. By the Local Government Act of 1894 the parish councils in rural parishes were in certain cases made the local authority for holding the property of parochial charities, but not as a rule.⁴ A parochial charity, as distinguished from ecclesiastical charities, is defined as “a charity the benefits of which are, or the separate distribution of the benefits of which is, confined to the inhabitants of a single parish, or of a single ancient ecclesiastical parish divided into two or more parishes, or of not more than five neighbouring parishes.” The legal interest in all the property of these charities, which had formerly been vested in overseers with or without churchwardens, passed to the parish council. The churchwardens and overseers were superseded by trustees appointed by the parish council; and with the consent of the Charity Commissioners trustees other than churchwardens and overseers were allowed to transfer property held for any public purpose connected with a rural parish to the parish council.

74. Under the London Government Act of 1899 provision is made for the vesting in the borough councils of all legal interest in property hitherto vested in churchwardens and overseers, other than property connected with the affairs of the church, and for appointing trustees in place of the overseers.⁵

75. In those cases the property vests in the local authority, the administration lies with trustees; and the facts suggest that if a local centre for the administration of charitable relief were desired, some of the trustees in a parish or a group of parishes might in part form it. The same suggestion may be made in regard to the trustees of borough councils in the Metropolis.⁶

76. If we make a survey of the statements and facts so far submitted, we may conclude that there is a definite standard of administration which may be applied as a test to the efficiency of administration as we now find it in different parts of the country. General conclusion.

¹ Young, 31190, and Thirty-ninth Report of the Charity Commission, p. 19, and other Reports of the Commission. ² Municipal Corporations Act, 1835, 5 and 6 Will. iv., c. 76, Sec. 71. Charitable Trusts Act, 1853, Sec. 65. Municipal Corporations Act, 1882, 45 and 46 Vict., c. 50, Sec. 133. Municipal Corporations Act, 1883, 46 and 47 Vict., c. 18, Sec. 3. ³ Tudor on Charities and Mortmain, pp. 792, 795. Young 31131. ⁴ The Local Government Act, 1894, 56 and 57, Viet., c. 73. Sec. 75, 5 (2) (c) 14 (1) and (2). Young, 31156, 31159. ⁵ The London Government Act, 1899, 62 and 63 Vict., c. 14 23, (1), (3), (4). ⁶ Lewis, 22082.

This standard would require of those who participate in the administration the endeavour, not merely to supplement poverty by gifts, but to remove distress by well planned aid fortified by personal oversight and care. Next, there is accepted alike by the Charity Commissioners and by the Poor Law authorities, as exemplified in what is known as Mr., the late Lord, Goschen's Minute on Poor Law Relief, the principle that there should be a recognised division of work between the Poor Law authorities and the managers of charities, a division that implies that they should each fulfil a somewhat different function, but should none the less each co-operate with the other. We have seen further that a system of safeguarding endowed charities has been gradually developed and is now in operation, that a doctrine of *cy-pres* has been widely applied, and that under the provisions of Acts of Parliament a system of appropriating charities to altogether new uses has been enforced. On the other hand, there is no central administration applicable to voluntary charities though there is an evident desire on the part of many charities to obtain some kind of *status* by Act of Parliament, by Charter or by registration under the Friendly Societies Act of 1896, or under the Companies Act, 1867. Finally, apart from endowed charities which are administered under schemes by private trustees, there are charities which are administered by trustees acting for counties, county boroughs, parish councils, and Metropolitan boroughs, which, in conjunction with other endowed charities and with voluntary charities, might be the nuclei of some new local organisation.

XIV.—EXTENT AND CAUSES OF POVERTY.

77. We propose now to submit the information that has reached us from the inquiries that have kindly been made through the bishops and clergy in most of the dioceses in England and Wales as to the state of poverty. They will indicate in some measure the local conditions with which those who administer voluntary relief have largely to concern themselves. Subsequently dealing with the country districts, and the towns, and the Metropolis separately, we would submit evidence respecting the charities and their management, and the proposals made to us for the formation of some administrative system of responsible local committees or boards of charity.

Of the diocesan returns themselves, we should add a word. They represent an endeavour to obtain a census of opinion from the clergy throughout the country in regard to the extent of poverty and in regard to a few points on which in common conversation there is frequent criticism of the Poor Law. The results appear to us to be very valuable, especially as to the condition of the poor in the country generally. This and the method of charitable assistance are the only points with which we are able to deal. But, considered as tests of opinion, the replies to other questions are hardly of less interest as, for instance, those made to the questions whether there is any amount of unrelieved distress due to the reluctance of destitute persons to resort to Poor Law relief; whether there is distress due to inadequacy of relief; how far there is overlapping. Altogether the returns, which in the case of many of the dioceses have been very carefully collected and considered, are of a somewhat special importance.

Reports from
dioceses in regard
to the extent of
poverty in them.

78. From the rural and from the urban districts in the dioceses of Newcastle, Durham, Ripon, Liverpool, Manchester and Chester there are the following Reports:—

Of the Newcastle area it is said:—

Newcastle.

“In the rural areas poverty does not exist to any appreciable extent. . . . Such poverty as does exist in the rural areas is found in the small towns, and in connection with the ‘rights of freemen,’ charitable trusts, and weekly markets. The first seems to limit enterprise, the second to attract an indolent class, and the third loafers.”

“In the small boroughs and market towns, especially in Berwick, poverty is in evidence, largely due to ‘casual labour,’ mismanagement and drink. In the south-east corner of the diocese, where the population is almost entirely industrial, poverty exists to a greater extent, and especially among the lower-class labourers, and again it is owing to lack of regular employment, want of thrift, ignorance of household management, drink and gambling. Among the miners, of whom there is a large proportion, there is considerable reluctance to support their aged and infirm parents, owing, perhaps, largely to their becoming independent at an early age, and this is aggravated by the number of miners’ representatives on the board of guardians, who are ready to support applications without enforcing the duty of children to parents.”

Of the colliery and rural districts in the Durham Diocese, it is said :—

Durham.

"There is, comparatively speaking, little poverty in the colliery and rural districts except among the aged, widows and those who are physically unfit, and that is not increasing in intensity except among the last-named class. This increase is due, as in the towns, to the operation of the Workmen's Compensation Acts in making it difficult to find employment. With this exception, such poverty as does exist in those districts is almost invariably ascribed to moral causes, intemperance, gambling, thriftlessness, etc."

"In the slum districts of the towns there is a considerable amount of chronic poverty. There is, however, little evidence to show that it is increasing either in amount or intensity. . . . The proportion of 'poor' to the whole population is not increasing. But in towns dependent on shipping, ship-building and allied industries, recent depression of trade has caused great distress."

In the Ripon Diocese :—

Ripon.

"The rural parishes contain little or no poverty. In the great majority of cases the reply is that whatever real poverty there may be is due to the moral causes of intemperance and improvidence, and to the economic one of wages being too low to enable a saving to be made against sickness and old age."

"The case in towns is very different. In some parishes poverty is intense and increasing; in others it is but little in evidence, but on the whole there seems to be a decrease in the amount of poverty."

Wakefield :—

Wakefield.

"The Diocese of Wakefield is chiefly industrial; and the population more or less dense. On the whole . . . while some poverty and distress exists, it does not appear to be generally acute or increasing."

In the Liverpool Diocesan Report it is said that :—

Liverpool.

"While more than a third of the parishes, urban or rural, report the existence of a considerable degree of poverty, only one-seventh of the total number believe that there is a tendency of it to increase."

In the Manchester Diocese in the rural districts there is :—

Manchester.

"Not much poverty, and what there is appears to be decreasing. It exists chiefly through drink and gambling, also through sickness and early marriage."

"In all the large towns of the diocese there is a considerable amount of poverty, though at the beginning of the year when trade was exceptionally good the number in distress were less than usual. Where poverty exists in the towns apart from unemployment it seems to be traceable to drunkenness, gambling, thriftlessness, and early marriages, to the irregular employment, especially of unskilled labourers, and 'a desire to work only part of the week.'"

From the Chester Diocese it is reported :—

Chester.

"The summarised returns for the thirteen rural deaneries of the Chester Diocese agree in stating that, on the whole, there is not much poverty." With respect to the purely agricultural rural deanery of Malpas, it is stated that: 'There is no real poverty.' And 'little or no poverty is said to exist in the agricultural districts of Cheshire,' too absolute statements which, it would appear from the report, "require some modification."

"In towns where there is some flourishing industry, *e.g.*, Runcorn, Stockport, Crewe, there is little poverty. The greatest distress obtains in places where trade is bad, *e.g.*, in the salt district and at Nantwich, and where a town has no important industry but considerable opportunities of casual employment during part of the year, *e.g.*, at Chester."

In the Birmingham Diocese :—

Birmingham.

"Where urban conditions prevail, on the whole, poverty seems to be increasing, the exception being in the outlying districts. Of the fifty-two (out of ninety incumbents) who answer this question, thirty-three definitely state that it is increasing, sixteen say that it is not increasing, and four affirm that it is decreasing."

"The returns for forty-five rural parishes, many of which have a population of less than 500, are practically unanimous in stating that there is no general prevalence of poverty, and several of them state that there is *no* poverty in the parish. . . . It cannot be said that the problem of poverty exists in an acute form in the rural parts of the diocese, except in so far as the difficulty of provision for old age is concerned."

79. Taking next the Dioceses of Worcester, Lichfield, Southwell, Peterborough and Ely, the replies are :—

Worcester :—

Worcester.

"Not much poverty, except in congested areas, and not increasing. It is very prevalent where there are endowed charities. What poverty there is in country districts is caused by the precariousness of employment, which causes improvidence. In the town of Dudley, the reason for poverty is stated to be a disinclination to employ people over sixty years of age. Most of the poverty is traceable to intemperance and to a disinclination to regular work."

Lichfield.

Lichfield :

"In a large percentage of parishes there is little real poverty. There are three archdeaconries—that of Stafford, which covers a large mining and industrial district known as the Black Country, together with a considerable agricultural area. Here poverty is marked as increasing in twenty-six parishes, decreasing in 120. The Archdeaconry of Stoke contains the large pottery towns, together with a mining and an agricultural district. There is not much poverty in 104 parishes; there is poverty in twenty-five; in eight it is increasing. In the Archdeaconry of Salop there is only one large town, and a certain number of market towns, a large proportion of the parishes being country villages. Here there is little or no real poverty, at all events of a chronic nature, in 104 parishes. In two instances there is increasing poverty, and considerable poverty in eight."

Southwell.

In the Diocese of Southwell, out of 444 replies received to the question: "Is there much poverty in your parish?" the answers in 410 were in the negative.

"A large numerical proportion of the parishes are purely rural and scantily populated, whilst the mining and industrial centres are, for the most part, enjoying the benefits of good trade and regular employment."

Peterborough.

In the Peterborough Diocese the answers to the question: "Is there much poverty in your parish?"

"Reveal the fact that there is very little real poverty, or, at any rate, distress, over the whole area. In a few parishes it is said to be fluctuating with the state of trade; but in no less than 380 there is said to be very little, and in only thirty-one any considerable amount. These thirty-one, however, represent a total population of 148,711, of which nineteen are parishes with populations of over 10,000."

The "considerable amount," therefore, refers chiefly to the larger towns.

"Out of 106 parishes which answer the question whether it is increasing or decreasing, thirty-two state that it is increasing, thirty-two that it is decreasing, and forty-two that it is practically stationary."

The increase is in the more populated parishes, the decrease entirely in parishes with a population under 500.

Ely.

The Ely report does not contain the question as to the extent of poverty, but in 387 parishes for which figures are supplied, the approximate number of poor families is thus returned:—

| | | | | | |
|---|---|---|---|--------|------------------------|
| "Total number of families | - | - | - | 86,650 | } about 9 per cent. |
| Families living on insufficient wages | - | - | - | 2,800 | |
| Dependent upon charity or Poor Law relief | - | - | - | 5,600 | |

80. Another group may be made of the dioceses of Gloucester, Hereford, Bath and Wells, Exeter, and Truro.

Gloucester.

The Gloucester reply relates: (a) to parishes in Gloucester and Cheltenham. Here, it is said, that there is a good deal of poverty, mostly among the casual workmen, but destitution is met by the Poor Law; (b) to parishes with populations of 3,000 and over, and the reply is: "Always poverty, but destitution is met by Poor Law relief—not increasing in intensity;" (c) to parishes with populations under 3,000. In regard to these the answer is the same.

Hereford.

Hereford reports:—

"In a diocese where employment is chiefly agricultural, with wages of 11s. to 15s. a week poverty of the kind implied in such wages is, naturally, taken for granted. 'We are all poor' is a common verdict. But, apart from the privations admittedly attendant on wages like these, poverty of a severe type is said not to exist widely. There is an almost unanimous consensus of opinion that it is not increasing, and some little evidence that it is decreasing, and that, too, although there are frequent complaints of a steady diminution of industrial efficiency among the labourers. In only two replies is general poverty stated to be on the increase."

Bath and Wells reports:—

"There is not 'much poverty' in Somerset. Of the 325 of the clergy who reply to the question, 95 say that there is 'none,' or 'very little,' or 'not much.' Only thirty report to the contrary, and they speak almost entirely for the towns and chiefly for Bath."

Exeter reports :—

Exeter

"There is a general consensus that in country parishes throughout the diocese poverty is decreasing; and that such poverty as there is, exists, possibly to a small extent from low wages, but much more from drink habits, consequent thoughtlessness, improvident marriages, and the unwise administration of doles, which last breeds a pauper temper. In the country proper, there are few unemployed, unless for some reason or other they are practically unemployable."

"In towns, especially the larger towns, it is said that though poverty does not increase in ratio with the increase of population, there is a great deal of regrettable poverty. Immorality tends to poverty; but the chief causes of poverty are the same as in country districts, only in a more aggravated form, viz., intemperance, want of thrift, large families, and local charities and doles."

"In large seaside places where tourists create a summer harvest, the intermittent character of much of the work has a degenerating influence. Money easily earned in the summer season is not husbanded to meet the stress of winter. In 'The Three Towns' there is the reduction in dockyard labour, ups and downs of the building trade and occasional dislocation of labour. . . . It is generally agreed that the causes of poverty are more moral and social and hereditary than economic."

Truro reports :—

Truro.

"There is a large mass of pauperism that we are called on to relieve, which from local causes is not just now largely increasing (mining boom, etc.), except in some special parishes."

Passing to Wales, we have from the Diocese of St. David's the following note :—

St. David's.

"The great majority of incumbents expressed the opinion that there does not exist much poverty in their parishes and that it is not increasing in intensity. Only sixteen incumbents, of whom eight were from the industrial area, stated that much poverty existed in their parishes; and only seven considered the poverty to be increasing in intensity."

"In rural parishes the poverty is said to be due to old age and sickness; and in towns to drink, thriftlessness, and in a few cases, to lack of work."

81. The St. Asaph reply states that "the population is mainly agricultural and pastoral," apart from the Denbighshire and Flintshire coal districts, while a certain number are engaged in lead mining and quarries and some at seaside and pleasure resorts.

St. Asaph.

Of the agricultural and pastoral area—

"The answers are nearly uniform, a large number of poor, but very little actual poverty. Those who are disabled by age, or infirmity, or sickness are willing to receive Poor Law relief, which is administered fairly liberally. In most of the parishes there are coal and clothing clubs, and in some places sick clubs. . . . Benefit societies, Oddfellows, Foresters, and the like are also very general, and undoubtedly do much to stave off want in times of sickness."

In the mining and industrial area in one or two places, Bagillt and Flint, for instance, owing to exceptional industrial causes, such as the transference of industries elsewhere, there has been much actual poverty. In other places—Buckley, Brymbo, or Ruabon—business has been fair and poverty has been kept away.

In watering places there always will be a certain amount of poverty and distress. They draw together the unthrifty who do not mind a short spell of hard work but will not plod through a task all the year round; and lodging-houses are a speculative business often started on insufficient capital.

82. The south-western dioceses, exclusive of London and Southwark, may be taken next—Salisbury, Winchester, Chichester, Canterbury, Rochester. Salisbury writes :—

Salisbury.

"Ninety per cent. of the returns state that there is no real poverty; the remaining 10 per cent. say that there are some cases, and attribute the causes to drink and thriftlessness, improvident marriages, increase of insanity, and fluctuations in a particular trade or employment; all agree that poverty is not increasing."

For Winchester a few abridged Returns are given :—

Winchester.

I.—A fair amount of poverty increased lately. Unemployment normal last winter.

II.—No special poverty. Conditions normal. Agricultural.

III.—Great poverty. Seamen and dock labourers. Caused by drink, overcrowding, and casual labour. . . . Dock labour constant source of distress. Attracts wastrels; is intermittent.

IV.—Not much poverty, and not increasing.

V.—Considerable and increasing poverty; due to want of independence and backbone. Riverside work casual, seasonal, uncertain, employment better.

VI.—A good deal of poverty. Unemployment due to dockyard discharges.

VII.—Large amount; acute poverty much increasing, largely due to migration from slums into new streets here.

VIII.—A good deal of poverty; but not increasing. Many live on visitors, making money in the summer; out of employment in the winter. Moral causes: intemperance, idleness of men, living on wives' earnings.

IX.—Not acute poverty. Employment normal.

X.—A good deal of poverty. Employment irregular. Want of thrift and drink causes poverty; 200 men out of work last winter.

Chichester.

In the diocese of Chichester replies have been received of ninety-three town and 227 country incumbents:—

"There is a general consensus of opinion that in the towns conditions as to food, clothing, and housing, have improved, but some deterioration in housing (arising from high rentals or the unsuitability of the houses for the working classes) is mentioned in a few of the returns." "On the whole, there is not a general increase of poverty. Where such increase is reported, it is almost entirely confined to the towns of Brighton and Hastings. Amongst causes of poverty are mentioned drink, the want of thrift in prosperous times, and in some cases betting and gambling."

From the country two-thirds of the returns state that there is no actual poverty, and the remainder—

"Very little. . . . For such poverty as does exist the main causes mentioned are intemperance and want of thrift."

Canterbury.

From the diocese of Canterbury come the following statements:—

"In the country parishes we find that there is no real poverty. There is nearly always work enough for those who can do it. If in some cases the employment is not constant, there is the possibility of supplementing it even in the winter by work of another kind. The poverty that does exist is due for the most part to moral and not to economic causes."

"In the towns there is poverty varying in different localities. But much more stress is laid upon the moral rather than economic causes. As to the latter, the chief reasons assigned are want of work amongst unskilled labourers. . . . High rents are also mentioned. Amongst older persons, the poverty is attributed in the towns to the difficulty to find employment. With regard to the moral causes, with reiteration we find poverty assigned to 'the waste of money in drink,' 'thriftlessness, money spent on pleasure out of all proportion to earnings,' 'growing extravagance in the manner of living,' 'improvident marriages,' 'slate clubs as substitute for benefit societies,' 'a spirit of pauperism has been fostered by petty doles and local charities,' and this last applies equally to church charities and to those controlled by parochial and municipal authorities. . . . There is an increasing tendency on the part of children to allow aged parents and relations to apply for out-relief. . . . In the country, a large percentage make no effort to save . . . and, this is from Croydon, . . . 'the lack of sense of filial responsibility has increased during the period in which the State has done so much for the children. . . .' We are driven back again and again to the moral cause. The poverty is to be attributed to a failure in character, rather than to any particular economic cause. . . . The expectation of relief appears to have contributed in no small degree to the encouragement of pauperism. . . . Another bad feature in some towns is the number of unskilled casual workers who are content to live on the earnings of women; when the latter are unable to work, distress instantly ensues."

Rochester.

The Rochester reply is as follows:—

"Dividing the parishes roughly into urban, manufacturing, and agricultural, to the first part of the question: 'Is there much poverty' the answer from more than half of the (187) parishes is in the negative, i.e., that there is little or no poverty. In those parishes where poverty is reported to exist, it is almost invariably stated to be increasing, or likely shortly to increase. . . ." Out of a total of about 116 parishes that may be classed as mainly agricultural, distress is admitted to exist in only twelve, or of those twelve in only two cases is the distress attributed to general agricultural depression.

"Practically all the urban parishes attribute distress to depression in the building trade, increased in some cases by thriftlessness and drink."

St. Albans.

83. St. Albans includes the populated districts on the East of "London—London over-the border, in which are situated some of the very poorest parishes in England." Extreme poverty in the diocese is mostly confined to this area. The definition of "much poverty" varies in different localities and with different men, but sixty-four town parishes speak of much poverty, and thirty-eight say that it is increasing.

Fifteen country parishes say that they have much poverty and six say that it is increasing. Acute poverty in country districts would appear to be rare. "Those out of work leave the place."

84. Lastly we take the replies for the dioceses of Southwark and London. From Southwark. Southwark the reply is:—

"In the suburban and country parts of the diocese, there does not seem to be any growth of poverty except that incidental to the building trade, which is rather slack in some places; but in the Metropolitan area, and more especially in the Archdeaconry of Southwark, reports show a considerable increase.

"The causes for this seem to be, from the moral point of view, drink and thriftlessness, from an economic point of view to be owing to the fact that the richer people are gradually going further afield, and leaving many who used to be employed by them to shift for themselves, and further, to an excess of unskilled labour, and to ignorance of domestic management, consequent upon too early marriages."

It is difficult to generalise about London, and the Bishop of London's Commission London. have therefore published examples of replies as indicating the state of things, instead of drawing up a summary. To the questions: "Is there much extreme poverty in your parish? If so, to what do you attribute it?" The examples of replies are as follows:—

(i.) No; though proportionately, this parish containing few of the artisan class, there is too much. Rents here are very high, but the chief trouble is irregularity of employment, particularly in the cases of unskilled labour.

(ii.) Yes, many of the men are casual labourers, and many only obtain work in their calling during part of the year. There is a good deal of drinking, both amongst men and women.

(iii.) Not a great deal of extreme poverty, except under special circumstances when trade is bad and casual labour is in small demand. High rents, which mean sub-letting, are, in my judgment, a chief cause of squalid living and low ideals and want of self-respect.

(iv.) There is a good deal. Much attributable to drink; but a good deal also to the fact that many of the younger men have never learned a trade.

(v.) In a population of 6,500, there are about 1,000 desperately poor. The sole causes seem to be drink and extravagance; especially extravagance in dressing the children and in expenses on holiday excursions and treats.

(vi.) About 1,000 people belong to the "slum class." Their poverty is, in my opinion, due to:—

(a) The uncertainty of employment for the *unskilled labourer*.

(b) Improvidence:—

(i.) Reckless marriage.

(ii.) Drink.

(c) Disproportionately high rents for tenement property.

To the questions: "Is the distress increasing or decreasing? What is the cause of the variation?" the following examples of replies are given:—

i. The last two years there has not been quite so much out of work, but a *serious feature* is the difficulty lads—fairly capable, honest and sober—find of obtaining work.

ii. Increasing. Poorer people coming to live here.

iii. Increasing on the whole. This is largely due to the migration of better-class families to the suburbs. Undoubtedly religious influences are among the chief causes for this aspiration after more congenial surroundings.

iv. Steadily, if slowly, increasing. The better-off folk push *out*; their places are taken by a lower social class.

85. We have given these notes at some length, both because they indicate what may be accepted as a brief summary of the state of the country, and because they suggest the conditions which any schemes for the better relief of distress would have to meet. Needless to say that scattered throughout our evidence many references could be cited in support of the various opinions and generalisations which we have epitomised.

86. The statements of the causes of distress it is not necessary to reproduce in further detail. They tell their own tale. Economic causes are constantly at work to alter social conditions and to place within the reach of people both many opportunities for

good wages and many obstacles resulting from the instability of industrial and commercial life. But, after making all allowances for these, the vital issues in the problem are rather moral than economic. And many of the evils to which reference is made in the reports can hardly be affected at all by relief, though relief unwisely given may aggravate them. To obtain results, therefore, with or without relief, some other element has to be brought into play, which, whether it work through personal influence or by considerate refusal of relief, or by treatment, or by general measures will strengthen and develop self restraint and independence of character.

87. The impression which the evidence gives in regard to the rural districts is that, though there are low wages in the country and in that sense "we are all poor," the poverty of the rural districts is not what some of the writers have called "actual poverty," or "poverty of a severe type." It is the clean and self-respecting poverty which is consistent with a small wage, that is spent according to a routine of careful expenditure, and so suffices. "Actual" or "special" or "acute" poverty is due to misfortune, the misfortune, for example, of the migration of a trade to some other place or to some want or uncertainty of employment, the results of which have not been, or cannot be, avoided without loss and suffering. But this is a very small part indeed of the whole. "Actual" poverty is due, also, it is repeatedly stated, to degrading habits of some kind, such as intemperance, immorality, or gambling, or to, what one may call, fatal and habitual social misjudgment, which shows itself in many ways, such as improvident marriage, thriftlessness, and disinclination to fulfil the duties of relationship. The periods of out-of-work due to physical causes, sickness and old-age have their effect also—difficulties which it should be possible to meet in great part by insurance and foresight, as they represent evident and calculable risks. But, after all has been said, in far the larger number of rural parishes there is not much poverty or little or no poverty, and very seldom is it on the increase. Indeed, the reports as a whole are most satisfactory.

88. The distress in industrial towns, on the other hand, especially among the unskilled classes, is serious. The inducements to excess of some kind—which may be summed up in the words "moral causes"—have a freer play, while at the same time economic instability is greater. The individual has thus to educate himself to bear the pressure and distraction of influences to which he becomes very slowly habituated; and social aid and charitable help find their office in promoting this process of habituation, so that the great self-restraint and steadfastness necessary to an industrial life in the large centres of population may be acquired by a larger number of the unskilled class, as it has been acquired by the greater part of those engaged in industry. Its relation to this question, and to the cases of individual distress which come to light, partly in connection with it, gives a special character to charitable work in these centres, and suggests the nature of the administration which should be put in force in them.

XV.—ENDOWED DOLE CHARITIES IN THE COUNTRY AND IN TOWNS.

89. With this general view of the problem before us we turn to the endowed charities in the rural and in the urban districts.

90. It would appear that the total gross income of the endowed charities which come within the scope of our Report is £991,959, of which £666,147 is applicable to the maintenance of almspeople and pensioners, and £325,812 to distribution among the poor.¹ The whole of this sum is appropriated: "most of it very strongly appropriated to localities." This is a consideration which affects endowed charities especially, but relatively by habit and procedure it affects also the great mass of voluntary charities. Whatever scheme of general organisation may be proposed, the charities themselves are established to fulfil certain definite purposes, and an adaptation of them to other even slightly varied purposes is very difficult.

91. The endowed charities which in general terms are called doles receive very severe criticism, managed as they are at present. It is not possible to read through the evidence—the replies from the bishops and clergy of the dioceses, the evidence taken

¹ Young, 31182, 31183, and App. No. XII. (G), p. 621, Vol. III., and (H), p. 623, Vol. III. Mr. Drage's Return, 1898, 110. See also the Report of Select Committee on Charitable Trusts Acts. p. 5.

by the Commission, and the reports furnished by our investigators—without coming to the conclusion that some far-reaching changes in regard to them are absolutely necessary; and we preface a more detailed examination of the subject by a statement of this evidence.

92. It is stated in the Peterborough Report that “most parishes, except the new districts in towns, have doles of some sort, though they vary from ‘bad,’ ‘mischievous,’ ‘pauperising’ and ‘leading to jealousy’ to ‘good,’ ‘beneficent,’ ‘useful,’ and ‘adding to comfort and happiness.’” To some extent, at any rate this is a matter of administration. In many parishes, however, a share in these ancient charities is obtained by all householders who are in receipt of weekly wages as a right, whether in money or kind, and the feeling seems quite general that when the amount given is small and universal it becomes at once mischievous and even of an immoral tendency.” In two parishes, one of them under 200 in population, £70 and £80 is annually distributed in cash. The vicar says: “All the village participate in it, except those owning live stock,” and he has a “distinctly unfavourable opinion” of it.

“A strict inquiry seems to be desirable into what constitutes eligibility (so far as position is concerned) for the old parochial charities. Strong working men in the prime of life claim their share, *simply as labourers*, while widows and aged people suffer, for whom the charity (*if kept for them*) would be a real and valuable boon. The keenness of these men to obtain their share however small it may be, shows the harmful effect upon an otherwise manly and independent character.”

The Ely Report contains some weighty sentences on the administration of endowed charities.²

“Our imperfect statistics which lack the particulars of almost a hundred small parishes, prove that the income of the endowed charities in the diocese exceeds £22,000. Though not a large amount as compared with the funds of some other dioceses, it is large enough if efficiently administered to produce important results. Unhappily the documents before us tend to show that, under existing conditions, the administration neither is nor can be efficient.

(1) The mere fact that there are 935 separate trusts is a very serious obstacle. A separate organisation for managing every £20 of the income! But even that is not the worst. A great number of these trusts have an income of from £3 to 15s., sums not large enough to effect any solid good, yet quite large enough to be the objects of intrigue, and the causes of much jealousy and ill-feeling. Only if the administrators are both entirely wise and entirely trusted by the people can the distribution of such funds be innocuous.

(2) It has already been shown that in the majority of parishes the trusts are administered either by the incumbents alone or by the incumbent and churchwardens. Now it is only a minority of the clergy who have received any training in the principles of charitable relief; and the answers we have received make it clear that such knowledge does not come by the light of nature. Still less can we expect the churchwardens, who are appointed for reasons quite independent of almsgiving, to possess this kind of skill. Clergy and churchwardens alike are exposed to the criticism of the ignorant, whose idea of justice is always a mechanical rule. What wonder, then, if the administration of small funds is often either arbitrary or mechanical? We cannot refrain from quoting an example of churchwardens' charity which is given in one of the returns:—

“Our considerable charities are made of little use by being divided up among the whole of the cottagers. Families earning £3 a week are treated in the same way as those who are in real poverty; but the churchwardens cannot be persuaded of the folly of this waste.” This is, indeed, the prevailing vice of distributing committees. Fearing the criticism which would be provoked by substantial gifts to deserving cases, they shield themselves by a mechanical allotment of useless doles. As to the other bodies of trustees we have no direct evidence; but it is reasonable to assume that many of them labour under the same disabilities.

(3) One of the besetting sins of charitable trustees is a desire to act independently, refusing co-operation with other bodies which are doing similar work. The effect of this feeling is that, all over England, plausible mendicants make a comfortable income by obtaining grants from several sources. This diocese is no exception to the rule. In those many small parishes, indeed, where all the funds are in the hands of the incumbent, and the Nonconformists give no relief of any kind, the danger is not serious. But in the larger parishes, especially in the towns, there are frequent instances of overlapping. Of the incumbents who are aware of the evil only twenty (mostly in town parishes) are able to say that an attempt has been made to co-ordinate the sources of relief. Where a Committee has been appointed to deal with all the local funds, and to work in concert with

¹ Diocesan Report, Peterborough.

² Diocesan Report, Ely.

the guardians, the results are said to be thoroughly satisfactory. The town of Bedford is particularly well organised in this respect, and derives much advantage therefrom. But the effect of the want of system, which is so general in the diocese, may be read in the discouraging answers given to our fifth and eighth questions. The perusal of them leaves a depressing conviction that the greater part of the "relief" which is being given is either useless or positively injurious to the recipients.

(4) The wisest administrator can effect little good if he is bound by covenant to devote much of his care to mischievous objects. We have, therefore, to consider the purpose for which the charitable trusts have been founded. Some of them are excellent. Parts of 72 trusts are devoted to education, of 60 to the housing of the poor, of 15 to apprenticing boys, 11 to hospitals or district nurses, and a few to allotments of land. But "charities" of another class are more numerous and better endowed. No less than 172 provide for doles of coal, 125 for doles of bread, 91 for doles of money, and 82 for doles of clothing. The returns contain many laments over the mischief which these relics of an obsolete conception of charity are inflicting upon the present generation. Where the funds are large (and in some places they are very large) widespread demoralisation is the result. All the parishioners are inclined to grasp at a share in such distribution; and trustees exposed to the fire of local criticism must be unusually courageous if they can wholly resist the claim. Consequently, for every case of deserving poverty which is relieved, several who are undeserving obtain a portion of the spoil, while several more are not less pauperised because their unjust desires have been disappointed. We cannot wonder, therefore, if the wiser clergy are anxious to be relieved of a responsibility which involves so much odium, and carries with it so little power of doing substantial good.

These charities are subject to the Charity Commission; and many of them are administered under schemes drawn up by that body. Some of the schemes are intrinsically bad; some fail in practice because they assume too large a measure of wisdom and courage on the part of the trustees. We cannot help thinking that the time has come for a wholesale revision of these antiquated instruments.

The Gloucester Report¹ states there is a general consensus of opinion that endowed charities, which consist of doles have a demoralising effect on the recipients, and the Committee think that the Charity Commission might with advantage sanction schemes for the conversion of dole charities to purposes more beneficial to the parishes concerned.

The Exeter Report states:²

"It is agreed that the existence of large endowed charities in a place tends to create whole areas of dependence and destitution."

The Hereford Report has the following sentences:³

"It is most regrettable to find that a large number of parochial endowed charities are of the kind known as "dole" charities. They are generally described as "unsatisfactory," "wasteful," and "demoralising." These doles are given in bread, coal, clothing, boots, and cash, and bread is stated to be the most wasteful form of gift. Some recipients will not even take the trouble to call for the bread which has been allotted to them. Very many of the parochial charities have under the trust deeds to be distributed to fixed numbers of persons or families in money or kind, and it appears frequently to occur that these numbers are in great excess of the really necessitous poor of the parish. Even where the hands of the trustees are not fettered by the terms of the trust, it is the practice of many parish councils and other trustees, as a result of custom or a mistaken sense of justice, to distribute the proceeds of the charities in doles among the entire working population of the parish. Complaint is made that in some cases these doles have to be earned by a regular attendance at church services, and there are clergy who strongly resent having to perform divine service before a congregation consisting partly of paid worshippers. The doles are sometimes too large, often insignificant from excessive division, and, being regular, are anticipated before receipt, and for all practical purposes serve no useful end, but are merely aids to low wages, which they help to make still lower. Many incumbents express hopes that powers will be taken, if such are not now existent, to revise the trust deeds. There is an almost entire agreement that these dole charities would be better reserved for emergencies, such as cases of sickness, sending patients to convalescent homes, or providing outfits for girls of necessitous parents to enable them to enter domestic service, or in paying parish nurses. There are also important proposals for utilising the capital for the provision of almshouses, as indicated under the last question.

"Closely connected with the question of outdoor relief is that of the provision of pensions. It is not quite easy to gather from the returns how many parishes have a satisfactory pension system already in operation. Twenty-nine speak of such a system, but

¹Diocesan Report, Gloucester.

²Diocesan Report, Exeter.

³Diocesan Report, Hereford.

it seems to be on a very restricted scale, consisting, in some instances, of 2s. 6d. a month to a few old people, sometimes of 1s. a week to aged church folk; in one instance it is given frankly as a weekly reward to old people who attend church regularly.

"In seventeen parishes the endowed charities have been converted, under a scheme drawn up by the Charity Commissioners. The amount formerly used for doles is, in these cases, applied usually, in the first instance, to pensions. Almshouses, nursing funds, apprenticing, and other good objects are also included in the schemes. We are glad to notice that the clergy are evidently anxious for change. Speaking from personal experience some members of your Committee can point out that, whatever opposition there may be at first to the adoption of a scheme, it speedily dies down when once the improved methods get to work. Also, it may be added, the Charity Commissioners are prepared to vary their scheme in order to meet the special needs of the neighbourhood.

"In several parishes out-relief is reported to be dying out, being rendered unnecessary by the pensions provided under the scheme. In one or two cases the church and the endowed charities co-operate to provide pensions for all who are beyond the working age and have a good record behind them.

"Meantime, it appears that there are eighty-six parishes, of those making returns, in which there are endowed charities which are given away entirely or almost entirely, in doles. Many strong criticisms are passed upon the result; the money is given in coals and clothing to people who don't want them, and fifty-one loaves every Sunday to people who don't want them. 'The parish suffers from the number of Christmas doles.' 'So many loaves are given each Sunday—all wasted money.' In one parish the endowed charities yield an income of over £600 per annum, of which more than half is distributed in doles. That, of course, is exceptional."

"In the Canterbury report it is said that there appear to be many unreformed charities:—¹

"Two loaves a week through six winter months to widows and poor attending church. Another charity gives coal at Christmas and money to about eighty persons at Easter.' In the same parish, population 1,350, '£15 a year to thirty men and women over sixty; also grants of £1, £2, £3, to fifteen others in need of help.' Again, in another parish, population 2,321, 'On Ash Wednesday, 100 persons receive 10s. each.'

"When such grants are made we are told often that persons do not need them. It would obviously be well in some cases to secure an alteration of old schemes, and where new schemes are unwisely administered by parochial bodies, to make suggestions as to the more helpful alternatives offered by such a scheme.

"The Committee is of opinion that if the separation between Poor Law and charity were made, the desired change in the method of administration would come about of itself."

Some of the clergy write in regard to the question whether there is overlapping in these terms. "Yes; owing to the reckless way in which tickets for city charities are given to the most undeserving by city authorities." "Canterbury is a sink of small charities." And from another parish there the report is:

"There is a great deal of overlapping between various charities. A great many municipal charities and charities in the hands of trustees and almshouses which might well be reorganised. There is a regular scramble for their doles."

"From St. Albans come the following statements:—²

"As regards endowments, the very considerable amount of money that appears to be given away in doles is surprising. Whether such doles are, in all cases, really productive of good results may be open to question:—

1. "If my poor fund runs low, I have only to say so in church, and the congregation will give readily."

2. "Total about £125, of which I have official knowledge. Much in addition to this is done by private almsgiving."

3. "The charities for the relief of the poor have been amalgamated . . . they are now to be used for the upkeep of a club and reading room."

4. "I think the extent of our dole charities is on the whole mischievous, and should be glad to have the revenues devoted to some permanent object of helping appreciably the aged deserving poor."

5. "We get a little from Ecclesiastical Charities, but the recent conditions of its distribution greatly minimise its value."

6. "In my opinion wasted. Any change would be resented unless it were part of a general system prescribed by law."

7. "There are no endowments of any kind, and I think this fact has been a blessing to the parish."

¹ Diocesan Report, Canterbury.

² Diocesan Report, St. Albans.

8. "There are no endowments, I am thankful to say."

9. "I think the money spent on doles according to the conditions of the trust deeds might be more beneficially expended."

10. "The parish charity is useless, and might with others of the kind be given to some other object—preferably old-age pensions."

11. "Every parishioner, including children, whose weekly wage does not exceed 25s. per week, is entitled to share in the endowed charities, so that in some cases as much as £2 goes to one house."

Dole charities
Evidence of
witnesses as to
country districts.

93. To pass to other evidence. One witness referring to the dole charities in his parish, says:¹

"As to the effect of these charities, I doubt if they serve any useful purpose. It would be better if it were possible to utilise part of these charities as the contribution of the poor to some good object, such as the provision of a certificated nurse for the parish."

Another says that:

"The effect of the charities on the poor is rather degrading, as they cringe to the trustees." There is "great discontent, as few are satisfied with what they get as charity."²

Another said:

"I have to do with parishioners who know that they have no charities whatever and with parishioners who know that they have many. Although the two belong to the same class the difference between them is very marked. . . . It may be fancy on my part, but it really seems to change the whole tone of the people, socially and even spiritually."³

Another says of the small endowed charities:

"The benefit from them is received by persons who are not in need. As regards one of the charities, bread is only given to certain people who attend divine service on particular days. The consequence is that persons who never enter a church on any other occasion flock to it at the times. The doles, therefore, partake of the nature of a bribe for taking part in religious worship, and certainly have anything but a good effect on the recipients, as far as religion is concerned." "Once they [people who do not really need the gift] get on the list it is very difficult to strike them off, and it is also very difficult to refuse to give to other people in the same position. I have struck off some. For instance, there was a woman who was keeping a shop and who kept cows and had 7 or 8 acres of land, and she had benefit from these charities and these doles. In another case there was a widow who was paying £15 a year for her holding, and had a pony and trap and kept cows. They had this charity, and they thought they ought to have it."⁴

94. There is also a widespread depreciation of the endowed charities of the small towns. Of the results of their administration at Beverley, one said:⁵

Dole charities
in towns.]]

"The dole charities are an absolute waste. The money is taken to the first public-house. They have a bad effect on character and independence. Before Christmas people get themselves up shabbily, and touch their hats at street corners." "They look on the church as a place out of which there is something to be got." "Many of the people live on charity. Cadging is the order of the day. The charities deter people from improving their position."⁶

A trustee said:

"My bell used to be continually ringing with people asking for tickets for groceries, etc. The deserving people keep away, and the undesirables come."

95. Passing to the larger towns, we have the same criticism. Of the doles in Norwich, "More than one of these informants who had been officially connected with the administration" spoke of the dole charities as an unmitigated evil. Another, an incumbent, said:

"Norwich is pauperised to a degree, and a large portion of idlers appear to live on the 'generosity' of the Norwich 'charitable.' The poor are helped too much, and if they were helped less, and made to help themselves more, we should have less poverty and discontent."⁷

¹ Batchelor, 63879, (13). ² Hood, 71523, (13)., Jebb, 71698, (21). ³ Moody, 71940, (10)., Burges, 72139, (11). Kevill Davies, 72681 (25), 72766, 72831 (2). ⁴ Platten, Vol. VII. App. No. exciv. (8). Report on endowed and voluntary charities, p. 29, Beverley. ⁶ Cf. Lichfield, p. 32. Ludlow, p. 34. Bourne, p. 35. Staunton-on-Wye, p. 43. ⁷ Norwich, p. 14.

So at York the incumbent of a city parish said :

"The people come in swarms to the school-room, and the gifts do them no good at all. There is no limit of age ; people of thirty, and under, get the charity. Prostitutes take a room in the parish before Christmas and try to get it. It is given to men earning good wages, for instance, a telegraph wire-man, earning 28s. to 30s. a week, with a drunken wife and three or four children. The charities destroy my spiritual position. When I visit the people, they say : 'What has Mr.— brought ?' " ²

96 . In support of all this generally unfavourable evidence, many cases might be quoted, of which the particulars are given in the 'investigators' report, for they made independent inquiries in regard to a large number of cases taken at haphazard.² These show that the doles fell to many of the unjust, and to some of the just. They came to drinking and immoral people living in dirty homes, to the lazy and disreputable, to people quite well enough off to do without them ; to old almspeople who were already in receipt of a pension, or had a place in an almshouse ; to widows of good, bad, or indifferent character ; to steady and well-doing people, and to thriving families. They were indiscriminate. They promoted dependence among the independent, and palliated demoralisation, and did little or nothing to ameliorate a state of poverty, or prevent a state of distress.

97. These charities are a principal factor in the settlement of any reorganisation of the local relief. Where they are small in comparatively small populations they cannot be ignored, and where they are large it is indispensable that they should be revised and brought into co-ordination. To a great extent they are now used to supplement outdoor relief. If, as we would desire, the policy adopted heretofore by the Court of Chancery and the Charity Commission and the Poor Law, as represented by Mr. Goschen's Minute, were to prevail, they would be administered on lines parallel to the Poor Law. Co-operation would take the place of supplementation. But to make the charities useful, and to bring them into co-ordination, is usually a very unpopular task.³ Local residents and trustees fear to undertake it. Reform, therefore, must in great measure come from without.

Dole charities .
conclusion.

XVI.—SUGGESTIONS OF WITNESSES IN REGARD TO DOLE CHARITIES AND THE LOCAL ORGANISATION OF VOLUNTARY AID.

98. We next turn to some of the comments and suggestions made by witnesses in regard to the better application of doles and the better organisation of local voluntary aid. The Rev. Charles H. Heale, the Vicar of Williton in Somersetshire, in his very interesting evidence, told us that⁴ :—

Suggestions of
witnesses and
others as to the
development
of a reformed
system.

"Under the old schemes each parish provided for the relief of their own people, and the money of these old charities was practically given to the help of the parish generally. If you examine the old overseers' accounts and the old churchwardens' accounts, you invariably find that they relieved their own people ; and sometimes people connected with the place left a small sum in charity to go towards lessening the local expenses. . . . There was a house kept in almost every parish where the very poor people, who were helpless and could not take care of themselves, were herded together. . . . As far as I can gather, there was very little out-relief given in the old days, and what was given was only given in cases of sickness. I am going back more than 100 years now. Charities 'left for giving a small sum or clothing annually to the second poor, i.e., those not in receipt of parochial relief' were given to people who were not in the house."

The parish poorhouses have vanished, and their place has been taken by the union workhouses, which have often developed into general institutions for the care of the sick and aged poor rather than workhouses. Now, usually, it is possible to take advantage of much more various means for dealing with those in distress than formerly ; and institutional relief may be said to include, not only treatment of the sick in infirmaries or infirm wards under careful nursing, but the maintenance of the afflicted and of children in special homes. And these means may be still further developed by making use of private certified homes, and by regulated co-operation between the public authorities and the managers of voluntary agencies. Hence

Kendal, p. 25. Lichfield, p. 31, and Lloyd, 32062. Also the Abstract of information, p. 235. ³ Report on Endowed and Voluntary Charities, p. 32, p. 39.

⁴ Heale, 69047, 69055, 69058, pars. 29-31.

by the scheme we suggest, while the dole charities, subject to an indispensable modification, namely, that they are applicable to cases of distress, are left in the hands of trustees for local use, the Poor Law, in the larger area of the county, and with the aid of county rates, would provide such institutional relief as might seem right for the individual applicant, instead of only "the workhouse" and the "offer of the house." Outdoor relief would be restricted in its scope, and charitable association throughout the union by means of the Voluntary Aid Committee would, as far as may be, take its place.

99. Speaking of the possibility of an unification of outdoor relief and charity, Mr. Heale thought it was not possible to work local charity and Poor Law together; if this were carried out, people would cease to give to church collections, money would not be so freely given by individuals, and there could be no system or method. The charities or endowments left to the second poor ought, he considered, rather to be used for old-age pensions than for the relief of the poor under the Poor Law.

100. This line of thought is taken by several witnesses tentatively. The Rev. Henry Moody, Vicar of Wolverhampton, who was very familiar with the methods of the Poor Law, and who from about 1870 had worked continuously among the poor, in towns—in the East of London, and in Leeds, and in country districts, gave us the results of his experience.¹ He said that:—

"In some cases charity and out-relief should go hand in hand together, but at present there was no connection between them. In some way or other there should be provision for the two to work together. . . . Some means should certainly be devised so that each knows what the other is doing. . . . Occasional charity is no doubt of the greatest value, and one cannot see how the poor could possibly tide over certain times without it. In the hour of their real want they seek charity rather than Poor Law relief. In the interests of the poor themselves by all means do away with harmful relief and substitute useful charity, if it can possibly be arranged, and I think it might."

101. Another witness,² the Chairman of the Stretton Board of Guardians, suggested that the charities in a parish or town might be pooled and provide—

"A number of small pensions to carefully selected cases, and letting it be known that, unless forfeited by bad conduct, such pensions will be continued through life. In a former parish with which I was connected," he said, "a number of small charities no one of which alone was of sufficient value to do any permanent good, when distributed amongst all the aged, or all the widows, or all the spinsters of the parish, by being pooled, produced an aggregate sum from which we were able to pay thirteen worn-out folk, all of the classes for which the charities were originally intended, a weekly pension of 3s. 6d. each. All these people must have, but for this charitable help, been on the outdoor relief list at, perhaps, from 2s. to 2s. 6d. each. They had no longer any fear of the money being withheld, provided they behaved themselves reasonably well—all the annoyance and quarrelling caused by frequent distribution of doles was done away with, and the poor rate was relieved to an appreciable extent."

102. Here by consolidation dependence on the rates was reduced. In co-operation with the board of guardians, if State pensions led to its being desirable to revise such a settlement, the charities could be equally well turned to some other account on similar lines.

103. Another witness,³ Mr. Thomas Emberton, speaking of Ellesmere, where he had been a guardian for fifteen years and vice-chairman six years, proposed that a—

"Committee might with advantage be formed to administer both outdoor relief and the charities." "There is," he said, "a good deal of dissatisfaction. You see there is the vicar and the churchwarden; there is the trustee from the parish council and a trustee from the urban council, and one or two more of the other minor parishes that have been lopped off from the Ellesmere parish that have trustees really." "The guardians," he continued "have nothing whatever to do with the trustees; there is no conference with them in dealing with cases; the urban council elects a trustee; the guardians have no standing whatever."

The committee, he suggested, might be composed for the greater part of guardians (whose service on it would be compulsory) with, say, the vicar and one of his churchwardens as trustees, the secretaries of friendly societies—the Oddfellows and Foresters, and of a women's club. The committee would then refuse out-relief if they thought

¹ Moody, 71940, (10-14).

² Burges 72129.

³ Emberton, 71324, 71341, 71375, 71350.

there was fraud of any kind; or where the applicants "lived under insanitary conditions in cottages which are unfit for them to reside in" and "when they have no one to look after them and they can get no attendance; and, where we find it is some drunken, careless, improvident individual, we do not see that we are in a manner bound to give him out-relief at all." For the reasons which we are about to state we have not advocated a combined Poor Law and Voluntary Aid Committee as is here suggested, but otherwise this evidence describes what we think is desirable.¹ In this case the Voluntary Aid Committee would deal with the whole union, an agricultural union with a population of about 2,000, with Ellesmere town as its only urban centre.

104. Another witness from the same union,² "a dissatisfied distributor of Phillip's charity which, up till 1905, annually provided blankets and flannel (about £100 worth) for distribution in Ellesmere parish" said:—

"The co-ordination of medical and all other agencies for the help of the poor is sorely needed. One representative body might undertake the work of the hospital, the dispensary, the trained nurse, etc., and be in touch with the guardians, the charity trustees and other, at present, separate organisations."

105. Mr. John MacGowan,³ the general secretary of the Oddfellows Widow and Orphan Society, at Bridgwater, said:—

"To endeavour to prevent this ('a too liberal dispensing of charity, which tends to make people sordid and seems to cause them to be more and more disinclined to depend upon any effort of their own'), all charity should be organised, and its indiscriminate distribution discouraged. This might be done by establishing permanent charity organisation committees in each locality, the members thereof to be elected and some co-opted. The aim of such a committee should be to centre all charity within its own sphere of work. If charity thus organised could be assisted by aid grants from the State, the present system of out-relief would, I think, be greatly reduced, and in time might disappear in its present form.'⁴

106. Miss Joseph,⁵ a guardian of the Williton Union, said:—

"I believe, if out-relief were the exception and not the rule, and there was co-operation between the charity of a district and the Poor Law to meet the 'hard case,' that in the course of a generation there would be a marked improvement in the economic condition and *morale* of the district; but where out-relief is given it should be adequate and the circumstances of the recipient be reviewed frequently."

She suggested that the parishes or villages in unions might be grouped, and that in each group there might be a sub-committee—

"Different people representing the various interests in those villages, and that one of their members should work on the central committee and report to the central committee of the union, which would meet on the board day of the board of guardians after the meeting of the board. The sub-committee would not make any expenditure without reference to the central committee, and the funds should be raised on each case. There are a certain number of endowed charities which we hope to get. Then there is a great deal of private charity, and if we could bring the charitable to our point of view, we hope to get the money which they now give individually. . . . The idea of the scheme in the first place was to keep cases from becoming chargeable by timely aid."⁶

The suggested rules require that "relief shall not be given to supplement outdoor relief; that the board of guardians allow their clerk and committee to report fully to the committee after investigation that the money needed must be raised specially for that case; that a reserve fund be raised from private donors for certain specific objects; that members of the committee must under no circumstances give relief without the authority of the committee; that members must be encouraged to visit cases regularly and report to the committee; that every decision be reported to the board of guardians as soon as possible."⁷

107. This scheme deals with the whole union, and would serve a purpose similar to that of the more simple scheme adopted by the guardians at Farnham, which Mr. Baldwin Fleming described to the Commission. Mr. Fleming said:⁸—

"Take Farnham, for instance, which has been referred to by Miss Hill. They have an admirable institution by the side of the board of guardians' work. They call it a benevolent

¹ 71324 (2). ² Jebb, 71698 (16). ³ MacGowan, 68814, (16), 68835, 68844. ⁴ Malaher, App.

.cxxxvi., Vol. VII. (2), (3), (4), (7). ⁵ Joseph, 69293 (3), 69334, 69359. ⁶ App. iii., Vol. VII., p. 365.

⁷ App. iii., Vol. VII., p. 366. ⁸ Fleming. 9417-9422.

fund. This benevolent fund is subscribed to by people who live within the district, and if any case goes before the board of guardians which they think the application of the Poor Law works hardly upon, and which is evidently a deserving case, but only of temporary distress; and if they want to save the person becoming a pauper—if, for instance, it is the case of a man who can be got to work by purchasing tools for him—they apply to the benevolent fund, and the benevolent fund gives what is necessary, possibly on loan. The man having got his tools and to work, would gradually repay them back. Colonel Fitroy, who is the treasurer of the Benevolent Fund, told me recently that in no year had they spent more than £20.

“It is a question whether it ought to be done at the cost of the rates.”

“It would be a most excellent thing to have such voluntary funds annexed to boards of guardians elsewhere. Mr. Bland Garland told me that when he started the reformed administration in the Bradfield Union he put aside £100 to meet cases of that kind, and that he had only used a small amount of it. . . .”

And Mr. Fleming agreed that “It is mostly a little advice and sympathy that is helpful to the people”; and that there was every reason why, even in the poorest districts, there should be some kind of organisation of a voluntary character working side by side with the Poor Law system, if you could only get the people to do it. And he thought that—

“The funds that would be required would be so small that they could always be forthcoming. There was an enormous amount of charity given away, and if that charity were utilised instead of being wasted, it would much more than do what is required in the direction that we are now considering.”

108. Of the usefulness of parochial committees and similar organisations we have received much evidence. ‘In the Report for the Winchester Diocese special attention is called to them. Parochial committees are to be found, it is said, mostly in town parishes; but we may take this statement as applicable to parishes in the smaller as well as in the larger towns.’ The rules frequently adopted by these committees suggest what might be a line of division between the Voluntary Assistance Committee which we have proposed and the Committee of Public Assistance. The parochial committee, it is said:—

“Must bear in mind that there are many cases in which the granting of relief is likely to encourage idleness, lack of thrift, or forgetfulness of family responsibility. Consequently relief shall not be granted:—

(a) In ordinary out of work cases, unless there is evidence of thrift, or unless there is illness, and there is reasonable prospect that circumstances will improve.

(b) In cases of destitution, when there is no prospect of circumstances improving—these are Poor Law cases.

(c) In cases of chronic sickness, unless they are suitable for a permanent allowance on the ground of good character, thrift, provision for the future, and readiness of relations to assist.

(d) In cases in which near relations, able to help, are unwilling to do so.

109. And in regard to a parochial committee at Shalford, Sir William Chance gave the following account:—

“May I say on the other point of voluntary effort taking the place of outdoor relief, that there is a parish close to where I live, Shalford, near Guildford, where last year they established a parochial relief committee; that relief committee has the vicar of the parish at the head of it, but he has called in a certain number of laymen, the chief constable of the county being one, and two guardians and one or two ladies. Every month they have a collection in the church for this relief society. Then they meet once a month, and all the cases that have been relieved during the time are reported, and perhaps in difficult cases they meet in the interval to consult whether a case should be relieved or not. That has worked extremely well. The charity is cut off entirely from the church, with this exception, that every month a collection is made for it, but it has nothing at all to do with the church. The consequence is that now practically we get no demands for outdoor relief in that parish; we get a few demands for medical outdoor relief, but no longer any for outdoor relief. I hope that before very long we shall have that system established all over our union, and I hope that these parochial committees, consisting of the clergy, ministers, and laymen and people who are interested in the thing, will gradually be able to deal with all the deserving cases. I hope that that principle may possibly extend to the country. That is one reason why I do not want to upset the present system, certainly in the country, more than is necessary, because I do feel that there is an enormous movement for good going on all over the country now, and pauperism is going down.”

¹ Diocesan Report, Winchester, and App. xvi., Vol. iii. Diocesan Report, Canterbury. Diocesan Report, Hereford. ² See also Charities App.: Cases dealt with by Parochial Committees.

110. We thus pass from suggestions to plans which are at work successfully, and which, conducted under slightly altered methods and in alliance with the public assistance committees, would, we believe, lead to a good use of endowments, adequacy of relief, diminishing dependence, and friendly and personal help.

XVII.—POOR LAW RELIEF AND THE ENDOWED CHARITIES CONSIDERED IN RELATION TO THE UNIONS.

111. In many parishes there are few and trifling or no endowed charities ; and the same may be said of not a few unions, if we consider the unions as groups of parishes. But, as we have seen, in very many places these charities are well worth considering in relation to the relief of distress ; and we have selected Cricklade in Wiltshire, Ellesmere, Taunton and Lichfield as illustrating the position.¹ The population of the parish of Cricklade is 1,517. Most of the inhabitants are agricultural labourers. The wages of the labourers are said to be 12s. to 14s. a week with a cottage. The demand for labour is fairly steady. The Diocesan Report states that in 90 per cent of the parishes in the diocese there is no real poverty ; and “all agree that poverty is not increasing.”² From the endowed charities at Cricklade £204 2s. 5d. in doles was distributed in 1906 to 230 single persons or heads of families ; the recipients are returned at 830, who would accordingly receive on an average about 4·91s. each.

“Of recent years the trustees have reduced the number of recipients by striking off the names of about fifty recipients whose circumstances seemed to disentitle them to the receipt of charitable relief, but the list still includes, in addition to ordinary labourers, the names of small farmers, gardeners, grooms, tradespeople, shopmen, railway men, postmen, and others earning good wages.”

Twelve months' residence qualifies for the reception of the doles.

112. Apart from the endowed charities about £20 is raised by the two churches for sick and poor funds. This is distributed by the clergy in one case, and through district visitors in the other. Out-relief to the extent of £283 is distributed in the parish, making in all a distribution of £625 a year ; in a population of 1,517 persons. The pauperism of the parish is high. “There has been no communication between the board of guardians and the trustees of the charities or any understanding arrived at as to the class of cases with which each should deal.” There is a good nursing association, the benefits of which are available on payment of a small subscription ; and there are 304 adult members of permanent registered friendly societies. Clearly there is very little distress.

113. Already in this parish there is practically a central board. Under a recent scheme the rector of one parish, the vicar of another, the high bailiff of Cricklade, serve as *ex officio* trustees for the endowed charities, together with the representative trustees appointed by the parish council. All the dole charities might by general statute be assigned to the relief of distress, and, further, according to the distribution of the population a part might be assigned to the Voluntary Aid Committee for the union, and a part retained by the parish. The demand for the relief of distress would be very different from the demand for the charities' gifts. The former would be met by relief according to the needs of the case, and there would be comparatively few cases ; for the latter any so-called poor person is a claimant. The trustees would be represented on the Voluntary Aid Committee.

114. There are fourteen parishes in the Union. Two have no endowed charities, six have charities with incomes of between £2 and £17, five have incomes of £88, £80, £61, £58, £35 respectively. As to the management of the charities : in eight parishes the trustees of the larger amount of the charities are the rector, vicar, and trustees appointed by the parish council. The rector, vicar, and churchwardens as trustees deal in these parishes with an income of £28. In one parish trustees appointed by the parish council and co-optative trustees deal with an income of £75. If therefore we take the union as a whole there is a good basis for the formation of a Voluntary Aid Committee, and from the point of view of the trusteeship,³ this conclusion would apply equally to the other Unions to which we refer.

¹ Report on endowed and voluntary charities, pp. 37, 205, 246.

² Diocesan Report, Salisbury.

³ Charities Appendix.

115. The general position, financially, may be summed up thus :—

Poor Law relief :—

- (1) Indoor relief in the half-year ending Lady-Day, 1908—108 persons.
- (2) Of those in receipt of indoor relief sixty-nine had received relief for ninety days and over. They are, therefore, presumably most of them aged or infirm.
- (3) Outdoor relief—half-year, as above: recipients, 338: of these undoubtedly a large proportion are the aged.
- (4) On outdoor relief in the year ending Lady-Day, 1908, was spent £1,634.
- (5) Thus in the union with a population of 11,357 persons, apart from indoor relief, £1,634 was expended on outdoor relief *plus* £719 from endowed charities: in all £2,353.
- (6) The charge of £1,634 would, in future, so far as it referred to the aged, fall on the Exchequer, in a subsequent generation, when the pension at 70, instead of poor relief may be claimed.
- (7) It is clear that, as we shall show in other instances, the endowed charities and voluntary charities could meet a great many of the miscellaneous cases now assisted by the Poor Law.

116. Next we take the Ellesmere Union.¹

The population is 14,486. The income from endowed charities is £632. Nine parishes with populations varying from 44 persons to 624 persons have no endowed charities. In four parishes the charities are under £17. In the remaining eight parishes the income of the charities is £600, of which £25 is available for almspeople, in a population of 9,476.

The general position, financially, is as follows :—

- (1) Endowed charities, £632.
- (2) Indoor relief for half-year to Lady-Day 1908—100 persons.
- (3) Of these seventy-two had been in receipt of relief ninety days and over.
- (4) On outdoor relief in the year ending Lady-Day, 1908—the expenditure was £726; which, for the half-year, may be analysed thus :—

| | Persons. | Expenditure in half-year. £ |
|-------------------------|----------|-----------------------------------|
| Infirm | 66 | 216 |
| Widows | 13 | 62 |
| Illness | 17 | 53 |
| Miscellaneous | 15 | 35 |

(5) Here in a succeeding generation the major part of the infirm would probably be old-age pensioners; illness would be dealt with under the scheme in Part V.; and it should be quite possible by co-operation within the union, by the endowed charities, and otherwise to deal with the cases of widows and with the miscellaneous cases.

117. Taunton Union has a population of 38,653.² There are in it forty-two parishes. Ten parishes with small populations have no endowed charities. The income of sixteen charities from their sources is in all, £136—£25 being the maximum. The rest of the income, £4,932, lies in sixteen parishes, with a population of 29,741. Of this income £1,364 is payable to almspeople. The total income of endowed charities for the union is £5,068.

Here the financial position stands thus :—

- (1) Endowed charities £5,068.
- (2) Indoor relief for half-year ending Lady-Day, 1908—243 persons.
- (3) Of these 180 have been in receipt of relief for ninety days and over.
- (4) On outdoor relief in the year ending Lady-Day, 1908, the expenditure was £1,224.

¹ See Emberton, 6324(2), Jebb, 71697, and other entries—Index to Vol. VII. Report on effect of Outdoor Relief on Wages, etc., Shropshire, by Thomas Jones, p. 17, and Charities Appendix. ² Cf. Report by A. D. Steel Maitland and Rose Squire, and Charities Appendix.

(5) In the half-year ending Lady-Day, 1908, the figures may be analysed thus :—

| | Persons. | Expenditure. £ |
|-------------------------|----------|-------------------|
| Infirm - - - - - | 112 | 336 |
| Widows - - - - - | 19 | 68 |
| Illness - - - - - | 39 | 120 |
| Miscellaneous - - - - - | 36 | 98 |

(6) Here, if we have regard to the amounts available in the different parishes and take into account the reports we have received about the Taunton Charities for instance, it would seem again quite feasible in connection with a Voluntary Aid Committee, and in co-operation with the Public Assistance Committee, to deal with all miscellaneous cases and with the cases of widows.*

118. Again, to take the case of Lichfield.¹ It is a "typical small cathedral city." The population is 7,902. There are three breweries employing under 200 men, and two small iron foundries; and about 150 men are employed by an architectural sculptor. The only other occupation of any importance is market gardening. Labourers' wages are 5d. to 6d. an hour, rents are low, the population increases but very little.

119. The following is a table of the charities :—

| Endowed Charities. | Trustees. | Object. | Gross Yearly Income. |
|-----------------------------|--|---|---|
| St. John's Hospital - - - | Governed under statutes made by the bishops. Proposed—a body of trustees. | 12 inmates over 60. | £1,250; will shortly be considerably increased. |
| The Municipal Charities - - | 15: 3 appointed by the town council, 3 by electors of the north ward, 2 by those of the south ward, and 7 co-optative. | Pensions, alms-houses, 5s. grants, etc. | £650 |
| Dr. Milley's Hospital - - | The Dean of Lichfield and 2 trustees appointed by the city council, 1 appointed by the trustees of Fecknam's Charity, and 3 co-opted trustees. | Almshouse. | £540 |
| Lowe's Charity - - - - | 5 trustees appointed by the town council and 7 co-operative trustees. | Coats, caps, pensions, etc. | £520 (shortly). |
| Henry Smith's Charity - - | Churchwardens of St. Mary's. | Flannel, etc., for the poor of the City | £18 |
| Wakefield - - - - - | 4 trustees. | Doles. | £103. |
| Passam's Charity - - - | Incumbents and churchwardens of 3 parishes. | Doles. | £26. |
| Hinton's Charity - - - | Mayor of Lichfield. | 5s. gifts in sickness or distress. | £26. |
| Haworth's Charity - - - | The Dean of Lichfield. | Monetary and other relief; very poor persons. | £45 |
| The Close - - - - - | 2 trustees not connected with Lichfield. | Deserving poor of the Close. | £71. |

*Data in regard to two or three other towns are given in the Charities Appendix.
¹ Report on Endowed and Voluntary Charities, pp. 30, 179 and 286.

120. Besides these are eleven other charities distributed, some in all three parishes, some in one or another—amounting to more than £90 a year. Apart from those which are mostly distributed by the incumbents of the several churches and the churchwardens, who are the trustees, there are, as the above list shows, nine different sets of trustees. This fact and the figures suggest that there might be one committee of trustees for the city; that all these sums and the almshouses and pensions might be made available for the relief of distress in a larger area. With the single body of trustees in the union might be associated representatives of the voluntary societies of the city and others. A Voluntary Aid Committee would thus be formed. There are several useful Voluntary charities in Lichfield, a nursing home, a branch of the Ladies' Association for Friendless Girls, a White Ribbon Mission and Maternity Home, trades unions, church and chapel charities, and a Charity Organisation Society. Thirteen per cent. of the population are members of friendly societies, and there is a medical provident society with 2,818 members.¹ At present, though of the eight guardians for the City of Lichfield six are trustees of endowed charities, five of them being trustees of the municipal charities, this has not resulted in bringing about any system of co-operation between the board and the charities. A Voluntary Aid Committee acting in co-operation with the friendly societies would promote that, and other movements that tend to independence might be strengthened.

121. Altogether the income from the endowed and voluntary charities in Lichfield, and the amount expended by the guardians on out-relief is £4,290—in a population of 7,902. And the investigators report:—

“If the standard of administration of the almshouse and pension charities were raised, and steps taken to secure help from relations, old employers and others, which is never done at present, and if the £361 (the yearly sum available from endowments for temporary help) much of which goes in useless doles, were differently applied, the expenditure of £484 on out-relief somewhat laxly administered, might, in our judgment, become unnecessary, or at least be reduced to a small amount.

“To secure this result it is essential that the charities should be brought into definite relation with the administration of the Poor Law. Instead of this there is often overlapping between the two.”

The total expenditure on outdoor relief is £483; and but for the help given from the charities, the outdoor relief, it is agreed, would be heavier.

The Lichfield Union contains thirty-five parishes. Their total population is 42,542. The total income for endowed charities is £5,231. In the half year 377 persons received indoor relief, of whom 225 received it for ninety days and more. There were 611 persons relieved outdoor in the half year; and in the whole year £3,900 was spent. Of this, £2,658 appears under the heading “Infirm;” under “Widows,” £513; under “Illness,” £536; under “Miscellaneous,” £191.²

The total expenditure for the year from the Poor Law, apart from indoor relief, and from endowed charities was £9,131.

Clearly in this union also concerted administration would produce great changes for the better, on the lines we are about to consider.

122. In the Charities Appendix will be found data in regard to other Unions and parishes.

XVIII.—THE SUGGESTIONS AND CRITICISMS OF THE INVESTIGATORS.

123. Mr. A. C. Kay and Mr. H. V. Toynbee were appointed by us to make inquiry in certain urban and rural areas as to the administrative relations between charity and the Poor Law and as to the extent and actual and potential utility of Endowed and of Voluntary Charities. What the nature of the reforms should be the suggestions and criticisms of these investigators indicate; ³and before proceeding further it may be well to state their opinions briefly. We will touch on the main points in succession, adding notes also taken from general evidence.

¹Cf. the circumstances of Kendal, p. 161. ²See Charities Appendix. ³Report on Endowed and Voluntary Charities, pp. 59–79.

1. *Administrative Relations between Charities and the Poor Law.*

124. On this point the comments of the investigators are:—

“In most cases it does not seem to have suggested itself to the representatives of either the one or the other that it was even desirable that such relations should be established, or that it was possible that any advantage might be derived therefrom. In no single instance, so far as we could ascertain, had any conference taken place between the endowed and voluntary charities and the Poor Law guardians, as to the policy which they should respectively pursue in dealing with the relief of the poor, nor had any attempt been made to define the sphere of operation which each should fill. Here and there we met with an individual who appreciated the importance of co-operation, but this was quite exceptional, and it is no exaggeration to say that the majority of those whom we saw had given the subject no thought, and surprise was sometimes expressed at the suggestion that such co-operation was advisable.”

2. *Mr. Goschen's Minute of 1869. Registration and the Prevention of Overlapping.*

125. Mr. Goschen's minute, to which we make reference again later on, advised the guardians that there should be some recognised division of labour between them and the charities; but “representation of the boards of guardians on the charities is not likely to lead to any change of policy unless there is a recognition on both sides of the great importance of working in co-operation” on some such lines.

Minute of the
Poor Law Board,
November, 1869.

“One of the recommendations there made is ‘that in all those cases where the board of guardians are granting relief—and in all such cases the relief must by law be adequate—the almoners of charities should abstain from giving food or money, or supplying any such articles as the guardians are themselves strictly bound to grant, and especially from giving their charity in such a manner as would constitute a regular increase of income.’

“As a means of bringing about such an understanding, it is suggested ‘that there should be every opportunity for every agency, official or private, engaged in relieving the poor, to know fully and accurately the details of the work performed by all similarly engaged. The lists of the relieving officers would form the natural basis for the necessary information. No funds are at the disposal of the Poor Law Board with which they could appoint a staff and provide offices for organising a general registration of Metropolitan relief. Other means must, therefore, be sought for providing that a public registering office should be established in every large district, where registers should be kept of all persons in receipt of parochial relief, with such particulars attached as might guide others in their inquiries. The clergy of all denominations, and the representatives of all the charities in the neighbourhood, should be invited to send in their lists to such offices, and to make themselves acquainted with the other lists deposited there, by which means an accurate dictionary or reference book might be framed, which would supply the necessary information about almost every person who had once received relief, either parochial or charitable. In the absence of any sufficient legal power in the Poor Law Board to enforce an organisation of this kind, the working of the plan must mainly depend on the voluntary action of the guardians and of the various charitable bodies, but the Poor Law Board will be happy to afford any aid that may be in their power, and to authorise such expenditure as may fall within legal limits. They would be prepared—

1. To authorise the guardians to print weekly lists, containing the names and addresses of outdoor paupers, and the sums given in relief in each case.

2. To authorise any reasonable remuneration for extra work to officers whom the guardians may employ to carry out this arrangement.

3. To instruct their inspectors to facilitate the communication between the official and private agencies, where such interposition may be of any service, and to assist in systematising as far as possible relief operations in various parts of the Metropolis.”

“It is further suggested that the trustees of the charities should refer to the relieving officer all totally destitute applicants who properly fall within his sphere, while he, on the other hand, should pass on to the charities all those not actually destitute, who seem likely to fall within the class which charity undertakes to assist.”

126. This minute is supplemented by the General Order (Metropolis) 1878, by which the guardians may cause lists to be prepared at such intervals as they may deem expedient, being not oftener than once a week, showing the name and address of each pauper who has during the interval been admitted into the workhouse or has received outdoor relief . . . and the amount or value of the outdoor relief so received in each case, and may cause such lists or any parts thereof to be printed and circulated and distributed in such manner as they may think fit. This Order and Mr. Goschen's minute apply to the Metropolis only.

Norwich.

Kendal.

127. We propose that they should be enforced throughout the country in a modified form consistent with the general scheme of poor relief which we recommend.¹ Heretofore it would seem, the investigator's report, "that the minute would have remained entirely inoperative but for the practice of the Charity Organisation Societies, which are invariably in constant communication with the Poor Law authorities with a view to avoid the supplementation of out-relief and to promote the transference of cases from one body to the other as the one or the other could best deal with them." In Norwich a weekly return of cases dealt with by the Charity Organisation Society with the decisions arrived at was sent by the society to the guardians. At Kendal the society had opened a general register with a view to the prevention of overlapping. Casual supplementations of poor relief is the rule, however. The investigators state that in all places which they visited the charities have been applied in a greater or less degree in supplementation of Poor Law relief with two exceptions.²

"It was our practice to submit lists of the recipients of the various endowed charities to the relieving officers, who marked the names of all those who were on their out-relief books. In every place, apart from those mentioned above, it was found that there were numerous cases in which people were being helped both by charities and the Poor Law."

Kendal.
Results of over-
lapping.

"In Kendal it was stated by a trustee . . . that if the trustees did not give to people in receipt of poor relief, they would have no recipients; and an informant at Beverley said that 'if the doles were not given to Poor Law cases, the money could not be spent'."

York.

"At York, when lists (not complete) of the recipients of the charities were submitted by us to the relieving officers, over sixty cases of people receiving out-relief were at once, much to their surprise, recognised by them. The following are particulars of the amounts received in some of these cases from the endowed charities:—

OVERLAPPING OF CHARITIES AND POOR LAW RELIEF IN YORK.

| No. of Cases. | | | | Amount Received from Charity. | | |
|---------------|---|---|------------|-------------------------------|----|---|
| | | | | £ | s. | d. |
| 1 | - | - | Pension of | 20 | 16 | 0 a year. |
| 3 | - | - | " | 13 | 0 | 0 " |
| 1 | - | - | " | 10 | 10 | 0 " |
| 4 | - | - | " | 10 | 0 | 0 " |
| 1 | - | - | " | 6 | 0 | 0 " |
| 5 | - | - | " | 5 | 18 | 3 " |
| | | | | | | (3 also received gifts of 40s., 22s., and 12s. respectively.) |
| 1 | - | - | " | 5 | 4 | 0 " |
| 1 | - | - | " | 5 | 0 | 0 " |
| 5 | - | - | Gift of | 2 | 0 | 0 " |
| | | | | | | (4 of these also received 1s. a month and a loaf weekly.) |
| 1 | - | - | " | 1 | 10 | 0 " |
| 3 | - | - | " | 1 | 2 | 6 " |
| 13 | - | - | " | 1 | 2 | 0 " |

"The overlapping is not confined to endowed charities. Out of thirty recipients of help from the York Benevolent Society, taken at random, nine were found to be on the outdoor relief list, and five in receipt of occasional relief.

"In Norwich, the endowed and voluntary charities (apart from the Almshouses and pension charities) go very largely to those in receipt of out-relief.

"In the case of the Norwich Society for the Relief of the Sick Poor, out of twenty-five cases taken at random, ten were found to be in receipt of out-relief."

Necessity of
Registration.

128. To prevent this aberration of charity, registration is essential.³ It is adopted and is being extended by degrees wherever the problem of relief has been carefully studied—at Berlin, and generally wherever the Elberfeld system in its different forms is in force: in Holland; in some cities in the United States of America, but especially at Boston, Massachusetts. In England probably it is now most completely applied in the civil parishes of Chelsea⁴ and Hampstead.

Results of
Registration.

129. At Chelsea, churches and charities and the Poor Law guardians are by degrees to a larger and larger extent using the "Chelsea Mutual Registration of Assistance,"

¹ Report, p. 60 ² Report, p. 61. ³ Report, p. 74. ⁴ Memo.: Chelsea Committee of the Charity Organisation Society and Sketch of Hampstead System. Charities Appendix, Blankenberg, 100020 (55). Munsterberg, 100300 (8), (18).

together with various institutions whose work in some measure lies in Chelsea, though they do not have their central quarters there. The scheme was instituted more than three years ago “with a view to the prevention of overlapping and promotion of co-operation among the relief agencies in Chelsea.”

“The procedure is that ‘the agencies forward monthly or weekly lists of their cases to the office, where they are compared, and if the same name is found on two or more lists, the fact is notified to those agencies. The scheme,’ the hon. secretary writes, ‘receives increasing support, and we have lately commenced holding monthly conferences of the overlapping agencies for the purpose of considering the possibility of restoring the families to a state of independence and mutually agreeing upon future action in regard to them.’”

130. This statement of itself proves the positive utility of the method. The statistics show each year an increasing number of communications made to those who have registered cases, as year by year the plan has been utilised by a larger number of charities.

131. The figures, according to the average monthly numbers for each year, are:—

| | 1905. | | | | 1906. | | | | 1907. | | | |
|--|-------|------|------|------|-------|------|------|------|-------|------|------|-------|
| | Jan. | Feb. | Mar. | Dec. | Jan. | Feb. | Mar. | Dec. | Jan. | Feb. | Mar. | Dec. |
| Communications - - - | 180 | 222 | 216 | 254 | 210 | 136 | 199 | 129 | 246 | 274 | 181 | 358 |
| Families concerned - - - | 107 | 130 | 133 | 130 | 132 | 92 | 115 | 58 | 152 | 174 | 116 | 188 |
| Cases of overlapping within four weeks excluding pensions - | 49 | 55 | 56 | 81 | 53 | 42 | 59 | 31 | 73 | 69 | 82 | 72 |
| Cases of overlapping within eight weeks excluding pensions - - - - | - | - | - | 160 | 73 | 58 | 77 | 34 | 87 | 90 | 83 | 84 |
| Communications to the Board of Guardians - - - - | 51 | 49 | 88 | 68 | 45 | 31 | 42 | 22 | 51 | 58 | 28 | 58 |
| Families assisted - - - - | - | - | - | - | - | - | - | - | - | - | - | 2,152 |

132. It was found that the register at Chelsea was of very great service to the London Unemployed Fund in 1904-5, and the agencies that are members of it bear witness to its great utility.¹

133. Such registration can only be developed, it is evident, with great perseverance and by demonstrating to the charities how it may serve their several needs, may prevent duplication of inquiries, and may secure that either one agency deals with the case, or that each agency, instead of unconsciously supplementing the work of others, co-operates for a common object. A scheme of general registration is so necessary that we recommend its adoption in every union area.

3. Want of information, and inquiries.

134. The investigators report that in their opinion²:—

“The trustees are not sufficiently alive to the importance of making thorough enquiries regarding applicants. In many cases we found that the trustees considered inquiry unnecessary, on the ground that they knew all the poor people already. This may, no doubt, be true in a country village, but can hardly be so in larger places, except in cases in which no publicity is given to the charity, and appointments are practically confined to persons known to the trustees or their friends. Forms of application, with inquiries regarding the character and circumstances of applicants, may be usefully employed, but we frequently found that such statements, if certified by two or three householders, were accepted as sufficient. It is important, we think, that independent inquiry should be made by the trustees themselves, or through an inquiry officer, or an agency such as the Charity Organisation Society, for the purpose of verifying the statements on the application form, and ascertaining the character, thrift, resources and home conditions of the applicant.”

¹ Report of Central Executive Committee: London Unemployed Fund, 1904-5.
² Report on Endowed and Voluntary Charities, p. 70.

135. Of the necessity for inquiry, a point to which we have already referred, evidence has come to us from almost every quarter, and we are of opinion that it should no longer be left to the trustees of charities to make inquiry or not to make inquiry in regard to those who apply to them for the benefit of a charity.¹ The Charity Commission in the case of almspeople and pensioners requires that there be "full investigation of the character and circumstances of the applicants, and inquiry whether they have shown reasonable providence, and whether and to what extent they may reasonably expect assistance from relations or others," and they have added in more recent schemes—that for the purpose of this clause the trustees may avail themselves of any suitable agency.

Necessity of securing proper means of inquiry.

136. We think that many facilities for making inquiry in regard to applications will result from the unification of charitable work on the lines we are about to suggest. Both voluntary and paid help will be more easily provided for the purpose; and as trustees and others desire to effect more through their intervention, they will be led to require a better system of investigation for their own guidance and for the benefit of those who have asked their assistance. In any case, we are of opinion that means of making suitable inquiry should be assured in regard to all charities as part of the schemes, under which they are administered; and that there should be some supervision to ascertain that so necessary a condition is fulfilled.

4. Appropriation of Means and Supervision.²

137. Among the objects mentioned as permissible to trustees are those contained in clauses we have quoted above: "the supply of: (a) Clothes, linen, bedding, fuel, etc; and (b) temporary relief in money, etc."; representing, as Sir George Young said: "The limit to which the Commissioners considered themselves able to cut down the pernicious operation of promiscuous doles."

Difficulty of obtaining the service of suitable Trustees.

"It is clear," the investigators write, "that a fund left at the disposal of a body of trustees for application under provisions such as those of the scheme for general benefit of the poor referred to above might, with care and intelligence, be made productive of very great benefit to the poor. Help, adequate in amount and wisely directed, at a time of special need, through sickness, want of employment, or other misfortune, may often prevent a family from drifting into a condition of pauperism."

138. With this we agree; but the agreement implies two conditions—the appointment of competent trustees or managers, and a supervision of the administration.

139. On the former question there is a difficulty.³ Trustees are inclined to accept the pleasure of patronage as the compensation which they receive for undertaking the management of the trust. Hence the common practice of allowing each trustee in turn to nominate to the charity. What should be the duty of the trustees jointly becomes the privilege of the individual trustee; and the decision of the common body, which is intended to prevent the domination of private interests may yield to the dictates of a merely private patronage. But further:—

"Unfortunately, the work of selecting 'helpable' cases and providing assistance suitable to the varying circumstances of each case demands an amount of knowledge and interest in charitable work, and an expenditure of time and trouble which can rarely be found under the conditions of charitable administration prevailing in the towns the investigators visited. . . ."

"In some of the places which we visited we were unable to discover any elements out of which a really satisfactory body of trustees could be constituted."

"The administration of almshouses and the granting of out-pensions as compared with other modes of charitable relief . . . makes much less demand upon the time and capacity of trustees. It is, consequently, much easier to find a body of trustees who will make good appointments of alms-people and pensioners than who will satisfactorily perform the difficult work of from time to time giving appropriate assistance in cases of special need and distress."

140. It is clear from this and other evidence that the building up of a good administration will not only necessitate a careful choice of trustees, but will also involve the imposition upon them of a new and ordered responsibility in connection both with

³ Report

a local committee of administration and with a central supervision of some kind. Otherwise, as the investigators say:—

“We should feel considerable doubt as to the expediency of leaving any considerable sum at the disposal of the trustees as a liquid fund applicable for the benefit of the poor, unless a serious endeavour is made to ensure that the administration is sound.”

“In the absence of effective periodical inspection we see reason to fear that a fund left at the disposal of the trustees for the relief of distress would too frequently be frittered away in the same ineffectual manner as is common now; and in this case, if experience should show that the money is not being applied in ways calculated to be of real benefit to the poor, it should be diverted to other modes of application which leave less scope for unwise expenditure.”

5. *Raising Money for Relief Purposes and the Cases assisted.*¹

141. It may be feared that if a system of doles is set aside for a system of reasonable charity, consistent with the standards which we described in the earlier part of this section, a very large amount of money for relief purposes would have to be raised by public appeal. If the method discussed by the investigators and described by several witnesses is adopted, this would not be the case.² The investigators point out that if there were careful selection the funds of the charities would go much further. They would not be wasted. In regard to almspersons and pensioners, they say:—

“We have frequently referred to cases in which it seemed to us that the almspeople might have been maintained by sons or relatives, and we think there is some laxity of administration in allowing sons, who are fairly well-to-do, to be relieved of their obligations at the expense of the charities. We also think that more might be done in supplementing the allowances from the charities by contributions from children, old employers, and others.

“If these points were kept in mind in the administration, the funds of the charities would go further, their benefits would not be extended either to persons who do not really stand in need of the assistance, or to those whose character and antecedents do not entitle them to any exceptional consideration, and who might well be left to the guardians for support, and there would be better security that the benefit of the charities are really going to the best and most deserving cases.”

142. It is well that this should be thoroughly understood; and accordingly we mention one or two cases illustrative of it.³

The two cases which follow, taken from different localities, show the waste of doles:—

Husband was formerly in Marines; said to have been discharged with “very good” character, forty years ago (but discharge papers said to have been burnt). No pension. Children said not to help. According to several trustworthy authorities, husband and wife are said to be intemperate, the former lazy, and in habit of begging, and the latter of doubtful moral character. Dole, $\frac{1}{2}$ ton coal biennially.

Husband, crippled with rheumatism, and wife, almost blind, have done no work for eight years and have been in receipt of out-relief most of that time. Single son, 20, labourer, lives with them, contributing 5s. a week. None of the other children help. There were originally fourteen children. Statements said to be unreliable, and six credible informants stated that recipients were notoriously untruthful, cadgers, and drunkards, and the man’s condition was due to his intemperate habits. Doles, Lane’s Gift £5; husband, 1 shirt and 1 loaf every 3 weeks; wife, 1 shift, 2s. from church occasionally.

143. The two almshouse cases which follow, show insufficiency of relief:—

No. 79.—Man, single, 66, formerly labourer. Room and occupant both very dirty, supported parents for many years. Complained of the smallness of allowance from charity, 3s. 6d., which is now his total income. Said on reliable authority to be very respectable.

No. 81.—Widow, 73, late husband foreman in a mineral water factory for twenty-five years, earning 40s. per week. One son, who has never assisted. Recipient’s character said to be very good. Total income now only 4s. (the almshouse stipend). Husband was in Ancient Order of Foresters and another club, and widow received £24 at his death, twelve years ago.

144. In these instances a dole is granted or an admission to an almshouse, but there is no plan adopted to see that it is of actual use.⁴ “The effects of the dole charities as a means of relieving the poor are insignificant.”

145. There are two ways of obtaining the assistance required for cases of distress. One is to open funds for relief purposes. The endowed charities are funds of this kind

Raising of funds for the relief of distress.

¹ Report on Voluntary and Endowed Charities, App. x., p. 234. ² Report, p. 70. ³ Report, pp. 32, 35, 36.

⁴ Report, p. 71.

hemmed in by many restrictions. When the fund is used up all the good that it can do is done, and, whether the money which is given is or is not sufficient to meet any real need or fulfil any real purpose, it is given and there is an end of it. The other method is to use funds but not to rely upon them alone, but to raise in addition from other sources what is necessary. This has many advantages. In the first place probably greater care is taken in considering what should be done and how the persons in distress can be properly helped. Next the charitable feeling of those connected with the family is kept alive. The relations are asked to help, and former employers, and friends. This is good for all parties. The family tie is strengthened, and so on one important side the plan justifies itself; and similarly it justifies itself on other sides. Many will help in this way and for some definite purpose who otherwise will not help at all. Again, no large fund, always insufficient, always likely to raise claims and to assume large and even preposterous dimensions in the popular imagination, always likely to create greater demands than it can meet, will be found to be necessary.¹ The charity of individuals forms a more comprehensive and more constant fund than any large collection made by appeals and circulars; and, directed in the manner which has been suggested, it is much more useful. And further, in addition to the gifts of the endowment consisting sometimes of considerable sums and sometimes of one or two insufficient shillings, an amount adequate to the need is raised from the endowment and from other friendly sources, while in addition personal care and friendliness comes to the rescue to assist in many other ways.² The endowment has, in fact, become vitalised. It is wrought into life again and is meeting once more the real needs of the people.

"H. family.—Bermondsey United Charities gave £5 12s. 8d. towards temporary allowance and convalescent treatment.

"The father of a large family was dying of phthisis when the case was first referred to the Trustees of the Bermondsey United Charities. He was being carefully nursed at home, and help was continued until he died. In addition to this, a good deal of help was given directly by the trustees. After his death, assistance still had to be given until the Charity Organisation Society had obtained the admission of three children to Church of England Homes, the Children's League of Kindness paying 2s. a week for each, and until the delicate eldest son had been convalesced and had started work, and a girl had become old enough for employment. In addition to this it was found necessary to obtain hospital and convalescent treatment for the widow. The family was self-supporting for some months, but the oldest son developed rapid consumption, and help was again needed. The total cost so far has been about £30.

"In this case there was co-operation between the Bermondsey United Charities, Children's League of Kindness, Society for Relief of Distress and Courage's Fund. The 'Sons of Thames' Lodge of Oddfellows (M.U.) have also been helping."

146. Here the endowed charities granted £5 12s. 8d. The total help has cost £30. In another case the £2 11s. 6d. of the endowed charity becomes £12 1s. 6d. by the increments of assistance obtained from other sources; and there is added a friendly care or visiting that supervises the whole.

"E. C., girl, aged 15.—Bermondsey United Charities gave £1 11s. 6d. to complete training at Clark's College for Typewriting and Shorthand.

"The mother, widow of a police inspector, has three daughters, one of whom is almost a dwarf, and very frail, and another (the above-mentioned) has a crippled left hand. The tiny daughter was in work, but required much care, making it difficult for her mother to be absent for long hours. E.C. was sent by the Charity Organisation Society to Clark's College to learn typewriting, shorthand, and book-keeping, the total cost being £12 1s. 6d. The mother and son paid £4 4s., a friend through the Society for Promoting Employment of Women £4 4s., Ragged School Union £2 2s., and the remainder was made up by the Bermondsey United Charities as above.

"Sixteen months after training she was earning 13s. 6d. a week."

147. Or to take the case of aged people:—

"F.M., a widow, aged 82.—The City Parochial Foundation gave a pension of £6 10s. a year.

"F.M. is a Belgian who has lived nearly forty years in London. She earned her living by laundry work, and supported her sick husband for years. Of her seven children, a married daughter only remains. F.M. managed to save as much as £100, and when past work kept herself on this till it was almost gone, and she was obliged to ask for help.

¹ Cf. Witnesses as to newspaper appeals: Maynard, 78372 (3); Marshall, 82176-8; Richardson, 85662, 85689; Gardiner, 78694, 78731. ² Hayes Fisher 30906 (18), 31042.

"The Charity Organisation Society at first raised an allowance of 9s. 9d. a week for her, towards which a Foreigners' Society contributed 5s. a week, her daughter 1s., and the clergy 1s. The rest was given by private persons till the City Parochial Foundation granted her an allowance of 2s. 9d. a week. Now the old lady is too frail to live alone her daughter gives her a room in her house rent free, and the Society of Friends of Foreigners in Distress and the City Parochial Foundation give 5s. a week between them."

6. *Pooling of Funds and Supervision.*

148. Further, it is suggested by the investigators that it would greatly facilitate the work of reorganisation which they have sketched, if the parochial charities could be "pooled," and the parochial boundaries, which have not been allowed to stand in the way of the unification of civil government and of the Poor Law, should also be set aside in the administration of the charities in favour of the Union or some other area.¹ In Norwich and York there is a migration of the population from the inner and more fully endowed parishes to the parishes in the circumference of the town. At Norwich the city parishes, in which no new houses or very few have been built, contain only 26·4 of the population, and have no less than 85·0 per cent. of the endowed charities and 48·2 per cent. of the church charities, while they are responsible for 37·9 per cent. of the expenditure on out-relief. And similar conditions prevail in York, and no doubt in other largely endowed towns. In these circumstances we think that a "pooling" of charities and a revision of boundaries should take place under statutory powers, but conditionally on the introduction of an effectual administration on the lines which we propose.

149. Lastly, to carry out the necessary improvements of administration Assistant Commissioners who have been trained in the methods of relief should be present at the meetings of the voluntary aid committees, whose creation we suggest; and they should, as far as possible, use their influence to ensure that suitable inquiry is made, well-considered plans put in force in individual cases, the necessary relief raised, and friendly visiting and co-operation promoted.² In the past, as we have amply proved, the charities have been distributed to individual applicants on quite general lines, and without any special attention to detail. Now, if they are to be used for adequate help and for the prevention and relief of distress, a right consideration of details will be of the first importance. Official Assistance.

XIX.—THE REFORMED SYSTEM OF POOR RELIEF IN GERMANY.

These statements, drawn chiefly from the Reports of our investigators, may be taken as a fair summary of the suggestions that may be made, not only in regard to places in which there are considerable eleemosynary endowments, but relatively to other towns also. But to obtain a different view of the problem, we would submit a statement in regard to the organisation of relief in other countries, but especially in the State of Hamburg. The system of municipal relief.

150. The German system of poor relief as reformed on the lines of the administration at Elberfeld, is not so much a new method as a reversion to earlier post-reformation methods combined with much resettlement of details.

151. There are one or two primary principles on which the German system of poor relief is founded.³

152. The Poor Law in effect imposes on local relief authorities throughout the Empire the obligation "of relieving every poor person conformably to his need"; and it defines settlement. The administration it leaves to local authorities acting for the parish, the municipality, and the province. The administration is not centralised in a Government Department, and there are no Government Inspectors.

"There are towns which refuse outdoor relief, and others which refuse money and give relief only in kind, so that the practice everywhere is quite different; but, as a rule, one can say that outdoor relief is prevalent."

² Report, pp. 78 and 79.

³ Munsterberg,

No actionable right as against the Relief Authority. The franchise subject to considerable property qualifications.

153. Next, the council of the town or parish is elected by the votes of three classes of electors graduated according to a property qualification. Each class elects a third of the council.¹ Thus, at Berlin in 1902, "electors of the first class numbered 1,501; those of the second class, 28,017; and those of the third class, 314,032."² The administration of relief for the town is entrusted to one special committee subordinate to the town council, and is formed out of members of the town council with the addition of other inhabitants. The mayor or his representative presides over the committee. There is thus a restricted franchise and a responsible central committee for the supervision of all public relief, composed in large measure of persons other than members of the council.³

154. Next, "an actionable right of the poor to poor relief is not recognised by German legislation. The legal conception is that every community is obliged, in the interests of public order, to grant the relief requisite in individual cases."⁴ In England, "an indictment will lie against a relieving officer for negligence in relieving the poor." This would not be so on the German system. The applicant, if he considers himself aggrieved, may appeal to the superior administrative authority. Hence there is a lesser disinclination than in England to refuse cases, if it is thought desirable to do so.

The relief to be necessary relief only.

155. Next, in the local administration of relief it is an accepted principle that the relief afforded from the rates should be only necessary relief. A poor person who needs help, and is unable to work, or only partially able to work, is eligible for public relief, if no one else is both liable for his relief and able to relieve him, or if private charity does not provide for him.⁵ A poor person who needs help, but is able to work, is relieved on the same conditions, but he must prove that he has honestly striven to obtain work, though it be without result. He is obliged to perform any work which may be found for him. Persons living alone, and heads of families whose income is sufficient for providing for themselves and their families what is absolutely necessary for their maintenance have no claim for relief.

The relief to be less eligible relief.

156. Next, in the local administration of relief the principle laid down by the Poor Law Commissioners of 1834, that public relief should be less eligible than an independent maintenance, is accepted and made applicable to outdoor relief.⁶

"The pauper shall not be placed in a better position through relief than the person who provides for his own support by free labour.⁷ On the other hand, care must be taken to ensure that it remains possible for him to lead a life consistent with human requirements, and that he does not receive such relief only as will merely prevent starvation."

The administration by voluntary officers with decentralisation of services.

157. Lastly, the older German or Elberfeld method, which is considered best in Germany, proceeds on the principle that, properly guided and assisted, voluntary workers, acting not only as Poor Law guardians on their committees, but as enquiry and relieving officers in their districts, can safeguard relief and yet avoid inadequacy. The process by which this is to be accomplished is decentralisation, and an extreme sub-division of work amongst the members of a large band of voluntary assistants, coupled with a strong centralisation in many other respects.

158. Summing up, we may say that, as in England, the conditions of relief to the applicant should, on this system, be such as would be less eligible in his eyes than self-support, and the relief he would receive should be only necessary relief.⁸ The administration is placed in the hands of very closely controlled volunteers, in such a way that a definite and restricted task is imposed upon each of them; and the nature of their responsibility in relation to the application for relief is different from that of a relieving officer, and less absolute. The system is legal not voluntary. But to it, as a legal system, the voluntary service of the visitors or helpers gives a charitable or philanthropic character; and it is the evident wish of the authorities that this element in it should be retained and developed. "On the activity of the helper depends the weal or woe of the applicant; on it, too, primarily depends

¹ See here, and generally Appendix on Poor Relief in Germany, and regulations for the administration of poor relief in Hamburg, Berlin and Elberfeld. ² Munsterberg, 100462-67, 100497-99. ³ Appendix: Germany, pp. 15 and 21. ⁴ Munsterberg, 100569, 100347, 100300, 100394 (2). Cf. Adrian, 936-43. ⁵ Munsterberg, 100300 (14). ⁶ Munsterberg, 100300 (14). ⁷ Berlin, Instructions, Sec. 50. ⁸ Berlin, Instructions, Sec. 10.

the social and moral value which is the characteristic of an ordered care of the poor. He must be the friend and counsellor of the poor and in the granting of relief assist them by word and deed."

159. Some of these points we will now consider further. A board of guardians is a comparatively large body of persons elected on a popular franchise for the administration of Poor Law relief in a large area after an inquiry which is made by paid relieving officers. Large unions were formed in England partly with a view to providing a workhouse that would admit of classification, and partly for the determination of cases by an impartial non-parochial body. Here a different process is adopted. The institutional area remains large, and the central committee of control supervises that area. But the adjudication of relief is decentralised and administered in small districts, but yet by persons who are appointed by, or whose appointment is sanctioned by, a central board.

The area of administration in relation to institutional and personal work.

XX.—THE METHOD OF DECENTRALISED SUPERVISION.

160. We would illustrate this in some detail and as a whole.

In the State of Hamburg the senate is the supreme administrative authority. The public authorities who are in charge of separate branches of the administration of the State consist either of members of the Senate or of members of the Senate and of members elected by the council (*Bürgerschaft*). The senate appoints on each administrative authority one or more of its members and decides which of these members is to be president of the authority. Among the branches of administration, the authorities of which consist partly of members of the senate partly of members elected by the council, and are delegate authorities (*Deputationer*), are, in the department of public assistance, the *Armenkollegium* or poor relief corporation and the corporation of the orphanage. The *Armenkollegium* consists of three members of the Senate, one of them appointed by the Finance Deputation, and fifteen elected by the council.

The administration of relief at Hamburg. The President and Director.

161. The duties of the Collegium are: the issue of all general instructions necessary for the guidance of the administration; the publication of all decisions and orders bearing on questions of fundamental importance; the demarcation of the boundaries of poor divisions and poor districts; the settlement of complaints against the orders and instructions of subordinate authorities; the selection of district superintendents, and the ratification of the appointment of deputy district superintendents, of district almoners, men and women, and of women-helpers, and the appointment of medical officers. The president, with the aid and co-operation of the director, is responsible for the supervision of the administration throughout the State.

162. Next in order below the Collegium come the poor divisions. Of these there are eleven. At the head of each of these is a divisional superintendent, who holds office generally for three years. He is appointed by the Collegium from those of its members who are elected by the Council, and while he acts as superintendent of one division he is also deputy superintendent in another. It is his duty to see that the regulations of the Collegium are carried out in the districts which lie within his division. He has the right of taking part in the district meetings, to require information from the almoners in regard to individual cases, and according to his discretion to obtain information respecting these cases by visiting the home and otherwise.

The Divisional Committee and Superintendents.

163. The divisional superintendent and the superintendents of the district committees within the division form a divisional committee. The divisional superintendent is chairman of it; and the chairman of the Collegium, any members of the Collegium appointed by him, the director and such officials of the central office as the director may order, have the right to take part in it. This meeting is usually held monthly. The divisional meeting choose and dismiss the almoners; make the nominations for the selection of divisional superintendents; alter the boundaries of districts; allow or disallow relief in excess of that permitted by the regulations; decide whether the payment of back rent may or may not be permitted in particular cases; and settle as to the placing of persons in families or as to their admission

to public and private institutions, except in the case of hospitals; and they decide also on complaints submitted to them in regard to resolutions of the district committees.

The district committee, district superintendent and the almoner.

164. Next in order comes the district committee, consisting, as a rule, of not more than fifteen almoners and a district superintendent, who is elected by the Armen-Collegium out of three persons nominated by the divisional committee. The superintendent holds office for three years. It is his business to act as intermediary between the district committee and the central office, the divisional committee and the Armen-Collegium, and to obtain from them whatever information may be required; to select the almoners who should deal with particular cases; to summon the meetings of the district committee; to guide them and to ensure that their restrictions are carried out; to ensure that the regulations for the care of the poor are closely followed, and to promote uniformity of procedure; to inform himself according to his judgment in regard to the cases in his district, and with that object, to pay visits at the home; to prepare the prescribed returns of helpers and other returns, and to see that the district returns of cases in which continuous relief is being given, and the district minutes in which are entered general resolutions and resolutions respecting the relief of persons helped on a single occasion, are properly prepared. Applicants are referred to him, and his chief duty is to find the right helper for the right case.

165. There are 112 district committees and 1,513 almoners. The almoners are chosen by the divisional meeting, one out of two persons nominated by the district committee, and hold office for four years. Women may be elected on a three-fourths vote of the divisional meeting. The district committee meeting consists of the almoners and, as a rule, of the helpers (*Hilferinnen*), women who assist the almoners, especially in cases of women living alone, or families with children. They are consultative members of the committee, but they have a vote in regard to cases which have been entrusted to their independent care. The medical officer is required to attend, but he has only a consultative vote. The almoner is bound to attend, whether he has a case to submit to the committee or not. The President of the Armen-Collegium, members of the Collegium appointed by him, the divisional superintendent, the director of public poor relief, and officials of the central office on his instructions are entitled to take part in the district meeting. The meetings are monthly. They elect the deputy district superintendent. They decide on the applications for relief. They have to settle the kind and amount of relief that should be given, and how long it should be continued. They have to receive the approval of the divisional committee in cases in which relief beyond 5 shillings is proposed, and in regard to admissions to institutions and the placing of individuals in family care. The first business of the meeting is to consider circulars, notifications and resolutions of the Armen-Collegium or the divisional committee, and to discuss general questions raised by the district superintendent or an almoner; then the cases are taken. Stress is laid on the utility of the discussion of general questions. In the discussion of cases it is urged that the district superintendent should arrange that more time should be spent on the new cases, and that the almoners should all take part in it. At the conclusion of the meeting all the case papers and minutes are sent to the central office. When the entries have been noted, the books are returned to the district. The President of the Armen-Collegium is entitled to postpone any resolution of a divisional or district committee, and the superintendents of the divisions and of the districts have similar powers in regard to their divisions or districts. They may prevent the enforcement of any resolution provisionally, and may submit the question to the Armen-Collegium or the divisional committee, as the case may be.

The Central Office.

166. This closely linked and supervised organisation is further supervised and supported by the central office. At the central office is the director, who is the intimate adviser of the president. Under his guidance it is the duty of the central administration to support the voluntary officials in the conduct of their work, to carry out the resolutions of the Armen Collegium, the divisional and district meetings, and to attend to the official business arising out of the cases which are dealt with. All additional notes in regard to particular cases are put together in case-papers (*personalakten*). It is the policy of the administration indeed to take off the shoulders of the almoner all responsibilities except that of attending to the cases placed in his care. The system of

case papers has been simplified. All the papers are kept at the central office. The cases of applicants are taken down in the first instance at that office. All questions that arise as to the claims on relations on the part of those who are assisted, as to action to be taken against persons who refuse to maintain, etc., are dealt with by the central office. Since 1892, when the whole system of poor relief at Hamburg was reformed, the staff at the office has been largely increased. It now consists of five departments—a general office and registration department, where all papers in regard to cases are collected and placed with the several case-papers, and where the applications afterwards referred to the almoners for verification and for submission to the district committee are taken down; a scrutiny department which carries out the decisions of the district committees on the financial side, and notes the payments to be made to the almoners for their cases. It also makes all the arrangements for the admission of applicants to institutions, for the placing of cases in family care, for the admission of tuberculous patients to institutions, for the housing of the furniture of persons admitted to the poor house, and for the storing of the property of paupers which on their death passes to the Poor Administration. Next there is a legal department to deal with all questions of legal claims, whether claims on the part of the administration on the property of paupers, or claims on the part of applicants on relations or on burial clubs or sick clubs, or trade clubs, or for insurance in infirmity or old age. They have also to deal with all the legal business in connection with prosecutions, and with minors. Lastly, there is a pay department from which amongst other business the sums which have been approved by the district and divisional committees as payable to applicants are paid to the almoners. The staff, as we have said, has largely increased since 1894, but it is stated that the cost of it has been more than covered by the sums raised from various sources, from property accruing to the administration from the estates of those relieved, from payments from other poor administrations for non-settled cases, from payments from clubs and from insurance, from the relations of those relieved, or from the poor themselves.

167. This statement of the organisation of poor relief in Hamburg will have to be supplemented in some ways in order that its relations to charitable work may be made clear, but one or two points that it suggests may be noted. Hamburg contains a population almost as large as that of Liverpool, and if the proposal were adopted of employing voluntary workers in greater or less degree in the administration of poor relief, its methods might be considered as fairly applicable to cities of that size and to smaller cities of any considerable population. First, there is a strong central organisation which controls the treatment of cases in detail throughout the several circles of co-ordinated authorities of which the administration is composed. The kind and amount and continuance of the relief is no doubt settled by the district committee, but there is a limitation to the amount, proposals for assistance in excess of which have to come before the divisional committee, and the committee cannot settle as to the admission of persons to institutions or their committal to the care of a family. These questions come automatically from the district committee to the divisional committee, and they settle them, accepting or rejecting the proposals of the district as they may deem best.

168. The divisional committee is a small committee of eleven persons, the divisional superintendents, one from each district. The president of the Collegium or one of the members of the Collegium, the director and other officials of the central office, can take part in it. The president of the divisional committee and that of the district committee can control the business of his committee by postponing any decisions which he thinks desirable. The president of the Armen Collegium can postpone any decision of either the divisional or the district committee. At the district committee, too, the Collegium and the central office may be as strongly represented as at the divisional committee. The whole system is placed under the supervision of a paid director, and in connection with a central office it is organised so as to ensure that the register is examined to ascertain if the case is known, that the case is taken down at that office in the first instance, and that subsequently on its settlement that office carries out the decisions in so far as these entail admissions to institutions or questions of an obligation to maintain. Thus the control and influence of the director and the central office and of the divisional superintendents tend to give unity to the whole organisation, and to remove from the helper burthens and responsibilities that would exceed his powers. All that remains for the almoner is the verification

of the facts as noted when the case was taken down, the care of the family, and the taking of the relief. Yet the administration on this side is extremely decentralised. The almoners have the care of only 5·8 cases each, and it may be said that apparently such an organisation as this meets the objection of the Commissioners of 1834 to relief at the home at least on one point—the impossibility of “finding an adequate number of officers whose character and decisions would obtain sufficient popular confidence to remove the impression of the rejection of some deserving cases.” On these terms then we have a large institutional area, and a central committee of control which supervises that area, with the aid of the superintendents of divisional areas or divisional committees. On these the settlement of admissions to institutions depends, a small representative committee, as we have pointed out, whose members are severally acquainted with all the cases dealt with by the district committees in their areas; and the central office carries out all the arrangements. Finally, burthened only with the minimum of writing or reckoning there are the almoners, fifteen to a district, making up, it is alleged, “that adequate number of officers” which is required.

XXI.—THE DECENTRALISED METHOD OF SUPERVISION IN RELATION TO VOLUNTARY ASSISTANCE.

169. Taking this organisation as representing what is generally considered desirable in Germany, we will now refer to its charitable side, and then submit some statistics and criticisms.

The Voluntary
Fund of the
Central Office.

170. First, then, here, as in Berlin, there is a central charitable fund.¹ The Poor Institution (*Armen-Anstalt*) was formerly an institution, in the management of which the State of Hamburg took part, and which was also constituted a legal corporation (*Juristische Person*), but it was supported by endowments and contributions and not at all by subsidies from the State. Subsequently these sources proved year by year less sufficient, and State grants were made in constantly increasing amounts until in 1870, owing to the passing of the laws on education and on settlement, the education of the poor and public relief were finally taken over by the State. The endowments of the Poor Institution amounted to a capital of about £85,000. Some of this was used for educational purposes, but eventually in 1898 £60,000 was placed at the disposal of the *Armen-Anstalt* for preventive charity, a method which they were entitled to adopt under the Act of 1892; and they had already in 1878 established a separate fund for this purpose. Thus the Poor Institution besides, and parallel to, the public funds which it administers on behalf of the State, has a charitable fund consisting of about £61,258, and with other annual receipts producing an income of £3,986.² This sum is used in co-operation with other associations in payment of rent and in the relief of urgent cases, etc., in the treatment of cases of tuberculosis, and in sending children to sanatoria and to holiday colonies.

The registration
of charitable
endowments.

171. But further action has been taken in two ways. There are about 500 charitable foundations in Hamburg, with a capital of £2,000,000; and these funds, it is stated, were administered arbitrarily and not in accordance with the public interest. By an Act passed by the State in 1907 the supervision of charitable endowments is placed in a section of the *Armen Collegium*, consisting of one of the members of the Senate serving upon the Collegium as chairman and six Council members, chosen yearly by the *Armen Collegium* out of the number of their members of that class. The supervision extends to all corporations for the relief of individuals—excepting foundations managed by the State, the civil parish or the church authorities, and, generally, foundations which by their trust deeds are managed entirely in the interest of members. For the rest the managers of the foundations have to produce documents and papers and send in yearly accounts, yearly lists of the persons assisted, notifications of changes in their governing body, and other returns. The committee of supervision in cases of neglectful management may report to the Senate, and in special circumstances the Senate may dismiss the members of the committee of management and appoint others in their place.

¹ Das öffentliche Armenwesen in Hamburg, p. 66.

² Annual Report for 1907, pp. 15, 16.

172. Next an information office has been established at the offices of the Poor Administration which supplies to inquirers in regard to cases information drawn from the case-papers of the Armen-Anstalt, the case papers of the police authorities, and the evidence supplied by the managers of charitable foundations and associations and obtained from the private sources. It reports as to the amount of the poor relief which has been granted, the extent to which there are pensions or allowances, the amount of the relief granted by charitable foundations in single gifts or continuously, and finally, the settlement of the applicant, so far as it is possible to ascertain it. A report is also made in regard to the character of the applicant, his reputation, the circumstances of his family, the cause of his distress, and other matters. The issue of reports on these lines increases largely year by year. Information office.

173. Each year an address, bearing on some important question of the day in reference to assistance and social work is given by the director to the members of the administration, and some institution for the relief of distress is visited by them. In addition to the assistance of the women helpers (*Hilferinnen*) referred to above, the members of an association for the care of the home assist in the homes in certain cases, if, for instance, the wife is incapacitated for a time by illness or some other cause. In the year 1907, ladies from this association aided 1,510 persons in co-operation with the Poor Administration which supplied the necessary relief.

174. In this and other ways the administration in Hamburg is developing new relations year by year with the charitable institutions in the State, and is carrying out, indeed, the policy which many of our witnesses have strongly supported. In spite of this, however, it did not appear to the members of the Commission who visited Hamburg on our behalf that, so far as they could judge, the consideration and treatment of individual cases was so careful and sympathetic, or so preventive and helpful as it is in England among persons trained to the duties of associative charity. They thought that the old evils of giving small landlords a security in their rentals by reason of the fact that their tenant was a recipient of public relief tended to reappear; and the grant of outdoor relief to women with one or more bastard children, born sometimes during the period of their receiving relief was open to very grave objection. To the necessity of avoiding a procedure that would stereotype the methods of relief, whether public or private, the authorities are fully alive; but the applications are chiefly dealt with from the point of view of allowances, and obviously great care has to be taken to prevent these being granted without sufficient consideration or being continued indefinitely.

XXII.—STATISTICAL RESULTS AND COMPARISONS.

175. Some statistical results should now be stated. The general statistical test of administration in Germany is the average number of cases, or the average number of continuing cases, assisted with monetary outdoor relief in the course of the year, apart from medical relief. In 1892, the administration of relief in Hamburg was reformed. The average of continuing cases in May, 1893, was 9,178, and in 1907 it was 8,762, while the population had increased from 585,671 to 930,889. Thus, in fifteen years these cases had decreased 4 per cent., while the population had increased 59 per cent. The temporary cases decreased from 2,652 in 1900, to 2,331 in 1907. The inmates of the work and poorhouse, according to a day count, increased from 1,220 to 1,777, or 45 per cent., between January 1st, 1892, and January 1st, 1908, but the persons in this department who were placed under family care decreased from 201 in 1903 to 163 in 1907, or 18 per cent. This shows that whether by process of gravitation or by conscious policy there has been an increase in the indoor relief coupled with a marked decrease in outdoor relief, a result which would be anticipated from a stricter administration of Poor Law relief on English lines. Generally, it is said that where the stricter methods of administration have been introduced on Elberfeld lines—with a sufficiency of almoners, there is a reduction in pauperism, and an increase in the amount of relief in individual cases. In detail the German statistics consist usually of a monthly average of continuing cases (*Parteien*) in receipt of outdoor relief and cannot be compared Statistical results.

with the English day count of all persons in receipt of indoor and outdoor relief, including medical relief, on a particular day, reckoned according to the instructions of the Local Government Board. But, as a general measure of the increase or decrease of pauperism the results arrived at according to each method may be roughly compared. Thus, at Elberfeld, the average number of cases of single persons and families assisted by outdoor relief and of children under care is returned at 1.76 per cent. of the population in 1855, when the reform of the administration was introduced, and at .63 per cent. in 1906. Of the other forms of relief, outdoor medical relief, and indoor medical and other relief there is no continuous return. On the other hand, at Leeds, for instance, between 1851 and 1901, the population has increased 151 per cent., and the numbers of persons in receipt of relief of all kinds, in and out on January 1st in those years has decreased 14.54 per cent. The percentage of pauperism on population has dropped from 5.9 to 2.0 in this period. This reduction in the gross figures of pauperism we have found in many unions, due partly to changes in the population and differences in economic conditions, partly to a more fixed and regular administration. Many more salient examples of the reduction of pauperism in English unions than that we have quoted might be adduced. But a comparison of the English figures with those of towns in Germany, where the administration of relief is managed on the stricter system, suggests that results similar to those attained by good administration in England, on the lines of the limitation of outdoor relief, and the greater use of the workhouse and other Poor Law institutions of the union, may also be secured by the close scrutiny of individual cases and by the closely controlled services of voluntary assistants on the German method. On the other hand, if we may judge by Berlin, where the control is more difficult, and the cases are not in the first instance taken down by an official at a central office, and where it is hardly possible to obtain the aid of a sufficient number of helpers, the check on the expenditure of relief at the home can hardly be sufficiently strong.¹ At least, there the figures show an expenditure increasing considerably beyond the increase of the population, and similarly an increasing number of persons continuously relieved. Thus between 1892 and 1905 the population has increased by 25.94 per cent., and the number of recipients of permanent outdoor relief at the close of each year increased by 49.97 per cent.; and the number of the children of widows and others for whose subsistence outdoor relief is paid, increased by 36.36 per cent.

XXIII.—DIFFICULTIES OF THE DECENTRALISED METHOD.

The enlistment
and control of
helpers.

176. Dr. Munsterberg,² whose evidence has been of the greatest service to us, on account both of his frank avowal of difficulties, similar to those with which the Commissioners were familiar, and by the clearness of his conception of the main issues of poor administration, threw some light on these figures incidentally. To take one or two points.³ The control over the work of the district committees without paid officers in the districts is hardly sufficient, though Dr. Munsterberg, as President of the Poor Relief Board, by official instructions and by personal influence, does much to secure uniformity of action and administration.

"I am myself," he said, "very careful to see that the instructions are followed. I allow audience to every poor person in the town, which consists of more than 2,000,000. Every poor person may apply to me directly. I have three days of the week audience, and everyone may apply to me; so that by this personal influence care is taken that the district committees are not out of touch with the head of the administration. Local forces, however, are very strong and greatly affect the selection of the helpers. The chairman of the district committee and the helpers are appointed by the town councillors, and the town councillors appoint them as they will. The whole town is distributed to the town councillors, and they find out honorary people; and there are also small communities, a kind of clubs, who do not allow anyone who is strange to them to enter a district committee. We have little communities of citizens in a very small area, they are well acquainted with each other; and if a man of more progressive character, for instance, a social democrat, wishes to be appointed, it is very difficult to bring him into that district committee, because the others resist; and it is the same with the women."

177. At Hamburg the city is smaller and the almoners or helpers more numerous; and "they are accustomed to a more thorough investigation than in Berlin." Also as the city

¹ Munsterberg, 100309, 100458, 100493, 100300 (23).

² Munsterberg, 100404, 100420, 100459, 100308.

³ Munsterberg, 100479.

develops, classes separate, and rich and poor communities are formed. This is cause for anxiety. The helpers are by the rules resident in or quite near their districts, but with the expansion of the town this becomes more difficult. "I believe," Dr. Munsterberg said, "there will come the time when we shall be obliged to have some paid officers in order to supplement the inquiries of our ordinary people." There is a difficulty, too, in the supervision of continuing cases. At Hamburg able-bodied men may have relief from month to month, "if a thorough investigation proves that there is need of help." Persons over sixty years of age can have relief granted to them for as long a period as a year, but "the helper is under an obligation to ascertain from time to time if the need of help continues to the extent anticipated." In other cases relief may be granted for three months. The same rules prevail at Berlin, except that relating to able-bodied men—who at Berlin "are not as a rule to be considered eligible for relief." But Dr. Munsterberg says :—

"I am not quite sure that the district committees are as careful as they should be in every case. It is a mistake to allow permanent relief for a whole year, and if I could do away with it I would. I think every case must be inquired into at least every month."

By the General Orders the helpers should maintain a permanent supervision of the poor, and :—

"If the Orders were carefully followed it would be impossible that any change in the conditions of the person relieved could escape the view of the helper; but, as a fact, I confess that we have cases in which the change does escape. That is a fault of administration, and not a fault of rule."

Grants of allowances for maintenance can never be kept under control, unless they be made for very short periods and checked by an active and constant revision. Next the whole system depends on the sufficiency or, perhaps it should be said, the stringency of the inquiry. The inquiry is the alternative to the test. If it fails, the relief can hardly be otherwise than partial, controlled by private and personal influences, irregular, arbitrary and injurious.

178. On another side also there are difficulties.¹ The measures contained in Measures of the Imperial Penal Code for the punishment of drunkards, idlers, beggars and repression. tramps are not carried out. The evils indeed in Germany are those to which the Report of the Departmental Committee on Vagrancy have drawn attention as prevailing in England. In regard to the desertion of families Dr. Munsterberg says :—

"It is really a pity to see the healthy and able-bodied people walk through the town and desert their families, when we have no means to punish them, or if we bring them before a judge he merely fines them 10 marks, which they can earn within a week."

Therefore on this side, again, the administration is not properly supported.

179. From this evidence and other indications we are led to conclude that in any application of this decentralised method of voluntary helpers, whether it be considered as part of a recognised voluntary administration or as a new method for the control and distribution of public outdoor relief in our large cities, and especially in the Metropolis, greater reliance would have to be placed on skilled and paid local assistance in England than has hitherto been placed on it in Germany. This, it seems to us is an indispensable condition, if the employment of voluntary workers on the lines of decentralisation and individual treatment is to be introduced here to any large extent. Safeguarded, however, in this and other ways, we are in favour of its adoption, as part of the scheme of administration which we recommend.

180. In making this statement we are expressing views in substantial accordance with those of the Poor Law Commissioners in 1836—so far at least as the indigent are concerned—with this difference only that what they proposed to do by paid relieving officers only, and by boards of guardians, we should propose to do in towns partly by voluntary assistants, working in conjunction with paid officers and with local boards,

¹ Munsterberg, 100362, 100300 (29), 100446.

constituted differently from the present boards of guardians, and partly in co-operation with voluntary agencies. The indigent under the definitions of the Form of the Consolidated Order of 1836, form a considerable group, the indigent who are helpless from age, or from being crippled, or from incurable disease, or from temporary sickness.

181. The question of the application of the system of individual treatment remains to be considered in relation to the special classes to which the Commissioners of 1834 referred, the "partially able-bodied" and the widows; and there is also the problem of the able-bodied. We take this first.

182. We said in an earlier page that "only if the conditions of the treatment of the able-bodied, whatever they may be, are fully and finally settled, is it possible to settle with any completeness what time should be adopted in regard to other classes, whether with the aid of public or official relief, or of private and voluntary help."

XXIV.—THE DECENTRALISED AND INDIVIDUAL METHOD IN RELATION TO THE ABLE-BODIED.

183. The Hamburg rules state that an able-bodied man is not, as a rule, to be considered entitled to relief (*helfsbedürftig*); but in exceptional cases, if he prove that he has been active in the endeavour to obtain sufficient work but without success he may have temporary relief from month to month. In suitable cases, in which the willingness to work is assured, able-bodied men may be referred to labour information offices; and in Hamburg in 1892 agreements were made between the poor administration and some fifty of these offices with that object. In the years 1898 to 1902, 1,613 persons were so referred and 406 or 25 per cent. informed of work, but how far these may have found work upon the docks not independently but through the municipality cannot be ascertained. Men are also sent to the neighbouring labour colonies. But the question is being dealt with also from another side.¹ A Hamburg Act of 1907 authorises the formation of a Committee for relief work, who may serve as an administrative court. If a person has received public relief for himself or for his dependents he may, on a resolution of the Committee, be required to do any work that is suitable to his strength, if such will enable him to provide for his needs wholly or in part; and on his refusal to do the work he may on the resolution of the Committee be removed to a poor relief workhouse and there detained. This is an experiment, but the effect of it is receiving the fullest attention from experts, and it opens altogether new lines of possible development.² Speaking generally, Dr. Munsterberg said:

"If the case is one of a really deserving man, whose willingness to work is undoubted, he is relieved several times, perhaps two or three months, without hesitation. We are quite satisfied with the results, if, as I must repeatedly point out, there is a thorough investigation."

In charitable work this line was adopted by the Kensington Committee of the London Charity Organisation Society, in the winter of 1904-5, with very good results, on the same indispensable condition of "thorough investigation."³ Dr. Munsterberg proceeds:

"If we have able-bodied men who are not deserving, who live with their families, then perhaps we give the wife and the children relief, and tell the man to go to work; if he does not, we refuse further relief, and then he must do something. If he is very undeserving, and the children are in danger of being neglected, then we ask for a judicial order so that we may take the children away, because we have no power to compel the man to give us the children. We have no other power than to decide upon relief or no relief. If we say we refuse relief, then the case is rejected; but if the district committee becomes aware in that case that there are children in a very bad state, neglected, ill-treated, and such things, then they report it; and we try to have the children placed under our authority. For those purposes we need a judicial decision."

"With thorough investigation it is quite without danger to give outdoor relief"; and to the question—

¹ Munsterberg, 100376. Munsterberg, 100300, (29). ² Munsterberg, 100468, 100399, 100563, 100431, 100432, 100444. ³ Jackson, Evidence, Appendix No. xl., Vol. VIII. Cf. as to Nottingham, Wright, 87323 (2).

“What is there in the way of deterrence that is to prevent people from applying who might, with a little exertion, be able to provide for their own needs unless you have a workhouse test?”

the reply given was:—

“You refuse relief. If the commit'ee is of opinion that he is an able man, and he might take care of himself and his family, we refuse him relief. We apply the workhouse test only in those cases in which we find there is a man with a family and wife, or a woman who needs relief, but which relief, on account of unworthiness, we will not give in money or in kind. Then we offer him or her the House; but in the case of able-bodied people we do not offer the House, we simply tell them we refuse relief: We have inquired into your case, and we are of the opinion you are able to help yourself.”

184. But it is only fair to say that this position of granting relief to the able-bodied Insurance it is proposed to buttress by the system of insurance applied to unemployment, a against want of method which, as we have said elsewhere, we would strongly urge for experimental employment. adoption by local authorities or agencies in the first instance. The opinion that the provision of factitious employment, furnished with a view to meeting distress is desirable or indeed ultimately practicable is now losing ground. “For skilled artisans who are in want of work”¹ the Report of the Strassburg Unemployed Committee states, it is impossible under existing economic conditions to organise work suitable for their callings. For them, there is no resource except relief in money or insurance.” The application of insurance or provisional funds to the unemployment of unskilled labourers we have discussed elsewhere. In Berlin some employment is provided by the town authorities, but not any considerable amount.² Reliance is placed on other measures. One of these is insurance for “invalidity” and old age. It tends to classify and in part provide for one group of claimants. The cards for his invalidity insurance which the applicant is required to produce serve indirectly also as evidence of character. It “is a great help. If a man, for instance, has the twelfth or thirteenth card with stamp, that is a sign that he has had work all the time.” Thus a difference in policy comes to light. One policy is that of the Commissioners of 1834. They wished to prevent the creation of a dependent class of able-bodied men, and ultimately, it may be said, succeeded in doing so by the use of one method, by the offer of the house—the clearly less eligible maintenance—with more or less uniformity everywhere. The other, the German method, the method which this evidence suggests, is to adopt various expedients, to break up the problem; to prevent claims by insurance of the several kinds, which directly, in the case of unemployed insurance, and indirectly in the case of other insurances, supply substitutes for relief; to deal with exceptional cases by allowances; to provide relief works to a moderate extent; to use “colonies” of the Belgian or Swiss type where, if the inmates are not reclaimable they are at least provided with work under less eligible conditions, and for a time kept out of temptation where they are separated and treated, as the Commissioners of 1834 recommended, “as a class, placed in its proper position below the position of the independent labourer”; to strengthen the law against those who shirk reasonable work; to link out-of-work help, whether from unemployed insurance funds or from the relief authorities, with the labour agencies in such a way as to keep the unemployed under a very sharp supervision; to lighten the task of providing employment, by proceeding promptly on lines of repression against all unsatisfactory men who apply for poor relief, by the refusal of this relief, by the “offer of the house,” and in the more extreme cases by the removal of children to the care and authority of the poor administration. In all these, and in other ways, there is, what may be called, an adjustive ineligibility in the offer of the authorities; and behind this there is a local administration strongly centralised on the official side, and on the side of the voluntary helper decentralised but supervised closely. Finally, there are charitable means available in exceptional cases. As we have said elsewhere we think that some such combination of methods may be adopted in England, subject to strict adherence to the principle that the offer of relief to the able-bodied, and indeed to all claimants for public relief, should be less eligible than maintenance by their own efforts. But as we have also urged we do not think that relief in a workhouse under the conditions usually prevalent at the present time is the only satisfactory method of meeting the requirements rightly involved in the application of this principle.

¹ Report of members of the Commission as to Strassburg. 100471, 100376.

² Munsterberg, 100300 (28), 100468,

185. The corollary of this conclusion in relation to voluntary institutions and social and charitable work is obvious. The voluntary institutions registered and inspected on the lines we have proposed, would be brought into relation with the administration as recognised assistants in the public relief of the country, as institutions that did not give "partial relief," but dealt with the individual wholly and separately. And with a recognised development of voluntary personal work preventive assistance would have a larger scope. There would be a better classification of the objects of relief, a better ascertainment of the appropriate course of treatment and its application, with a better organised system of co-operation. To this question we have now to turn.

XXV.—THE DEVELOPMENT OF RESPONSIBLE VOLUNTARY ACTION AND CO-OPERATION.

Registration of cases in towns and co-operation.

186. Legislation in Holland has aimed at leaving all poor relief in the hands of churches and private charities on the understanding that the public administration should intervene only in cases in which they are unable to help.¹ Practically, relief is administered by three recognised authorities: the State provincial or communal authorities; the churches; and private institutions, that is, institutions which are not official bodies nor yet of a confessional or ecclesiastical character. By degrees a larger share of the administration is passing to the official authorities and to the private bodies, a decreasing share to the churches.

187. The percentages representing the share of the total expenditure which each authority meets are as follows:—

| Year. | Public. | Churches. | Private. |
|-------|---------|-----------|----------|
| 1854 | 40·1 | 50·4 | 9·5 |
| 1903 | 47·6 | 39·1 | 13·3 |

188. Every municipality keeps a register of all charities in the locality and the institutions, subject to penalty, send it to their rules and regulations. They have also to forward annual statistics of their work, and they are under an obligation, if required to do so, to submit to the municipal authorities evidence to show why, they, rather than the municipality, should not assist an applicant. There is no legal right to relief. Public relief is limited to what is "strictly necessary."² In Amsterdam an association of charities (*Liefdadigheid Naar Vermogen*) has been formed and has established a central register of cases; and its relief has been administered on "Elberfeld" lines for the last fifteen years by a staff of 400 or 500 workers. The municipal relief also is now taken to the houses of the poor by its voluntary workers. This system has been in force only one year, but it has hitherto answered very well. Societies similar to that in Amsterdam are established in the larger towns of Holland, and work generally on Elberfeld lines. Mr. Blankenberg, who was one of the founders of the association of charities in Amsterdam, and who was for a long time a member of the board of guardians of the city and is now a member of the town council, submitted to us evidence on which this short statement is based; and he considered that the main points round which a future reform of the administration of relief would probably centre were the following:—

(1) In every town an association of all the existing charities (public, church, and private) to be established, in order to secure co-operation and efficient organisation.

(2) In every town a central register to be instituted, in which all the names and addresses of the assisted poor shall be recorded for consultation by all the associated charities.

(3) Public relief to be organised on the Elberfeld plan.

189. As we have said, voluntary charity should, in our opinion, form a kind of outer circle of assistance, of which the centre is public relief, and by its means many of those who are in distress should be aided outside the Poor Law in such a way as to prevent

¹ Blankenberg, 100020, (9). (48), (55).

² Blankenberg, 100086, 100147, 100076, 100125, 100126, 100020, (43),

their dependence on the community. In Berlin, as in our own country, the co-operation between the public relief authorities and the voluntary agencies is not systematic or effective, though in many German towns the relations between the two are, it is said, "very good and helpful."¹ But in Holland, as we have seen, these relations are much more fully developed. A kind of partnership between the two administrations has been recognised, and an "Elberfeld" system on charitable lines is being utilised for municipal purposes.² The registration of charities is also there in force, indeed, the registration is necessary in order that the institutions may have civil rights, be competent to plead in Courts of Justice, to receive bequests, and to collect contributions. Except on these conditions, "the charities, so to say, cannot exist."³ Among the proposals recommended by a Special Parliamentary Committee in Belgium on the Reform of the Public Administration of Relief which reported in 1900, are included proposals for the registration of charities with the object of promoting co-operation between them and the public authorities, and for the establishment in each commune or union of communes a central joint information committee, on which both the voluntary and the official institutions should be represented.⁴ Reference need only be made to the laws for the recognition of voluntary associations and of foundations in France. They amply support our general proposition on that head, as does also, in Paris, the decentralised method of relief adopted in the divisions of the *Arrondissements* placed under the care of unpaid *Administrateurs* and their assistants. Thus, the evidence that we have received from abroad from experienced witnesses and from documents may be said to confirm our opinion on two points; that there should be a close association between the administration of official and of voluntary relief; that with that object voluntary societies and institutions should be enabled to acquire a recognised and responsible *status* that would make them competent for such association; and that a system of trained voluntary visitors should, as far as possible, be brought into alliance with the authorities entrusted with the duty of public relief, or should be directly associated with them in its fulfilment.

190. During the past thirty years the movement of thought in the United States has been in this direction.⁵ In many towns there are friendly visitors who work in connection with the Associated Charities or the Charity Organisation Society of the town. The Boston Associated Charities states as its object:—

"To secure the concurrent and harmonious action of the different charities in Boston in order to raise the needy above the need of relief . . . to encourage thrift, self-dependence and industry . . . to prevent children growing up as paupers . . . and to accomplish these [and other] objects, it is designed [amongst other means.] :—

"1. To provide that the case of every applicant for relief shall be thoroughly investigated; 2. To provide a means of confidential exchange of information between overseers of the poor, charitable societies and agencies and benevolent individuals. . . . 5. To send to each poor family, under the advice of a district conference, a friendly visitor."

191. In the course of the year some 900 to 1,000 friendly visitors are employed, while about 1,800 families are cared for by friendly visitors, and some 2,700 families are otherwise dealt with or worked for.

192. The society is organised like a Charity Organisation Society with a central council and district committees or conferences. The friendly visitors visit cases for longer or shorter periods as the circumstances require, both cases dealt with by the Poor Law and others. "The friendly visitor is not expected to investigate a family, for investigation is made by the agent." Nor is he "an almsgiver, for where relief is needed experience has taught clearly that it should be obtained from someone else." His aim is by friendly help and influence "to give people a fair chance to retrieve their fallen fortunes," whether their difficulties have been "caused by ignorance misfortune, or moral defect; to help them to improve their condition"—"not simply to relieve distress, but rather to ascertain and remove its causes." This method has led to the prevention and removal of much distress. It is an application of the "individual"

¹ Munsterberg, 100319, 100512 ² Blankenberg, 100257-72. ³ Réforme de la Bienfaisance en Belgique: Résolutions etc. de la Commission spéciale, 1900. ⁴ Appendix vii., Systems of Poor Relief, p. 4. ⁵ Charities Appendix.

system, combined with central registration, the training of workers and localised supervision; and it has been at least an important concurrent force in the reduction of outdoor relief. One of the distinctive features of the "associated charities" is the exclusion of all relief from their direct administration. Relief is not granted by them; it is obtained from other sources, as they may think best, whether from private agencies or individuals or from the Poor Law. Another is the large reliance placed upon the friendly visitor in dealing intimately and continuously with cases of every kind. But here, consistently with the other evidence we have received, the cases are in the first instance, taken down and investigated by a paid officer of the committee.

193. We have analysed as far as possible the conditions of one or two larger towns and cities, as we have those of rural districts and the smaller towns. Information in regard to them will be found in the Charities Appendix; and later bearing in mind the statements which we have just submitted and the experience gained in the administration of relief in Great Britain, we will formulate our recommendations. Other evidence in the same direction is to be found in the methods and development of the Charity Organisation movement.

XXVI.—SUGGESTIONS OF WITNESSES FOR THE RE-ORGANISATION OF CHARITIES IN RELATION TO THE POOR LAW IN COUNTRY DISTRICTS AND THE SMALLER TOWNS.

Suggestions
for the
development
of a reformed
administration.

194. We have now to consider the suggestions which have been made to us for a development of administration on lines resembling those which we have indicated but partially and tentatively. They will, we think, justify the position we have taken.

195. It is stated that outdoor relief cannot be abolished under present conditions of administration; that the charities cannot take the place of outdoor relief; that a reform of the endowed dole charities is urgently required; that though there may be supplementation of outdoor relief, there is little or no co-operation with the guardians; and that in many places there is overlapping between administrators of the Poor Law and administrators of the charities and donors.

196. (1) In most parishes in the country districts there are no Voluntary Relief Committees, and there no change need be made except that the terms under which the dole trusts are held should be altered, so that they become unconditional trusts for the general relief of distress in the parish, or are applied, wholly or in part, to some purpose of an eleemosynary character approved by the Charity Commission. Where the parishes have Voluntary Relief Committees, these committees, if registered, would be represented on the Voluntary Aid Committee of the union. The applicants to the Public Assistance Committee would be referred to the Voluntary Aid Committee for help, if suitable, from the distress (formerly the dole) charities of the parish in which they are resident and from other sources of benevolence. The trustees of the parish charities, though the legal interest in the charities is in some cases vested in the parish council, are independent trustees; no question need arise, therefore, of the rights of the councils. The use of the charity would remain as heretofore in the hands of the trustees, some one of whom would be desired to serve on the Voluntary Aid Committee, but the funds of the parish would still be applied to residents within the parish. (2) If, however, the funds are large, out of all proportion to the population and rateable value, it would be open to the Charity Commissioners to make an allocation of the charities proportionately to population to the several parishes in the union, or to make a scheme for their application in connection with the Voluntary Aid Committee for some special eleemosynary purpose that experience has shown to be satisfactory. As we have seen, provision for the aged by way of almshouses or pensions is said to have been very useful; but the utility of these charities may be greatly modified after a time by the introduction of State pensions. The provision of nurses for the sick and infirm is greatly desired by many witnesses, and where a scheme is necessary owing to the largeness of the endowments, part of the funds might well be applied to this object,

not for the parish only, but, so far as is practicable, for the union.¹ The detailed requirements of the third section of the model form of scheme would no longer be necessary: "The supply of : (a) Clothes, linen, bedding, etc.; or (b) temporary relief in money by way of loan or otherwise, in case of unexpected loss, etc.," for the doles would be transmuted into a distress fund not available for the poor generally, but for those only who are proved to be in distress. (3) By the Charitable Trusts Acts all trustees have now to send in accounts yearly to the Charity Commission; it will now be recommended by us that these accounts be made up in accordance with definite forms and be sent to the Voluntary Aid Committee for publication in their Annual Report, as well as to the Charity Commission. The registration of all cases assisted in the union might be better undertaken by the Voluntary Aid Committee than by the Public Assistance Committee. In these and other ways there would be built up a voluntary system of relief parallel to the public system, which might take over the duty of giving relief at the home, in co-operation with agencies and persons in the several parishes.

XXVII.—MR. GOSCHEN'S MINUTE OF 1869.

197. The desire to develop a systematic scheme of co-operation between charity and the Poor Law, especially in regard to outdoor relief, is very generally expressed in the evidence. Mr. Goschen's Minute, to which we have already referred, represented a turning point in public opinion in regard to this question and suggested a line of co-operation which in some of the unions of London has been carried out to a considerable degree by the guardians acting in correspondence with the District Committees of the Charities Organisation Society. We therefore draw attention to it again in some detail.² Mr. Goschen laid down a principle and suggested a method. The principle remains. The method, in our opinion, requires revision and extension. The principle was that there should be co-operation between Poor Law and charitable societies, but not overlapping; that is, that each case should be fully dealt with by either one or the other agency, and that, neither unwittingly nor of set purpose, should there be a supplementation of the allowances of one agency by the relief granted by others. After referring to "one of the most recognised principles in our Poor Law," "that relief should be given only to the actually destitute, and not in aid of wages," he says:—

"The general principle to be borne in mind seems to be that the obligations of the guardians should not be curtailed, and that where the charitable associations consider it within their province to deal at all with persons on the parish lists, they should do so, not by affording additional means of income, but by supplying once for all such articles as do not clash with or overlap the relief administered by the guardians."

To carry this out, Mr. Goschen proceeds:—

"The first point is that there should be every opportunity for every agency, official or private engaged in relieving the poor, to know fully and accurately the details of the work performed by all similarly engaged."

Then he suggests communication between the boards of guardians and the charities with that object. The Poor Law Board would, he says, be prepared:—

"(1) To authorise the guardians to print weekly lists, containing the names and addresses of outdoor paupers, and the sums given in relief in each case; (2) to authorise any reasonable remuneration for extra work to officers whom the guardians may employ to carry out this arrangement; (3) to instruct their inspectors to facilitate the communication between the official and private agencies, where such interposition may be of any service, and to assist in systematising as far as possible relief operations in various parts of the Metropolis."

And he suggests as at least one practical line for the division of labour between charitable and Poor Law work for relief purposes:—

"It may be well to add that boards of guardians cannot legally give relief (1) in redeeming tools or clothes from pawn; (2) in purchasing tools; (3) in purchasing clothes (except in cases of urgent necessity); (4) in paying the cost of conveyance to any part of the United Kingdom; (5) in paying rent or lodging; so that assistance rendered for any of these purposes will not interfere with the action of the guardians."

¹ Batchelor, 69011.

² Davy, 3291.

Alford, 31693(11)

198. The Local Government Board,¹ as the evidence shows, have been ready to approve any useful co-operation between the Poor Law and charities, but in general it may be said that but few active steps have been taken by the inspectors "to assist in systematising as far as possible relief operations in various parts of the Metropolis."

The principle of Mr. Goschen's Circular we accept. However it may be defined, the Poor Law authorities should have a definite province of work and a clear and undivided responsibility in regard to it, though they may find it proper or necessary in the interests of those who apply to them to obtain the services of charitable societies or institutions or the aid of voluntary workers. The methods of co-operation should, however, go further, we think, than those suggested by Mr. Goschen. In each Poor Law Union there should be a register of cases which are being dealt with or have been dealt with by the Poor Law authorities, the charities and parochial and other agencies, managed, as may seem best, by a central Voluntary Aid Committee, or by the Public Assistance Committee. Next a broad division of labour on either side should be accepted; and the Public Assistance Committee should refer to the Voluntary Aid Committee of the union cases in which people should be "kept off the rates," persons who can be assisted to become or to keep independent. We do not think that the Poor Law should become a charitable fund for the relief of the poor as it was before 1834. We think that cases in which relief goes beyond the relief that is necessary to meet destitution, reasonably interpreted, should not be relieved by the Poor Law, though the aid of voluntary workers be called in for the better supervision of these cases. And we are of opinion that, if there is to be co-operation, some working plan of cross representation of the Public Assistance Committee on the Voluntary Aid Committee and *vice versa* is indispensable.

199. That there is a wide field for such co-operation may be gathered from the special return of persons relieved during the year ended 30th September, 1907. This suggests that many cases of temporary distress might be dealt with by voluntary agencies instead of by the Poor Law. Thirty per cent. of the applications to the Poor Law were cases of persons whose aggregate period of relief during the year did not exceed one month, and who were not relieved on more than two occasions during the year.

XXVIII.—THE METHOD OF CO-OPERATION BETWEEN POOR LAW AND CHARITY, AND ITS PRACTICAL RESULTS.

The required co-operation between Poor Law and charity.

200. As a general statement of the kind of co-operation required the evidence of one or two of the General Inspectors of the Local Government Board may be quoted. Mr. Preston Thomas, who has had a large experience both at the Local Government Board and in the practical work of inspection, says:²

"It always seems to me that the one complement that you want to the Poor Law is, in every place, some organisation to deal with what ought not to be Poor Law cases. There are lots of people who are ready to subscribe money if they can be certain that the money is not wasted, and you want some organisation in every union, in every district, to take off the rates people who ought not to go to workhouses, and whom it would be kindness to prevent from going to workhouses, or indeed from being pauperised otherwise, and who would not come within hard and fast regulations. I should like to see that very much. Of course, in London you have got various societies which help in that way."

And Mr. Preston Thomas' evidence in regard to Exeter shows how, in connection with a careful administration of outdoor relief, Mr. Goschen's suggestion of the circulation of printed lists of applicants was of service, while the material for carrying out our proposals for the formation of a Voluntary Committee are there at hand. He says:³

"I found the administration was very unsatisfactory in many respects; in the first place its workhouse was bad, its accommodation for the sick was adversely criticised by Sir William Chance in an address which he published—I think the epithet he used was 'abominable,' and altogether it was as bad as it could be. Forty-two per 1,000 for a town of that sort, abounding in charities, everybody only wanting to find somebody to bestow charity upon, and Poor Law relief given broadcast! They had not grasped, until it was represented to them, how much pauperised they were in comparison with other places, and when they came to know that, and came to know that fixed rules were desirable and that giving relief indiscriminately was not good for anybody, they reformed their ways—one or two very influential guardians took up the matter thoroughly, and instead of having 1,127 outdoor paupers they have at the present time under 500. I think the last return sent to me was 450 something. . . . That saved them £2,700 a year, so I was then able to go to them and say: Well, now you have been saved this, do not you think you can provide properly for your sick inside the workhouse and build a decent infirmary? They said: That is a fair way of putting it, we will; what do you want us to spend? They have now built a very excellent infirmary, and their Poor Law relief is going down still. I took the trouble to go round only a week or two ago for the purpose—knowing I should have the honour of being examined before this Commission—of finding out whether there was any hardship from this at all. I went to the clergymen of the different parishes, to the chief constable, to the

¹ Davy, 3264.

² Preston Thomas, 12318, 12427.

³ Preston Thomas, 4438, 4439.

secretary of the Charity Organisation Society and to the secretary of the Church Army. I had talks with all those people, and the universal opinion was that the result had been wholly beneficial. One of the clergymen, who has a parish of, I think, about 4,000 or 5,000 people—a man who knows the condition of every man, woman, and child in his parish—was able to turn to a book as to all the smaller houses, in which he kept the names of people living in the houses; he could tell you about Mary Smith and William Jones, and every individual, and what they were doing. He was a man who knew all about it, and I went over the old lists of paupers with him. The Exeter guardians do a very useful thing; they print the names of their paupers in their half-yearly book, half-year after half-year. Then they circulate these books a great deal, and sometimes people come and say: This man or this woman does not want this relief; he or she has a flourishing son who lives at so-and-so, and could perfectly well afford to keep her or him; and, on the other hand, some one may come and say: This woman is only getting 3s. a week; it is very hard on her; she ought to have more. It is a very useful thing to do that. I went through some of the names with the present clerk of the guardians; he was once a relieving officer and therefore has a very large knowledge of the whole thing; he was able to indicate this person and that person and say of her, That person is doing very well; she sells apples in the market, or she peddles—she is making herself very comfortable indeed, and her son lives with her. Then someone else now lives with a married daughter, someone else lives with a married son, and so on. Lots of these people who had had relief seven years before were living on, and had got merged in the general population, and were earning their living, or being supported by people whose proper duty it was to support them, without any harm to anyone, but with great benefit to the rate-payers."

Other evidence of Your Majesty's inspectors confirms the utility of co-operation.

Mr. Hervey suggests that ¹:—

"The clergy of all denominations and representatives of charities in the neighbourhood should be invited to send in their lists to some central charitable organisation and to make themselves acquainted with the other lists deposited there, by which means an accurate dictionary or reference book might be framed to supply the necessary information about almost every person who had once received relief, either parochial or charitable."

And the utility of the method is practically confirmed by its use by boards of guardians and charity organisation societies by mutual arrangement. Mr. Lockwood says ²:—

"Not a few boards of guardians have amongst their members those who are members also of the Charity Organisation Society. An excellent practice prevails in a certain number of boards, and I wish the number were greater, of referring applicants for relief through the guardians representing the society to the Charity Organisation Society where such a course seems desirable. The arrangement works very satisfactorily where adopted, and saves a quite appreciable number of persons from becoming chargeable to the rates. In the report of the White-chapel guardians for the year ended Lady Day, 1905, is given a return of cases assisted by or through the agency of the Charity Organisation Society, whence it appears that 113 persons were so assisted during the year in various ways." ³

The procedure is almost invariably this:—

"Some member of the committee or of the board who is there, and who happens to be a member of the Charity Organisation Society, takes down the particulars, and then the applicant is told to attend at the office of the Charity Organisation Society at a certain hour. If a member of the Charity Organisation Society does not happen to be present, then the applicant will be given a note to say that the guardians think it will be better for the Charity Organisation Society, in the first instance, to deal with the particular case.

"At St. Pancras at almost all the relief committee meetings a member of the Charity Organisation Society, who is not a guardian, attends and notes particular cases, and to a certain extent enters into the deliberations with regard to the case, but has no official *status*.

"The agents of the Charity Organisation Society at St. Pancras always come round to know what we know about their cases, and they are always willing to show us their case-papers with regard to any case that we may have, or to render assistance to the relieving officer with any information that they may have on any particular case."

Mr. Morris, the Vice-chairman of the St. Marylebone Board of Guardians and Hon. Secretary of the Charity Organisation Committee, said:—

"The procedure, ever since I remember, has been that at the relief committee a member of the Charity Organisation Society has always been sitting. I have been sitting there since I have been elected, and prior to my being elected there was one of the justices of the peace who always used to sit there. When cases come up for consideration if any member of the committee considers they are suitable for the Charity Organisation Society's work, it is suggested they should be referred; but I should think that quite half the cases that are referred to us come from the relieving officers who say, before bringing this up to the committee, 'Is not this a case rather that you feel would be suitable to you?'"

And on the financial side Mr. Morris said:—

"I do not think in Marylebone we ever have been in the position [of being unable to meet the needs of a case that had been investigated, owing to lack of funds]. I think possibly in the year 1897 we might have been pushed into that position, but we had at that time as

¹ Appendix to Vol. I., App. xxxiii. (A). Davy, 2971.

³ Morris, 16278, 16805, 16820, 17051, 17061. Millward, 18766. Craig, 19696. Cleaver, 35917.

representing us on the board of guardians, a gentleman who gave very freely, and he used to bring the cases from the guardians to the Charity Organisation Society, and he himself very largely financed them. So that although at that time, when we were trying really to almost do away with out-relief in Marylebone, we had a great pressure at the Charity Organisation Society's office. We weathered it. Since then we have, I think, never had a really good case for assistance which we felt should be dealt with by charity, and yet been obliged to refuse it."

Speaking of London, Mr. Toynbee,¹ an Organising Secretary of the Charity Organisation Society confirmed these statements. Asked whether the Poor Law authorities throughout London generally co-operated with the Society, he said:—

"The practice differs very much in different districts. In some parts of London there is the closest possible accord. There is, for instance, in Whitechapel. In others, at the present time, there is not very close co-operation. But in most cases I think I am right in saying that there is a reference to the Society on the part of relieving officers, and very often on the part of individual members of boards of cases which they think can be better dealt with by the Society than by the Poor Law—even where co-operation with a board, as a board, is not known.

"30651. May you say that it is the regular practice, then, of a majority of the London Boards of Guardians to refer cases to your Organisation?—Undoubtedly.

"30652. Would you say that in a majority of cases thus referred, which otherwise would come upon the Poor Law, you have been able to do something to prevent them coming upon the Poor Law?—It is difficult to say whether the majority have been helped by the Society to that extent—a very large number, at any rate, have.

Asked, "In the great majority of cases, have you been able to help the people and to put them on a better footing than before, so that they may render themselves independent for the future?—I should say in the majority of cases that is so; but, undoubtedly, there are a certain number of recurrent cases—cases that come back to us after a time which we thought we had permanently helped. On the other hand, there are, as I say, a great number who do not come back, who have been reinstated once and for all, and whom we never hear of again.

"30644. Then may you say that you think your curative work has been considerable and effective?—Undoubtedly. I should say, roughly, that about half the applications made to the Society are not helped, for one cause or another. Some are withdrawn forthwith when the question of investigation is broached; others are already in the hands of the Poor Law guardians, and as it is the practice of the Society not to supplement Poor Law relief, they would at once be ruled out; and then, of course, a large number are rejected on the score of character after the investigation has been made.

"Outdoor relief cases could be dealt with to a very large extent . . . by the existing agencies, if there was the proper close co-operation." ²

Mr. T. Hancock Nunn, a member of our Commission, has cited another class of cases in which there has been useful co-operation with the Poor Law authorities.³

"After considerable controversy it was agreed, between the Guardians and our Executive, that, in accordance with the principles of Mr. Goschen's circular, these young women should, in every first case, at the outset, be offered the alternative of being dealt with by a woman worker—one of the members of our Rescue and Maternity Committee. By these, the young women, who almost invariably accept the alternative thus offered, are sent first to a Maternity Home and then to a Maternity Hospital, often the same institution. For the first three, six, or sometimes twelve months of the baby's life, the mother is enabled to earn her livelihood in the Maternity Home without separation from the life of her child. A glance at Appendix VIII. will indicate what measure of success has attended this difficult work. Of the influence on character—the most important thing—a schedule can only speak most vaguely. But it speaks definitely on two tendencies; firstly, the prevention of application to the relieving officer, and, secondly, the steady increase in the number of cases in which the man has been successfully prosecuted."

201. It is hardly too much to say that, as these quotations suggest, all systematic co-operation between charity and the Poor Law authorities for the exchange of information, the prevention of overlapping, and for mutual help has on the charitable side been promoted and carried out almost solely by charity organisation and other similar societies. Of the method generally, Sir William Chance, who has studied the problem of relief from the historical side and also practically as a guardian, and as the member of a Charity Organisation Committee, gave evidence. He said⁴:—

"How different is the administration of public relief by the vast majority of boards of guardians, and of private relief by a properly organised Charity Organisation Committee. Before such a committee all the facts of a case have to be ascertained before a decision can be come to, and when these facts have been ascertained the question of how it can best be helped may occupy a considerable time, and even then it may have to be adjourned for further information before the final decision. And the discussion is carried on by 'experts,' by men and women who really know the poor and live among them. Surely equal if not greater care should be taken by those who have the public purse to draw upon."

And speaking of the possible withdrawal of outdoor relief consistently with the encroachments of voluntary effort, he said:—

"I think certainly something would have to be put in the place [of outdoor relief]. I am not going to answer for London whether that can be done or not; but I think for the country

¹ Toynbee, 30717. Grisewood, 37204-7, 37228. Crowder, 17387 (6), (11), (13), 17651. Toynbee, 30629, 30643, 20649, 20652, 20646, 20782. ² 30716. ³ See page 703. ⁴ Chance, 27061 (48), 27106-8.

that a far better thing could be put in the place of outdoor relief—not by the Local Government Board nor by the State. . . . I believe that voluntary effort could perfectly well manage to relieve all the so-called deserving cases which otherwise would be relieved by outdoor relief.

“There would be a difficulty [in great districts growing up near London where the mass of the people are poor], but at the present moment it is almost impossible in some of these districts for voluntary effort to do very much, because the Poor Law gets in its way. Even in some of these districts that you talk of I am not at all certain that people would not come forward to help, because after all it is not always the rich people whom you want; we want everybody to help. You will very often find in some of the poorest parishes less pauperism than in a very rich parish. If you go abroad to the Tyrol you will not find a pauper there. The Tyrol is extremely poor, but everybody looks after themselves and they help each other. The abolition must be done extremely gradually, but I am not at all certain that it could not be done. You cannot say to-morrow outdoor relief shall be abolished. That was not done even in Bradfield; it was done quite quietly by not allowing any more outdoor cases to go on the lists. I quite recognise the difficulty you mention, but still I cannot help thinking that charity will meet it with benefit both to the poor and to the rich—the well-to-do rather.”

202. In several of the larger towns, as for instance, London, Edinburgh, Glasgow, Liverpool and Bristol, Charity Organisation Societies have adopted the decentralised form of organisation, and have usually a representative central administration with district committees. In London there are forty district committees, one or more in each union. To these committees the applications are made and are taken down on “case-papers” similar to those used in the administration of poor relief in Germany. The district committees have the services of a paid or hon. secretary and an inquiry officer, and the committees are composed of voluntary helpers and persons connected with parochial and local work, who, some of them, conduct the work of inquiry and the business of the committee, some of them help by friendly visiting, for which purpose many persons associated with other agencies give their aid. A large number of voluntary workers are in active co-operation with the society. Four hundred are working in connection with the district offices.¹ In view of the conditions of London life, it has hitherto been thought best in the treatment of cases not to create a general visiting system, but, as far as possible, to make use of the services of persons already at work in the district, and to ask their aid in the several ways that may seem suitable in the particular case.² With the object of yet further decentralisation, the formation of parochial relief committees have been promoted and ward committees proposed.³ Co-operating with the Charity Organisation Society, the guardians have been aided both to improve administration and to reduce pauperism. In their work the society has aimed at restoration to independence, “lifting them out of the circumstances that necessitate recourse to Poor Law relief.”⁴ The three main conditions that govern the action of a district committees of the society may thus be stated:—

“That there should be (1) a thorough knowledge of the character, circumstances and cause of distress of the applicant; (2) a definite scheme of really adequate help directed to the restoration of the applicant to a position of independence, and (3) co-operation in carrying out the scheme on the part of (a) relations; (b) employers and others upon whom the applicant may have some claim, and (c) charitable agencies.”

And the results of the method are its best illustration and its justification. The following is one of many cases that have come before us in evidence⁵:—

“A.M. was referred to the Charity Organisation Society by the Church visitor. He was ill with pneumonia. His club contributions were in arrears, so no sick pay was available. Five quite young children made it impossible for his wife to earn. Although for several years the man’s wages had been small and irregular owing to bad health, it was evident that they had done their best to keep the home comfortable and take good care of the children. The Charity Organisation Society raised money to pay up the man’s club arrears, gave an allowance of from 15s. to 20s. a week until he was entitled to sick pay, and sent him twice to a convalescent home by the sea. (He had a relapse after his first visit, because he tried to begin work too soon.) By the kindness of one of the Society’s visitors two of the children were sent for three months into the country to enable Mrs. B. to give more time to nursing her husband, and to lessen the household expenses. After many months of careful treatment, in which the district nurses took a large share, the man recovered, but was not strong enough to resume his former work. An introduction was obtained for him to the manager of one of the tram lines. He obtained work exactly suited to him and was quite able to support his family.”⁶

Results of the method of co-operation with guardians and agencies.

203. In co-operation with the guardians the following are cases taken at random. Mr. Morris says¹:—

"I will take one which is a case we are dealing with at the present moment, which I think is a typical one, in which I think charity can help. It is a case of a very badly crippled girl, who was placed by the guardians in a special home for cripples. I went to see the girl there, and I brought the case under the notice of the Charity Organisation Society, and consequently one of our ladies found a suitable dressmaker, and the girl was taken out of the home. A brother, who was not legally liable, was written to, and he helped to pay the cost. The guardians, instead of paying to the home, will be paying for about two years a small amount, and at the end of those two years that girl will be self-supporting. There was a piece of work which was very largely not relief work, it was the arrangement and the management of the thing, which I think will save the rates a very considerable sum. That was one of the cases.

"Then the second I have brought is a case that is now being worked out. It is really only just commenced; it only came in about a month ago. It is a case in which a man had insured against fever in an insurance society, and had dropped it some three months before, thinking he would never have fever. Then he took scarlet fever, and the relieving officer found it was rather a hard case. The wife went to ask if the guardians could pay the rent. We found that the relations were willing to help with the food, and so on, and it seemed to us rather a pity that the wife, under those circumstances, should get on the rates. That is a case we are dealing with at the present time. That is a temporary case for rent.

"16713. The guardians did that?—No, the Charity Organisation Society. These are cases we have taken off the hands of the guardians. The next case was a case where one of the out-of-work men applied to the relieving officer. This was one of the cases that was referred to us. That man has just been accepted for emigration by the Central Unemployed Body. That was the case of a man and his wife and five children, and it is a case where I think probably they would have had to go into the workhouse, but in that case he was sent to us before the order for admission was given. We went into the case, and found it was not without spot or blemish, but it was a case where we thought he might be emigrated, and the Central Unemployed Body took the same view, and the family is being emigrated to Canada this next month.

"The fourth was a case which was sent to us in the middle of last month, a man who had gone into the workhouse; he was blind, and they asked me if I could look into it and give some advice with regard to it. I found he had been educated at the Blind Institution at Hampstead, had behaved very badly indeed; had stolen and behaved disgracefully in many ways. That was a case where I thought it best to leave the man for a time in the workhouse. I thought it better to put him to grinding corn for a time, and when he had learned what steady work was one might see what could be done with him, so as to put him back to his trade, which is Braille printing.

"16714. Has he learned the lesson?—That lesson is in process of being learned. These are all quite recent cases. I took the last five cases. As it happens, instead of all being old-age cases, they are various cases, they are not all of one type. The last case is a pension case; an old woman of eighty-one, who had been very largely helped by her adopted daughter. The relieving officer, when she applied to him, felt it would be rather a mistake to bring an old lady like that up to get her relief from the rates. He thought her adopted daughter had behaved so splendidly to her that it would be better to arrange the relief through charitable people. We found that someone who knew her was willing to help, and we have raised the balance. Those are five cases that have come to us recently from the guardians, and show the sort of co-operation that goes on. It is very largely a co-operation of the relieving officers; all the relieving officers come to our offices and know us, and if they think there is a case which seems a suitable case for us, they pass it on."

204. An example of the method of co-operation applied to the relief of school children, with the results attained by it was submitted to us by Mr. Toynbee.²

"The cases showed how varied was the needs of the different families and what different methods were required if they were to be effectively assisted."

205. Of cases that fail the following, taken from the report of investigators of the question of the effect of outdoor relief on wages, may be cited as typical:—

"A. C.—Widow, forty-two. Left with five children in 1902. Two were taken by the guardians. The woman was taught good cooking and a situation was found for her as daily servant. She did not like the regularity of her life, grew very slack and was dismissed. She was not willing to make another effort, and now gets casual work and receives occasional help from the guardians.

¹ Morris, 16712-5.

² Toynbee, 30622 (41-44).

"G. R.—Came for help, as her husband had consumption, and it was necessary for her to become the wage earner. It seemed promising, and she was taught fine ironing with a firm of shirt manufacturers, where she could have earned up to 25s. a week when she was skilled. Her home was kept for her for three months while she was learning. At the end of the time she informed the foreman that she did not like it, did not mean to work every day, and preferred to do casual charing and get 'what help she could.' She has since drifted to the Poor Law."

206. In these two instances what appeared to be hopeful plans for the help of those assisted failed owing to the temperament and character of the applicants. The extent to which this affects the administration of relief, and especially of any curative treatment, is hardly understood. It is possible that personal influence might, in these cases, effect the change of mind which would make the assistance of service ultimately; but too much should not be expected from that method. Or even a decentralised scheme of public relief, such, for instance, as that at Hamburg, as our colleagues report, there is very little power of inducing a recovery of the better position in life which the applicant once held. The method of voluntary friendly visiting as practised at Boston and elsewhere might achieve more. But all that can be done is to put in operation the best personal forces that are available; and by a completer organisation of these, as we suggest, and by the training of both paid officers and men, better and more preventive results may be accomplished.

207. In addition to the evidence which we have quoted, we have the evidence of the Jewish Board of Guardians. They may be said to make a minimum use of the Poor Law and conduct their work, it would seem, very successfully on the lines of inquiry and assistance with the visitation by districts.¹

208. It may be urged that it makes little difference whether the applicant receives relief from the Poor Law or from some well-administered voluntary organisation. Here the question of the efficiency of the voluntary organisation is the critical question. What the standard should be we have stated above (p. 2).² Of the general utility of preventive help, there seems to be but one opinion. We desire both to increase its utility and to extend it.

XXIX.—FURTHER DEVELOPMENTS OF DECENTRALISATION, AND PROPOSALS FOR CO-OPERATION.

209. In the last year or two there has sprung up another movement consistent with the lines of charity organisation, but differing from it in the stress laid upon the personal care of individual cases on "Elberfeld" lines. Mr. Grisewood, the secretary of the Liverpool Central Relief and Charity Organisation Society, gave us evidence in regard to it. In Liverpool there are now eighteen district committees with 250 voluntary friendly visitors, a number which it is hoped to raise to at least 500, in accordance with a plan of undertaking certain duties under the guardians on well-defined limits.³ The voluntary visitors might, Mr. Grisewood suggests, "be placed in contact with the Poor Law organisation," and be semi-official visitors "in actual connection with the Poor Law." And on the guardians' part:—

"Every case should be dealt with as a problem in itself, precisely the same as we deal with our cases in charity organisation work. We say, What can be done for this family? In what way can they be restored to self-support? What natural means of help are there? And we resort to those means of help, and we use those means of setting them on their feet again. . . ."

"I fear there would still be a number who could not be treated in what we might call an effective way; but, at all events, when they came into a position to be treated effectively, it ought to be done."

210. Thus, at Liverpool we have the Central Relief Society developing on "Elberfeld" lines with the definite object of its visitors becoming the semi-official visitors of the board of guardians, and the guardians adopting what may be called a "charity organisation" policy.⁴ At Bradford, Bolton, and elsewhere, guilds of help have been recently

⁴ Cooper, 36692 (19); Milledge,

Vol. IX., App. lxxvi.; Paton, Vol. IX., App. lxxix.

established on lines parallel to the Poor Law, with, it would seem, a similar aim in view, at least, to the extent of their visitors becoming the visitors of a remodelled scheme of public assistance. On the other hand, there is some criticism. Mr. Cleaver, for instance, the experienced clerk of the West Derby Union, whilst strongly in favour of co-operation with charitable societies and ready to adopt the suggestion that the visitors of the Central Relief and Charity Organisation Society should visit all the widows in the union, was of opinion that it was better to adhere to the present division of labour between the Poor Law and voluntary agencies.¹ It was, he thought, impracticable to grant relief through voluntary agencies. "He did not think we should get the voluntary assistants here that they can there." But on this question we will not enter. We think that those who may undertake the work of visiting should assist the recognised voluntary aid committee, the establishment of which we propose, and should thus take a position parallel to that of the officers of the boards of guardians on the public assistance committee, co-operating with them and visiting for them as the cases may require; and we have made our recommendations accordingly. This represents the length to which the "semi-official" assistance should go. We believe that it would preserve its spontaneity and effectiveness to the best purpose if it were associated with the public administration of relief and worked in recognised alliance with it, but was not part and parcel of it.

211. At Hampstead,² under the guidance of Mr. T. Hancock Nunn, a member of our Commission, an interesting experiment in what is styled communal co-operation is being carried on. First he and those co-operating with him aimed at securing three conditions:—

- (1) That the actual hand felt by those in distress be the hand of a friend, and not of an official organisation.
- (2) That the helper should yet be backed by a powerful instrument for handling the network of agencies that exist for social betterment.
- (3) That the relationship between helper and helped should continue long enough to develop the knowledge essential to friendly help.

And to secure also the individuality and spontaneity of the several societies that co-operated and wishing to avoid centralisation they aimed also:—

- (1) Complete intercommunication between the associated agencies, it contented itself with merely offering—
- (2) Opportunities for any closer co-operation that might be desired, either permanently or as a temporary expedient, and maintained—
- (3) The complete freedom of action of each agency.

They next surveyed the borough, and made a registration of all agencies, municipal, endowed, voluntary or mutual, and subsequently a registration of all assistance. Next inter-parochial conferences were established to consider how co-operation might be effected in the cases in which overlapping occurred, and as "common meeting places to promote special organisation, local schemes for the improvement of the condition of the poor, or any meetings of common interest." This led to the formation of inter-parochial committees of assistance. The object of these committees was to improve the relation of the district visitor to the poor, by enabling her to substitute friendly visiting for the dispensing of alms; to bring into operation a committee of men of business and working men, who would be better equipped for the actual work of making wise decisions than the district visitor; to facilitate co-operation with municipal and other bodies. For purposes of social education a board of social study was established. And the scheme was also organised so that there should be co-operation with the friendly societies and with the Public Libraries Committee, the Public Health Committee, and the Distress Committee of the Borough Council, with the elementary schools and the Poor Law guardians.

"We saw that Poor Law relief and voluntary aid were two forces whose interaction was inevitable, and that unless the closest co-ordination could be effected between them they must thwart one another at every turn. The temptation to a board of guardians to play the part of charity is as

¹ Cleaver, 36155, 35887 (33), 35917, 35917, 36159, 36150 ² See p. 684.

irresistible as it is dangerous, and is illustrated up and down the country in union after union; and the only solution of this difficulty seemed to be, so to man the board with voluntary workers and voluntary associations with guardians, as to ensure an enlightened policy on the part of both. At any rate, the Hampstead Board, after having been dominated by a chairman to whom the poor rate was a constant temptation to lavish out-relief, became a board of social workers, who realised that the legal limitations of a destitution authority practically precluded any serious form of charitable enterprise."

Finally, as a centre for discussion a Council of Social Welfare was established representative of the agencies in the district and of the inter-parochial Committee. This Council appointed a Domiciliary Visiting Committee of which the results are stated as follows:—

(1) Virtually complete inter-communication between all assisting agencies had been secured by our system of registration, whilst the permanent allocation of certain families (composite as to their relations with several churches) to certain churches and societies and to the guardians, had minimised the possibilities of overlapping.

(2) The release of the district visitor in several parishes from almsgiving, and the administration of assistance by weekly or fortnightly committees representative of the churches had purified the friendly influence of the visitor, and the spiritual influence of every Church.

(3) The Social Study Circle, by rendering continuous social study easy, attractive, and practical, had paved the way for the Continuous Course, now running, which aims at providing such a general equipment as to eliminate the necessity, in all but exceptional cases, of employing a fresh visitor to meet fresh needs unstudied by the visitor already at work.

212. Of the general movement of thought towards the development or establishment of some central administration, representing, for co-operative purposes, voluntary effort and the charities, there is a mass of evidence from London, Liverpool, Birmingham, Newcastle-on Tyne, Tynemouth, Huddersfield, Sheffield, Leeds, Leicester.¹ But we think that without special efforts being made by inspectors and others in charge of the direction of public relief, "to assist in systematising, as far as possible, relief operations" in these and other places, little may be accomplished. If co-operation with voluntary agencies, personal and institutional, assumes an official importance equal to that of the administration of Poor Law relief by separate and independent boards, great progress in it may be made. But this can hardly be expected on the present lines, so long as the Poor Law has no active relations with the general charities, and is managed usually as an independent and isolated organisation.

XXX.—VOLUNTARY SOCIETIES.

213. Before submitting recommendations on this point, however, we would refer shortly to the large group of voluntary societies in the great cities, but especially in London. In considering these, the following statements should be taken into account.

(1) Charitable work of the best type is becoming more and more preventive in its nature:—

"That that is so is due in no small measure to the increased study which is now devoted to social questions. It is now becoming common for would-be social workers to equip themselves for their responsible duties by attending lectures and classes and submitting to a course of practical training under those who have already had experience. These workers are no longer satisfied with giving relief; they begin to enquire into the causes which make relief necessary and so come to be attracted to such work as health visiting, the promotion of thrift, the industrial training of children and the better organisation of labour."

For their instruction classes have been arranged at the School of Sociology and Social Economics in London, coupled with practical work at the district committees of the Charity Organisation Society, and courses of instruction for relieving officers and others.² Similar classes are being furnished in connection with the Victoria University at Liverpool; and centres for the examination of Poor Law officials who wish to stand for the relieving officers' examination are being opened in

London, Liverpool, and other parts of England. This method, it appears to us, is worthy of general adoption. If greater reliance is to be placed on the individual official or voluntary worker, the assistance, both of those who, like many capable officers, have been educated by the experiences of life and of those who have studied the administration of relief as a department of work and thought, like an increasing number of officials and voluntary workers, will be required. In this way, to a great extent, "the co-operation of persons of leisure and information" and also of a well-instructed paid staff will be promoted.

The Rev. B. H. Alford, who, as clergyman and Poor Law guardian has had a long experience of districts, rich and poor, urged upon us the advantages of the "interaction of State and voluntary agents" on the intellectual side of administration:—

"I desire it," he said, "as a volunteer, in order that philanthropists may be steadied in their work by a fuller sense of its wide significance; that visitors to the poor may be moved to a more continuous study of the poor, and more considered and persistent action, as feeling their responsibility to a board which entrusts them with civic duties.

"I desire it as a guardian; for I recognise with Mr. Birrell that there is 'a charm about voluntary work which could never be obtained in connection with work done at the expense of the taxpayer or ratepayer.' Also I see that in this way something of a novitiate may be provided to train the judgment and supply acquaintance with details of work among the poor. So candidates for the board might prove more suitable for election, and when elected more ready to acknowledge that there is no issue out of the perplexities of pauperism save by following patiently and through many long passages the clue of experience."

Arising, in great part, out of this new demand for special instruction, there is a new and widespread endeavour to use old institutions and agencies in a new way. They are being pressed out of their isolation. Miss Nussey, the almoner at the Westminster Hospital, showed us to how large an extent, with a view to the better care of out-patients, new connections were being opened out on all sides with general and parochial agencies.

"The difficulty of getting the various charitable and endowed organisations to combine and come together is growing considerably less." "It is difficult . . . but it is far easier now than it was to get people of various denominations to work together, and to get the various charities to co-operate. For instance, you will find on some of the parochial relief committees Nonconformists sitting. I am quite certain that some years ago it would have been quite impossible to have brought this about . . ."

As to co-operation:—

"I think the people are much more dissatisfied with the state of affairs than they were. They find the overlapping which goes on is so prevalent and so unsatisfactory, and that the way relief is given leads to no good results when it is given in such very small amounts. I think there is a great desire on the part of people to see that the work is done more thoroughly."¹

(3) The cure for overlapping is co-operation.² Overlapping is a soft and quiet thing. It is due in part to heedlessness and to want of experience, in part to a feeling of the privacy of charity. It can neither be found out nor checked as a rule, except by local inquiry (if, even then, the facts happen to come to light), and by reference to those who are mostly likely to be givers of relief in the area. Hence the use of registration. At the offices of centralised charitable societies it cannot be ascertained. They can prevent the grosser abuses of overlapping by reference to some general society for inquiry and mutual aid, but they cannot do more. By personal and continuous friendly visiting alone probably will be learned the facts, and that often incidentally. Hence, overlapping, as a rule, cannot be stopped by large measures of unifying, or, as it may be vaguely called, co-ordinating institutions, but by the general use of a common method of inquiry and by the perfection of local friendly care.

214. Thus, as we have said, the cure of overlapping is co-operation. And this co-operation is constantly increasing in reference to individual cases. If an institution is co-operating with others in regard to the people who want its help, it is probably fulfilling its function properly and for the common cause. It is wrong to take the mere number of the charities as in itself evidence of want of co-operation or inefficiency. One must also judge them by what is much less easily observable—by the to and fro of co-operation that goes on between them.

² Thorburn, 35693

215. The charities of provincial towns endowed and others are not usually very large: The charities of those of London are comparatively large. But to judge of them fairly, it is necessary to consider as London charities only those charities that find their field of work wholly London and provincial towns. or for the most part in the Metropolis. The population of larger London is great, but not a few charities have their headquarters in London, which to a very large extent deal with cases outside London, and are national rather than metropolitan. On the other hand, many charities outside London are local, but yet are available for London cases. The largest and most important charities are usually in modern times the voluntary charities. A classified return of the receipts of "charities in or available for the Metropolis" is printed in the Appendix.¹ The summary of these charities is as follows:—²

SUMMARY.

The income of the agencies dealing with material needs may be thus summarised:—

| | £ | £ |
|---|-----------|------------|
| Charitable contributions - - - - - | 3,664,022 | |
| Payments by or for beneficiaries - - - - - | 955,847 | |
| | | 4,619,869 |
| Interest on invested funds - - - - - | | 1,537,712 |
| Legacies - - - - - | | 735,197 |
| Industrial receipts and sundries - - - - - | | 367,080 |
| | | 7,259,858 |
| To this must be added the minimum income of local charities - - - - - | | 419,883 |
| Making a total in and available for the Metropolis of - - - - - | | 7,679,741* |

It should be noted that large sums are also contributed congregationally for the purposes of relief, the distribution of which would not necessarily pass through the above channels. Thus in 1905-6 the contributions entrusted to the Church of England for the support of the poor amounted, in the Diocese of London, to £84,533, and, in the Diocese of Southwark, to £39,716. Similar information with regard to other religious bodies is not available.

In addition to the receipts for material relief given above it must be noted that charges on public funds have been excluded from the summaries; consequently, in estimating the sums available for expenditure, the following amounts have to be added:—

| | £ |
|---|-----------|
| County and other councils' expenditure on asylums for the insane and epileptic of the Metropolitan area - - - - - | 566,845 |
| Treasury and public grants to industrial and reformatory schools - - - - - | 360,038 |
| Total expenditure of guardians on relief of the poor in the Metropolis - - - - - | 3,864,973 |
| | 4,791,856 |

The classes of charities each stand for some definite want on the part of the people, and as such they have a logical social claim and justification. Nor, in many instances, is the income for the class of charities out of proportion to the obvious needs of those who may be in want of relief from such charities. For example, the income of the charities for the blind in London and throughout the country is £205,961. A common registration is greatly needed in the relief of blind persons, but the income cannot be said to be excessive. So in regard to other classes. On the other hand some institutions, forgetting the three requirements of efficient administration, to individualise, to decentralise, and to co-operate—such as some hospitals in their out-relief departments, may, while doing much good work, promote and foster much that is indifferent and harmful. In these cases a change of method which should now be sufficiently understood would meet the evil. In other instances the institution itself may be administered on entirely wrong lines. In these cases it is a question whether it should not be permissible to appeal to some authority to consider and report whether it is in the interest of the community that such an institution should be established. The question of the establishment of shelters is an instance in point. We are of opinion that if a suitable central body such as we have suggested were set on foot, it might very rightly report on such matters.

216. What we have said leads us to these conclusions. The income of the charities is large, and they represent not only a large sum invested in the assistance of the distressed and afflicted, but a very large amount of experienced paid and voluntary work. They are the natural co-operators with any organisation for public relief. Public relief on its

* Adding the income of spiritual charities (£2,386,662) would bring the total income of charitable agencies to £10,066,403.

¹ Charities Register and Digest, p. cccxii., 1908. ² Charities Appendix.

side absorbs the proceeds of a large capital. In England and Wales in 1905-6 £3,374,427 was spent on outdoor relief. The effect of good administration is generally two-fold. The number of those who make application is reduced. Those who are relieved are, generally speaking, relieved both to a larger amount, if the financial question only be considered, and very much more thoroughly and sympathetically. The need of the individual is not generalised into half-crowns or other purposeless gifts; it is met according to its character, with money or without money, as may prove best. Co-operation implies, therefore, a better utilisation of means and an economy of means. But if this result is to be secured, there should be some recognised grouping of charities in each city, and some central body representing them. The parallelism between the Poor Law and charity should be carried through. If the bond between them is of value, each party to it should have the best opportunity for fulfilling it, the charities as well as the Poor Law. Each brings different qualities to the solution of the problem, the one a certain spontaneity and devotion, the other a more regularised and defined intervention. But it cannot be urged, as it is sometimes implied, that the Poor Law has the means to deal with all questions of relief completely, while the former, supported only from voluntary resources, can deal with them only incompletely. In the Poor Law, under the form of official continuity, there may be great changes in policy and great derelictions of duty; and these may hardly come to light, or come to light very slowly. The completeness and social utility of an institution does not depend on its command of resources only. Other elements of activity, energy and direction of purpose have to be taken into account, and what is, or seems to be, incompleteness may be in part only an indication of growth and of a process incident to the adoption of new ways. We think, therefore, that while help is given to promote the co-operation of charities, a larger rather than a lesser range should be given to voluntary effort; and that it should be the policy of the Local Government Board and the administration of Public Assistance to promote it and to utilise it as far as possible, and not either directly or indirectly to supersede it.

Three methods of reforming the dole system in relation to a reformed outdoor relief considered. Outdoor Assistance administered by Committee of Public Assistance and Voluntary aid by a Voluntary Aid Committee.

XXXI.—CONCLUSIONS.

217. We have now completed our survey, and would submit our general conclusions and recommendations, which indeed we have already in great measure indicated.

The first method. The withdrawal of all non-institutional relief.

218. Three methods of reorganisation have been considered by us. The first method was the withdrawal of all non-institutional Poor Law relief. To this objection was made to us by those who fully concurred in the criticisms of outdoor relief, which we have elsewhere stated at length.¹ They were witnesses of great experience, who had spent a great part of their lives in the administration of poor relief, and their knowledge of the whole subject—alike from the point of view of the poor and from that of voluntary charity—was exceptional. They felt, however, that outdoor relief, or what would elsewhere be called "help at the home," if the antithesis of indoor and outdoor relief may for a moment be set aside, had become so definitely and absolutely a part of the administration of the country that it could not be wholly abolished. And we, accepting this view and at the same time appreciating fully the very grave evils of the present administration of outdoor relief, have made proposals which, we believe, would modify very greatly the general conditions under which outdoor relief is now given. As we have shown, by the inter-action of the Committee of Public Assistance and the Voluntary Aid Committee new forces will be brought into the field; and it will be the duty of the Public Assistance Committee to deal with no applications that can be dealt with equally well or better by the Voluntary Aid Committee; and also, as we have shown, the persons who can be assisted by the Public Assistance Committee are those, and those only, who fulfil certain conditions. In this way, under proper supervision and subject to the proper training of those who take any responsible paid service with the committees, we think that the burthen of home relief which now rests on the guardians will become less and less and the responsibilities of the Voluntary Aid Committee will become greater. And thus we may hope that in the course of a few years outdoor relief will shrink to small proportions. In these circumstances we have recommended a policy of diminution and limitation instead of abolition.

¹ Crowder, 17474; Alford, 32039; Chance, 27106; Mackay, 29861.

219. The second method which we have considered is to form a single local board in each union area, which should have at its disposal such moneys as might be receivable from the rates, supplemented by any relief that might be obtainable from voluntary sources. This method we have not adopted. It seemed to us that relief from the rates must, for the good of the community, be administered subject to definite limitations, and to merge the two into one would result in introducing into rate-furnished relief an uncertainty in direction and purpose, which would lead to great confusion and much inequality of expenditure, and possibly much extravagance. Thus it might be very desirable that by some temporary aid an applicant should be so helped that he might no longer require to apply to the public relief committee. But if the resources of both the public committee and those of the charities formed one fund, the prevention of dependence would be made more difficult. There would be no intervening body, which with many private influences and sometimes considerable private means at its disposal, might stop dependence, if possible, at the outset.¹ Nor is it likely that the trustees of charities and charitable persons would be willing to place their funds and their generosity in the hands of a public rate-supported body. Rather would they say, as the trend of gifts and bequests for the endowment of charities seems to indicate, that what the State does not undertake they will help, what it does undertake they will leave to it wholly.

The second method.
A single Committee for the administration alike of rate-furnished and of voluntary relief.

220. For these and other reasons we have concluded that there should be two recognised bodies, parallel each to the other, one dealing with relief from the rates and one with relief and aid from endowed and voluntary sources. While we are of opinion that these two bodies should be distinct and separate, they should, we think, also be for certain purposes associated. What is desired is a division of labour accepted in concert and consistent with the same principles. For this reason we would arrange that representatives of the charities should be nominated to serve upon the Public Assistance Committee, and that some members of that committee should be co-opted on to the Voluntary Aid Committee. Again our desire would be that funds now in the hands of trustees for gifts to the poor should become funds available for the relief of distress or for certain purposes of charity to which they may be permanently applied. There would thus be a much larger amount of money available for the relief of distress than there now is; and the many obsolete conditions that now surround the use of doles and render them injurious or unserviceable we would, as suggested below (*see par. 237 (21)*) remove by an alteration of the Charitable Trusts Acts, combined with a simplification of the Commissioners' methods of modifying the application of charities by scheme.

The third method.
Separate Committees for Public Assistance and for Voluntary Aid.

221. This method would apply to the rural districts. There we find that the administration of voluntary relief is in the hands of the clergy and churchwardens and the trustees of the non-ecclesiastical charities.² Sometimes the trustees of the non-ecclesiastical parochial charities are appointed by the parish council. But besides these there may be other non-parochial charities which are under the charge of independent trustees. There are also the church and chapel collections and some voluntary gifts; and sometimes a nursing or sick relief association.

222. *Mutatis mutandis* the problem in the towns is the same. The provision of relief is usually more abundant. There are large voluntary charities of many kinds, which often meet both the needs of rural districts, and sometimes those of the neighbourhood generally, as well as the needs of the locality itself. There are many voluntary workers also attached to the parochial organisations and the churches and chapels, and to voluntary societies. There are endowed charities, in proportion to the amount available for relief usually smaller than those in many parishes in the country. And there is a comparatively elaborate system of Poor Law relief.

223. Our object is to bring these agencies into some continuing relation to one another, and, as a body, also into relation with the public administration of relief. We propose therefore the establishment of Voluntary Aid Committees parallel to the Public Assistance Committee on these lines. These Committees would be specially concerned with relief and aid at the home, the personal help of those in distress, the prevention of distress, the visiting of cases of all kinds in connection with applications made to it directly, or in connection with public health or educational authorities. Further, as we have else-

Establishment of Voluntary Aid Committee and their Duties.

¹ Young, 31191.

² Charities Appendix.

where shown,* we propose that outdoor relief, or relief at the home, if provided from the rates, should be administered on certain conditions, which may be summed up as follows :—

(1) That out-relief or home assistance be given only after thorough enquiry, except in cases of sudden and urgent necessity.

(2) That it should be adequate to meet the needs of those to whom it is given.

(3) That persons so assisted should be subject to supervision.

(4) That with a view to inquiry and supervision the case-paper system should be everywhere adopted.

(5) That such supervision should include in its purview the conditions, moral and sanitary, under which the recipient is living.

(6) That voluntary agencies be enlisted as far as possible in the personal care of individual cases.

Co-operation with
Public Assistance
Committee.

224. The division of work between the charities and the Poor Law would take the following form. The limitations to the claim of public relief which at present obtain would continue. Only destitute, or as we prefer to call them, necessitous persons would be eligible for it, and destitution is thus defined :—

“Destitution when used to describe the condition of a person as a subject for relief implies that he is for the time being without material resources : (i.) Directly available ; and (ii.) appropriate for satisfying his physical needs ; (a) whether actually existing ; or (b) likely to arise immediately. By physical needs in this definition are meant such needs as must be satisfied : (i.) In order to maintain life ; or (ii.) in order to obviate, mitigate, or remove causes endangering life or likely to endanger life or impair health or bodily fitness for self-support.”

Those who do not come within this definition would be dealt with by charity or, rather, by the Voluntary Aid Committee.

225. The Public Assistance Committee would proceed by trying to settle some plan of help, instead of considering only the question whether an allowance should be given, and how much it should be. They should not help in any case in which the necessary assistance could be obtained from other sources. Thus, instead of the present isolation of the board of guardians, there would be a constant reference of cases to the Voluntary Aid Committee for their help. Also, in so far as charitable institutions existed or came into existence to meet definite wants, they would undertake the cases of those in distress, as might be arranged, freely or on payment by the Public Assistance Committee. That committee would also be able to refer applicants to the Voluntary Aid Committee in order to arrange that visits should be paid to their homes by a competent visitor, with a view to some definite object being carried out, such, for instance, as household cleanliness, the proper use of the relief, etc.

226. This scheme of relief, coupled with the proposals made above, would, as far as possible, put a stop to the supplementation of outdoor relief. The grants of out-door relief are at present often so small that charitable means of every kind are used to supplement them. But in future the standing excuse for inadequate outdoor relief will no longer be preferred, namely, that it is given on the assumption that it is eked out by the addition of other undivulged means. The inquiry would have to show that the sum which it is proposed to give, *plus* sums definitely ascertained to be forthcoming or actually obtained from other sources, is enough according to a reasonable standard of necessary relief, or it would be illegal for the Public Assistance Committee to grant the relief at all. As an alternative they could offer institutional relief of some kind or they could leave the relief to the Voluntary Aid Committee.

Area of Volun-
tary Aid Com-
mittees and their
development.

227. The area of the Public Assistance Committee would be that of the present Unions. In the country the area of endowed and private or voluntary relief is the ecclesiastical

* See Part IX., par. 79.

parish. To a large extent this is so also in the towns and cities; but voluntary charities and sometimes the endowed charities extend over a larger area, such as that of the whole town, which is usually contained within one Union. We propose that the area of the Voluntary Aid Committee be the Union, but the Union considered as built up and composed of the parishes comprised within it. In the country and in all but the larger towns and cities the parochial divisions would be of special importance. The work of the Voluntary Aid Committee could be decentralised and might in part devolve on them, so far as the care of individual cases might be in question, and often its relief also. Thus, if it were thought necessary, the parish might be a unit of administration in connection with the Committee of the Union. And in the larger towns other subdivisions might be adopted according to local needs and requirements. The Voluntary Aid Committee might thus be developed into a kind of "friendly visiting" or a kind of "Elberfeld" system. In any case it would be the standing counterpart of the Committee of Public Assistance.

228. Our proposal for carrying out this method is as follows:—

First it is necessary, in our opinion, that charities that undertake any responsible public duties should be registered. Already the system of registration and certification has been carried far; and it is of great service to the public as providing guarantees of *bona fides* and accountability. This we would extend. Some common centre for registration is necessary. We suggest that the Charity Commission, subject to certain changes and alterations, should be the centre of this registration. A Department for the registration of voluntary charities should be opened at the offices of the Commission, and it should be within the power of every voluntary charity to register if eligible within the terms of paragraph 229. A voluntary society by registration would have privileges similar to those of an endowed charity or a friendly society. It would have a limited civil personality and would become a voluntary body publicly recognised as performing certain definite functions for the community. Registration would be the condition precedent to the representation of a society on the Voluntary Aid Committee. Endowed charities, which may not be known to the Charity Commission and therefore would not have been registered by it, would have to be registered before they could be represented on the Voluntary Aid Committee.*

Registration of
Voluntary
Charities at the
Charities
Commission

229. We begin, therefore, with a scheme of registration for voluntary charitable and benevolent societies; and we have defined as eligible for registration any voluntary charity that holds any property in land or houses obtained by purchase or by leasehold, or that is the tenant of any property under a yearly or other agreement.

230. The Charity Commission would be enlarged to meet this new work and would, we suggest, take a new position. It would become the Charities Commission, and would be attached to the Local Government Board. The President of the Board would represent it in the House of Commons.

The Charity
Commission to
become a
"Charities
Commission"

231. But apart from the registration of charities it would have a further duty.

To set on foot the Voluntary Aid Council, we place the initiative on the Lord-Lieutenants, Chairmen of County Councils and Mayors of County Boroughs in each county or county borough. It will be incumbent on them in co-operation with managers of Charitable Societies, Trustees of Endowed Charities, and members of the Public Assistance Authority, to establish a Voluntary Aid Council consisting in part of trustees of endowed charities, of members of registered voluntary societies, of some members of the Public Assistance Authority, and of such persons as are members of friendly societies and of trade associations, and of other persons being co-opted members.

The establish-
ment of Volun-
tary Aid Councils.

* As was stated on p. 455, we are not here concerned with educational charities, whether ecclesiastical or not ecclesiastical, but with eleemosynary charities; and further, neither here or elsewhere in the discussion respecting registration do we make any reference to the endowed or the voluntary charities of churches or congregations granted for religious purposes nor to the voluntary charities of churches or congregations provided for eleemosynary purposes. To charities of any kind it would be left open to register, if they so desired, and if otherwise eligible under paragraph 229.

232. The scheme under which the Voluntary Aid Council is formed must receive the approval of the Charities Commission.

Constitution of
Voluntary Aid
Committees.

233. It shall be the duty of the Voluntary Aid Council to appoint the members of the Voluntary Aid Committee. These committees would consist partly of representatives of trusts and foundations—endowed charities—registered at the Charities Commission and partly of representatives of voluntary societies so registered. These endowed charities and voluntary societies would be registered as engaged in local work in the Union area or in any of the parishes in the Union. The Committees would also consist partly of social workers and of persons of influence in the locality interested in charitable work. The schemes for these Voluntary Aid Committees would also in turn be approved by the Charities Commission in accordance with some settled lines of organisation. The Commissioners no doubt would consult with persons representative of the administrators of charities, and would formulate model schemes applicable to the varying conditions of parishes in rural unions, villages, smaller and larger towns, and county boroughs. A Voluntary Aid Council or Committee, should be eligible for subscriptions from the Public Assistance Authority on the lines of 42 & 43 Vict., c. 54, Sec. 10. No subscription should be made under the Act to any unregistered endowed charity or voluntary society.

Scheme to be
approved by
the Charities
Commission.

Duties of the
Voluntary Aid
Councils.

234. The duties of the Voluntary Aid Councils would be for the most part supervisory. The Voluntary Aid Council would supervise the operations of the Voluntary Aid Committees generally, and they would, as far as possible, maintain the same standard of help and relief throughout the area under their charge. They would collect funds for distribution to Voluntary Aid Committees, and they would allocate funds to poor districts. The County is already the accepted area for many benevolent and philanthropic purposes. The local infirmary or hospital is frequently a County institution. There are County nursing associations, and the County is the recognised centre in connection with various naval and military charitable associations. We propose that the Voluntary Aid Council acting for the County should promote these and any other voluntary institutions, associations, or societies for which the County, as a whole, has need. Its duties would thus be both distinctive and important.

Dole charities
to become
charities for the
relief of distress.

235. With regard to all dole charities there would be a statutory provision enabling the trustees to administer them as relief for persons in distress, and to co-operate with the Voluntary Aid Committee and with any sub-committees it may appoint in the administration of this relief.

236. In the solution of these questions, it has been our endeavour to apply a general principle of the Report of the Commissioners of 1834 and the suggestions of the Minute of Mr. Goschen of 1869 to the new conditions of the present time, in so far as they bear directly or indirectly on that charitable and voluntary provision and organisation, which should, we think, be established and extended on lines parallel to the Poor Law, or rather, perhaps we should say, parallel to a new public administration in very many ways different from what is known either as "the old Poor Law before 1834 or the new Poor Law after 1834. We have proposed measures for meeting cases of indigence and helplessness, partly by outdoor relief (as the Commissioners approved); and for providing partly by voluntary organisation (a branch of the subject which they did not discuss with any fulness), cases in which it may seem possible to "lift" people "out of the circumstances that necessitate recourse to Poor Law relief." We have drawn attention to the laws relating to the supervision of endowed charities and for the registration of voluntary benevolent societies. We have submitted a sketch of the general conditions of the poor, the administration of doles in various places, and the suggestions made for their reform. We have also described in some detail the methods of public assistance in some of the towns in Germany, not because we propose to include that method in the English Poor Laws, but because we think that it furnishes many suggestions for the organisation of helpers, who, working on voluntary lines but as the recognised coadjutors of the Poor Law authorities, could definitely undertake on behalf of the community the visiting of Poor Law cases, but, above all, the preventive work of social and charitable aid. We have described the work of voluntary societies and the success that has attended co-operation with the Poor Law and co-operation between societies, wherever it has been carried out. We have shown how the movement of thought and the recognition of the need of social education coincide with our proposals, and, accepting the principle of Mr. Goschen's Minute, we have recommended a general and intimate co-operation between the Poor Law and charity, so as to give to the latter not merely the opportunity to co-operate, if it may, but the *status* and encouragement that may enable it to become both in town and country the responsible and competent fellow worker of the administrators of public assistance.

XXXII.—ESTABLISHMENT OF VOLUNTARY AID ORGANISATION.

237. Our recommendations in regard to the organisation of Voluntary Aid are as follows:—

Establishment of the Voluntary Aid Councils and Committees.

1. That in the area of each Public Assistance Authority, that is in each County or County Borough, there be formed a Voluntary Aid Council, consisting in part of Trustees of endowed charities, of members of registered voluntary charities, as defined below, of some members of the Public Assistance Authority, and of such persons as members of friendly societies and trade associations, of clergy and ministers, and of other persons being co-opted members, as may be settled in schemes approved by the Charities Commission.*

2. That a statutory obligation be imposed upon the Lord Lieutenants, the Chairmen of County Councils, the Lord Mayors and Mayors of County Boroughs to take steps, within a given period, and after consultation with the managers of charitable societies, Trustees of endowed charities, and members of the Public Assistance Authority, for drawing up schemes in accordance with the preceding recommendation, which schemes must be submitted to the Charities Commission for approval.

3. That the Voluntary Aid Council submit to the Charities Commission proposals for the formation of Voluntary Aid Committees to be drawn up in the form of schemes to be approved by the Commission, and that the Voluntary Aid Council under such schemes appoint as members of the Voluntary Aid Committees persons such as those mentioned in Recommendation I.

4. That Voluntary Societies and Charities as defined in Recommendation 17 be entitled to register at the Charities Commission on lines similar to those of the registration of Friendly Societies under the Friendly Societies' Act.

5. That a registered voluntary society be entitled to nominate members of its own body for appointment to the Voluntary Aid Council and to the Voluntary Aid Committee of the district in which either its institution or any branch of its institution has an office.

6. That it is desirable that the Voluntary Aid Committee have its offices in the same building as the Committee of Public Assistance.

Functions of the Voluntary Aid Council.

7. The duties of the Voluntary Aid Councils would be for the most part not executive but supervisory. The executive work would be assigned to the Voluntary Aid Committees. The Voluntary Aid Council would supervise their operations generally and would, as far as possible, maintain the same principles of help and relief throughout the County or County Borough. They would collect funds for distribution to Voluntary Aid Committees, and they would allocate funds to poor districts. The County is already the accepted area for many benevolent and philanthropic purposes. The local infirmary or hospital is frequently a County institution. There are County nursing associations, and the County is the recognised centre in connection with various naval and military charitable associations. We propose that the Voluntary Aid Council acting for the County should promote any voluntary institutions, associations, or societies for which the County, as a whole, has need. Its duties would thus be important and distinctive.

Functions of the Voluntary Aid Committee.

8. That the Voluntary Aid Committee aid (1) persons in distress whose cases do not appear to be suitable for treatment by the Public Assistance Committee, and (2) applicants for Public Assistance whose cases have been referred to the Committee by the Public Assistance Committee.

9. That, with a view to the thorough treatment of individual cases, the Voluntary Aid Committee make such arrangements for the investigation of the applications made to them as the Charities Commission may deem necessary and sufficient.

10. That in dealing with persons in distress for whom it is desired to provide aid by way of monetary relief, it shall be the duty of the Voluntary Aid Committee to obtain such sums as may be possible from relations of the applicant, from friends, and from charitable sources generally for the aid of individual cases.

* See Recommendation No. 18 as to the proposed change in the name of the Charity Commission.

11. That with the administration of aid on the part of the Voluntary Aid Committee there should be associated such a system of voluntary visitation as the Committee may deem advisable in view of the responsibilities of their work in providing effectual aid, and in view of the physical needs and the habits of those whom they decide to assist.

12. That the Voluntary Aid Committee be empowered to appoint such Local Committees as it may deem necessary, subject to the approval of the Voluntary Aid Council.

13. That a Voluntary Aid Committee shall, as far as possible, register the cases dealt with by the Public Assistance Committee and by the Charitable societies and institutions in the district.

14. That Voluntary Aid Committees receive the support of the Public Assistance Committee, and of the Inspectors of the Local Government Board, with a view to systematising the relations between the Public Assistance and Voluntary Aid Committees and promoting co-operation between them.

15. That Voluntary Aid Councils or Committees be eligible for subscriptions from the Public Assistance Authority, on the lines of 42 and 43 Vict., c. 54, Section 10.

The Charities Commission.

16. That the Charity Commission be attached to the Local Government Board, and that the Commissioners and Assistant Commissioners, permanent or temporary, be appointed by the Local Government Board, whose President should represent it in the House of Commons.

17. That the Charity Commission be enlarged, and that there be assigned to it two departments of work, the supervision of endowed charities on the lines of the Charitable Trusts Acts, and the registration of Voluntary charities or Societies which hold any property in land or houses by purchase, or by leasehold, or are the tenants of any property under yearly or other agreements.

18. That the name of the Charity Commission be the Charities Commission.

19. That the staff of the Commission be strengthened so as to fulfil all the various additional duties that may devolve upon them:—

1. As a centre for the registration of voluntary charities.
2. In assisting in the preparation of schemes for the establishment of Voluntary Aid Councils and for registering such schemes.
3. In assisting in the preparation of schemes for the establishment of Voluntary Aid Committees and for registering and supervising their administration.
4. In the scrutiny of accounts and statements relating to Voluntary Aid Councils and Committees.
5. In the supervision of other schemes; and
6. In the scrutiny of the accounts of endowed and registered charities.

20. That Section 30 of the Endowed Schools Act, 1869, by which certain charities founded for purposes of relief may be applied to purposes of education, be repealed.

21. That it be provided in a Statute amending the Charitable Trusts Acts that, by order of the Charities Commission, any charities, as defined in Section 30 of the Endowed Schools Acts, 1869, exclusive of Loan Charities, Apprenticeship Charities, and Charities for Advancement in Life, may be used for the relief of distress, subject to such conditions respecting enquiry and other matters as the Commissioners may determine under a general order.

238. We have included in the Charities Appendix a draft of suggestions for the formation of an organisation of Voluntary Aid in the Metropolis.

Chapter 1

INVALIDITY INSURANCE.

1. We have shown in another Chapter the great changes that have taken place in the organisation of industry during the last eighty years. The more intimate and inter-dependent relations that often used to exist between employers and employed have been superseded by a system which, in appearance and also largely in fact, divides the interests of the employers from those of the workmen. This in turn tends to efface duties which might have been urged on the one side or on the other as a kind of moral obligation.

2. The evidence shows that, with very few exceptions, what working-men desire is the "cash nexus"—the bare wage contract uninfluenced by any but purely economic considerations—and the employing classes generally have accepted the situation and consider their obligations fulfilled when they pay the wage. Over the great trades, wages are determined by collective bargaining between Trade Unions on the one side and large employers and associations of employers on the other. The issue of the system is, for those who find employment a maximum wage during the prime of life, and no wage at all when the prime is passed.

3. The theory of industry which used to prevail was that the worker should maintain himself throughout life by his own exertions, providing for contingencies and for old age by thrift, or that, if he could not do so and his relatives were unable to help, he should receive poor relief. But of late years the "cash nexus" has been supplemented and modified in two different ways—the Employers' Liability and the Workmen's Compensation Acts* and the Old-Age Pensions Act †—the one insuring the operative against the accidents more incidental to work than heretofore, the other providing for a time when he is no longer able to work for his own support.

4. But it has become evident that these two methods do not meet all the exigencies which have arisen under this system. Accidents are not the only checks to wage-earning during active life, and wage-earning itself, as we have seen, generally ceases before the pension age of seventy.

5. From the Chapter on "Social and Industrial Developments since 1834,"‡ it seems clear that the present organisation of industry, with its excessive specialisation and universal application of machinery, has raised the standard of work required from the ordinary operative. From such an organisation, many, we fear, owing to want of original capacity and want of early training, must always be excluded and fall into intermittent and ill-paid occupations.

6. Trade Union regulations have worked in the same direction. The "standard wage" is based on the assumption that the worker employed is worth that wage to his employer; if the employer does not consider him so, the man is dismissed.

* Under the Workmen's Compensation Act where death results from the injury, if the workman leaves any dependants wholly dependent upon his earnings, there is payable a sum equal to his earnings in the employment of the same employer during the three years next preceding the injury, or the sum of £150, whichever of those sums is the larger, but not exceeding £350 in any case. . . . If he leaves no such dependants, but only those who are partially dependent on him, a sum lesser than that which would have been payable under the preceding clause is agreed or determined upon; and where total or partial incapacity for work results from the injury a weekly payment during the incapacity, not exceeding 50 per cent. of his average weekly earnings during the previous twelve months" is payable.

† The Old-Age Pensions Act, 1908, allows a gratuitous pension to a person who has attained the age of seventy, and has 12s. a week or less; all who have £21 a year or 8s. a week or less, receive a pension of 5s. a week. A person who has an income of £21, or 8s. a week will thus have in all 13s. (5s. *plus* 8s.); and those who have an income of between £21 and £31 10s. receive an addition of 4s., 3s., 2s., or 1s., so that their income also may reach 13s. a week in all. But a person is disqualified for receiving, or continuing to receive, a pension while in receipt of poor relief (other than medical relief), and until 31st December, 1910 (unless Parliament otherwise determines) if at any time since January 1st, 1908, he has received, or hereafter receives, any such relief. He is disqualified also if, *inter alia*, before he becomes entitled to a pension, he has habitually failed to work according to his ability, opportunity, and need, for the maintenance or benefit of himself and those legally dependent upon him. The pensions are payable from the Exchequer, and new authorities have been created for their administration.

‡ Page .

7. The same tendency seems to have been strengthened by the working out of the Employers' Liability Act and the Workmen's Compensation Acts. Whatever be the cause, the fact remains that, since the passing of these Acts, the number of injuries registered has constantly increased. Against the undue extension of this liability, the insuring bodies, whether employers themselves or outside companies, must protect themselves, and the system necessarily excludes many who cannot fulfil the insurance standard whatever it may be. Those presumably more liable to accident, though still more or less efficient, are excluded, and a new standard of ability is created which reacts on industry generally. A large class grows up of partially efficient unemployed men. They accept the situation, with complaint, indeed, but with submission, and thus assume a new position which imposes on society many new anxieties and difficulties.

8. We have, again, evidence to show that industrial demand, as it now exists, draws many younger unskilled men into a kind of employment, in its early stages remunerated by a wage which will not increase at any later period of their lives but will rather diminish. Such a demand in effect puts a premium on want of skill; if it be inevitable, it suggests that measures should be taken by way of insurance to prevent in part the evil results which must follow.

9. The years between the withdrawal from wage-earning and the pension age present a more serious problem than ever before. Trade Union regulations make it difficult for men skilled in the great trades to work on at their trades and accept a lower wage, and partial employment is more difficult to get. If, as frequently happens, there is not enough put by to cover this period, insufficiency of means or the acceptance of relief seems inevitable. In such cases the fact of other men getting a State pension at the age of seventy, on the ground that they are unable to earn a wage, may create a feeling of injustice on the part of those who have not attained the age and are yet as effectually barred from wage-earning.

Unless, therefore, some system of wages graduated according to age can be adopted, it is clear that workmen above a certain period of life will for the future find it more difficult to keep themselves in continuous employment. We do not forget that for the solution of these and other industrial problems we may look with growing confidence to methods of remuneration such as co-operation and co-partnership. Of their importance and promise we are convinced; but we have felt that to deal with them fully would take us far beyond the terms of our reference.

10. We seem almost driven to the conclusion that a new form of insurance is required, which, for want of a better name, we may call Invalidity Insurance. The early superannuation of the best workmen is so well recognised that it will, in all probability, give rise to demands for lowering the pension age, and will, at some point or other, entail a financial burden beyond the power of the national resources to bear.

11. We have made strong recommendations as regards insurance against temporary unemployment, but this does not meet the case of such persons when entirely incapacitated from wage-earning. It would, at any rate, be more agreeable to them, and more consonant with the feeling of the community, that they should fall back on an insurance fund to which they had at least contributed a part, than that they should be forced to have recourse to the Public Assistance Authorities. Such a scheme of Invalidity Insurance strongly appeals to us as calculated to meet many of the evils which we have been discussing.

12. One thing, however, must be borne in mind. Whatever be the risk insured against, whether it be sickness, accident, old age or unemployment, the possibility of such insurance depends on the existence of savings, whether these savings be in private or collective hands, or be put in the hands of the State by taxes which represent the savings, or what otherwise might be the savings of its citizens. Insurance, in short, is only a method for the utilisation of those savings. Whatever may be said, in order to insure, some people must have saved, individually or collectively.

13. As the necessity for such insurance seems to arise from the very organisation of industry which the nation has adopted, such a fund, it seems to us might appropriately be supported partly by contributions from employers, partly by contributions from em-

ployees, and partly by a subsidy from the State. In considering the amount of any subsidies to be granted by the State, we think that full weight should be given to the fact that a very heavy charge has recently been imposed upon the revenue of the country by the Statute granting gratuitous old-age pensions to all above 70 years of age who comply with certain conditions.

Actuarial inquiry
into cost of
invalidity insur-
ance.

14. We have consulted three eminent actuaries as to the weekly premiums for which a man aged twenty-one in good health and employed in a healthy occupation could insure the receipt of 10s. 6d. a week during the first twenty-six weeks of illness, and 7s. 6d. a week during the remainder of illness up to age sixty-five. Mr. T. G. Ackland, F.I.A., taking a 3 per cent. basis, places the amount at 3·9d. ; Mr. George King, F.I.A., assuming 2½ per cent. as the rate of interest, estimates the amount at 3·74d., and Mr. F. G. P. Neison, F.I.A., at 3·62d.¹ These sums are little in excess of the average weekly fee payable per child at school up to 1891, and remitted by the Act of that year.

15. Though we have obtained a good deal of information from the Board of Trade concerning systems of insurance both at home and abroad, and also from a number of witnesses representing the provident and benefit societies of this country the information is not sufficient to enable us to make specific recommendations. An account of some of the foreign systems of Insurance will be found in the following Note. It will be seen that none of them exactly meets the case, and, moreover, generally the schemes have not been long enough in operation to enable us to judge as to their measure of success. The foundations of any future legislation ought to be very closely scrutinised. They should be broad, solid and capable of continuous extension, and the organisations resting upon them should be so constructed as to expand automatically according to need. The great trade and benefit organisations in existence in this country ought to be very freely consulted before any proposals are made in Parliament. If time had permitted, we might have been able to make definite recommendations under this head, but, in view of the urgent necessity of laying our more important proposals before Your Majesty, all we feel justified in doing is to state our opinion that the information at our disposal requires to be supplemented before legislation can be attempted.

NOTE AS TO FOREIGN SYSTEMS OF INSURANCE.

Danish scheme

I. In Denmark the claim for statutory assistance in old age is inability, on reaching the sixtieth year of life, to provide what is necessary for the maintenance of oneself and such dependants as have a claim to entire support, or, in case of sickness, inability to provide medical relief and care. The poor relief authorities settle the cases and grant the allowances. In 1905–6 the average allowance per head in Copenhagen was £8 7s. 3d. ; and the average subvention per head £10 3s. 6d. For the whole country, including Copenhagen, the average figures were £6, and £8 1s. 11d.

II. The following figures show the results :—*

| — | Heads of families and single persons. | Dependants. | Communal grants. £ | State grants, £ |
|------------------|--|-------------|--------------------------|--------------------|
| 31 December 1892 | 30,959 | 12,867 | 82,008 | 53,883 |
| 1897 | 39,048 | 15,240 | 112,080 | 112,077 |
| 1902 | 46,015 | 16,791 | 161,059 | 161,059 |
| 31 March 1905 | 49,490 | 17,388 | 186,764 | 190,050 |

III. On this method of what may be called statutory old-age poor relief it is clear that the claimants and the charges tend to increase seriously from year to year. But the

* See Statistisk Jaarbog, 1901, p. 115 ; 1905, p. 120 ; 1907, pp. 132–3 ; 1908, p. 138.

¹ Statistical Appendix, Part XVI.

scheme reaches the labouring classes. It gives them relief provided by State and communal grants at sixty years of age; and what, in practice, simplifies administration is its association with the Poor Law.

IV. Not unlike the Danish scheme is that adopted in France in 1905* for the assistance French scheme. of the aged, infirm and incurable who are without resources (*privés de ressources*.)

V. The claim for assistance is thus defined:—

“Every Frenchman who is without resources, and, either more than seventy years of age, or suffering from an infirmity or a malady adjudged to be incurable, receives the assistance prescribed by this law, subject to certain conditions.”

VI. Lists are drawn up annually by the *bureau d'assistance* of persons who fulfil these conditions and reside in the commune. The lists are revised by the Municipal Council, who settle the admission to assistance of those who have their settlement in the commune and determine the conditions under which they shall be assisted, whether at their homes or in an institution. Provision is made for appeal. The Departmental Committee settles the admission to assistance of persons who have a departmental settlement, subject to approval by the General Council of the Department and subject also to appeal.† The approved claimants, if settled in the commune or department, have relief at their homes. But with their consent they may be placed in institutions, and there maintained. The mode of assistance which is adopted in each case is not fixed (*n'a aucun caractère définitif*). It usually consists of a monthly allowance—not less than 5 francs, nor, unless in exceptional cases, more than 20 francs. The cost is met by the communes and departments and by State subvention.

VII. The numbers who were assisted under the Act in 1907 were 340,610.‡ The estimate of the number to be assisted in 1909 is 495,000.§ The charges for the year 1907 on the Commune Departments and the State may be taken at £1,961,980:‡ the charges for the year 1909 are estimated at £3,760,000.§

VIII. Here, too, the charges appear likely to increase very greatly. The measure is a Poor Law measure and it is non-contributory; but allowance is made for other resources such as pensions and savings. The allowance thus, as in our Old-Age Pensions Act, provides a kind of bonus on contingent resources up to a fixed total. In France this fixed total is about 9 francs a week.||

IX. Both the Danish and the French schemes provide not only for old age but also for infirmity; but neither is on a contributory basis, though the French scheme, as we have just said, is so applied as to give advantages on account of savings up to a certain point. The Belgian scheme, on the other hand, depends on voluntary effort stimulated to make provision by reason of the largeness of the bounty it receives. As aiming at a growth in thought and habit, it cannot reach unskilled labourers so immediately, but it merits very careful consideration. It suggests a method which, applied to medical insurance, old age, invalidity, and also to accidents might very quickly harmonise with English institutions and legislation in this department.

X. The following brief description of the Belgian *Caisse de Retraites* is compiled from the Board of Trade Report on Provision for Old Age in certain European Countries (1899) the “Transactions of the Second International Actuarial Congress” (1898), and “Le Caisses de Retraites Ouvrières,” by J. Lefort (1906).

XI. The fund was first instituted in 1850 as a system of deferred annuities, to be bought entirely through the savings of the recipient, but working under the guarantee

* Law of July 14th, 1905, Sec. 1., modified according to Section 35 of the Financial Law of December 31st, 1907. † *Ibid.*, Secs. 7–18. ‡ L'Assistance obligatoire aux Vieillards, aux Infirmes, et aux Incurables: Edouard Campagnole, p. 50 (1908). § *The Times*, October 30th, 1908. || Law of July 14th, 1905, Sec. 20.

of the State, and bearing interest at the rate of $4\frac{1}{2}$ per cent. The principal changes in the present position are that the contributions of the recipients are largely subsidised, and that the rate of interest has been reduced to 3 per cent. The regulations under which the fund is now administered are as follows:—Any person over eighteen years of age may pay money into the *Caisse* with the object of acquiring an annuity for himself or for another person, but persons into whose account sums are paid by another must not be under six years of age.*

XII. The annuity purchased may be immediate or deferred, and the terms of purchase may provide for the return of the capital at the death of the insured person. The maximum annuity payable to any one person is 1,200 francs (£48). A deferred annuity may be purchased also by a single payment or by a series of payments, of which, however, either must suffice (having regard to the age of the insured person, and the time of life fixed for the commencement of the annuity) to purchase an annuity of at least 1 franc (9·6d.). Sums of not less than 1 franc may be paid into the fund, but they are treated as ordinary savings bank deposits until enough has been paid in to purchase an annuity of 1 franc.

XIII. The age at which an annuity is to become payable is fixed at sixty-five, but a person who becomes invalided earlier may draw his annuity at a rate reduced in proportion to his age.† But persons whose incapacity is due to loss of a limb or an organ or other permanent infirmity arising out of their employments may draw the full amount of annuity without reduction.

XIV. Annuities payable by the *Caisse* cannot be assigned or attached, except in the circumstances provided in the Civil Code respecting the reciprocal obligations of parents, children and married people. In these circumstances annuities exceeding 360 francs (£14 8s.) a year may be attached to the extent of one-third, provided the remainder be not less than £14 8s.

XV. A sum of 25 francs (£1) as burial money is paid out of the fund to the relatives of deceased annuitants who are in indigent circumstances.

XVI. The various steps by which the system has been turned from almost complete failure in its earlier years to a very considerable success are suggestive. Up to 1887 the fund was little used, except for soldiers' accounts opened by Government. In 1888 the State entered upon a vigorous propaganda by means of widely distributed pamphlets and notices. In 1890 the Post Offices were placed at the disposal of the institution. Progress began, but still slowly, and it was not until 1895 that the working class came in to any considerable extent. Since then the increase has been rapid amongst the workers, who in 1903 numbered 87 per cent. of the whole membership, i.e., 544,606 out of 624,086 (population, 6,000,000).‡ This success is attributable mainly to:—

- (1) The simplification of formalities to be complied with.
- (2) The reduction to 1 franc of the minimum sum for deposit (1884).
- (3) The reduction to 1 franc of the minimum amount of deferred annuity (1896).
- (4) An appeal to employers to affiliate their workers to the fund.
- (5) The subsidising of Friendly Societies.

XVII. It is really the last step which appears to have been most influential in attracting new members; and, in entering upon this policy, the State seems to have been influenced by the fact that in Belgium Friendly Societies are legally prohibited from providing life annuities for their members. In 1891 a subsidy was voted to be divided amongst recognised Friendly Societies, in proportion to the number of new subscribers to the fund, and the amount of payments made to it through their agency. This subsidy was renewed annually on an increasing scale until 1900, when it was made permanent on the basis of a percentage on every payment (60 centimes per franc), and an annual subvention to the intermediary society of 2 francs on every account on which at least 3 francs has been

* Board of Trade Report, p. 29.

† Lefort, p. 126.

‡ Lefort, p. 130.

paid during the past year.* The result has been a rapid increase, both in the number of societies and the number of accounts opened. The number of affiliated societies increased from 232 in 1896 to 4,924 in 1903; while the number of new accounts opened annually increased from 10,549 in 1896, to 114,978 in 1903.†

XVIII. It must be noted that many of these new societies have been formed solely for the purpose of bringing new subscribers to the fund; they are sometimes quite small, and serve no other function than that of collecting the payments at the homes of the members and receiving the subsidies.‡ Nearly all of them are said to be organised on a political basis, and the fear is sometimes expressed that the State would refuse to recognise them if their politics should be displeasing.§

XIX. In addition to the State subsidy, these societies generally receive subsidies from their honorary members, from their provinces, and sometimes also from their communes. It is estimated that of the whole sum invested, 55 per cent. is due to personal effort, 45 to various subsidies.||

XX. So far it is said that the fund has touched only the *élite* of the working class, and it is feared that it will fail to attract members of the poorest or of the least provident classes.¶ It has been suggested that for those who are really poor, recourse should be had to charitable societies which should open accounts for them, while, for the improvident, it is suggested that their employers might make enrolment compulsory. More promising than either plan would seem to be the movement which is taking place in the elementary schools, where societies are formed by the teachers, who collect the smallest subscriptions from the children, and are paid a small premium in proportion to the sums paid in. These school societies are recognised by Government, and in 1901 they numbered several hundreds, while more than 2,000 Friendly Societies had a school section for the same purpose.**

XXI. Two points remain to be noticed. As a temporary measure the law of 1900 provides a pension of 65 francs for indigent workers already over sixty-five, and for those who were over fifty-five on January 1st, 1901, when they shall reach the age of sixty-five.†† The granting of these pensions is left to local *Comités de Patronage*, and some complaint is made of the facility with which they are given; over 40 per cent. of the population over sixty-five having received them in 1901.‡‡

XXII. The second point is the fact that the savings may be returned. "Sums are paid into the *Caisse* by Friendly Societies for their members on one or other of the following conditions:—

- (1) That when the pensioner dies, the capital be handed over to the society for the benefit of its own funds.
- (2) That when the pensioner dies, the capital be handed over to his own family.
- (3) That no capital be returned. In this case the rate of pension is much higher than in either of the other two cases.

XXIII. The last named arrangement is, however, but little approved of by the workmen's families, and by far the greater number of investments are made in accordance with the second arrangement by which the capital is paid over to the family on the decease of the member."§§

The contributions made by the State are on a non-returnable basis.

XXIV. This scheme seems to contain much that is applicable to conditions existing in this country. The element which is peculiarly applicable is the utilisation of Friendly Societies and the encouragement of their work. Special advantages might fairly be accorded to members of Friendly Societies, in return for the services of the society in collecting and remitting payments. By making the fund a centralised one, under the guarantee of the State (as in Belgium), the necessity of any further interference with the management of societies, than that at present involved in their registration would be avoided. In England the Friendly Societies have never been organised as political agencies, and it might be well to guard against any such development by recognising for the purposes

Question of applicability of Belgian system to England.

* p. 126. † p. 129. ‡ p. 131. § p. 130. || p. 132. ¶ p. 130. ** p. 134. †† p. 126.

‡‡ p. 138 §§ Board of Trade. Report, p. 31.

of the fund only such societies as were really mutual benefit societies, granting sick pay to their members. The benefits of State subsidy would then be accorded only to permanent invalidity.

XXV. The following figures show the working of the Belgian system :—*

| — | New Savings Books. | Old Savings Books. | Contributions not returnable. | Contributions returnable. | Number of Mutual Aid Societies. | Balance on Deposits. | Pensions paid. | Invested Funds. |
|------|--------------------|--------------------|-------------------------------|---------------------------|---------------------------------|----------------------|----------------|-----------------|
| | | | £ | £ | | £ | £ | £ |
| 1898 | 43,873 | 288,156 | 89,365 | 50,864 | | 22,553,131 | 45,793 | 872,387 |
| 1900 | 136,384 | 719,732 | 102,650 | 102,192 | 4,996 | 26,460,303 | 54,872 | 1,187,877 |
| 1906 | 86,151 | 2,138,576 | 310,118 | 238,156 | 7,079 | 32,483,717 | 66,159 | 3,823,268 |

XXVI. The table shows what a very great incentive to insurance the bonus of the Government has given. The machinery of the Act is very simple also, and all the trouble, heartburnings and often litigation that follow on adjudication on individual claims are avoided.

German Scheme.

XXVII. In Germany there may be said to be three public insurances, the Accident Insurance, with which is closely related the Sick Insurance, and the Invalidity Insurance, with which again the old-age insurance is so closely related that the latter may be considered as merely supplementary to it.

(1) Accident Insurance.

(1) The Accident Insurance led up to, and almost necessitated, the Sick Insurance. “ All workmen and managers, the latter in so far as their yearly wage or salary does not exceed £150, are according to this law insured against the consequences of accidents which may occur in their industry, while they are engaged in it ; ” and definitions follow. The word “ manager ” has a side connotation. ¹

The object of the insurance is to provide for compensation proportioned to the loss which ensues from injuries to the body or from death.² In the case of injuries, there is provided as compensation for loss from the beginning of the fourteenth week after the occurrence of the accident :—

1. Free medical treatment, medicine and other medical aid.

2. An allowance during the continuance of unfitness for work. If it be a full allowance, it consists of 66⅔ per cent of the year’s earnings ; if a part allowance, it consists of some lesser sum than this reckoned according to the degree of incapacity for work which has ensued.

The earlier weeks’ illness are met by the sick insurance.³ In case of death the compensation is :—

1. As burial money, the fifteenth part of the year’s wages, but at least not less than fifty shillings.

2. Allowances to dependent relations, proportioned to the wages, from the day of death. Thus a widow would receive an allowance equal to 20 per cent. of the year’s wages ; and so a child up to the age of 18.⁴

The contributions are assessed on the employers according to wages and risks.

(2) Sick Insurance

(2) The Sick Insurance is managed chiefly by groups of associations. The assurance is compulsory on workmen and on employees who have yearly salaries up to £100 and are engaged in trade or commerce. (For agriculture and home industries there are special rules.)

The contributions are met two-thirds by the employees and one-third by the employers. /

* Annuaire Statistique de la Belgique.

¹ Gewerbe Unfallversicherung Gesetz 5 July, 1900, § 1.

² *Ibid.*, § 5.

³ *Ibid.*, §§ 12, 15.

⁴ *Ibid.*, §§ 16, 17.

The benefits are medical treatment and sick pay for thirteen weeks at the rate of 50 per cent. of the average daily wages ; or free treatment at a hospital with half sick pay for the family. Confinements also are provided for, and burial.

(3) Lastly, as a third form of insurance, an Invalidity and Old-age Insurance ⁽³⁾ Invalidity and old-age insurance. supplements the Sick Insurance. The insurance is compulsory on all wage earners, as defined, managers, foremen and others who have a salary of less than £100. The employers and employed each contribute half of the necessary funds, and the State contributes fifty marks for each annuity.¹

XXVIII. Persons who do not come within the terms of the Act may insure voluntarily if their wage does not exceed £150 ; and there are other classes of persons also who are allowed to insure, such as small employers and home workers.²

XXIX. The object of the insurance is the claim to receive a pension or allowance in the case of inability to work or of old age. The allowance for invalidity is payable irrespective of the age of the insurer and continues during inability to work. If the inability to work is due to an accident, the claim for the invalidity allowance is valid only in so far as the latter exceeds the allowance granted for the accident.³

XXX. The old-age allowance is payable without regard to the question whether the insurer is or is not able to work.

XXXI. An insurer who is not permanently unable to work, but who has been unable to work for twenty-six weeks continuously, receives an allowance for the further period of his inability to work.⁴

XXXII. If an insurer is so ill that, as a consequence of his illness, he has to be cared for in order to prevent his becoming unable to work and thus claiming an invalid allowance, the insurance office is required to allow him to undergo medical treatment within such limits as may appear to them suitable. The insurance office can do this by bringing the sick person into a hospital or a convalescent home. The charges for this institutional treatment fall not on the Sick Insurance Fund but on the Invalid Insurance.

XXXIII. During this treatment a relief allowance has to be paid for such dependants of the insurer as he has hitherto maintained out of his wages, if the insurer does not come within the terms of the legal provisions for the sick. This relief insurance, in so far as the insurer was under the legal provision for the sick up to his coming into relation with the insurance office, amounts to one-half of the sick pay allowed to him during the legal continuance of the sick relief, besides a fourth of the customary local daily wage of the ordinary day labourer in the place where he was last employed or last resided.⁵

XXXIV. These funds, it will be noted, are very closely related the one to the other. They apply chiefly to wage-earners and to employees who earn less than 2,000 marks, or £100 a year, and they give large advantages of treatment and maintenance. The following table shows the totals paid in certain years for compensation for injuries due to accidents :—

Accident Insurance.

| | | | | Accidents Insurance Compensation for injuries. |
|------|---|---|---|--|
| | | | | £ |
| 1890 | - | - | - | 1,015,766 |
| 1895 | - | - | - | 2,506,289 |
| 1900 | - | - | - | 4,332,247 |
| 1905 | - | - | - | 6,771,896 |
| 1906 | . | - | - | 7,221,843 ⁶ |

¹ Invaliden Versicherungs Gesetz, 1899, § 1. ² *Ibid.*, § 14. ³ *Ibid.*, § 15. ⁴ *Ibid.*, § 16. ⁵ *Ibid.*, § 18.
⁶ Amtliche Nachrichten des Reichs Versicherungs amts 15 March, 1908, p. 326.

Invalidity, Sick,
and Old Age
Insurance.

XXXV. The following table gives the number of current pensions or allowances under their several heads :—

| Years. | Total. | Of these :— | | |
|--------------------|---------|-------------------|----------------|----------------------|
| | | Invalid Pensions. | Sick Pensions. | Old Age Pensions. |
| 1st January, 1897. | 365,625 | 161,670 | — | 203,955 |
| " " 1900. | 519,452 | 324,319 | 5,118 (1901) | 195,133 |
| " " 1905. | 897,406 | 734,955 | 16,985 | 145,466 |
| " " 1908. | 978,960 | 841,992 | 20,081 | 116,887 ¹ |

XXXVI. The total expenditure upon these forms of insurance, and upon contributions returned to insurers, treatment, home care, and extraordinary expenditure has been in the following years :—

| | £ |
|----------------|-----------|
| 897 - - - - - | 2,994,691 |
| 900 - - - - - | 4,636,463 |
| 905 - - - - - | 7,911,000 |
| 1906 - - - - - | 8,301,957 |

Of the last sum £5,864,076 were paid by the insurers, employers and employees, and £2,437,880 by the State. ²

XXXVII. The wage-earning population which is dealt with in Germany is 15·4 millions ; and to this population £8,301,957 was paid in the year ending January 1st, 1908 for the three insurances, ³ and for accident insurance in 1906 £7,121,343. ⁴ The yearly increment of pensions for invalidity appears now to be lessening, and the old-age pensions vary little in number from year to year. Perhaps, except in the case of the accidents insurance, a maximum has been reached. On the population of 15,000,000 the number of current pensions is 6 per cent.

XXXVIII. There is, we believe, no reason to believe that there has been any considerable decrease in pauperism or in Poor Law expenditure in consequence of the insurances, judging by the statistical standards applied to poor relief in Germany. When the sick allowance has run out or an invalidity allowance is not sufficient, on an application to the Poor Authorities it is frequently supplemented by poor relief. The relief per head is thus probably larger than it was. The existence of three funds gives rise to unnecessary complications and expenditure. It is suggested that the next step of reform will be the consolidation of the funds in one single fund with one insurance payment for all benefits. ⁵ The total expended by the working classes and by the employers through these funds is very large, amounting to £15,000,000 a year for all the insurance purposes, a sum withdrawn from the ordinary circulation of the market and devoted to a special purpose. The justification for this withdrawal is the same as that for the poor rate, namely, that, if it were not for compulsory contributions, the money would not be forthcoming to meet needs ; and those who most wanted the help might least obtain it. The scheme coincides with the industrial system. The levies are made out of wages on pay days, and the employers act as agents. The obligation on each party is fixed and transformed into a monetary transaction. It is accepted as part of the business system of the country and thus becomes a matter of routine ; and as in other ranks of life insurance through insurance societies is used to cover most of the financial risks of life, so in these classes a national insurance in great measure supersedes clubs and savings banks and sick funds.

XXXIX. If a contributory scheme were adopted the choice would seem to lie between the Belgian system and the German. The Belgian system would fall in with the great Friendly Societies organisation in this country and might be supplemented. The insurances of the country might be reorganised on such a basis, settling the purposes to which public insurances should be applied and defraying the expenses in great part by Government grants on the Belgian lines.

¹ Amtliche Nachrichten des Reichs Versicherungs Amts 15 March, 1908, p. 366.
² Ibid., p. 326. ³ Ibid., p. 368. ⁴ Münsterburg 100,333.

⁵ Ibid., p., 368.

XL. The alternative is the German system. To produce benefits according to the standard of living in this country would involve the charging of considerable premiums and the laying aside of a very large capital. But it would have one advantage. It would make a provision for the poorer classes at once, though it would not, like the Belgian system, directly stimulate habits of self-support and thrift. If the formation of such habits is of the first importance, more important than the provision of relief without regard to them—then the Belgian system is the better.

XLI. It is true that such schemes scarcely touch the unskilled worker, but efforts, in the first instance experimental, might be made in this direction. In most poor districts there might be club centres, to which by arrangement the employers might pay some part of the wage to the account of their workmen, who would thereby become contributing members for the prescribed benefit. By way of experiment the Treasury might allow the Registrar of Friendly Societies to appoint one or two organisers to promote or extend clubs for this class, in co-operation with the employers and existing societies in the locality. In this way the contributory system might be extended.

XLII. We would also call attention to a Memorandum which has been submitted to us by the Bishop of Lichfield, Lord Avebury and Sir Edward Brabrook. The suggestions made in that Memorandum are for the creation of a pension fund administered by the State, and are summarised under the following heads:—

Discussion of
Memorandum by
Bishop of Lich-
field, Lord
Avebury and
Sir Edward
Brabrook.

- (1) Registration on birth fee.
- (2) School fee.
- (3) Voluntary contributions of payments at fixed interest, subject to limit of £52 a year.
- (4) Temporary State addition to contributions of persons of more advanced age not qualified to receive pensions.
- (5) Temporary provision of free pensions to persons too old to buy any pension, subject to limit of income and to a certain amount of discrimination.

XLIII. No estimate is given of the sums necessary to be paid, but it is said that:

“The registration fee and school pence will, in the generality of cases, have been adequate to provide for the child a pension of 5s. a week at the age of seventy, and a certificate of the pension that has been ensured by those payments should be granted to the child. It should at the same time be intimated to the child that he or she is at liberty to make further payments to the pension fund administered by the State. The essential condition of that pension fund is that all payments made to it should be accumulated at a fixed rate of compound interest. If the earnings of the investments of the fund do not in any year amount to that rate of interest, the deficiency is to be voted by Parliament, and added to the investments of the fund. The payments to the pension fund should be voluntary, and might be applied to increasing the amount of the pension already earned, or lowering the age at which the pension may be claimed. In cases of persons above school age, or scholars for whom pence have not been paid, payments to the pension fund might be made of any amount at any time, and corresponding cards or certificates issued, specifying the pension thereby acquired. No person should be entitled to insure in the pension fund any sum exceeding in the aggregate £52 a year—£1 a week.”

Chapter 2.

SETTLEMENT AND REMOVAL.

Origin of Law
of Settlement
and Removal

16. The origin of settlement extends into those remote periods which are responsible for the body of judicially recognised custom known as the Common Law.¹ An early legislative recognition of a kind of settlement may be found in the Statute of Labourers, 12 Rich. II., c. 3, which enacts that "no servant or labourer . . . shall depart, at the end of his term out of the hundred . . . where he is dwelling, to serve or dwell elsewhere," without "a letter patent";² and also "that every person that goeth begging and is able to serve or labour" shall be punished until means have been found of securing that they return to serve and labour in the town whence they came.³ Also "beggars impotent to serve shall abide in the cities and towns where they be dwelling, and if the people of the said cities and towns will not or are not able to maintain them they shall withtake themselves to other towns and cities within the hundred, or to the town where they were born, and shall there continually abide during their life."⁴ Thus, with the well-known qualification that all relief in those days was voluntary relief, this enactment seems a distinct recognition by Parliament of the principle of referring both able-bodied and impotent applicants for relief to the town of their birth or residence. The Act for Artificers and Labourers (5 Eliz., c. 4) controls the movement of labour on the same general principle as the Act of Richard II. Settlement is thus due, in part, to the desire to keep labourers available in the places where they are wanted, and at the same time to keep those who beg for or require relief within their parishes, and thus prevent mendicancy and vagrancy.*

17. There is accordingly a demand for settlement on two grounds, the regulation of labour and the local administration of relief. And when, as after the Acts of Queen Elizabeth respecting relief, "abiding places" were provided and "work," there was, as subsequent Acts show,⁵ a new attraction as between parish and parish from the point of view of the provision of "employment" as well as of "relief."

18. The Poor Relief Acts of 1572, 1597 and 1601,⁶ although they contained no direct reference to settlement, incidentally made it more important by making each parish definitely responsible for the relief of the poor and by requiring that there should be a compulsory rate for setting the poor to work. Indeed, the Act of Charles II. (1662),⁷ under which settlement acquires its chief significance for modern Poor Law, was directly due to the difficulty of deciding who were and who were not the poor whom the parish was to maintain or set to work under the Act of 1601. The parish authorities were, as required by the Elizabethan law,⁸ in the habit of providing "stock" for setting the poor to work, and were desirous of defending it against the inroads of strangers, much as Distress Committees at the present day find it necessary to exclude from their relief works all who have not resided one year in their district. In order, therefore, to prevent "the great discouragement of parishes to provide stock when it is liable to be devoured by strangers," and "to prevent the perishing of any of the poor, whether young or old, for want of such supplies as are necessary," power was given to the parish authorities to remove within forty days any newcomer to such parish where he was last legally settled, either as a native, householder, sojourner, apprentice, or servant, for the space of forty days at the least, unless he gave sufficient security for the discharge of the said parish to be allowed by the justices. This removal might be made though the newcomer had not applied for relief. It was the safeguard against prospective chargeability. Thus forty days' residence without removal, or, by another provision of the Act, occupation or

* See also 1 Edw. VI., c. 3. "The mayor shall see all maimed, lamed, sore, aged and impotent persons, who cannot otherwise be taken for vagabonds, bestowed and provided for."

¹ Report to Poor Law Board, on the Law of Settlement and Removal. H.C., 675, 1851, Coode, p. 7.

² "History of the English Poor Law," Vol. I., Nicholls, p. 56. ³ *Ibid.*, p. 58. ⁴ *Ibid.*, p. 58. ⁵ 3 Charles I., c. 4. 14 Charles II., c. 12, etc. ⁶ 14 Eliz., c. 5. 39 Eliz., c. 3. 43 Eliz., c. 2. ⁷ 13 & 14 Car. II., c. 12. ⁸ 43 Eliz. c. 2.

a tenement of £10 annual value, gave a right to "settle." Other conditions under which settlement could be acquired were made legal by subsequent Acts, and in 1834 the nine various modes of settlement were enumerated by the Royal Commission.

19. The power of removing all new-comers, subject to certain limitations, continued until the Act, 35 George III., which prohibits the removal of others than persons actually chargeable.

20. In 1817, a Select Committee on the Poor Laws drew attention to the expensive and embarrassing litigation to which the laws of settlement had given rise, and to the fraud and chicanery to which they had given occasion; but they thought "that something short of a total repeal of the law of settlement" would meet the evils of which complaint was made, and they proposed several important simplifications. As to litigation they pointed out that the money expended in litigation and the removal of paupers in 1815 amounted to £287,000, while the appeals against orders for removal, entered at the previous four Quarter Sessions amounted to 4,700.¹ The Royal Commission of 1832 wrote in the strongest terms against settlement and were in favour of its entire abolition, but they did not include a recommendation for its abolition among their recommendations.² A Select Committee in 1847 passed a series of resolutions against the law, but "though not agreeing to a report, they were united in condemning the narrow area of rateability." The Commission, appointed by Mr. Charles Buller:—

"Established beyond question all the evils that followed from the system of parochial settlement, the clearing of parishes, the driving the poor out of them, and thrusting them into places already overcrowded, and into dwellings more fitted for beasts than for human beings."

In 1854 and 1860 two other Select Committees of the House of Commons again considered the operation of the laws, and in the Acts of 1865 and 1876, large simplifications and changes were made. The *status* of irremovability was adopted. A residence of one year on certain conditions gave irremovability; and in 1876 it was agreed that a continuous residence of three years should give settlement. In 1879, a Select Committee of the House of Commons recommended the abolition of the law, but, partly, no doubt, owing to the adoption of Union chargeability, no important change in the law has been made.

21. We would now deal with the question more at length, from the year 1834 to the present time. In 1834 the nine methods in force for obtaining a settlement were as follows: (1) birth; (2) parentage; (3) marriage; (4) estate; (5) apprenticeship; (6) renting a tenement; (7) payment of parochial rates; (8) serving a parochial office; (9) hiring and service.³ The Royal Commission described at length the evils arising from settlement, the fraud, the neglect of the paupers' interests, the litigation, and perhaps worst of all the stagnation of labour due to the labourer's fear of "losing his parish;" and they concluded by saying:

"These evils arise almost exclusively from the heads of settlement, which were introduced in consequence of the 13 & 14 Car. II., and might be almost entirely removed if those heads of settlement were put an end to. But there are others greater and more extensive, which arise from the mere existence of a law of settlement whatever the law may be, which increase in intensity in proportion as the limits of the district, which has to support what are called its own poor, are restricted, and could be mitigated only by its extension, and removed only by its entire abolition."⁴

22. Nevertheless, they subsequently recommended that settlement by birth, parentage, and marriage should be retained. The introduction of settlement by residence, which had been recommended by the Committee of 1817, they definitely rejected as likely to aggravate existing evils.⁵ One difficulty which they anticipated from it is especially interesting in view of subsequent history:—

"Again, the demolition of cottages, and the forcing the agricultural population into the towns, and the parishes in which property is much divided, though we fear that they must, to a certain degree, arise under any law of settlement whatever, would be much promoted by a law which would fix on a parish every labourer who should have been allowed to reside there for any given period, unless the period were so long as to render the law almost inoperative."⁶

* The meaning of the quoted passage is doubtful. The "*its extension*" obviously relates to "district" and not to "settlement." Does not "*its abolition*" mean also abolition of district or abolition of parochial system? See also p. 165. "All these are the natural result of the parochial system," etc.

¹ Report from the Select Committee on the Poor Laws, 462, 1817, p. 26. ² Report of Poor Law Commission, 1832 [Cd. 2728], 1905, pp. 152-64, 344-6. ³ *Ibid.*, pp. 152-3. ⁴ *Ibid.*, p. 164. ⁵ *Ibid.*, p. 343. ⁶ *Ibid.*, p. 344.

23. Some indication of the extent to which the labourers had suffered may be found in the further recommendation of the Commissioners that:—

“Instead of the present mode of first removing a pauper, and then inquiring whether the removal was lawful, the inquiry should precede the removal.”¹

Legislation
following report
of 1834.

24. It was only to a very limited extent that Parliament, either in 1834 or subsequently, adopted the recommendations of the Commissioners with respect to settlement; and the existing law still retains eight forms: birth, parentage, marriage, estate, apprenticeship, renting of tenement, payment of parochial rates and residence. Here it will be seen that “hiring and service” and “serving an office” have been omitted; while residence was added at a much later date (1876), carrying out the recommendation of the Committee of 1817.²

Non-resident
relief.

25. The Royal Commission of 1832 foresaw in their Report that if their policy of refusing outdoor relief to the able-bodied were carried out, questions of settlement would diminish very much in importance³; and this has in fact happened. A further mitigation of the hardship arising out of settlement laws is found in the practice of some Guardians in granting “non-resident relief.” It is generally open to a Board of Guardians, as an alternative to removing a pauper to his parish of settlement, to grant relief and pay it by arrangement through the Board of Guardians or other agency in the parish in which he is residing. But this practice was found at that time to be open to great abuses.

“The granting of non-resident relief continued to be a widely adopted practice, because, bad as it was, it was a less costly and unjust expedient than removal. At Lady-Day, 1846, there were 82,249 persons receiving non-resident relief, and Mr. Coode points out that though this practice led to a large amount of imposture, demoralisation and fraud, yet, if we reckon 2½ persons as affected by each order of removal, it had prevented some 32,899 warrants of removal.”⁴

Limitation of
power of removal.

Illegal removal.

26. In 1846 Parliament passed a Poor Removal Act prohibiting the removal of any person who had resided in a parish for five years “next before the application for the warrant,” providing that the five years did not include residence in a prison or lunatic asylum or hospital, receipt of parish relief, etc., etc.⁵ It is significant also that it attached a penalty to the offence of causing any poor person to become chargeable to a Union to which he was not previously chargeable, by removing him or assisting him to remove, and such penalty attaches, however the removal may have been brought about, whether by direct or indirect payment, by facilities of conveyance, by promises or by threats.⁶ The Act provided that no warrant should be granted for the removal of a person becoming chargeable in respect of temporary illness, nor for a removal of a widow within twelve months after her husband’s death in the parish.⁷ The *status* of irremovability thus created was further developed by the Poor Removal Act of 1861, which reduced the period of residence from five years to three, and substituted residence in the Union for residence in the parish;⁸ and by the Act of 1865 which diminished the period of residence to one year.⁹ Finally, in 1876:—

Settlement by
residence.

“It was enacted that where any person shall have resided for the term of three years in any parish, in such manner and under such circumstances in each of such years as would in accordance with the several statutes in that behalf render him irremovable, he shall be deemed to be settled therein until he shall acquire a settlement in some other parish by a like residence or otherwise.”¹⁰

27. These repeated attempts to diminish the hardships of compulsory removal represent a compromise between the desire to abolish settlement altogether, and the fear of leading up to a national poor rate. It was thought by opponents of the change that the abolition of settlement involved the abolition also of all local chargeability, and the evils of having local authorities spending a national rate were felt to outweigh those of removal. In 1854 Mr. Baines, then President of the Poor Law Board, introduced a Bill: “To abolish the compulsory removal of the poor on the ground of settlement, and to make provision for the more equitable distribution of the charge of relief in the Unions,” pointing out in his speech that if all the orders issued in 1849 had been executed upwards of 40,000 poor persons would have been subjected to the hardship of compulsory removal.¹¹ The Union Chargeability Act of 1865 was opposed in

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 344. ² Adrian, 356–8. ³ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 345. ⁴ “History of Poor Law,” Vol. III., Mackay, p. 350. ⁵ 9 & 10 Vict., c. 66, Sec. 1. *See also* Adrian, 387. ⁶ Sec. 4. ⁷ Sec. 2. ⁸ 24 & 25 Vict., c. 55, Sec. 1. ⁹ 28 & 29 Vict., c. 79, Sec. 8. ¹⁰ Adrian, 366. ¹¹ “History of the English Poor Law,” Vol. II., Nicholls, pp. 433–5.

the House on two grounds, firstly, because it did not include the entire abolition of settlement, and, secondly, because it was feared that it would lead ultimately to a national rate.¹

28. Subsequently, in 1879 a Select Committee of the House of Commons reported strongly in favour of the abolition of compulsory removal:—

Recommendation
of Committee of
1879.

“Your Committee having given due weight to the various arguments and opinions that have been placed before them, recommend that in England the law of removal should be abolished, and that for the purposes of poor relief settlement should be disregarded, with the following exception: That with respect to seaport towns, persons landing in a destitute condition, and immediately applying there for relief, be chargeable to the place of their settlement for non-resident indoor relief.”²

29. Since then the only change in the law has been that effected by the Poor Removal Act of 1900, which provides that a person who has resided five years continuously in England shall not thereafter be removable to Ireland.³

30. But the situation is to some extent modified by the power given to Boards of Guardians to refer disputed cases of settlement to the Local Government Board for decision in order to avoid litigation. It is partly due to this practice, but more to the introduction of Union chargeability, that the expenses of removal and of litigation have very much diminished during the last fifty years.

Appeals to Local
Government
Board and effect
of Union Charge-
ability Act.

31. As we have seen, for a very long time the abolition of the law of settlement has been strongly advocated, and many witnesses have placed that view before us. We will now, accordingly, consider that question, and in relation to it the questions of removal and non-resident relief. Mr. Joseph Brown, President of the Poor Law Unions Association, says:—

“I believe that less harm would result in any case from the abolition of the law of settlement than is anticipated. I question whether many unions obtain the relief by settlement which they imagine they do. If the two sides were carefully estimated, I do not think the burden would be serious that would be thrown on any union, whilst the hardship inflicted on many a family would be saved. It is from that standpoint that I dislike the law of settlement and removal.”⁴

32. The Clerk to the St. Pancras Board would like to see settlement abolished in London:—

“The settlement is always difficult to decide, because we are confronted with a great tendency to evade the truth on the part of the people. Sometimes they have an objection to being sent back to their homes, and, therefore, we have to prove everything.”⁵

33. Sir William Chance states:—

“A very necessary reform is, to my mind, the final and complete abolition of the law of removal that has long been condemned, and so lately as by the Report of the Select Committee of the House of Commons in 1879. Such a reform would put an end, at once, to all the abuses connected with non-settled relief and non-resident relief.”⁶

34. Mr. Willis Bund states:—

“No reform in dealing with the sick poor can be carried out without a change in the law of settlement. The best thing would be to abolish it entirely, but if that cannot be done to make the county the area of settlement, not the union, and to make six months residence or employment sufficient to give a settlement.”⁷

35. Mr. John Laverack states:—

“Law of settlement should be done away with, relieving paupers wherever they become chargeable.”⁸

36. Mr. Cripps, K.C., would:—

“Strongly advocate the abolition of the law of settlement.” “I look upon the law of settlement as really a survival of the old penal laws, and it ought to have been done away with, I think, when the parish was no longer the unit, and the union was made the unit. With the county as the unit, I think there would be no necessity for it at all.”⁹

¹ “History of the English Poor Law,” Vol. III., Mackay, p. 363. ² Report from Select Committee on Poor Removal, H.C., 282, 1879, p. v. See also Adrian, 409. ³ 63 & 64 Vict., c. 23, Sec. 1. See also Adrian, 390. ⁴ Brown, 25118. ⁵ Millward, 18906. ⁶ Chance, 27061 (64). ⁷ Bund, 76546 (16). ⁸ Laverack, 76227 (4). ⁹ Cripps, 76394 (4), 76422.

37. The abolition or simplification of the law of settlement is one of the reforms most generally urged upon the Commission by Boards of Guardians and their Chairmen throughout the country. Thus 37 recommended that the law should be “abolished,” 25 others that it should be “simplified or abolished,” and a further 198 that the law and decision of settlement should be simplified.¹

38. In view of much of this evidence it may be asked with some reason why the Legislature has refrained from abolishing the law of settlement. The evidence that we have received indicates the answer. In urban centres at the present time there is a feeling that the law of settlement limits to a certain extent the local chargeability of the pauperism which arises among migrants in a moving and changing population. And this feeling is accentuated perhaps in cities which are large seaports or are close to such seaports, like Liverpool and West Derby.² There is also the general feeling that it is fair that the place to which an applicant is attached by some tie of settlement, such as birth, parentage, or continued residence, should be responsible for his maintenance. “There is a certain amount of fairness in the law.”³ On the other hand, it must be admitted that settlement now, and in its present form, neither restricts the mobility of labour, nor makes it more difficult for the poor to find houses in their Unions. We do not believe that the prospect of becoming removable as a pauper is at present sufficiently imminent to the majority of workmen to act as a deterrent to them in moving into a district where they hope to get work. Moreover, the old tradition of the labourer that he was settled in a particular parish and that it was dangerous to move from it for fear that he should lose his settlement has long since disappeared. A *status* of irremovability may be acquired in any Union by one year’s residence⁴ and a settlement by three years’ residence⁵ in any parish, and there is no evidence to show that the fear of getting inadequate relief in a particular Union has any appreciable influence on the economic influx of labour into that Union. We are inclined, therefore, to agree with Mr. Davy that the law of settlement as now administered has no serious effect on the mobility of labour.⁶

Hardship of removal.

39. But other arguments are used. One is that the law of settlement is the cause of hardship to the poor.⁷ During the year 1907 upwards of 12,000 persons, or one out of every 141 paupers, were removed from one Union to another in England and Wales.* The law of settlement led to the law of irremovability; and the existence of this law is in itself evidence of the recognition of the hardship resulting from an untempered law of settlement. It has seemed hard, for instance, that a person who has acquired new ties in the place where he has resided, in the event of his receiving Poor Law relief, should be liable to removal to his native place, if his settlement is a settlement by birth. And similarly, in other circumstances which entail settlement, such as parentage, or marriage, or residence. To modify this hardship, as we have seen, a person who is ill temporarily cannot be removed, though he be not settled in the Union in which he becomes chargeable; nor can a widow be removed within twelve months of her husband’s death; and, finally, a residence of one year now renders a pauper irremovable. The hardship, however, is still felt where removal is in all cases insisted on.

* Removal is more frequent in urban Unions than in rural Unions, as the following figures show :—

| | | | | | | | | | | |
|-----------------------------|---|---|---|---|---|---|---|---|---|---------------------|
| | | | | | | | | | | One removal amongst |
| London | - | - | - | - | - | - | - | - | - | 72 paupers |
| Extra-Metropolitan Unions : | | | | | | | | | | |
| Wholly urban | - | - | - | - | - | - | - | - | - | 148 „ |
| Mainly urban | - | - | - | - | - | - | - | - | - | 183 „ |
| Mainly rural | - | - | - | - | - | - | - | - | - | 289 „ |
| Wholly rural | - | - | - | - | - | - | - | - | - | 366 „ |
| England and Wales | | | | | | | | | | 141 „ |

Moreover, this movement takes place principally between the urban Unions, and, upon the whole, the movement is slightly to the advantage of those Unions, the rural Unions receiving a rather larger number of paupers than they remove.

¹ Vide Appendix. ² Cleaver, 35887 (12), 35894. Macdonald, Vol. IV., App. xlv. (13). ³ Cutter, 19332. ⁴ 28 & 29 Vict., c. 79, Sec. 8. ⁵ 39 & 40 Vict., c. 61, Sec. 34. ⁶ Davy, 3895. ⁷ Davy, 2549; Brown, 25121; Gaunt, Vol. IV., App. lxxii. (14).

40. On the other hand, the fact should not be overlooked that, in a large number of 28 & 29 Vict., cases of removal, removal has been beneficial. Children have been returned to parents c. 79, Sec. 3. and aged people to relations or friends. And whole families have been sent back to their native places on their failure to succeed in some locality to which they had been allured by false pretences. This point was brought out before the Select Committee of 1879, among other witnesses by Mr. Higgins, removal officer for the Parish of St. Pancras, and apparently the only witness before the Committee who was continually in contact with persons under orders of removal. Mr. Higgins points out that, under the law of removal, in one year alone the St. Pancras Guardians were able to return to their parents in the country 200 unfortunate girls who otherwise would have gone to swell the ranks of prostitutes in London.¹

41. In 1905-6, £270,728 was received by Boards of Guardians in repayment of relief given by them to paupers not settled in their Unions, and the amount appears to be increasing.² On 31st March, 1906, the number of persons in receipt of non-resident relief was 21,884.³ About one-half of these persons are aged, and Mr. Davy suggests:—

“I think that in the case of people over sixty it is a great hardship that they should be removed against their will, and I unhesitatingly recommend that no removals of persons over the age of sixty or sixty-five should be allowed. If that were done we should, to a great extent, automatically put an end to non-resident relief.”⁴

42. In certain cases it is at present within the powers of Boards of Guardians to give non-resident relief to their own paupers, and they may pay non-settled relief to the paupers of other Unions.⁵ Unions which are “strict” in their administration frequently refuse to do either, and insist upon removal.⁶ This course is, in many cases, a great hardship to old people or those who, on account of some physical or mental disability, are best cared for when living with their friends or relatives; and if removed they are placed in institutions at a greatly increased cost.

43. A person who has resided for twelve months in a Union cannot be removed or charged to his Union of settlement; but this does not gain a settlement for him. On the other hand, if he becomes chargeable before he has resided in the Union uninterruptedly (with certain exceptions) for twelve months, he may receive non-resident relief from the Guardians of the Union of his settlement. This relief is administered by the Authorities of the Union where he resides, and it is obvious that the Guardians of his own Union have to trust to them entirely, both in regard to the investigation of his circumstances and the necessity, sufficiency, and continuance of the relief which they grant. There is often found to be a want of adequate supervision, when the relief is granted by one Board and administered by another, and Poor Law officers who have appeared before us have expressed themselves very strongly against it on these grounds. They are in favour of remedying the evil by making removal compulsory except in the case of infirm persons living with relatives who look after them.⁷

44. Non-resident relief has, by reason of its careless administration, led to evils which are laid at the door of the Law of Settlement; the evils result from less care in investigation, discrimination, and supervision being exercised by the authority administering the relief, because they are entitled to re-imbursement by the authority of the place of settlement. We believe that these evils are exaggerated. Little evidence has been given which leads us to believe that the evils are widespread; at least, they are no more extensive than the laxity in administration of settled relief. Where one form is lax, the other form is usually lax also. In the next place, persons are always in receipt of relief before the question of settlement really arises. It is true that, on dealing with an application for relief, particulars as to residence which bear upon settlement must be taken down. This knowledge of its probably being a non-settled case rarely enters into the quality of relief in the first instance. It is not dealt with as a suitable case for relief on the strength of possible repayment, as the settlement has got to be proved to the satisfaction of the authority of the place of settlement. It may therefore be said generally that non-settled cases do not get relief more easily than a settled case.

¹ Report of Select Committee on Poor Removal, H. C. 282, 1879, Higgins, 2122, 2216, p. 113.

² Thirty-Sixth Annual Report, Local Government Board [Cd. 3665], 1907, p. cxxxviii. ³ Statistical Appendix, Part II., Table 2. ⁴ Davy, 2549. ⁵ Davy, 2937. ⁶ Davy, 2423. ⁷ Peters, 20052-3. Dyson, 20117, 20185-7 (14), 20236.

45. The evils, such as exist, usually occur in cases in which, when once relief has been given, and the place of settlement proved and repayment obtained, less supervision is exercised, and changes in circumstances are not notified as carefully as in a settled relief case. Such a defect in administration is an obvious one, which can be easily guarded against by a rule to make it, on the part of the authority of the place of settlement, an imperative duty to require a full report on the circumstances of the case on a specified form transmitted with each demand for payment.

46. We can, therefore, conceive of non-settled cases of relief being as well-administered as settled cases. In the treatment of settled and non-settled cases there should be no difference whatever. It is only a question of charge, not one of treatment.

47. The effect of settlement at the present time may be stated in the following words:

“The obligation to relieve must now be held to lie, in the first instance, on the parish where the poor person is. Settlement merely affects the question whether the parish which relieves has any right to transfer the burden elsewhere, and in no way influences the right of the pauper to relief.”¹

48. If settlement were abolished there would be a danger of the differentiation of treatment between old and new residents, adopted with a view to preventing people being attracted to the district for the advantages which a certain method of treatment may offer.

49. The truth is that the remedy lies largely, almost entirely, in proper and sufficient inquiry. This is indispensable. And in these cases there is, perhaps, an added incentive to thoroughness of investigation. In regard to new residents, inquiries would have to extend into the area from whence they came; and it is only reasonable to suppose that the officers of such an area would not so readily make inquiries for another authority, when no question of chargeability is involved, as they do now for purposes of settlement. But we conceive that in the future between all the Committees of Public Assistance there will be a regular system of local investigation, one district assisting another to complete its inquiries.

Expenses of
Settlement and
removal.

50. Lastly, there is the argument that the law of settlement entails unnecessary expenditure of time, trouble and money, and causes needless litigation.

51. The expenses of removal and litigation amounted in 1905-6 to £21,530, and this did not include the salaries of the officers engaged partially or wholly in settlement business.² This is a very considerable item. In every Union such questions employ a large part of an officer's time, in many Unions an officer is employed solely for the purpose, and in large urban Unions more than one officer may be so employed. One witness, Chairman of the Birmingham Board of Guardians, states:—

“The present system of removal and settlement is very antiquated, and needs to be thoroughly revised and to a large extent abolished. It is absurd to keep an expensive army of officials to move people from place to place throughout the Kingdom.”³

52. A return as to settlement work in the Dewsbury Union shows that in 1905 191 cases were investigated, 42 reported to and accepted by other Unions, 32 ceased to be chargeable after the particulars were taken, and 28 were reported by other Unions and accepted by Dewsbury. The total cost for twelve months of cases that were accepted by other Unions, or that ceased chargeability by reason of the inquiries, was £661. The total cost of the cases accepted by Dewsbury, as reported by other unions, was £339. The annual cost (or saving) in favour of Dewsbury was £321—the difference being £18. The total expenses incurred each year in the investigation of settlement was £29. One official gives his time to settlement cases, and his salary should be set against the “saving.”⁴ We cannot generalise from these figures, but they indicate what is the actual cost of settlement work in a

¹ Mackay, “History of the Poor Law,” p. 364. ² Local Taxation Returns, 1905-6, Parts I. and IV. (H.C. 321 and 321-III. of 1907), pp. 78 and 56 respectively. ³ Turner, 43566 (9). ⁴ Brown, Vol. III., App. i., (C) 25122.

large industrial town in the West Riding. On the other hand, it may be argued that, but for this work, instead of 42 cases being accepted by other Unions, and 28 reported by other Unions and accepted by Dewsbury, Dewsbury would have been chargeable for the difference for at least fourteen cases of which it has now got rid. The grievance of cost, however, is generally admitted.

53. It appears that in the three Unions of Birmingham, Aston, and King's Norton five officers are entirely engaged in removal work.¹ A similar expense is avoided in Manchester and Liverpool, each of which towns also extends to three Unions, by an arrangement through which the several Unions in each town do not remove against each other (except in the case of lunatics).²

54. There remain the questions of time, trouble and litigation. That the time and trouble expended in settlement cases is very considerable is also admitted. Most witnesses are in favour of some further modification and simplification of the law of settlement. Of the nature of these modifications they did not speak with precision except in one or two instances; but it is fair to infer that all the objections to which we have alluded have their weight in this widespread conclusion. Litigation there is a general desire to prevent by the reference of all disputed cases to the final arbitrament of the Local Government Board.

55. We feel, that a strong case has been made out for placing within the reach of Local Authorities and their officers the means of determining settlement, with less expenditure of time and money. The power which the Local Government Board already possess to determine the settlements of a pauper in any case where the Unions agree to submit a case to them, should, we think, be extended, and all questions connected with any dispute whether of fact or law as to settlement should be determined only by the Board, unless the Board consider that the question is one which ought to be submitted to a Court of Law. This proposal has been strongly advocated to us.³

56. What the effect of the abolition of settlement would be on administration it is difficult to forecast with certainty. Some witnesses consider that greater uniformity would be the result. If people passed from less comfortable to more comfortable Unions, there might have to be a modification of standard in some of the larger urban workhouses, "in the dietary, for one thing, in order to make the conditions of workhouses really much on the same lines, as far as local conditions would admit."⁴ Others argue that abolition would necessitate a greater uniformity, an uniformity greater than now prevails.⁵ One witness thinks that in London, abolition of settlement would result in absolute uniformity. One witness, who would be disposed to make it easier for persons to obtain a settlement, suggests, that, while actual uniformity in workhouses is hardly possible, "some Guardians whose workhouses were popular might go to the opposite extreme and treat the people as badly as they possibly could."⁶ Under proper inspection, and as the result of the one cause, abolition of settlement, we think that this could hardly happen, though it may be urged that if settlement were abolished there would be a danger of differentiation of treatment between old residents and newcomers, in order to avoid attracting people to the district for the advantages which a certain method of treatment offers. However, we do not propose entire abolition. We leave it for the future to prove whether, administered in County areas, Poor Law relief will still require the protection of "settlement," even in the modified form we suggest.

57. The evidence taken as a whole suggests in our opinion one or other of the following alternatives. Either the law of settlement should be repealed, save and except in seaport towns, for which special Regulations may be required; or it should be very greatly modified, especially in view of the changes of Poor Law areas which we propose.

¹ Fothergill, 43877-9. ² Ball, 35467-8, 35587. ³ Brown, 25136-9; King, 25264 (9); Cleaver, 36081-4; Ford, 39826-7; Fothergill, 43825 (13n); Thompson, Vol. IV., App. CIII. (13); Cook, 74259-65; Sharman, 75202; Wilkes, 75345 (10); Wallace, 77007 (9), 77065. ⁴ Booker, 40893. ⁵ Cook, 74271-3; Willis-Bund, 76580; Millward, 18941, 18942. ⁶ Curtis, 29037.

58. To take the latter alternative first. The law of settlement might be modified by eliminating from it settlement by estate, apprenticeship, renting of tenements, and payment of parochial rates. There would then remain the simpler and more important conditions of settlement, birth, marriage, parentage, and residence. The period for settlement is now three years, and it appears to us that some lesser period should be substituted for it; and we suggest that, if settlement be not abolished, the period of settlement by residence be one year.

59. But the suggestions that we make in regard to the areas of Poor Law administration largely modify the whole position.

60. We have proposed that Counties and County Boroughs should be the areas for what we have termed "Public Assistance" in the future, an organisation of assistance in many ways different from that which now prevails, and that its expenditure should be charged to a County or Borough rate. Obviously, therefore, this area would for purposes of settlement and removal supersede the Union area; and it would thus reduce very greatly the number of cases in which questions of settlement would arise. But the point should be considered in detail.

61. In the case of County Boroughs which are in close proximity there might be considerable differences in regard to settlement cases. But, as we have seen, Unions in County Boroughs already tend to come to agreements by which, as between themselves, they practically set aside the law of settlement. In such cases a modified settlement such as we have suggested could hardly be inconvenient or oppressive, for in these circumstances the tendency of combination is towards the several Boards acting together in many ways or for one associated area, as in London, Liverpool and elsewhere; and the Central Authority could promote development in this direction.

62. There are, next, the cases which would occur as between a County and a neighbouring County Borough; and these cases might well cause trouble, as the rural population moves constantly towards the urban areas, settling outside the County Boroughs and within them. In these circumstances there would be, on the one side, the large County population, on the other the often larger population of the County Borough. As between these two areas and populations, there might be constant cases of difference, but the modified law of settlement which we suggest would prevent any migration for immediate relief in the, perhaps, better establishments of the County Borough.

63. There remains, lastly, the relation of County and County Borough areas to one another when they are not contiguous. If the largeness of the population in most of these areas be considered, it will, we think, be admitted that, in these instances as well as in the others which we have discussed, we have reached the conditions of extension, which the Royal Commissioners of 1832, contemplated and in which the largeness of the areas largely neutralises the purpose of the law of settlement.

64. For the abolition of settlement it cannot be denied that there are many strong reasons—the labour it would set free, the time it would save, the friction it would prevent, the hardships it would avoid; though we have shown that removal is not always a hardship, and that non-resident relief well administered may be a sufficient alternative.

65. Of the two courses, therefore, which lie before us, the repeal of the law of settlement or its simplification, we have, after much consideration, preferred the latter. If experience shows that repeal is the better plan, that course may be adopted later. But for the present we think that the modes of obtaining a settlement might be reduced to the four we have mentioned, viz., those of birth, parentage, marriage, and residence, and that a settlement by residence should be acquired by one year's residence in a County or County Borough. In the Unemployed Workmen Act a year's residence is required as the condition of eligibility for assistance; and we have received no complaints on that score. We think that this precedent might safely be followed in the larger province of Public Assistance generally.

Conclusions.

66. It has already been shown that the existing law retains eight forms of settlement : birth, parentage, marriage, estate apprenticeship, renting of tenement, payment of parochial rates and residence. We propose to reduce these to four, birth, parentage, marriage, and residence. Settlement by estate, apprenticeship, renting of tenements and payment of parochial rates we would abolish. On these terms settlements are comparatively seldom gained at the present time. The period of residence we would reduce from three years to one, making it the same as the period of irremovability. This would reduce considerably the labour involved in investigating settlement cases. It would also decrease the number of removals and the number of non-resident relief cases. We consider that the area for all purposes of settlement and removal should be the County or County Borough, as the case may be.

67. We propose that the Local Government Board should determine all cases of disputed settlement, unless the Board consider that the case should go to a Court of Law.

68. We shall deal separately with the difficulties of settlement and removal as affecting Scotland and Ireland, but we may here point out that we see nothing in the arrangement we propose for England which need interfere with any legislation securing reciprocity of removal as between the three countries. Removal between three divisions of United Kingdom.

Chapter 3.

RECOVERY OF COST OF RELIEF.

69. It is the duty of a man to maintain himself, his wife and family, and if, while able to do so by work or otherwise he fails to perform this duty, and as a result he or his wife or any of his family whom he is legally liable to maintain become chargeable, he is liable to punishment as an idle and disorderly person.¹ If, too, he runs away and his wife or child is or becomes chargeable, he is deemed a rogue and vagabond, and is liable to be punished accordingly.²

Law relating to recovery from property of pauper and of loan relief.

70. The cost of relief granted to a poor person may, under certain conditions, be recovered by the Guardians:—

- (1) From the pauper himself.
- (2) From the person liable for the support of pauper dependants; or
- (3) From certain relatives of the pauper.

71. With regard to recovery from the pauper himself the law provides that if a pauper has money or valuable security for money the Guardians may appropriate a sum equivalent to the cost of the relief granted during the preceding twelve months, and, if the pauper dies, also the expenses of burial. The Guardians may also recover at common law from a pauper's estate the cost of his maintenance for a period of six years, *i.e.*, for an additional period of five years.³ Moreover, it is within the power of the Guardians to stipulate that the cost of the relief given to any poor person above the age of twenty-one shall be considered as given on loan, and for repayment of relief so given wages may be attached, or the relief may be recovered in the County Court.⁴

72. In the case of relief to dependants, it is provided that all relief given to a wife or to a child not being blind or deaf and dumb, is considered as given to the husband or father as the case may be, and relief given to the children of a widow is considered as given to the widow. The cost of such relief may be recovered from the head of the family in the manner previously indicated and the relief may be given on loan.⁵

Desirability of recovering relief where possible.

73. The justice of these provisions cannot be questioned, for it is clearly reasonable that a person who has received assistance at the public expense for himself or his family should reimburse the ratepayers if, and when, he is in a position to do so. At the same time it would manifestly be improper and contrary to the public welfare to press for repayment in cases in which the recipient would thereby be compelled to deprive himself of the necessities of life, or his family of adequate support. And we also feel that it would be unwise to exact repayment in cases in which it would prevent a man from insuring against such contingencies as old age, sickness, etc., for manifestly, if these be not provided for, the man will again become chargeable when they overtake him. It may be that these considerations weigh with some Guardians as the provisions with regard to relief upon loan are seldom adopted, and when advantage is taken of them the amount recovered is only small.⁶ But it seems more probable that the failure to utilise the provisions is chiefly due to the procedure involved.⁷ One essential to recovery of loan relief is that the recipient should have been informed, at the time of receiving the relief, that it was granted on loan, and even when this formality has been complied with the procedure before the County Court involves so much inquiry and delay, and the results are so uncertain, that the Guardians are reluctant to put the machinery in motion.⁸

Procedure for recovery of loan relief.

¹ 5 Geo. IV., c. 83, Sec. 3. ² *Ibid.*, Sec. 4. ³ Adrian, 110–11, 152, 751–4, 781–5. ⁴ Adrian, 109, 755–7, 913, 1082–92. ⁵ Adrian, 101, 105. ⁶ Preston, Thomas, 4296. Thurnall, 15789. Gray, 52195. ⁷ Cutter, 19201. Burnell, 68091 (10), 68147. ⁸ Baldwyn Fleming, 9505. Preston Thomas, 12463, 12500. Brown, 25080.

74. Mr. F. Morris, who is a member of the Marylebone Board of Guardians, says :—

“The recovery of loans has always been a difficulty. We have attempted to recover amounts, but the difficulty is that unless we can prove earnings, and unless we can prove position, it is hopeless.”¹

75. And Mr. H. A. Craig, the superintendent relieving officer for St. Pancras, states :—

“We grant very little relief by way of loan. We should have to recover through the county court, of course, and that is always a troublesome process and a difficult process too. . . . If you get an order, you are still a long time in recovering it, and the Guardians feel naturally that it is hardly worth doing. . . . It is an expensive process too.”²

76. We have also received representations from several Boards of Guardians urging that the recovery of loan relief should be facilitated.

77. As a result of these difficulties there is great variation in the practice followed in different Unions. Mr. Baldwin Fleming put in a table showing the amounts recovered on account of loan relief in the fifty-four Unions in his district, which extends into Dorsetshire, Hampshire and Wiltshire. In the year ended Lady-Day, 1905, only ten of the Unions recovered anything, and the amounts received in nine of these were negligible, for out of a total of £443 recovered in the district £373 was received by Portsmouth.³ Mr. Bircham reports that hardly anything is given on loan in Wales and Monmouthshire, though at Swansea the Guardians recently resolved that all relief should be given on loan.⁴ Mr. H. G. Solomon, who is on the Swansea Board of Guardians, states, however, that at any rate in the case of medical relief, recovery has not been effected in many instances, but that the action of the Guardians has reduced the number of applicants for medical relief.⁵

Variations in practice as to relief on loan.

78. In Bristol and Bradfield all relief, both indoor and outdoor, is given on loan, and a note to that effect is printed on every workhouse admission note and out-relief ticket given by the relieving officers. In Halifax and Skipton all out-relief is granted on loan where there is any prospect of recovery. In some Unions rules have been framed prohibiting the granting of relief in certain classes of cases, except upon loan. Thus, at Merthyr Tydfil the regulations prescribe that all relief to able-bodied persons be by way of loan, and in kind only, and that in all cases, when not prevented by illness, the applicant is to sign an undertaking to repay the relief advanced. Relief to the wives and families of sailors, soldiers, and militiamen, and midwifery orders where the number of dependent children is less than four, and the father is able-bodied, are also to be given on loan. In the Mitford and Launditch Union all orders for medical attendance are granted in the first instance by way of loan, the applicant being required to repay 10s. for each midwifery case, and 5s. for each other case. In the Parish of Poplar Borough the Relief Committees are recommended to grant by way of loan such relief as may be given to married women whose husbands are in prison or have deserted them, and in cases of interment orders, midwifery orders, and medical necessities. In the Bradfield Union all medical orders have, since 1872, been granted in the first instance on loan, and the fact is printed in red across the orders.

“The result of this system has been that the people have largely joined the medical officers’ clubs, the fees for which are usually 4d. per month for adults, and 2d. or less for children (not much more than the price of one pint of beer per week), for a man, his wife, and two children, and the medical orders have been reduced from 700 per annum to fifty-eight in 1905, thus saving hundreds every year from the curse of pauperism, to which free medical relief is the open door in the widest sense.”

79. Where inquiries were made in the Unions we have visited it was generally found that very little, if any, relief was given on loan.⁶ In one Union, however, it was reported that a good deal of relief was so given⁷ and in another that the Guardians had passed a resolution some years ago to the effect that all relief should be given on loan. As at Swansea, where a similar resolution was passed, little appears to be recovered.⁸

80. The full effect of loan relief as a deterrent cannot be accurately measured by the statistical results. The amount actually recovered in any Union clearly gives no indication of the number of well-to-do persons who, owing to the Guardians’ policy, may have been deterred from applying for relief. But the large proportion of Unions in which

Extended application of system of loan relief.

¹ Morris, 17090. ² Craig, 19688–90. ³ Fleming, Vol. I., App. xix. (E). ⁴ Bircham, 5090. ⁵ Solomon, 50489. *Vide also* Young, 69537 (4). ⁶ Visits, Urban 2 C. and E., 15, 22A. ⁷ Visits, Urban 51. ⁸ Visits, Miscell. 108 II.

nothing whatever is recovered from loan relief, as shown by the table put in by Mr. Baldwin Fleming, seems to suggest that much more might be done in this direction to relieve the financial burden, either by actual recoupment or by the influence brought to bear upon prospective applicants. Mr. Fleming is of the same opinion.¹ It is not probable that a person really in need of relief will be deterred from applying by the knowledge that he will be called upon to repay the value of the relief should he be in a position to do so at some future date. If the case be genuine, the desire to repay will be all the stronger, and if it be fictitious deterrence can do no harm. But it is undesirable and impolitic that the poorest classes, when in real need of relief, should be placed in fear of harassing actions in the future. We think, therefore, that, whilst some simplification of the procedure for recovery of loan relief is desirable, the future Poor Law Authorities should exercise their powers in this respect with discretion, but with firmness where the ability to repay is undoubted, having regard to the man's obligations to his family and to the provision, which we think it is incumbent upon him to make, for sickness, old age, etc.

Simplification of procedure.

Law relating to recovery from relatives.

81. The repayment of relief by relatives is provided for by the Poor Relief Act of 1601, which enacted that :—

“The father and grandfather, and the mother and grandmother, and the children of every poor, old, blind, lame and impotent person, or other poor person not able to work, being of a sufficient ability, shall, at their own charges, relieve and maintain every such poor person in that manner, and according to that rate as by the justices . . . shall be assessed.”²

And the Guardians have power to obtain the needful orders. Orders can be made only during the time the person is chargeable. It will be observed that the provision does not extend to the relief of the able-bodied, nor does it attach any liability to brothers, sisters, or grandchildren.³ It was recently held that a married woman having separate estate was not liable for the support of her parents, but an Act has been passed in the present year (1908) to alter the law in this respect.⁴

82. If a married woman requires relief without her husband and becomes chargeable, the Guardians may obtain an order of Justices requiring the husband to contribute towards her maintenance.⁵ On the other hand when the husband becomes chargeable and the wife has separate property, the Justices may, upon the application of the Guardians, make an order upon her to contribute to the maintenance of her husband.⁶

Encouragement of filial responsibility.

Disinclination of relatives to contribute.

83. It is eminently desirable that the spirit of filial responsibility should be fostered and upheld as much as possible. However readily the moral obligations of children may be accepted by the majority of the population, there can be no objection to giving to those obligations the force of law if it be found necessary to enforce them in a minority of cases. The tenor of our evidence upon the question is, therefore, of much interest, and we regret to find that many witnesses dwell upon the disinclination of relatives to assist one another, and especially of children to maintain and nurse their parents. Mr. W. H. Peters, one of the relieving officers for the Greenwich Union, says :—

“My general observation is that as far as I can remember in many cases—I might almost say in most cases—the children of the people that come to me would, if they possibly could get out of it, avoid contributing anything towards the support of their parents.”⁷

84. And Mr. T. O. Williams, Chairman of the Aston Board of Guardians, states that :—

“Often at the relief committees you find sons in receipt of good wages endeavouring to evade contributing towards the support of an aged father and mother, or either, and in the case of lunatics the relatives will resort to any subterfuge to avoid paying a fair sum towards the support of a relative for whom they are liable.”⁸

85. Moreover, we learn that the indifference of children to the welfare of their parents tends to grow. Mr. Bagenal says :—

“I have noticed that there is a growing disinclination on the part of sons and daughters to help in contributing to the maintenance of their parents. . . . I think Yorkshire is almost the worst place there is in that respect ; they are growing exceedingly lax in that way.”⁹

¹ Fleming, 9390. ² Adrian, 106. ³ Adrian, 786–93, 1225–6, 1433–4. ⁴ 8 Edw. VII., c. 27. ⁵ 31 & 32 Vict., c. 122, Sec. 33. ⁶ 45 & 46 Vict., c. 75, Sec. 20. ⁷ Peters, 19839. ⁸ Williams, 45464 (16). *Vide also* Court, 6179. Briant, 14991. Kerwin, 18280. Henniker, 68011. Batchelor, 68973. Pearson, 72332. Visits, Urban 25 A., 43 A. ⁹ Bagenal, 7371.

86. Mr. G. B. ffolkes, Chairman of the Freebridge Lynn Board of Guardians, says :—

“With regard to the poorer classes there is not the same disposition to assist one another that there was years ago, and the younger generation have not the inclination to support their aged relatives, or take the same interest in them as formerly. It is a difficult matter to get them to contribute towards the maintenance of their relatives, even in the case of parents. Rarely do they visit relatives in the workhouses, and when information has been sent to them of the serious illness of a near relative in the workhouse, very often no notice of it is taken, or possibly a letter is sent saying that they are not able to visit them.”¹

87. In this connection attention may also be drawn to the peculiarly painful evidence of Dr. F. L. Pochin, District Medical Officer of the Walsingham Union :—

“Would you have any objection to my rather emphasising the difficulties with regard to the nursing in my own neighbourhood? In my neighbourhood, and I think it is the case all over the Walsingham Union, you cannot get the poor people to help their neighbours. They will not do it. In London, one is often struck by the way in which the poorest people do help one another. There is nothing of that kind at all in my neighbourhood; nothing. An example of that is this: I have had people refuse to nurse their own children without being paid for it. A mother left her daughter with a child three days old, and went right away out of the district, miles away, because she was not paid for nursing her.”²

88. In his Interim Report of Inquiry into the effect of outdoor relief on wages and the conditions of employment in certain rural Unions in the Counties of Suffolk and Cambridge, Mr. Jones concludes that the obligation to support aged parents is not keenly felt, but that the cause is not so much want of affection as an erroneous conception of the object of poor relief, which appears to some as a privilege to which they are entitled.

“Their minds are adjusted to this view of it; they do not feel pauperised in any bad sense.”³

89. Possible explanations of this reluctance of children to succour their parents have been given by one or two witnesses. Mr. Jenner Fust attributes it, to some extent, to the greater comfort of the workhouses, and considers that children have not the same objection as formerly to their parents going into those institutions.⁴ Other witnesses think that slackness of trade and diminished earnings are a contributing cause.⁵ There can be no doubt that the spending power of the working classes would have an important bearing upon the question, but taken as a whole any diminution in their spending power due to slackness of trade would be merely transient. The greater comfort of the workhouses is probably a more important factor, and with this subject we have dealt in a previous chapter.

Reasons for decrease of filial responsibility.

90. The Royal Commission of 1832 considered the question, but made no decided recommendation. They write :—

Views of Royal Commission of 1832.

“It appears from the whole Evidence, that the clause of the 43rd Eliz., which directs the parents and children of the impotent to be assessed for their support, is very seldom enforced. In any ordinary state of society, we much doubt the wisdom of such an enactment. The duty of supporting parents and children, in old age, or infirmity, is so strongly enforced by our natural feelings, that it is often well performed, even among savages, and almost always so in a nation deserving the name of civilised. We believe that England is the only European country in which it is neglected. To add the sanction of the law in countries where that of nature is found sufficient, to make that compulsory which would otherwise be voluntary, cannot be necessary; and if unnecessary, must be mischievous. But if the deficiencies of parental and filial affection are to be supplied by the parish, and the natural motives to the exercise of those virtues are thus to be withdrawn, it may be proper to endeavour to replace them, however imperfectly, by artificial stimulants, and to make fines, distress warrants, or imprisonment act as substitutes for gratitude and love. The attempt, however, is scarcely ever made.”⁶

91. In view of the evidence quoted above it cannot now be said, whatever the circumstances prevailing in 1834, that compulsion is unnecessary. But the present practice of Boards of Guardians as to enforcing the legal liability of children to maintain their parents when they are in a position to do so varies very much. In some Unions

Variation in practice.

(63-4). ² Pochin, 74965-7. ³ Report into Effect of Outdoor Relief on Wages and Conditions of Employment in Certain Rural Unions, Mr. Jones, p. 26. ⁴ Jenner Fust, 11134. *Vide also* Heale, 69148. ⁵ Quelch, p. 35. Fawkes, Stat. 28. ⁶ Report of Poor Law Commission of 1832 [Cd. 2728] 1905, p. 43.

it is only exceptionally that even sons are asked to contribute towards the support of their parents,¹ while in others all the children, including married daughters, and sometimes grandchildren, are expected to help, according to their means. In rural districts as we have seen, it is quite usual to give relief to old people who have sons living with them in regular work. We have found this practice obtaining in North and South Wales, and in both the Eastern and Western Counties of England.

92. In St. Pancras all liable relatives are provided by the relieving officers with a form for their written statement of particulars of their position, children, rent, income, etc., and the relatives are asked to attend before the Committee.² A somewhat similar system is adopted in Bermondsey.³ In the Langport Union of Somersetshire it is reported that :—

“ When relatives who are legally liable to contribute are discovered they are (provided it appears to the Guardians that they are in a position to do so) asked in the first place to sign an agreement to contribute a sum mutually agreed upon, failing which a magisterial order is applied for. The collection of these contributions is far more general than it used to be.”⁴

93. In several other Unions from which evidence has been received sons are required to contribute and in some cases to appear before the Guardians personally.⁵

94. The Swansea Board of Guardians have formed a Committee known as the “ Ability of Relatives ” Committee, and Mr. H. G. Solomon, who is a Member of the Board, describes the procedure thus :—

“ The relief committees consider the individual cases of the applications that are made to them, and refer any cases where there are means to a committee which has been called the ability of relatives committee. They consider what relatives there are able to pay, and have a certificate of wages from the employers of the sons, and see if, in their opinion, the sons are able to repay part or all of the relief which the relief committee has ordered in the case of the parents. The sons are summoned to appear before this committee as a preliminary step, and if they do appear, or volunteer to pay the Guardians the sum which the Ability of Relatives Committee assess them at, no further proceedings are taken, and the warrant officer collects every week from the sons the amount they have voluntarily agreed to repay to the Guardians. Failing that, the board would authorise proceedings to be taken for the recovery of those sums.”⁶

95. Some interesting statistics were put in by Mr. F. W. Mee, Clerk to the Hunslet Guardians, from which it will be seen that this Board deals actively with the question of both liable and non-liaible relatives, and by assuming an authority which is not always maintainable in law succeed in obtaining contributions from sons and other relatives in a large proportion of cases :—

“ The following figures show our dealings with new cases of liable relatives of paupers during the year ended Michaelmas, 1906 :—

| | | | | | | | |
|---------------------------------------|---|---|---|---|---|---|-----|
| Number of separate cases dealt with | - | - | - | - | - | - | 93 |
| Number of relatives dealt with | - | - | - | - | - | - | 185 |
| Sons ordered to pay whole cost | - | - | - | - | - | - | 1 |
| Sons ordered to pay part cost | - | - | - | - | - | - | 48 |
| Sons excused payment | - | - | - | - | - | - | 25 |
| Sons ordered to keep parents | - | - | - | - | - | - | 45 |
| Sons ordered to pay parents direct | - | - | - | - | - | - | 53 |
| Grandfather ordered to repay | - | - | - | - | - | - | 1 |
| Other relatives ordered to contribute | - | - | - | - | - | - | 12 |

“ In addition to these cases numerous others arose in which a notice from the relieving officer was sufficient to bring sons to their senses without the cases coming before the Guardians.

“ Over half the recorded cases were disposed of without the parents becoming paupers by a show of apparent authority.”⁷

Difficulty in obtaining information.

96. There is often much difficulty in ascertaining whether applicants have relatives able to contribute to their support, and the applicants themselves not infrequently give incorrect information or no information at all.⁸ In some Unions it is the practice to refuse outdoor relief in such cases, and this sometimes leads to the withdrawal of the application or to an offer to contribute.⁹ We see great advantage in the provisions contained in Section

¹ Visits, Urban 43 A. ² Craig, 19466 (8). 19635. ³ Dyson, 20339. ⁴ Lang. Stat. 13. ⁵ Briant 15090. Morris, 16732. Kendrick, 22504. Jones, 49848. Pearson, 72331. 70 of the Poor Law (Scotland) Amendment Act, 1845, which gives to the Poor Law Authorities power to require an applicant to answer on oath all questions regarding his case which may be put to him before any Justice of the Peace or Magistrate.

97. In a good many cases the amounts ordered to be contributed by sons are not recovered. Mr. Preston-Thomas says :—

Failure to recover amounts ordered.

“Occasionally a son is ordered to pay, perhaps. 1s. a week towards the out-relief of his father, he pays for a little time and then he falls into arrear, the debt accumulates and accumulates and finally it is often wiped off.”

98. Mr. Preston-Thomas also states that in some Unions the Guardians publish statements showing exactly the amounts in arrear, and that this action has had a salutary effect.²

Publication of amounts in arrear.

99. The collection of the amounts repayable by relatives is in some of the larger Unions placed in the hands of a special officer, but in the large majority of Unions the relieving officers are appointed as collectors and receive a percentage, generally 10 per cent., upon the amount collected.³ This arrangement is open to obvious objection.

Collection of repayments.

100. In the Table previously mentioned which was put in by Mr. Baldwyn Fleming, the amounts recovered from relatives in each Union in his district are given for the years 1903-4 and 1904-5. In every Union something was recovered, and the totals were £17,633 in 1903-4, and £18,824 in 1904-5.⁴ The amounts recovered in other Unions have also been mentioned by witnesses.⁵

Amounts recovered.

101. In Lambeth, £5,850 was recovered in 1905, as compared with only £3,263 in 1896.⁶ Some interesting particulars were also put in by Mr. F. T. James, Clerk to the Merthyr Tydfil Guardians, showing that the amounts recovered in that Union had averaged about £2,500 during the three years ended Michaelmas, 1906. The amounts recovered in respect of outdoor relief and of indoor relief are distinguished, and it appears that whilst £1,600 was collected in respect of outdoor relief only £400 or £500 was in respect of indoor relief. The remainder was chiefly in respect of lunacy cases.⁷ The greater desire of the Guardians to obtain repayment in respect of outdoor relief was referred to by Mr. Davy, who thought that very often it does not occur to them to ask for repayment for indoor cases.⁸ Mr. Lockwood states, however, that a contribution is made for inmates of the infirmaries in a good many cases.⁹

Larger amounts recovered in respect of out-relief.

102. Some witnesses have stated that they thought there had recently been an improvement in regard to the amounts recovered,¹⁰ and this would appear to be the case for the total amount received from relatives and property of paupers in England and Wales, including repayments of relief on loan, amounted to £211,061, or 2·5 per cent. of the total poor relief expenditure, in the year 1888-9, and to £442,355, or 3·0 per cent. of the expenditure, in 1905-6.¹¹ It should be mentioned, however, in connection with these figures and those previously given that a large proportion of the repayments are in respect of pauper lunatics. In the total practically one-half was recovered in respect of lunacy cases, in regard to the treatment of which there are only the alternatives of the expensive private houses, County Lunatic Asylums, and the pauper institutions.¹² A large number of persons who are able to pay moderate sums are thus compelled to send their relatives, through the Poor Law, to the County and Borough Asylums and to repay the Guardians the whole or a proportion of the cost. It may be here mentioned, however, that the Guardians receive a grant of 4s. a week in respect of each pauper lunatic maintained in an asylum, registered hospital, or licensed house for whom the net charge upon the Guardians amounts to or exceeds 4s. a week. If the net cost be less than 4s. no grant is obtained. Consequently, unless the full maintenance charges are repaid,

Increase in amount of repayments.

¹ Preston-Thomas, 4296, 12465. *Vide also* Kerwin, 18279. Phillips, 71016. Hood, 71674. ² Preston-Thomas, 12466-8. ³ Briant, 15236. Phillips, 71017-20. it is to the interest of the Guardians not to press for a larger repayment than will leave the net cost at 4s. a week, and in this way relatives well able to pay are sometimes excused from the repayment of a portion of the maintenance charges.

Variation in proportion of relief recovered.

103. Although it has been shown that amounts are recovered from relatives in most Unions, we are conscious from observations made during our visits that the degree in which contributions are enforced varies considerably. So far as statistics are able to prove this we may refer again to Mr. Baldwyn Fleming's Table from which it is found that whilst in one Union less than 1 per cent. of the poor relief expenditure was recovered from relatives in another the percentage amounted to over 8 per cent. In Portsmouth, £4,247, or 5·8 per cent. of the expenditure, was recovered from relatives or the paupers themselves, in Southampton only £761, or 1·5 per cent.

No effort made to obtain repayments in some Unions.

104. In Northampton no effort appears to be made to recover from relatives. The Rev. W. E. Chadwick, vicar of St. Giles, Northampton, says :—

“In Northampton (I can speak personally for my own parish I do not know of a single case in which there is any repayment to the Guardians from children. If the Guardians give out-relief there is no real effort to make the grown-up sons and daughters who might be able to pay, pay something back.

“The enforcing of the family liability is very rare ?—Very rare indeed. I think there have been in two years six cases brought into court, and all have been discharged except one.”¹

105. In another Union the election placard issued by four representatives of Friendly Societies, contained as the first item in the programme :—

“Adequate outdoor relief in every deserving case. Relatives not to be called upon to contribute to such relief.”²

Desirability of uniformity in enforcement of law.

106. It is difficult to establish any direct connection between the disinclination of children to maintain their parents and the frequent failure of the Guardians to enforce filial responsibility ; but it is, perhaps, still more difficult to believe that there is no connection. We think that the want of uniformity in practice is largely responsible both for the neglect of filial duties, and for the resentment felt towards any attempt to enforce them. If the law were regularly enforced as a matter of course, the attempt to evade it and the consequent friction would be diminished.

107. Mr. W. S. Price, Clerk to the Guardians for the Wellington Union of Somersetshire, says :—

“There is little doubt that the practice of the Guardians with regard to relatives of paupers being generally known, in many cases children undertake the maintenance of their parents without allowing them to apply for relief.”³

Persons relieved owing to Disagreements amongst children.

108. A considerable number of cases are driven to apply for Poor Law relief because of disagreement amongst the children as to the amount of their contributions and in such cases the refusal of out-relief becomes ineffective as a means of coercion.⁴ It has been suggested to us in connection with such cases :—

“That aged and infirm persons eligible for outdoor relief should be empowered to take legal proceedings against their relatives for support, without applying to a Board of Guardians.”⁵

The witness quoted in support of this suggestion the case of an old woman with eight sons, whose only reason for not maintaining her was disagreement among themselves.⁶

109. Mr. H. A. Craig, the superintendent relieving officer for St. Pancras, says that in that parish there have been during the last three years 150 cases where children, have refused to maintain their parents and the old people have had to apply to the Guardians in consequence.⁷ And Mr. J. T. Thompson, president of the Metropolitan Relieving Officers' Association, estimates that in the Metropolitan area there are from

¹ Chadwick, 47024-5, also 47085. ² Bagenal, Vol. I., App. xv., (J). ³ Price, 67743 (16). ⁴ Bagenal, 7316. ⁵ Peters, 19734 (4). ⁶ Peters, Vol. II., App. viii. (B). ⁷ Craig, 19557.

800 to 1,000 cases per annum of aged and needy persons who would not need to come to the Poor Law if they had any means of making their liable relatives support them without seeking aid of the Poor Law.¹

110. At present, as we have already pointed out, the Guardians of the Poor, on a person becoming chargeable, may take proceedings to recover the cost of his maintenance from relations within the terms of affinity set down in 43 Eliz., c. 2, Sec. 6, who "being of sufficient ability, shall at their own charges relieve and maintain every such poor person." It is suggested that in the case of relations coming within the terms of this Section, individuals aggrieved by not being wholly or in part maintained by such relations, should have a statutory right to proceed against them on their own behalf. It is affirmed that in many cases the question of maintenance could be more suitably dealt with by a direct appeal to court, without the intervention of the Board of Guardians, for in these cases the applicants are pauperised quite unnecessarily, as the relations are in a position to assist, and would do so if they were ordered by the court to do so. We recommend that in any revision of the Poor Laws this suggestion be fully considered with a view to the amendment of the laws in this sense.

111. Whilst suggesting that poor persons should have power themselves to proceed against liable relatives for their support, we do not wish to diminish the powers of the Authorities in regard to recovery from relatives. Indeed, we think that greater powers should be conferred upon them by the removal of the limitation of the period during which the Guardians may obtain orders. It will be remembered that orders are at present only obtainable during the chargeability of the poor person, and we see no reason why the Public Assistance Authorities should not have power to take proceedings against liable relatives before the applicant becomes actually chargeable, and to recover from such relatives, after the poor person has ceased to be chargeable, the value of the relief given. This amendment of the law would, we think, result in many persons being maintained by their relatives without pauperisation.

112. We may also say here that we think the liability of children to support their grandparents should be established. Although the reciprocal liability exists, it has been held that the provisions of the Act of Eliz. do not attach any liability to grandchildren, and this anomaly should, we think, be removed.

113. Reasons given for the failure of the Guardians to take action for the recovery of relief from relatives are that the procedure gives much trouble, and that the action may be unsuccessful.² The procedure before the Magistrates is not so tedious as the procedure in the County Court, but nevertheless it involves considerable trouble and delay. Mr. H. I. Cooper, Clerk to the Bolton Guardians, pointed out that:—

"Under the existing law, sums due to Boards of Guardians from relatives of paupers in respect of the maintenance of such paupers are to be recovered as civil debts. The following is the process which has to be gone through at the County Petty Sessions Court in the Bolton Union:—

- (1) Summons and order on liable relatives.
- (2) Upon non-payment, summons for arrears and order for payment of arrears.
- (3) Upon disobedience of the order for payment of arrears, application to be made to court for distress warrant.
- (4) In case there are no effects to distrain upon, another summons is necessary, calling upon the defendant to show cause why he should not be committed to prison.
- (5) Upon defendant appearing, the onus of proof that the defendant has had means wherewith to pay is upon the Guardians, and it is very difficult to prove in some cases.

"These proceedings are cumbersome and expensive; often the relatives of paupers are without goods on which to distrain."³

114. As with regard to the procedure for the recovery of loan relief, we think that some simplification should be effected in the process applicable to recovery from relatives. There is some difference between the procedure for recovery of money due under contribution orders made upon relatives and the procedure under Bastardy Orders. Money due under an order of Justices made upon a person for the maintenance of a relative under the Poor Relief Act, 1601 (43 Eliz., c. 2, Sec. 7), is recoverable before a Court of Summary

¹ Thompson, 22535 (2), 22566, 22903.

² Court, 6176, 6221.

³ Cooper, 36692 (14-15).

Jurisdiction as a civil debt, and not as a penalty, so that the provisions of Sec. 35 of the Summary Jurisdiction Act, 1879, apply, and an order of Justices for the payment of money so due cannot be enforced by imprisonment in default of distress, unless it is proved that the person in default has since the date of the order had the means to pay the sum in respect of which he has made default. Sums due under an Order in Bastardy are enforceable by criminal process, and not as civil debts. That is to say, a man failing to comply with an Order in Bastardy may be apprehended and in default of sufficient distress, be committed to prison without reference to the question of his ability to pay. If the latter procedure be considered too drastic to apply to the recovery of money due on contribution orders made upon relatives, we think that the present procedure should at least be amended by requiring proof of inability to pay from the relative instead of ability to pay from the Authorities.

Reasons suggested for laxness in enforcement of law.

115. Amongst other reasons which have also been given for the reluctance of Guardians to recover from relatives are :—

- (1) That the strict application of the law in rural areas would have the effect of driving the young men to the towns¹; and
- (2) That, in the case of medical relief, it is difficult to attach a value.

116. To the first of these reasons, to which reference is also made in Mr. Jones' Report on Suffolk and Cambridge, we do not attach much importance. Removal from the district does not relieve a man of his liability, and although a few cases may have occurred where responsibility has thus been evaded, it is improbable that the enforcement of the law will operate in this direction to any great extent. It is the plain duty of the Guardians to enforce the fulfilment of the obligation which the law imposes; and we think that, to prevent a failure of justice, in these and other cases resort should be had to the assistance of other local poor relief authorities for making inquiries as well as of the police and other agencies. In the case of poor relief authorities the obligation to assist should be imposed upon them by Statute. These authorities should not be isolated bodies each working and investigating separately, but associated bodies each giving assistance to others in carrying out common duties. The second question is fully discussed in the chapter on Medical Relief.

Influence of Metropolitan Common Poor Fund on question.

117. Reference may also be here made to a financial arrangement which has operated against the enforcement of the law in London. In claiming from the Metropolitan Common Poor Fund the sum of 5d. per head per day for each indoor pauper the Guardians are required to set against their claim any sums received from relatives in respect of such paupers, up to the amount charged against the fund. Consequently each Union does not obtain the benefit of the sums it recovers, except to the extent to which in any case the repayment may exceed 5d. a day.³ This difficulty would disappear under the scheme for the formation of a County Authority for London, which we advocate in a later Chapter.

More might be recovered from relatives.

118. That more might be done in the way of recovering contributions from liable relatives is the opinion of many witnesses.⁴ We think this is clear and that the new Poor Law Authorities should pursue this policy uniformly and with firmness and discretion.

119. As an alternative to proceeding against persons for the support of their relatives the assistance is sometimes offered in the less attractive form of indoor relief, or is occasionally reduced in amount. Whilst the offer of the workhouse is a perfectly legitimate method of inducing relatives to contribute, we should deprecate any attempt to accomplish this end by reducing the amount of out-relief given below what is required to meet the needs of the case. If the person relieved be living with the relatives who, it is thought, should assist, it is obvious that the amount of the relief which would otherwise be granted should be reduced to the extent to which it is considered the relatives should assist, for it would be ridiculous to grant a larger amount and then to call upon the relatives to repay part of it. But where the recipient of relief is not living with relatives, adequate relief

¹ Court, 6174, Vol. I., App. xiii. (14). Burges, 72166. Wood, Vol. VII., App. cexii. (3). ² Davy, 2479. ³ Downes, 23087. Mott, 14766. Briant, 14922. ⁴ Court, 6430. Herbert, 8446-7. Fleming, 9390. Williams, 45464 (15). Childe, 71062 (3). Mahomed, 76132. Reynolds, Vol. VII., App. cxlvi., 25-7.

should be granted whether the effort to recover from the relatives be successful or not. These, in the main, were the views taken on these points by the Royal Commission on the Aged Poor, to paragraphs 155 and 156 of whose Report we may refer.¹

120. In the case of relations who are not legally liable the Guardians frequently not only neglect, but actually refuse, to recognise any responsibility at all;² with the consequence that much relief is given into households of which the aggregate income of the members places them far beyond the position of want:—

“Relief is given almost irrespective of income in the case of old people living with relatives not legally liable. This statement applies in practice with slightly varying degree, to the whole of the Unions in . . . which I visited.”³

121. On the other hand, it appears that in some Unions a rule has been adopted which prohibits the granting of out-relief to persons residing with relatives where the united income of the family is sufficient for the support of all, whether such relatives are legally liable to maintain them or not. The rule is not strictly adhered to, however, for there is much difference of opinion amongst Guardians as to the propriety of the policy.⁴

122. We thoroughly endorse the principle that relatives, other than liable relatives, should assist wherever possible. The names of such persons should be carefully entered; and they should be approached as friendly assistants in the relief of their relatives, asked to co-operate with the local authority in the fulfilment of a personal duty. Sometimes it may be found best to leave the care of particular cases to voluntary assistance, which, acting on other lines, may be able to obtain the help of relatives, employers and friends for persons in distress who have applied for public relief.⁵ The attitude of the Poor Law Authorities towards non-labile relatives should, however, be governed by the limitations we have indicated regarding recovery from relatives legally liable.

Chapter 4.

BASTARDY.

(A) *Maintenance Orders.*

123. Under the Bastardy Laws before 1834, any man became the putative father of an illegitimate child on the uncorroborated oath of the mother. The putative father was then liable to imprisonment in default of maintaining the child and the amount of any maintenance order made by the Magistrate against the putative father was paid by the parish to the mother, quite irrespective of whether the putative father in fact made any payment at all. On the other hand, the mother herself was liable to a year's imprisonment for each bastard child who became chargeable to the parish. These laws had been productive of so much immorality and injustice that the Royal Commission of 1832 recommended that they should be totally abolished and that the whole burden of an illegitimate child's maintenance should be thrown in the first instance upon the mother, or, if she married, upon her husband.¹ The Poor Law Act of 1834 gave effect in the main to these proposals, but, during the passage of the Bill through Parliament, the Government accepted an amendment enabling the parish to recover from the putative father the cost of relieving an illegitimate child, provided that the evidence of the mother as to the paternity of the child was corroborated in some material particular. To this extent, therefore, the recommendations of the Royal Commission were modified.²

124. The only Sections of the Act of 1834 dealing with bastardy which are still in force, are Section 57, which makes a man liable for the maintenance of the children of the woman he marries, whether those children are legitimate or illegitimate, and Section 71, which makes an unmarried woman liable for her children till the age of sixteen. In 1844 an important change was made in the law: heretofore, from Elizabeth's time downwards, the sole object avowed by the Statutes regarding affiliation was indemnity of the parish for the charge of supporting the child. The new Act departed entirely from this principle; in it, redress to the woman was the object, it being now "admitted that the mother of the bastard, not the parish, is the party by whom redress is to be sought from the putative father, and the means placed at her disposal are the cheapest and most accessible known to the laws of this country," a proceeding in Petty Sessions. All pre-existing powers of the parish, therefore, for obtaining orders on putative fathers for the maintenance of bastard children were abrogated.³

125. It was evident, however, that this made no change in the duty of Guardians towards mothers and bastards: they were, like other persons, entitled to relief when destitute—the payment made by the putative father being, of course, considered among the "means" of such paupers.

Existing
Statute Law
as to Bastardy.

126. The existing Statute law on the subject of bastardy is contained in more recent enactments. "The effect of the more material of these provisions is as follows: Any single woman with child or delivered of a bastard may, either before the birth or at any time within twelve months from the birth of a child, or at any time thereafter on proof that the putative father has within the twelve months next after the birth paid money for the maintenance of the child, or at any time within twelve months next after the return to England of the putative father on proof that he ceased to reside in England within the twelve months next after the birth, make application to a Justice for a summons against the putative father. If the application is made before the birth

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, pp. 166, 346.

² Adrian, 419.

³ Smart, Mem. 78.

the woman must make a deposition on oath stating who is the father. The Justice shall issue his summons requiring the putative father to appear at a Petty Session (35 & 36 Vic. c. 65, Sec. 3). Another form of application is permissible. This application is authorised by the 36 Vic., c. 9, Sec. 5. It is made by the Guardians, and it can only be made after the birth of the child, and after the child becomes chargeable. Where the Guardians apply, their application must be made to two Justices, and thereupon the Justices may summon the putative father to appear before any two Justices to show cause why an order should not be made upon him to contribute towards the relief of the child.”¹ “With regard to the other kind of application, that of the Guardians, it is to be observed that the foundation for this is the actual chargeability of the child. Hence there may be a difficulty in making the putative father contributory in the event of the cessation of chargeability, unless within the prescribed time the woman has also availed herself of her right to apply.”²

127. “At the hearing, in cases where the application is made by the mother after Procedure. the birth of the child, the Justices, on the appearance of the person summoned, or on proof of due service of the summons, are to hear the evidence of the woman, and such other evidence as she may produce, and also any evidence on behalf of the putative father; and if the evidence of the mother be corroborated in some material particular by other evidence, to the satisfaction of the Justices, they may adjudge the man to be the putative father of the bastard child. The proceeding at the hearing on the application of the Guardians is, up to this point, essentially similar.”³

128. “The order on the application of a woman takes various forms according to The Order. the varying circumstances of cases. The cases are these:—

(1) Where the application was made before the birth of the child and the child is alive.

(2) Where the application was made before the birth of the child and the child has been born and is dead.

(3) Where the application is made after the birth of the child and the child is alive; and

(4) Where the application is made after the birth of the child and the child is dead.

129. If the Justices adjudge the man to be the putative father of the child, they may also, if they see fit, having regard to all the circumstances of the case, proceed to make an order on the putative father according to the exigencies of the cases above enumerated. Thus the order may direct payment to the mother or to any person appointed to have the custody of the child (that is, where the mother is of unsound mind or a prisoner) of a weekly sum not exceeding 5s. for the maintenance and education of the child; also:—

(a) The expenses incidental to the birth of the child.

(b) The funeral expenses of the child, if it has died before the making of the order.

(c) The costs incurred in obtaining the order; and where the application is made before the birth or within two months after the birth the weekly sum may, if the Justices think fit, be calculated from the birth (35 & 36 Vic., c. 65, Sec. 4).⁴

130. “Where the application is made by the Guardians under Section 5 of the Bastardy Laws Amendment Act, 1873, the order may direct the putative father to pay to the Guardians or one of their officers such sum weekly or otherwise towards the relief of the child during such time as the child shall continue or afterwards be chargeable as shall appear to them to be proper. Any payment will be recoverable by the officer appointed to receive it. Procedure in regard to and under the order is subject to the important conditions set out in the form of provisoes to Sec. 5 of the Act of 1873. The provisoes are as follows:—

‘(1) That no payments shall be recoverable under such order except in respect of the time during which the child is actually in receipt of relief.

¹ Adrian, 420.

² Adrian, 421.

³ Adrian, 423.

⁴ Adrian, 425.

(2) That an order under this Section shall not be made and if made shall cease except for the recovery of arrears when the mother of the child has obtained an order. . . .

(3) That nothing in this Section shall be deemed to relieve the mother of a bastard child from her liability to maintain such child.

(4) That any person upon whom an order is made under this Section shall have the same right of appeal against such order as in the case of an order obtained on the application of the mother.

(5) That if after an order has been made under this Section the mother should apply for an order . . . the order made under this section shall be *prima facie* evidence that the man upon whom the order is made is the father of the child.' (36 Vic., c. 9, Sec. 5.)"

131. "With reference to the second proviso it is to be observed that, in the event of the child being no longer chargeable, the order obtained by the Guardians will not authorise the mother to obtain payment from the putative father. For this she will need a fresh order, and this must be obtained on her own application. This apparently she may obtain during the currency of the order obtained by the Guardians. But her application must be made within the time allowed to her apart from the proceedings of the Guardians.'"¹

132. We have received important evidence to the effect that procedure under the law as it now stands is uncertain and difficult, and that the power of the Guardians needs enlarging. The following extracts from the evidence show the gravity of the position.

133. Mr. Joseph Brown, the President of the Poor Law Unions in England and Wales was asked if anything was done if a man absconded. He replied:—

"Nothing is done. I should think perhaps only in one out of every three cases are we able to obtain the order." ²

134. And his colleague, Mr. King, who had been Chairman of the Wallingford Board since 1874, said:—

"In my opinion power should be given to boards to obtain an order from the putative father of a bastard child for contribution towards the maintenance of the mother independently of the child, during her chargeability. As the matter now stands, the mother is often chargeable three or four months before and after the birth of her child. If she leaves, say, within one month of the child's birth, the guardians have in practice no remedy, as in present circumstances, they can only recover the cost of the child's maintenance, which, if breast-fed, is practically nil. Moreover, no order can be applied for by a board till after birth, and this practically gives no time to procure one, so that there is to all intents and purposes no remedy against the father in the very large majority of cases which come to the union infirmary." ³

135. A witness from West Ham, says:—

"Very large numbers of single women are admitted to the workhouse in a pregnant condition, and these come under the notice of the special committee consisting of the lady members of the Board and are in turn seen by me with a view to taking steps to compel the putative fathers to contribute towards the maintenance of the children."

"During the three years ended 31st December, 1905, forty-two such cases were settled in favour of the mothers, either by orders made by the justices at petty sessions, or by properly attested agreements; but many young women prefer to leave the workhouse as soon as possible after confinement, consequently, proceedings in the larger number of cases have not been taken." ⁴

136. Another representation frequently made to us is that an order obtained on the application of the Guardians, which at present lapses on the mother ceasing to be chargeable, should *ipso facto* be renewed on the mother again becoming chargeable.

137. The most important suggestions for reform received by us are the following:—

(1) That an order once obtained, either by the mother or the Guardians, shall be available by whichever party is maintaining the child, and that where the order has been obtained by the mother, the Guardians, if maintaining the child, be empowered to apply for an increase in the amount of the allowance.

¹ Adrian, 427.

² Brown, 24843.

³ King, 25264 (6c).

⁴ Rusbridge, 20418 (10).

(2) That an order may be obtainable without the evidence of the mother, when through death, insanity, or other sufficient causes her evidence cannot be obtained.¹

(3) That an order once obtained should remain in force until the child reaches the age mentioned in the order, whether the mother lives or not.²

(4) That a putative father should be liable for the maintenance of the mother during her chargeability.³

138. With regard to the first point we are advised that, under Sec. 7 of the Act of 1872, payment can be recovered by the Guardians under an order obtained by the mother. We think that the wording of the Act is not clear on this point, and that it should be expressly stated that an order once obtained, either by the mother or the Guardians, shall be available by whichever party is maintaining the child, and that, where the order has been obtained by the mother, the Guardians, if maintaining the child, shall be empowered to apply for an increase in the amount of the allowance.⁴

139. With regard to the second point, we cannot recommend that an order should be obtainable without the evidence of the mother; but we recommend that action for recovery of expenses of chargeability be brought against the alleged putative father by the Guardians immediately on the birth of the child, according to the evidence obtained by them, irrespective of the fact whether the mother is then able at once to give evidence or not; and that, if the mother is then unable to give evidence on account of her state of health, the man should be bound over to appear at a later date.

140. With regard to the case in which the mother dies before the child reaches the age mentioned in the order, some provision is already made in the Poor Law Amendment Act, 1844. "After the death of such mother, or if such mother be incapacitated as aforesaid, so often as any bastard child for whose maintenance such order of Petty Sessions has been made becomes chargeable to any parish or Union by the neglect of the putative father to make the payments due . . . then it shall be lawful for the Board to make such applications for the enforcement of the order as might have been made by the mother."⁵ It is to be noted that the chargeability to the parish must be due definitely to the "neglect of the putative father." We think that this should be amended, and that, under whatever circumstances the child becomes chargeable, the chargeability of the father should remain and be enforced, with—as we have said—the enforcement of a larger payment if necessary.

141. The fourth point is insufficiently met by the present law, under which a mother (but not the Guardians) can obtain the expenses incidental to the birth of her child.⁶ It is, however, entirely discretionary in the Justices to give them incidental expenses. (Stones's Justices Manual, p. 153.) We recommend that the putative father be chargeable for the maintenance of the mother of his child from the date of the mother's admission to relief, and for the child after birth; and that, immediately on the mother's admission, inquiry on behalf of the Local Authority be made in regard to the paternity of the child. If the cases be numerous these inquiries should be made by a special officer suitable for the work; but the interrogation of the mother should be by a woman.

142. In the previous Chapter we referred to the procedure for enforcing payment of arrears under the Bastardy Acts. That procedure, when the order has been made on the mother's application, is as follows:—

"What is the procedure for enforcing payments under orders made on the mother's application?—Provision is made for enforcing payment of arrears under such an order by empowering justice by warrant to cause the putative father to be brought before any two justices, and, "in case such putative father neglect or refuse to make payment of the sums due from him under such order, or since any commitment for disobedience to such order as hereinafter provided, together with the costs attending such warrant, apprehension, and bringing up of such putative father, such two justices may, by warrant under their hands and seals, direct the sum so appearing to be

Amendment Acts, 1872. Sec. 4.

³ *Vide* Recommendations from Boards of Guardians in
57 & 8 Vic., cap. 101, sec. 7. ⁶ Bastardy Law

due, together with such costs, to be recovered by distress . . . and may order such putative father to be detained and kept in safe custody until return can be conveniently made to such warrant of distress, unless he give sufficient security by way of recognisance or otherwise to the satisfaction of such justices for his appearance before two justices on the day which may be appointed for the return of such warrant of distress." If no sufficient distress can be had, any two justices may commit the putative father to gaol for a term not exceeding three months unless the sum and cost be sooner paid (35 & 36 Vic., c. 65, Sec. 4). With regard to the amendments which the legislation of 1872 and 1873 effected in the law, it may be noted that any reasonable sum may be ordered to be paid as incidental to the birth of the child and of its funeral; and the recovery of the weekly sums is not limited to a particular arrear; payments may be directed to continue until the child reaches sixteen years of age. Where an order has been made on the application of the mother, and the child has become chargeable after the death of the mother, the guardians are empowered to make any such application for the enforcement of the order as the mother might have made if alive (7 & 8 Vic., c. 101, Sec. 7). Also during the lifetime of the mother in a case where an order has been made on her application, and where the child has become chargeable, two justices may appoint some relieving officer or other officer of the Poor Law Union to receive, on account of the Poor Law Union, such proportion of the payments then due or becoming due as may accrue during the period for which the child is chargeable (35 & 36 Vic., c. 65, Sec. 7).¹

143. It has been represented to us that in a large number of cases this procedure fails, and that the man escapes payment by the simple expedient of removing to another place. We think that this difficulty will be very largely met by the recommendations made by us in the last Chapter, that the Poor Law and other authorities, both in the same and in different districts, be required to co-operate in enforcing the law. It is also desirable that fathers against whom affiliation orders are made should be required to report to the Court changes in address.

144. There is a minor point of procedure in connection with bastardy orders which we consider deserves attention. It has been strongly alleged to us that the practice of making orders against putative fathers in terms necessitating direct payment by the man to the woman, is productive of undesirable results, and sometimes tends to increase bastardy. It is not right that the terms of a legal order should serve as a pretext for periodical visits by a man to the woman he has seduced, and the position is even worse when, through failure of the payments, the woman is induced to frequent the man's house with a view to obtaining her money.

145. Miss Hogg, secretary of the Southwark Diocesan Association for the Care of Friendless Girls, says:—

"I have no hesitation in stating that when payments are made direct from the father to the mother the effect is so detrimental that so far as the influence of this Association is concerned the law is practically a dead letter."²

146. Miss Newill, president of the Birmingham Association for Rescue Training of Young Women, says:—

"The great aim of all rescue workers is to sever all connection between the putative father and the mother of an illegitimate child. For very obvious reasons the man should never be allowed to pay directly to the woman. At present no one but the mother is legally authorised to receive it. By threats or persuasions the man when paying directly has every opportunity to induce the woman either to return to him or relinquish her claim upon him."³

147. Miss Hall, honorary secretary of the outdoor rescue work department of the Church Army, says:—

"If, on the application of a solicitor acting on behalf of some rescue association or of the mother herself, an affiliation order is granted, payment is required to be made direct by the father of the child to the mother. But the great aim of the rescue worker is to break off all connection between the father and the mother. A weekly payment on a magistrates' order involves constant meetings which not only prevent the mother settling down in a respectable way of life, but most undesirable results almost inevitably ensue. Either she has to hang about on pay day at the shop where he works (and it very soon becomes well known why she is there), or she has to haunt his home or the place where he lodges; with the result that her shame is blazoned abroad and she becomes at least the centre of a degraded notoriety. If, as is often the case, the father regains his hold upon her, he works upon her affections, and not infrequently drags her down again, with the result that Boards of Guardians are apt to regard her as an altogether depraved woman, when the blame, as a matter of justice, should be laid on other shoulders."⁴

148. We think, therefore, that bastardy orders should invariably be made payable through the agency of some person other than the mother of the illegitimate child.

(2).

(2). ³ Newill, Vol. XI., App.

(2). ⁴ Hall,

We make this recommendation both in the interests of morality and of the ratepayers, who are so frequently called upon to support many bastard children of a single mother. As regards cases which involve no chargeability upon the rates, the Justices should be required, where the circumstances are favourable, to appoint an agent through whom the payments to the mother would be made.

(B) *Treatment of Unmarried Mothers.*

149. There is perhaps no more difficult problem in Poor Law administration than the treatment of unmarried mothers, and none in which discriminating methods might have greater results. The need for introducing a different system from the present has made itself universally felt amongst Poor Law workers, and there are certain points upon which our evidence is practically unanimous.

150. A very large proportion of the births which take place in the workhouse are illegitimate. Mr. Lockwood gives the numbers of legitimate and illegitimate respectively for six months in seven London workhouses, and the totals are 145 legitimate and 245 illegitimate.¹ Mr. Kendrick states that all the births in the Stone (Staffs.) workhouse the previous year were illegitimate.² Mr. Tarrant states that:—

“During the past five years there have been 229 births in this institution, and 177, or 77·2 per cent., of these have been illegitimate children, the mothers of whom for the most part are mentally weak, and in many cases approaching the imbecile.”³

Mr. H. Senior says:—

“Out of forty-five pregnant cases during the years 1905 and 1906 thirty-one were single women.”⁴

Mr. H. Cooper says:—

“In the workhouse of this union there are a great many illegitimate children born—children of young single women who go to the workhouse for the purpose of confinement. During the year ended June, 1906, there were thirty-two births in the workhouse, of which eight children only were legitimate and twenty-four illegitimate.”⁵

151. Some witnesses have felt strongly the fact that to many of these women there is nothing deterrent about the workhouse, and that they are able to obtain there treatment which is far superior to that within reach of the independent labourer's wife. The Rev. J. R. James says:—

“There is no doubt but that a premium is put upon illegitimacy by the ease with which the mothers of illegitimate children are admitted to the lying-in wards. I know of one such ward where during seven years seven different women have been confined of from three to five children by different fathers, and to these same wards it is very difficult for married women whose husbands earn a bare living wage to gain admission, in addition to the fact of the demoralisation which follows upon association with the regular inmates. The girl who comes to be delivered of her illegitimate child finds that there are numbers of others in the same case as herself, and feels no shame in returning in like case again.”⁶

152. The fundamental mistake hitherto has lain in the tacit assumption that all unmarried mothers coming into the workhouse belong to the same class, and are to be dealt with on the same lines. It has become clear to us that in future we must distinguish between at least three classes: the feeble-minded or irresponsible, the young mothers who are responsible but have fallen for the first time, and the women who have no desire to lead a respectable life.

153. With regard to the first class, the feeble minded, their case is fully dealt with in the Report of the Commission on Feeble-minded. If, as we hope, the recommendations of that Commission are carried into effect, a system of control over the feeble-minded will be initiated which will put an end to one of the most prolific sources of pauperism, and free the Poor Law administrator from one of his greatest difficulties.

¹ Lockwood, 14017. ² Kendrick, 22394. ³ Tarrant, Vol. IV., App. cii. (12). ⁴ Senior Vol. IV., App. xcvi. (9). ⁵ Cooper, 36693 (6). ⁶ James, 23566 (8). *Vide also* Vol. V. App. cxi. (56-7).

Meanwhile, we think that as a provisional measure, the Poor Law Authorities should be given power to detain feeble-minded mothers of illegitimate children who come under their care.

154. With regard to the second class, the young mothers who come into the workhouse for their first confinement, there is also great need for reform. Many of these are young girls, greatly to be pitied, who have been much sinned against, and who with proper encouragement and help may be restored to a useful and happy life. We cannot condemn too strongly the present system by which their sojourn in the workhouse becomes too often the introduction to a life of permanent degradation. We attach great importance to the evidence on this point of Miss Stansfeld, who inspects the maternity wards in the Metropolitan District for the Local Government Board. She says :—

“The experience I have gained impresses upon me the duty of representing to the Royal Commission that, for social reasons, I am of opinion that provision should be made for securing separate treatment for the large class which consists of young unmarried women who come into the maternity wards for the first time. A great deal has been said in favour of the classification of the aged poor and the withdrawal of children from workhouses and infirmaries, but nowhere is classification more needed than in the maternity wards. The unavoidable and close intercourse between the young girl, who often enters upon motherhood comparatively innocent, and the older woman who is lost to all sense of shame and who returns again and again to the maternity ward for the birth of her illegitimate children, constitutes a grave danger. Too often the older woman invites the friendless girl to share her home on leaving and so leads her on to further ruin. A young girl comes from the country to seek her fortune as a servant in London, she is led astray, and, not daring to return to her friends, she applies in her lonely despair to the workhouse maternity ward. Now while I feel sure that the matron and the nurses make every endeavour to shield and to help such a patient (and as a class they are easily distinguishable) it is impossible to avoid contact and conversation with the older women.”¹

155. In London, and probably elsewhere, a large proportion of these young girls have been domestic servants, and Miss Stansfeld assents to the suggestion that this indicates very great carelessness on the part of their mistresses. It also means :—

“That there are a great many country girls who come up to London quite ignorant of London ways and London’s temptations ; they are unprotected and unguarded, and they are thus led astray.”²

156. In many places, and more especially in the Metropolis, great efforts are being made on behalf of these girls, to give them a fresh start. Miss Stansfeld says of such work that :—

“It is very much on the increase. I think the amount of voluntary work which is now being done in the maternity wards of the Metropolis is wonderful. I do not think that I remember any one single instance, when asking a girl whether she would receive help on leaving, of her saying No ; and I nearly always ask that question.”³

157. Those of our witnesses who have experience in work of this kind are generally agreed that it cannot be made really effective under present conditions. Miss Newill, speaking of a committee working in connection with the Birmingham Workhouse, says :

“The result has been most encouraging, but the committee have felt that for some long time their work has been very sadly handicapped for the want of a home to which these young girls might be sent, instead of mixing for long periods of time—as many often have to do—with the degraded and vicious women who haunt our workhouses all over the country. We believe that the list of these women which now appears to be so large would be wonderfully decreased in the future if we could only rescue all our young unmarried mothers and help them to regain their footing. The moral atmosphere of a workhouse is such that no young girl should be introduced into it if we have any hope or wish to reclaim her.”⁴

158. The opinion expressed by this witness is confirmed by the evidence we have received from Bethnal Green, where it has been found possible to separate these “first cases” from the others. The matron says :

“These women are specially looked after by the midwife and not allowed to come in contact with undesirable women. Each woman is brought before the Ladies Committee, and she is visited by a member, and everything is done to reclaim her. Some of them are sent to homes, others to domestic service. Homes are found for their babies. The girls, if they earn sufficient money, pay 5s. a week, but if at first they cannot earn enough it is made up by the Ladies’ Committee. I am glad to be able to state that, during the nine years I have been matron here, I have only known two of these girls return to have their second child.”⁵

¹ Stansfeld, Vol. I., App. xxvi. (14).

² Stansfeld, 14564.

³ *Ibid.*, 14240.

⁴ Newill, 44920 (4).

⁵ Bushell, Vol. II., App. xv. (D).

159. The good results of this system in diminishing the number of cases are seen in the fact that, during the six months already referred to, there were only ten illegitimate births in the Bethnal Green Workhouse, as against seventeen legitimate.¹

160. Unfortunately, it is not found possible in most workhouses to find accommodation for these cases apart from others. Mr. Briant says :

“I feel very strongly that there ought to be some means of dealing with them outside, or when they come in, of not mixing them with the other women who have been in, unfortunately, in many cases, several times. That is a very serious blot practically on the administration. With our present workhouse it is very difficult to do otherwise, but I think something should be done to remedy that ; it is a crying evil, to my mind.”²

161. The Hampstead Board has met the difficulty by referring such of these cases as are willing to the Maternity Committee of the Hampstead Charity Organisation Society. Provision is made for them by this committee in voluntary homes, without their being brought before the Board and entering the workhouse. They are subsequently looked after and enabled to make a fresh start.³

162. Many witnesses are of opinion that these cases can best be dealt with in separate homes, preferably by voluntary charity, and in any case quite apart from the workhouse. Miss Stansfeld recommends that such a home should be established in connection with the Poor Law :—

“I would, therefore, venture to recommend that some means should be devised for London generally by which the exclusion of the younger women (*primiparae*) could be secured. I should venture to suggest the establishment of a special maternity home, with laundries and workrooms attached, to which the various boards of guardians might send such cases for employment before the birth of the child and for those important months afterwards which offer such valuable opportunities for the development of the instinct of motherhood—that instinct which constitutes so great a support to the young and impressionable woman. To such a Home I would also recommend that married women of really good character might, if they wished, be admitted.”⁴

[At the Liverpool Workhouse :

“Every unmarried woman who enters such a ward for the first time is given the chance of going to a home with her baby.”⁵

Miss Newill says :

“We would urge that a sufficient number of homes should be started by charitable agencies all over the country to which guardians should subscribe and after due consideration, send suitable cases and maintain them in the home for the requisite period.”⁶

163. We are strongly of opinion that these recommendations should be carried out in so far that all first cases should be dealt with in institutions apart from the workhouse. Where suitable voluntary homes are available, it would be well that these should be utilised ; and the Authorities should directly endeavour to promote their establishment as certified voluntary homes to which patients may be admitted direct on the order of the Public Assistance Committee, subject to their making such payments as may be agreed for the maintenance and care of the individual case. Failing these, the Poor Law Authorities should institute homes of their own. But in either case we think that the services of charitable workers should be enlisted to watch over the girls on their first return to the world.

164. A large number of witnesses have urged that even these first cases should be detained for a short period after child-birth, partly in order that they may be fully restored to health, and partly in the interests of the child. Miss Zanetti, Inspector under the Infant Life Protection Act to the Chorlton Board of Guardians, says :

¹ Lockwood, 14017. ² Briant, 15374. ³ Stansfeld, Vol. I., App. xxvi. (B). ⁴ *Ibid.* App. xxvi., (a) (15). ⁵ Thorburn, 35692 (15). ⁶ Newill, 44920 (5). *Vide also* Thurnall, 15718, Lloyd, 70511 (9b). MacNaughton-Jones, 72976 (4), 73078.

"I think that the detention of unmarried mothers of babies born in workhouses would, if feasible, have an important effect on the infantile death-rate. The mother herself would derive great benefit from good food and lodging for a few months after her confinement, and the child nursed by its mother during that time would have a better chance of healthy life than if brought up on artificial food and left to the care of a baby farmer."¹

165. We think that, if the young mothers were cared for under better conditions than at present, and were given the option of remaining when no better arrangement could be made, it would probably be unnecessary to exercise any power of detention. Experience shows that some simple expedient, such as the provision of an outfit for service, at the end say of three or six months, induces these young women to remain without powers of detention. In any case we think it undesirable to lay down any hard-and-fast rule, and prefer to leave it to the discretion of those undertaking the work to deal with each case according to the varying circumstances. We also desire to express the strong hope that those who are in charge of the homes, as well as the charitable workers, will impress on the girl mothers the duty of nursing their babies, and the advantages of that course both to the mothers themselves, and to the babies. During the nursing period there is strongly developed and intensified that maternal love which becomes in the case of the unmarried mother, a powerful factor in her moral reformation, and in her restoration to a respectable and independent life. This love also provides the mother with an unfailing motive to make every effort to contribute to the support of her child; and the human tie thus maintained is an excellent safeguard against a moral relapse.

166. It is different when we come to consider the more depraved women who habitually make a convenience of the workhouse. We hope that the numbers of these will be very largely diminished as they gradually cease to be recruited from the two previous classes; meanwhile, we have to meet a strong and indignant feeling on the part of local administrators that such women cannot continue to be encouraged in their immoral lives at the expense of the ratepayers. The remedy almost universally proposed to us is that of detention for a longer or shorter period.² At present there is no check upon the number of times they may come into the workhouse for their confinement, and their children for the most part become a permanent charge upon the rates. We think that these cases should be dealt with on lines similar to those adopted for "in-and-out" cases. The fact that they make a habit of throwing themselves constantly upon the rates constitutes a sufficient justification for affording relief only under strict conditions. After recovery from confinement they should, we think, be sent to some suitable institution, where they should be detained and taught, if possible, to earn a living. Their detention should be on an order of Justices, and should be probationary, and until it was judged that they were prepared to lead respectable lives. If they were fit to nurse their babies, these should be left with them while infants.

167. To sum up: we urge that careful discrimination should be exercised in dealing with the unmarried mothers who apply for relief. For the feeble-minded we recommend complete control on the lines laid down by the Royal Commission on Feeble-Minded. For young mothers coming for the first time we recommend treatment in special homes, voluntary where possible; and we urge that the services of voluntary workers should be enlisted for their after-care. We recommend that there should be a Women's Committee connected with every Public Assistance Committee, consisting of members of that Committee and of other voluntary helpers, to advise in regard to all maternity cases; and that members of the Women's Committee, or others suitable for the work shall keep in communication with mothers leaving the homes for the purpose of befriending them and their children. For depraved women we recommend that the Local Authorities should have power to arrange for their detention in suitable Institutions. Should these recommendations be carried into effect, we confidently anticipate a great diminution in the numbers of the latter class, and also in the numbers of illegitimate and degenerate children who are born only for an early death or to become a lasting burden upon the community.

Chapter 5.

VAGRANCY.

168. We have seen that the Royal Commission had, in 1834, recommended that the Central Board should be “empowered and directed to frame and enforce Regulations” as to the relief of vagrants.¹ It was anticipated that the burden of vagrancy would be lifted if the relief were “such as only the destitute would accept”; but the Commissioners expressed their assured belief that this result could be effected only if the system were general. Their prescience has been justified in the sequel.

169. No special reference to vagrants was made in the Act of 1834; presumably, it was considered that the general powers conferred by that Act would suffice, and in the Third Report of the Poor Law Commissioners are details of Regulations sanctioned by them for “the Relief of Casual and Mendicant Paupers” in the Hatfield Union.² These Regulations empowered every ratepayer, and any parochial or Union officer, to give a ticket recommending relief to be given in the workhouse to “any person who shall by words or signs intimate that he or she is in a state of destitution, has no means to get his or her living by (Stat. of 43 Eliz., c. 2) or who shall use no ordinary or daily trade of life.” The master was to admit the person in accordance with ordinary regulations of the workhouse, and then “if he or she be able-bodied or partially disabled” the casual thus admitted was to “be set on such work as may be provided for the able-bodied or for the partially disabled.” After the performance of this task, which was to be “proportioned to his or her capacity,” he was to receive the same diet and be subject to the same discipline as the other paupers in the workhouse. Provision was also made for notification to the Clerk and for the directions of the Guardians at their next meeting as to the continuance of the relief or the removal of the casual to his or her place of settlement. A set form was provided for the examination of the casual by the master, the result of which was open to the inspection of the ratepayers, and special stress is laid on the importance of due investigation of each case. The relieving officer was further authorised in certain cases to “suspend the performance of his other duties,” and to deal with a “common vagrant” in accordance with the Act for the Punishment of Idle and Disorderly Persons and Rogues and Vagabonds³ before the Magistrate. Finally, the ratepayers were notified that “every penny given to mendicants operates as a bounty on filth and imposture, and an inducement to bring up poor children in miserable and wicked courses.”

170. It was anticipated from a short experience of this plan that “with strict attention, and when it becomes generally known, there will not be a beggar to be seen throughout the Union.”⁴

171. It appears that a similar plan was adopted in other Unions, and in an application from the Spalding Guardians for the appropriation of one of the outhouses in the men’s yard at the new poorhouse for the nightly reception of vagrants may be found the germ of the present casual ward.⁵ The vagrant was to receive a supper and breakfast of bread and water, but the latter meal, and also his discharge, was dependent on a task of two hours on the corn mill. An Assistant-Commissioner, reporting on this proposal said:—

“Every workhouse ought to be provided with two rooms and straw beds for vagrants. A mill handle should be adjacent on the men’s side. At Coventry, we reduced an expenditure upon vagrants from many hundreds to a mere nothing.”

But the provision of casual wards for destitute wayfarers not belonging to the district was a duty which had not been contemplated by the framers of the Act of 1834.⁶ Difficulties soon arose and foremost of these was the fact that, until the law was amended in 1848⁷, inmates who had no settlement were maintained at the cost of the parish in which the workhouse happened to be.

¹ Report, of Poor Law Commission, 1832. [Cd. 2728], 1905, p. 340. ² Third Annual Report Poor Law Commissioners, 546-1, 1837, App. A, No. x., p. 80. ³ 5 Geo. IV., c. 83. ⁴ Third Annual Report Poor Law Commissioners, 546-1, 1837. Report from the master to the Marquis of Salisbury, p. 82. ⁵ *Ibid.*, pp. 82-3. ⁶ Report of Departmental Committee on Vagrancy [Cd. 2852], 1906 p. 9. ⁷ 11 & 12 Vict., 110, Sec. 1.

172. The position was especially acute in the Metropolis, where destitute persons found in the street by the police were refused relief on the ground that they belonged to distant parishes.¹

173. In their reply to a representation from the police authorities the Poor Law Commissioners affirmed their confidence in the sufficiency of the existing policy and the extension of workhouse accommodation, but they say:—

“That which the Commissioners are most anxious to have made known is, that the relief of actual destitution in cases of emergency should always precede the investigation of any question as to its cause, or as to the liability of any other parties than the parish to contribute to it.”

174. In a Circular Letter to the Boards of Guardians in the Metropolis the Commissioners requested that their correspondence with the police may “be read by the Clerk to the relieving officers and master of the work-house in the presence of the Guardians,” and arrangements for task-work, with regulations on the lines of those adopted at Hatfield, were recommended.²

175. In 1839 a further Circular threatened with dismissal any officer who neglected his primary duty of relieving any case of urgent casual destitution.³

“Serious notice” had to be taken of the “reprehensible practice on the part of certain parish officers of bribing or otherwise inducing casual paupers (who from sickness or other accidental causes have appeared likely to become burdensome) to quit the parish.”⁴

176. Thenceforward was issued a series of Circulars and Orders directly dealing with the vagrant.⁵

177. The vagrant has been termed “an accidental result of the law of settlement”⁶ and in their 8th Report the Commissioners deal at length with the question of settlement:—

“Although the right to relief in so far as it exists by virtue of the 43rd of Elizabeth was long anterior to the present law of settlement, it yet seems probable that after the statute of Charles II. had established the present system of settlement, some such local claim was considered necessary for conferring a right to relief. At least, in *Rex v. Inhabitants of Eastbourne* it was stated . . . ‘that Lord Holt had held he did not know that a foreigner had a right to be maintained in any place to which he came, but that they might let him starve,’ upon which Lord Ellenborough, Chief Justice, said, . . . in giving judgment, ‘the law of humanity which is anterior to all positive laws obliges us to afford them relief to save them from starving; and those laws (i.e., of settlement) were only passed to fix the obligation more certainly, and point out distinctly in what manner it should be borne.’ . . . Since the judgment in *Rex v. Inhabitants of Eastbourne* there is, it appears to us, no doubt that persons in a state of destitution are entitled to relief wherever they may be, independently of any previous residence and of any settlement or pretence to settlement.”⁷

4 B. and A. 103.

178. By an Act of 1842⁸ Guardians generally were enabled to prescribe a task of work in return for food and lodging, and were given a limited power of detention; refusal to perform the task, as also wilful injury or destruction of his own clothes or of the property of the Guardians, were to be deemed offences within the meaning of the Vagrancy Act, 1824. Another Poor Law Act of 1844⁹ still in force authorised the formation of districts for providing “asylums” for the houseless poor in London and in five other large towns.

* Nevertheless, the Commissioners found it necessary to recur to the subject in their Twelfth Report 1846, and to insist that it was not the *law* but the *practice* which they had sought to alter, p. 12, folio.

¹ Fourth Report Poor Law Commissioners, 147, 1838, App. (A), p. 98. ² Fifth Annual Report Poor Law Commissioners, 78, 1839, p. 52. ³ Sixth Annual Report Poor Law Commissioners, 245, 1840, p. 59. ⁴ Fifth Annual Report Poor Law Commissioners, 78, 1839, p. 51. ⁵ The first Order (August 6th, 1841) of the kind, addressed to certain parishes of the City of Westminster “ordered and directed under the powers and authority of the Act of 1834,” the admission to the workhouse of those parishes of “any person who may apply for relief under circumstances of sudden or urgent necessity.” ⁶ Report of Departmental Committee on Vagrancy [Cd. 2852], 1906, p. 9. ⁷ Eighth Annual Report Poor Law Commissioners, 389, 1842, p. 14. ⁸ 5 & 6 Vict., Cap. 57, Sec. 5. ⁹ 7 & 8 Vict., Cap. 101, Sec. 41.

179. Voluminous evidence was taken by a Select Committee of the House of Commons in 1846 on a scheme which had been proposed by the Commissioners for the formation of districts in the Metropolis. The scheme was opposed and eventually abandoned.

180. Meanwhile vagrancy had increased generally and to an alarming extent. To some extent the increase was attributable to the policy of the Commissioners, or perhaps to the manner of its application by the Local Authorities. A notable and instructive instance of this occurred at the workhouse of St. Saviour's Union in 1842:—

“A boy to whom admission had been refused by the porter was taken before a police magistrate. An inquiry into the porter's conduct followed. . . . The board of guardians were directed to admonish the porter . . . and the practice forthwith commenced of giving relief to all persons representing themselves to be vagrants. The number of applicants increased with wonderful rapidity. In the week before this mistaken system began 549 vagrants were relieved; in the next week, 1,279; then 2,026; then 2,947; then 4,281; and in the last week, 3,883; making in five weeks, 14,416 cases. . . . Such a concourse of clamorous applicants frequently rendered the presence of the police necessary; inquiry into individual cases was impossible, and there is no doubt that much imposition was successfully practised.” The guardians then established a stone-yard, and resolved to exact work for all relief afforded to such vagrants as were able to work. The weekly numbers for the next three weeks were 303, 243, and 230, atotal of 776 for three weeks after the offer of stone-breaking, against 11,111 for the three weeks preceding that offer.¹

181. But other causes were in operation; the great expansion of railway construction and industrial development coincided with a period of famine and fever in Ireland to swell alike the mass of vagrant misery and mendicancy and the stream of migrant labour.² And the mobility of labour had been increased by the abolition of settlement by hiring and service and many of the other consequences of the Poor Law Amendment Act.

182. In 1848 vagrancy was one of the first questions dealt with by the new Poor Law Board. A special Report made in that year testified to the increased numbers of the vagrants, their idleness and the part they played in the spread of fever and other diseases, as well as to the deficiencies of many vagrant wards. The want of uniform treatment was felt by the Inspectors, and the Report included a recommendation that the vagrant should be entirely transferred to the police. A Minute of the Poor Law Board was issued urging upon Guardians discriminate and uniform action, the refusal of relief to able-bodied men not actually destitute, and the employment of the police as assistant relieving officers for vagrants. A further recommendation was that passes should be given to persons actually in search of work.³

183. The vagrant appears to be always sensitive to Circulars from headquarters, and the Board were gratified to observe that the number relieved fell from 13,714 on July 1st, 1848, to 5,662 and 2,954 on the corresponding days in 1849 and 1850 respectively.⁴ Unfortunately this desirable effect is also evanescent, and from 1857 onwards the vagrant again continued to occupy the attention of the Central Authority and of the Legislature.

184. The Houseless Poor Acts of 1864–5, supplemented by the Metropolitan Poor Act of 1867, required the Guardians to provide casual wards to the satisfaction of the Central Authority, and the cost of these and the expenses in connection with vagrants were to be repaid to the Guardians by the Metropolitan Board of Works, and became eventually a charge on the Metropolitan Common Poor Fund.

185. At the same time special attention was given to vagrancy elsewhere throughout the country. A Parliamentary Report in 1866⁵ showed the general absence of uniformity in the treatment of the vagrant class and the insufficiency of the accommodation provided for them. In the County of Essex alone was the system of passes to work-seekers (*see above*) in operation, and it is noteworthy that in that County “vagrancy

¹ Tenth Annual Report Poor Law Commissioners, 560, 1844, p. 7. ² Fourteenth Annual Report, 960, 1848, p. 4. ³ *Ibid.*, pp. 5–6, and App. 22, etc. ⁴ Second Annual Report Poor Law Board, 1142, 1850, p. 6. ⁵ Reports on Vagrancy made to the President of the Poor Law Board by Poor Law Inspectors, 1866.

had been practically abolished by the energy of the chief constable.”¹ The Report furnishes picturesque details of the degraded and criminal types using the casual wards as a convenience or a rendezvous. Here are some notices copied from writings on the walls:—

“Saucy Harry and his moll will be at Chester to eat their Christmas dinner, when they hope Saucer and the fraternity will meet them at the union.—November 14th, 1865.”

“The Governor of Chester Castle orders all subalterns to meet at Stourbridge.”

“If rag-tailed Soph stays here, come on to Stafford.”

“Harry Heenan was here, hafter beeing off of the rope twelve months.”²

186. In 1871 the Pauper Inmates Discharge and Regulation Act required the Guardians of every Union to provide such proper casual wards as the Poor Law Board considered to be necessary; it made provision for the detention of casuals, and empowered the Central Authority to prescribe Regulations for their employment, dietary and discipline.

187. As usual these measures were followed by a temporary fall in the number of vagrants relieved by the Poor Law. But by 1881 the numbers had again risen to 6,215, and in 1882 another Casual Poor Act was passed extending the period of detention in the case of persons admitted to a casual ward of the same Union more than once in a month. For this purpose the Metropolis was to be deemed to be one Union, and for the purpose of identification officers appointed by the Local Government Board were frequently to visit the wards in London.

188. By a General Order dated December 18th, 1882, the Local Government Board prescribed the Regulations for casual paupers which, with a few minor modifications, are those now in force.

189. Admission to a casual ward, except in case of sudden or urgent necessity, is by order of a relieving officer*; it is directed to be after 4 p.m. in winter, and 6 p.m. in summer: vagrants are to be searched and money or other articles to be taken from them—the latter being restored on discharge. The vagrant is to be bathed, necessary garments supplied to him and his own clothes dried and disinfected if necessary. An admission and discharge book is to be kept, and particulars of any refusal of admission must be recorded and laid before the Guardians. The casual is not entitled to his discharge, which is subject to the performance of a task, before nine o'clock a.m. of the second day following his admission, or, in the case of a previous admission during a month, before the morning of the fourth day, Sunday being excluded from the computation.

190. In 1892, another General Order conferred upon any casual seeking work the right to discharge at 5.30 in summer or 6.30 in winter on the second morning after his admission. In 1897, an improved diet—including milk—was prescribed for the children.

191. But provisoes to the Orders enabling the Guardians or the officers to dispense with the provisions for detention, and the alternative dietaries and tasks of work prescribed by the Orders themselves, have occasioned an unfortunate diversity in practice.

192. In 1888, proposals were made before the Select Committee of the House of Lords on Poor Relief for the abolition of casual wards, but the Committee decided that the vagrant could not be dealt with otherwise than as a separate class, so that it would always be necessary to maintain a separate department of the workhouse for his reception.

* In the Metropolis a person brought by a constable is to be admitted “if there be room.”

¹ *Ibid.*, p. 31.

² *Ibid.*, pp. 62, etc.

193. In 1895, the vagrancy statistics were nearly double those of 1885, and strong representations were made to the Government. Another Circular exhorting Guardians to uniformity of treatment and to the exercise of their existing legal powers was issued in 1896, and was followed by the usual responsive decrease of numbers. But with the close of the South African War and the approach of a period of trade depression the numbers again rose, and in 1904 passed all former records. The general agitation throughout the country led to the appointment by Mr. Long of a Departmental Committee under the chairmanship of Mr. Lloyd Wharton, which reported in February 1906.

194. The Committee distinguished four types of vagrants resorting at one time or another to the casual ward.

(1) The *bona fide* working man, travelling in search of employment—less than 3 per cent. of the total in the opinion of competent observers. “In times of trade-depression there is,” the Committee say, “no doubt a larger number of working men on tramp, but it seems clear that as a rule the vagrant who is *bona fide* in search of work is extremely rare.”¹

(2) Men willing to undertake casual labour for a short time, but unwilling or unfit for continued work: the first to lose employment and the last to regain it as trade falls or rises. Drink, idleness, incapacity, and physical disability play their part; and for this class “once on the road, always on the road,” has come to be a proverb.¹

(3) The habitual vagrant and the mendicant.²

(4) Old and infirm persons “wandering to their own hurt,” crawling from ward to ward, entering the workhouse infirmary only when compelled to do so, living by begging and a constant trouble to police and Magistrate. For this class, the Committee thought that some power of compulsory removal to a suitable institution for care and treatment is needed.³

195. The number of female vagrants using the casual wards is comparatively small,⁴ and the proportion of vagrant children has been greatly exaggerated.⁵ The actual numbers, so far as these can be ascertained will be considered presently.

196. The majority of vagrants are men in the able-bodied period of life, and about 70 per cent. of the vagrants of both sexes relieved in casual wards on January 1st, 1905, were between thirty-five and sixty-five years of age; 23 per cent. were from sixteen to thirty-five, and 5 per cent. were over sixty-five.* In summer, the proportion of persons over sixty-five rises to 8 or 9 per cent., and there is some increase in the proportion of women and children during that season.⁶ Attempts have been made to ascertain the numbers of army reservists, discharged soldiers and militiamen resorting to the casual ward. On the night of May 8th, 1896, 24 per cent. of the men relieved represented themselves as of this class, but only about 5 per cent. were able to substantiate the claim. Another Return for December 20th, 1897, gave similar but rather lower proportions.⁷

197. The Royal Commission on the Care of the Feeble-minded do not find any excess of mentally defective persons among the vagrant class: indeed “the general opinion seemed to be that their wits had been sharpened by hardship and experience.”⁸ There may, however, be a “considerable population” of discharged mentally defective prisoners wandering to and from prisons, workhouses, casual wards and shelters,

* Of 5,579 casuallists relieved on January 1st, 1900, only forty-eight men and nineteen women were reported to be over seventy years of age.

¹ Report of Departmental Committee on Vagrancy [Cd. 2852] 1906, p. 24. ² *Ibid.*, pp. 25-6. ³ *Ibid.*, pp. 25, 106. ⁴ *Ibid.*, p. 111. ⁵ *Ibid.*, 113. ⁶ *Ibid.*, App. V. ⁷ Parliamentary Returns, No. 89 of 1897, and No. 332 of 1898. ⁸ Report of Royal Commission on the Care and Control of the Feeble-Minded [Cd. 4202], 1908, p. 132.

and to control these the Commission recommend “systematic notification, identification . . . and control, by which they could be detained and made to labour according to their ability.”¹

198. Vagrants as a class are not ill-fed, they are much better clad than formerly, and those who frequent the casual wards have reached a higher standard of cleanliness. But in other respects there is little change for the better. “The modern tramp as a rule lives an unsocial and wretched sort of existence. He has no object in life, and his very contentment with his miserable surroundings renders any improvement in his condition practically hopeless.”² It is indeed his low standard of comfort which has occasioned the treatment of the homeless man as a class apart from the ordinary indoor poor, and which stands in the way of any attempt to relax the rigour of that treatment.

199. It is in recognition of the evil arising from facilities for this low standard of miserable existence that the Committee recommend the provision of effective supervision and control over charitable shelters and free-food distributions. They adduce abundant evidence of the demoralising effect of these shelters, “the maintenance of which as at present conducted and the free distribution of food to all comers simply perpetuate the evil conditions and in no way remedy the disease—debaring the deserving and enabling the idle to continue in their aimless life.”³

200. They advise, that such shelters should be licensed and regulated by the local authority of the district;⁴ that the licences of these and of common lodging-houses generally should be subject to annual renewal; that the public distribution of free food should be under similar control; that the consent of the local authority should be required to the use of any building for the purpose; and that it should be open to the authority to withdraw their consent if at any time this should seem necessary in the interests of the community.⁵

201. The Committee recommend that “sleeping out” should be an offence whenever it takes place in buildings or on enclosed premises (*e.g.*, the staircases of tenement houses), or is a danger or nuisance to the public.

202. For sixty years past Returns have been obtained of the number of vagrants relieved in the casual wards of England and Wales on January 1st and July 1st in each year. In July, 1848, the number* was 13,714; in January, 1860, it had fallen to 1,542; in January, 1908, it was 17,083. The intervening period from 1860 to 1908 is occupied by waves of which the years 1869 (7,020), 1881 (6,215), 1889 (7,058), 1898 (13,563) mark the crests, while the troughs find their lowest points in 1875 (2,235), 1885 (4,866), 1891 (5,552), 1900 (9,841). The figures in brackets denote the count of each year.

203. About 1890 it was found that the *day* count of casuals did not give an accurate return of the actual numbers, vagrants breakfasting in one Union and supping in another being counted twice. Since that date a Return of those relieved on the *night* of January 1st or July 1st has also been published. The night count shows that the numbers have risen from 4,960 in 1891, to 10,436 — the highest record—on January 1st, 1908. Since 1904 weekly counts have also been made, and from these it would appear that the maximum numbers of vagrants relieved in casual wards may be in the autumn months—but possibly in association with the movements of hop-pickers, etc., and not wholly in consequence of an increase in the number of habitual vagrants resorting to the wards at that time. Both in 1904 and 1905 there was also a rise from January throughout the spring until June, followed by a rapid and remarkable fall of about 50 per cent. to the middle of July, and then a rise as rapid as the fall.⁶

* Incomplete, as not all Poor Law Authorities then made returns.

¹ *Ibid.*, p. 133.

² Report of Departmental Committee on Vagrancy [Cd. 2852], 1906, p. 26.

³ *Ibid.*, p. 96.

⁴ *Ibid.*, p. 98.

⁵ *Ibid.*, p. 88.

⁶ *Ibid.*, App. V. and VI.

204. In point of distribution through the country vagrancy is found to cling to the Metropolis and its neighbourhood, and to the manufacturing and coal or iron-mining districts; it follows also the track of the navy when any new works of importance are in progress.¹

205. The burden and annoyance of vagrancy and the spread of disease by tramps press hardly on the rural Unions through which the main tramp-routes pass.

206. The casual pauper* is but an incident of vagrancy; and vagrancy, at one time swelling, at another shrinking in volume, merges into a shifting and shiftless fringe of the population in such a way as to elude definition. Gypsies, hawkers and pedlars are often, but, as the Departmental Committee think, not properly, included in the term. And the same observation applies to hop-pickers and fruit-pickers, although these at certain seasons freely use the casual wards.²

207. One witness spoke favourably of the definitions of the German penal code as effective in the practical management of vagrancy:—

“Anyone may be punished by imprisonment (1) Who goes about as a vagrant; (2) who gives way to gambling, drink, or idleness, and thus reduces himself to a state in which he has to apply to the authorities for means for the maintenance of himself and of those dependent upon him; or (3) who receives public poor relief, but from unwillingness to labour refuses to do work which the authorities have provided and for which he has sufficient strength; or (4) who after the loss of his place, within a period fixed by the authorities has not found another situation, and cannot show that he has used all diligence to find it; or (5) who, although he can maintain those for whose support he is liable and in spite of being called upon by the authorities to do so, fails to fulfil his obligations, and is thereby reduced to apply to the authorities for means to maintain them.³

These definitions go beyond the description of a “vagrant” as “a person with no settled home and no visible means of subsistence.”⁴

208. Taking the latter definition, the Committee after a detailed consideration of the results of various censuses and of the estimates of competent authorities, concluded that the number “probably reaches at times of trade depression as high a total as 70,000, while in times of industrial activity (as in 1900) it might not exceed 30,000 or 40,000. Between these limits the number varies, affected by the conditions of trade, weather, and economic causes.” The “habitual vagrant” is unaffected by trade conditions further than that by each period of depression his ranks are permanently and increasingly recruited. No definite figures of this class are available, but the Committee were “inclined to think that the numbers would not exceed 20,000 to 30,000.” We fear that the later counts of casual pauperism indicate a serious and continued increase of habitual vagrancy.

209. A Return⁵ obtained from the Prison Commissioners showed that in February, 1905, more than one-fourth of the total prison population were, in the opinion of the authorities, persons of the vagrant class. The class, as a whole, is not addicted to the worst forms of crime, but minor offences are very common. “Cases of assaults by tramps on the highways frequently occur, and there is no doubt that in certain districts the tramp is a source of terror to women and children.”⁶

210. The conclusions of the Committee were that the present system neither repels nor reforms the vagrant; and that uniformity of administration, which is an indispensable condition of success, is impossible under the “600 independent authorities who are actuated by no common principle except the desire to get rid of the vagrant as cheaply as possible.”⁷

* The Act of 1871 defines a “casual” as “any destitute wayfarer or wanderer applying for or receiving relief.”

¹ Report Departmental Committee on Vagrancy [Cd. 2852] 1906, pp. 18, 25. ² *Ibid.*, [Cd. 2825] 1906, pp. 24 and 109, etc. ³ German Penal Code (Strafgesetzbuch), Sections 61 and 62. ⁴ Report of Departmental Committee on Vagrancy [Cd. 2825] 1906, p. 22. ⁵ *Ibid.*, App. VII. ⁶ *Ibid.*, p. 25. ⁷ *Ibid.*, pp. 32, etc.

211. Nor apparently could poor Unions, the workhouses of which happen to be on main roads much frequented by vagrants, be expected to willingly incur the heavy expenditure which proper control may entail in buildings and in staff.

"We are forced to the conclusion," say the Committee, "that an essential condition of any reform . . . is an extension of the area of chargeability and management, and the substitution for the guardians of some other authority who will administer the law on uniform lines, and be subject to central control."¹*

212. They accordingly recommend the substitution of the police authority as the body responsible for the control of vagrants, for their local relief, and for the management of casual wards.

213. Other suggestions had been made to the Committee, such as the combination of Unions within a County, or a system of co-operation between the police and the Poor Law with an Exchequer grant for efficiency, to be paid on the certificate of the chief constable. But on consideration these were rejected as presenting grave difficulties or being open to objection.

214. There is, they think, strong ground for making over to the police rather than to a relief authority the control of vagrancy.

215. The Committee show that only a small proportion of actual vagrancy at a given time is represented by the number of casual paupers. They remark that the care of the vagrant "may, in fact, be regarded rather as an excrescence on the Poor Law than as an integral part of the system";² and that from early times the regulation of houseless persons has, in England, been regarded as a duty of police. They recommend therefore that the tramp should be put under the police, "because it is mainly *qua* vagrant and not *qua* pauper that he has to be treated."³

216. The Committee point out that the work is akin to much that already is discharged by the police in their control of the community, such as the regulation of traffic, provision of assistance in street accidents, granting of pedlars' licences, impounding of stray cattle, and they observe that in thirty-six Counties the police already act as assistant relieving officers for vagrants, and that orders for admission to the casual wards are obtained from them.

217. To the objection that the proposal would take the police away from other duties the Committee reply that they do not contemplate that any great burden should be placed on the active members of the force; that in many cases the existing staff of the casual wards could continue their duties under the police; and that as vacancies occur it would probably be convenient to appoint retired constables.⁴

218. The possibilities of utilising existing casual wards and of arranging for supplies from the adjoining workhouse when the casual ward is not a separate establishment, were carefully gone into by the Committee; they concluded that such arrangements and the other details connected with the transfer and administration of the buildings were quite practicable, and they believed that in comparatively few cases would entirely new buildings be needed. They also considered that, in many cases, superfluous casual wards could be closed, and that the usual provision should be made for any permanent officer who might lose office under the scheme.

219. The Committee propose the adoption of the standing joint committee as the Local Authority in Counties, or the watch committee in police Boroughs. They consider that these bodies would by reason of their existing composition and functions be specially qualified to deal with the matter, and that there would thus be in each County a body specially interested in vagrancy as a whole.

* The Committee devote a chapter to a consideration of the lavish expenditure on modern casual wards which had come under their notice. They express "a strong opinion that means should be adopted to protect the ratepayer from any expenditure which is not really necessary for the object in view," pp. 86-7.

¹ Report of Departmental Committee on Vagrancy [Cd. 2852] 1906, p. 33.

³ *Ibid.*, Preston-Thomas, Q. 625.

⁴ *Ibid.*, p. 38.

² *Ibid.*, p. 35.

220. The Metropolis presented a difficulty because within the Metropolitan Police area* the Secretary of State is the statutory police authority, and there is no standing joint committee, the force being governed by the Commissioner appointed by the Crown.¹

221. Holding that their scheme is “essentially an affair of police,” and that in London the police side of the question is of special importance, the Committee after considering a number of alternatives, conclude that the control of the casual wards should be given to the Metropolitan Police within their area. But to meet the difficulty involved by the position of the Secretary of State as police authority, they propose that “the Metropolitan Police for the purpose of the management of the casual wards should be placed practically in the same position as the standing joint committees in the rest of the country, leaving the Secretary of State the same power of control as he exercises elsewhere”;² and that the City of London Police should manage the wards belonging to their own area.

222. The transfer of the casual wards from the Poor Law to the police implies a coincident assignment of central authority from the Local Government Board to the Home Office.³ The Committee recommend that the issue of the Secretary of State’s certificate of efficiency should be made conditional on satisfactory arrangements respecting vagrancy within the area of the police authority to which the certificate is granted. By this they hope that a powerful inducement to uniformity and efficiency would lie ready to hand.⁴

223. The Committee next address themselves to a consideration of the assistance which may properly be given to *bona fide* work-seekers. They propose that the police should be empowered to issue a way-ticket to a man who can satisfy them that he has recently worked at some employment (other than a casual job), and that he has reasonable expectation of work at a certain place or other good reason for desiring to go there. They further propose that the way-ticket should bear on it proofs of identity; that it should be limited to a certain period, say one month; that it should be so framed as to form a record of the man’s journey; that it should entitle the bearer, on application at the casual ward, to a night’s lodging, supper, and breakfast; and that after doing two hours’ work the man should be free to depart.⁵

224. It appears that the object of the small task is to maintain a spirit of independence in rendering something in return for the lodging, and partly also to check abuse. The Committee are of opinion that the way-ticket man should generally have somewhat better treatment than the ordinary vagrants and should be kept apart from them as far as possible.⁶ Details of dietary are given in the Report and arrangements for a mid-day meal *en route* are proposed, both for the ticket-holder and for the ordinary vagrant.⁷

225. The Committee express the hope that the sufficient provision made for *bona fide* wayfarers would tend to check the indiscriminate charity which is “the main support of vagrancy.”⁸

226. For the habitual vagrant the Committee contemplate the enforcement of a task and a detention of two nights at least in the casual wards. But they are strongly of opinion that the women and children should be received temporarily into the workhouse,† and not into the casual wards;⁹ and they were confirmed in their

* This includes the Counties of London (except the City) and Middlesex, and a number of parishes in Surrey, Kent, Essex and Herts, which are wholly or partly within fifteen miles of Charing Cross.

§ The scheme of the Committee generally resembles the system of Inter-Cantonal Union of Switzerland. The Union is a voluntary society, but the police are actively associated with the working of the system and some of the *Herbergen* (relief stations) are at police stations. (Report of Departmental Committee, Q. 8285.)

† Of 10,436 persons relieved in casual wards on the night of January 1st, 1908, only 986 were women, and 178 children. Of the children, nearly one-half on average are over seven years of age, and rather more than one-third are between two and seven years. (Report, App. v., and Returns of Pauperism, January 1st, 1908.)

opinion of the advantages of this arrangement by the evidence which they received as to unsatisfactory treatment of female casuals.

227. They are disposed to think that the question of female vagrancy is comparatively unimportant; and that with the removal of the men from the roads would follow the speedy disappearance of the tramping women and children.¹

228. The law as to vagrants rests on the Vagrancy Act (1824)² as amended and extended by subsequent enactments. Three classes of persons may be thus dealt with:—

- (1) Idle and disorderly.
- (2) Rogues and vagabonds
- (3) Incurrible rogues.

Under Class (1) are included:—

(a) "Every person being able wholly or in part to maintain himself or herself, or his or her family by work or by other means, and wilfully refusing or neglecting to do so by which refusal or neglect he or she (etc.) shall have become chargeable——"³

(b) Persons having been legally removed but returning and becoming chargeable.³

(c) Workhouse inmates refusing or neglecting to perform a prescribed task, or destroying their clothes, or damaging the property of the Guardians.⁴

(d) A similar provision for persons relieved out of the workhouse.⁵

(e) Persons applying for relief and not disclosing money or property in their possession.⁶

(f) Paupers: absconding from casual ward, workhouse or asylum during legal detention; refusing to do work or observe regulations while inmates of such institutions; wilfully giving false name or making false statement to obtain relief. (Certain officers of a workhouse or casual ward are empowered to take offenders before a Justice without summons or warrant, and upon conviction to convey them to gaol.)⁷

(g) Unlicensed pedlars, also mendicants and prostitutes under certain conditions.⁸

Under Class (2):—

(a) Paupers repeating any of the offences enumerated above (f), or any person on a second conviction as "idle and disorderly."⁹

(b) Men deserting their families, and so leaving them chargeable.¹⁰

(c) Mendicants exposing wounds or deformities; also persons gathering alms under false pretences.¹¹

(d) Certain offenders against decency or morality.¹²

(e) Fortune-tellers, persons gaming or betting in certain places, or concerned with lotteries.¹³

(f) Persons found in enclosed premises, etc., or frequenting certain places for an unlawful purpose, or in possession of house-breaking tools or armed with felonious intent.¹⁴

(g) Deserters from the Navy.¹⁵

(h) Immigrants or aliens guilty of an offence under the Aliens Act.¹⁶

(Idle and disorderly).

(Rogues and vagabonds).

Under Class (3):—

(a) Persons previously convicted as rogues and vagabonds.¹

(Incorrigible rogues).

(b) Escaping from legal confinement before expiration of a term of sentence under the Vagrancy Act.¹

229. It will be seen that the operation of the Vagrancy Act is by no means confined to the ordinary vagrant; it includes the pauper class generally and it extends to large sections of the criminal population, and it has been applied to quite miscellaneous offences.

230. The scale of punishments under the Vagrancy Act is as carefully graduated as the offences. "Idle and disorderly" persons on summary conviction before a single Justice may be imprisoned for not exceeding fourteen days with hard labour, or before a petty sessional court the term may be extended to one month. "Rogues and vagabonds" similarly may be imprisoned for not more than fourteen days on conviction before a Justice or for three months by Petty Sessions.

231. The foregoing may appeal to Quarter Sessions. The "incorrigible rogue" can only be finally dealt with by those Sessions; but any Justice or Petty Sessions may commit him to prison with hard labour to await Quarter Sessions, where he may be sentenced to further imprisonment for not more than one year with hard labour.² Male offenders may be whipped.³

232. The great majority of sentences under this Act are for fourteen days or less, and the Committee report that it is impossible from any practicable point of view to defend these short sentences, which neither deter nor reform.⁴

233. Some of the Committee's witnesses held that minimum sentences in the case of vagrants should be laid down by Statute, but it was felt by others that there would be considerable objection to taking away the discretionary power of the Magistrates. The Committee urge that, in any case where a Magistrate deems it expedient to give a sentence of less than fourteen days, the sentence should be for one day only, which means that on the rising of the Court the prisoner would be discharged.

234. But this nominal sentence would be a conviction and would be recorded, and the Committee suggest that, on a second or third conviction, the habitual vagrant should be dealt with by a long term of detention.

235. Hitherto the difficulty of identification has proved a great obstacle in dealing with this class of offender; but this, the Committee think, could now be overcome by a system of finger-print records.⁵

236. The Committee recommend that "means should be provided to allow of the habitual vagrant being dealt with otherwise than under the Vagrancy Act, and that as far as possible he should be treated not as a criminal, but as a person requiring detention on account of his mode of life." They suggest that the class should be defined by Statute and include any person who has on three or more occasions been convicted of such offences as begging, refusing to perform a task of work, or failing to maintain himself. The Committee also point out that under this head would come with much advantage many of the class of workhouse inmates known as "ins-and-outs."

237. The Committee consider that this prolonged detention should as far as possible be carried out in a "labour-colony," and that, although Government institutions will eventually be necessary for the more difficult cases, it would be best in the first instance to trust to the enterprise of voluntary associations or of individual philanthropy or of local authorities under strict supervision by the State, and assisted from the rates or the National Exchequer.⁶

238. The Committee commend the general lines of a Bill introduced by Sir John Gorst in 1904 and modelled on the Inebriates Act of 1898 which provided for the

¹ 5 Geo. IV., c. 83, Sec. 5.

⁵ *Ibid.*, p. 60.

⁶ *Ibid.*, p. 74, etc.

certification and regulation of such places of compulsory detention by the Secretary of State and for financial aid from the rates or from the Exchequer.

239. The Committee suggest that the period of detention should be from six months to three years and that there should be power to obtain discharge by good conduct and by small earnings. The Committee also attach great importance to the dietary as a means of encouraging or inducing the colonist to work. They found that, in some established labour colonies, the unearned allowance of food was lavish and costly, and that the system under which it was given instead of stimulating the man's energies tended to sap them.

240. They propose therefore that the allowance to each colonist should, with certain safeguards, be simply sufficient for subsistence, but it would be open to every man to supplement this by means of work and good conduct. Apart from the reception of women into a workhouse the Committee do not propose that their treatment should materially differ from that of men. Some provision should, they think, be made for female labour colonies, but it is not anticipated that many women would need to be so dealt with.

241. As regards children, the Committee recommend that, where the parent or guardian of a child is dealt with as a habitual vagrant, the Court should be empowered to send the child to an industrial school or to a place of safety, and that Section 14 of the Industrial Schools Act, 1866, should be so amended as to remove doubts of its application to vagrant children.

242. Under the Poor Law Act, 1899, Guardians are empowered to assume parental rights under specified conditions. This was commended to the Committee by an experienced witness as the most successful method of dealing with vagrant children.¹ The Committee endorsed its desirability inasmuch as it affords alternative ways of dealing with individual cases. But the law of settlement has, it appears, been an obstacle, as Guardians have hesitated to assume the cost of children not belonging to their Union. It had been suggested that the County should contribute, but the Committee were "not prepared to suggest that the charge should be thrown on the County in every case where the Guardians adopt a vagrant child."² Action may also be taken in the interest of vagrants' children under the Prevention of Cruelty to Children Act, 1904. The Committee found that much useful work has been done in co-operation with the Poor Law officials by the National Society for Prevention of Cruelty to Children under this Statute, but that difficulty has been found in practice because it is necessary to prove an overt act of cruelty, and because the Society are not able to assume control of a child unless they undertake the cost of maintenance.

243. The Committee also found that difficulties have arisen in regard to the provisions of the Elementary Education Acts applicable to children of this class, and that if these were acted on ample means would be available for assuming control of vagrant children who are not receiving proper education.³

244. Since the Report of the Departmental Committee upon Vagrancy has been published and its recommendations known, some objections have been raised to the proposal to entrust the regulation of the vagrant class to the police authorities. The proposal is one which has been made more than once since 1834 by experienced officials who have inquired into the matter, and one of the grounds upon which it is advocated is that the casual pauper is but an incident and a fragment of vagrancy. His exiguous relief, it is urged, is a small matter in the regulation of the multitude of which he is a part, and, as the purpose of the police is the preservation and enforcement of order, it has been commonly recognised from early times that the control of the vagrant is a part of the prevention of crime not less important than its detection.

245. It is further contended by the Committee that there would be no need for the withdrawal of the police from their other duties, for it was contemplated by those making the Report that an auxiliary organisation and the employment of superannuated constables should be authorised, as well as an extension of the arrangement by which certain Poor Law officials are at present invested with police powers in special circumstances. The Committee were further of opinion that there would not be any insuperable difficulty in arranging for a sufficient separation of buildings and of administration where the casual wards are contiguous to a workhouse.

¹ Report of Departmental Committee on Vagrancy [Cd. 2852] 1906, Q. 11010. ² *Ibid.*, p. 114.
³ *Ibid.*, p. 115.

246. To the objections raised against the proposal that the police should control the male tramps in the casual wards while the women and children are relieved in the workhouse, the Committee's reply would be that there may be distinct advantage in a separation which is in any case one of clear definition. The number of women and children to be found sleeping in the casual wards is small compared with the number seen upon the roads. The inference therefore is that the women and children sleep elsewhere, and this theory is confirmed by the counts which from time to time have been made of the vagrant population as a whole. These counts show a far larger proportion of women and children than is found in the Poor Law Returns.¹ It is therefore contended that the complete dissociation of the women and children from the casual ward will tend to further disperse the remnant of women and children who resort to them.

247. The main recommendations of the Vagrancy Committee involving police control are in fact co-ordinate parts of a scheme for the elimination of the undeserving vagrant. They are associated with a way-ticket which is intended as a passport and safeguard for the bona fide worker, and which derives its authoritative value from, and in its regulation depends upon, a police system. The powers which must necessarily underlie a compulsory detention are to be entrusted to the Department of State responsible for the enforcement of order and of the penal institutions of the State, as being the only authority capable of adequately carrying out such functions.

248. We did not ourselves give special attention to the subject of Vagrancy in view of the fact that it had been inquired into so recently by the Departmental Committee whose Report we have summarised in the preceding paragraphs.

249. We shall not, therefore, attempt to revise the Committee's conclusions, with which, indeed, many of us are in agreement. But on the other hand, we feel that some of our own proposals, such for instance as that for the enlargement of the Poor Law area and for the granting of passes to workmen by the Labour Exchange, will, if adopted, alter the situation as it existed at the date of the Departmental Committee's Report.

250. We therefore merely set out the recommendations arrived at by the Committee, and express the opinion that, in taking any action upon them, Your Majesty's Government should carefully consider the effect of our proposals for the re-organisation of the Poor Law system.

¹ Report of Departmental Committee on Vagrancy [Cd. 2852] 1906, pp. 20, 21.

Chapter 6.

STOCK-TAKING AND WORKHOUSE ACCOUNTS.

251. The question of workhouse accounts is one which should be dealt with in the reorganisation of Poor Law administration generally.

252. With the greater specialisation of institutional treatment the books and forms should be adapted to the particular type of institution. We desire the responsible heads of the institutions of the future to devote their time and energies to the more important questions of internal management, the individual care of inmates, etc. It will, therefore, be necessary in our opinion that the system of accounts should be reconsidered.

253. A Departmental Committee was appointed in May, 1901, to inquire into the question. The Committee made an exhaustive inquiry, and came to the conclusion that the system could be considerably simplified.¹ On any revision, the question of stock-taking should not be overlooked ; the present methods are open to serious objection. Except in a few cases in which a stocktaker has been appointed, the duty devolves upon the visiting committee of the workhouse or institution. Whilst the duty of stock-taking may in many cases have been carefully and punctually performed, we think that in future this duty should be performed by a paid stocktaker appointed by the Public Assistance Authority in each area.

254. The Orders which have been issued by the Local Government Board in the case of Willesden Board of Guardians and others, make it the duty of the stocktaker to compare the stores with the book entries of the quantities of stock in store at the date of taking stock and to certify accordingly ; on the other hand the Departmental Committee object to this, and consider that such a certificate could be given only by a person capable of examining all the books and vouchers, and they think that the stocktaker should be restricted to a statement of the stock found by him to be in store at the time.²

255. We believe that such a restriction might leave the way open to fraudulent practices.

256. Persons fully capable of undertaking the double duty of taking stock and checking the necessary books should not be difficult to find. We recommend their appointment, but the appointment should not take away the responsibility of the Public Assistance Authority for the proper oversight of all stores and the keeping of books.

257. We suggest that the keeping of accounts should be simplified as far as possible, and the number of books and forms reduced to a minimum consistent with sufficient safeguards to prevent or detect fraud and to prevent laxity of method.

Chapter 7.

PUBLIC ASSISTANCE AND INEBRIETY.

258. As the evidence has shown, the immediate cause of destitution in many cases is drink. When application for relief is made, a habit of drinking has often been already formed; and it is too late to do more than maintain the applicant, who can leave the workhouse with the usual notice and often returns the worse for a debauch. We have made recommendations elsewhere in regard to "Ins-and-Outs," amongst whom many of this character would be found; but we are not content to leave the question without some more precise suggestions. Where the cause of distress appears definitely to be drink, we think that the case should be specially investigated and noted and the applicant examined medically and otherwise, and proper action taken.

259. Little use can be made of the voluntary provisions of the Habitual Drunkards Act of 1879.¹ But the Inebriates Act of 1898 contains valuable provisions, which might, we think, be turned to account and extended. This Act provides that a person may be sentenced to be detained for a period not exceeding three years in a State inebriate reformatory or any certified inebriate reformatory, subject to the managers being willing to admit him, on his being convicted of an offence punishable by imprisonment or penal servitude, if the court is satisfied that the offence was committed under the influence of drink, or that drunkenness was a contributing cause of the offence, and the offender admits that he is, or is found by the jury to be, an habitual drunkard.²

260. In a Schedule to the Act is entered a list of offences, and any person who commits any of these offences, and who within the twelve months preceding the date of the commission of the offence has been convicted summarily at least three times of any such offence, and who is an habitual drunkard, is liable on conviction by indictment, or, if he consents to be dealt with summarily, on summary conviction, to be detained for a term not exceeding three years in any certified inebriate reformatory.

261. There are thus for these offenders two kinds of institutions—the State inebriate reformatories, for "troublesome, refractory and violent" inmates, and certified inebriate reformatories, which remain institutions of the more normal reformatory type. And besides the procedure by indictment there is the simple procedure available under the Summary Jurisdiction Acts. But apart from the policy and requirements of the Inebriates Act, cases of "criminal inebriety" are constantly brought before the magistrates. These are cases of attempted suicide, wounding, assault, malicious damage and other similar offences, brought before justices sitting in summary jurisdiction courts, which are dealt with by short terms of imprisonment or are handed over to friends. It is most probable that among these are many persons who subsequently become paupers, and are often for a long time maintained by the rates.

262. There is thus provision for the more extreme and less remediable cases of inebriety, but for other and presumably earlier and more remediable cases there is only as a rule the short sentence.

263. The weekly cost of an inmate in a certified reformatory may be taken at from 10s. to 12s.³ The weekly cost of an indoor pauper is about 10s.⁴ If the lower figure be taken, the difference of cost is not great between the inebriate and the pauper. On the other hand, we have the fact that the persons

¹ Report of the Royal Commission on the Feeble-minded [Cd. 4202], 1908, p. 133. ² *Ibid.*, pp. 133–4. Stone's Justices' Manual (1905), p. 257. ³ Report of the Inspector under the Inebriates Acts, 1879 to 1900, for the year 1907 [Cd. 4342], p. 8. ⁴ Thirty-sixth Annual Report Local Government Board [Cd. 3655], 1907, p. cxlviii.

whose drinking habits are least settled and unalterable receive short sentences and disappear, in no way bettered but left to drift into crime and pauperism. These two facts suggest: (1) that the evil might be dealt with at an earlier stage, if the law allowed it; and (2) that at that stage the cost of maintenance in suitable institutions would not be more expensive, or only slightly more expensive, than maintenance in a workhouse. But unless the ground for intervention at the earlier stage be strong and such as could fairly be dealt with in a court of law, it is hardly possible to base any administrative proposal upon it.

264. Socially, the ground for intervention—a ground which appears to us to be sufficient—is that the inebriate is reducing himself and his family to such straits that he will have to apply to the poor relief authorities for maintenance. There seems to be no reason why this should not be made an offence. Whether the cause of the intemperance be in part physical, or not, the result affects most seriously the community at large. Not only does the delinquent deprive his family of his services, but he weakens and degrades it, and he injures the community as well by imposing on it a large expenditure and by failing to fulfil his duty towards it. It may be asserted that the system of treatment is only partially curative. That may be so, and still it may be advantageous. Like other branches of medical social work it has to be carried out in a large measure experimentally and in the future there may be many alterations in the conditions of treatment. But to leave the problem unconsidered is the greater evil.

NOTE.—The above paragraphs were written before the publication of the Report of the Departmental Committee appointed to inquire into the operation of the law relating to inebriates and to their detention in reformatories and retreats.¹

The definition recommended by the Departmental Committee includes (see Recommendation II.) the class of cases to which we refer. It is as follows:—

“An inebriate is a person who habitually takes or uses any intoxicating thing or things, and while under the influence of such thing or things, or in consequence of the effects thereof is

- (a) Dangerous to himself or others; or
- (b) A cause of harm or serious annoyance to his family or others; or
- (c) Incapable of managing himself or his affairs, or of ordinary proper conduct.”²

¹ (Cd. 4438, 1908).

² *Ibid.*, p. 33.

Chapter 8.

COMPOUNDING FOR RATES.

265. Our attention has been directed by many witnesses to the system under which rates are now collected, a system which must be carefully considered in reviewing Poor Law administration. Speaking generally occupiers of rateable properties are alone liable for the payment of rates; but under the system popularly known as that of “compounding” the owner of small property may be rated instead of the occupier, either by agreement or by compulsory order of the local authority.¹

266. The law on this subject is, in regard to the rate for the relief of the poor, contained in Sections 3 and 4 of the Poor Rate Assessment and Collection Act, 1869, which are as follows:—

(iii.) In case the rateable value of any hereditament does not exceed twenty pounds, if the hereditament is situate in the Metropolis, or thirteen pounds if situate in any parish wholly or partly within the Borough of Liverpool, or ten pounds if situate in any parish wholly or partly within the City of Manchester or the Borough of Birmingham, or eight pounds if situate elsewhere, and the owner of such hereditament is willing to enter into an agreement in writing with the overseers to become liable to them for the poor rates assessed in respect of such hereditament for any term not being less than one year from the date of such agreement, and to pay the poor rates whether the hereditament is occupied or not, the overseers may, subject, nevertheless, to the control of the vestry, agree with the owner to receive the rates from him, and to allow to him a commission not exceeding 25 per cent. on the amount thereof.

(iv.) The vestry of any parish may, from time to time, order that the owners of all rateable hereditaments to which Section 3 of this Act extends, situate within such parish shall be rated to the poor rate in respect of such rateable hereditaments, instead of the occupiers, on all rates made after the date of such order and thereupon, and so long as, such order shall be in force the following enactments shall have effect:—

(1) The overseers shall rate the owners instead of the occupiers, and shall allow to them an abatement or deduction of 15 per centum from the amount of the rate.

(2) If the owner of one or more of such rateable hereditaments shall give notice to the overseers in writing that he is willing to be rated for any term not being less than one year, in respect of all such rateable hereditaments of which he is the owner, whether the same be occupied or not, the overseers shall rate such owner accordingly, and allow to him a further abatement or deduction not exceeding 15 per centum from the amount of the rate during the time he is, so rated.

(3) The vestry may by resolution rescind any such order after a day to be fixed by them, such day being not less than six months after the passing of such resolution, but the order shall continue in force with respect to all rates made before the date on which the resolution takes effect.

Provided that this clause shall not be applicable to any rateable hereditament in which a dwelling-house shall not be included.

267. Now this system of compounding has on many occasions been the subject of discussion. It was abolished by Parliament in 1867; it was re-established in 1869 because of the difficulties which the Local Authorities encountered when they attempted to collect the rates directly from small occupiers. We have not had access to any evidence other than that contained in the debates in Parliament which led to this significant fluctuation of opinion. We may, however, be permitted to observe that in administrative questions it is practically impossible even for Parliament to force on unwilling Local Authorities a system which they regard as administratively unworkable; but it should not be forgotten that forty years ago the machinery of local self-government was, comparatively speaking, undeveloped, and in some districts the working of this machinery was in the hands of a type of administrator very different from those who occupy similar positions to-day. Churchwardens and Overseers were the rating authority; they were appointed for the most part by the Easter Vestry; the rates are now made by the Overseers only, who are appointed by other bodies.

¹ Final Report Royal Commission on Local Taxation, Chapter XII.

But whatever changes have been introduced, the compounding system ever since has been and still is condemned on the ground that those who have the right to vote for the election or to become members of Boards of Guardians, entrusted with the raising and expenditure of money derived from the rates, should be directly rated and pay rates themselves. In this judgment many witnesses¹ representative of various shades of political opinion have concurred and have endorsed the opinion of the Royal Commission on Local Taxation who, although they pointed out the great practical difficulties of abolishing compounding held that it was most desirable that all classes of the community should, as far as possible, be made liable to personal payment of rates, in order that they might appreciate directly the effect of competent or incompetent, economical or extravagant, administration. The occupier of compounded property has, under the present system, no means of knowing what proportion of his rent is due to the demands of the rating authority. If the rate rises he may have his rent raised, but if it falls he does not necessarily obtain any reduction.² It is generally argued that the evil results of this system apply only to the poorest classes in the community; but as a matter of fact owing to the erection of what are popularly called "flats" occupiers paying an inclusive rent amounting in some cases to £400 or £500 a year have little cognizance during their tenancy of a rise or fall in the rates.³

268. There is, however, no reason to labour this aspect of the question. As far as the principle is concerned, few would be found to support the compounding system. It contravenes the whole theory on which the democratic form of government has been set up. On the other hand, it is urged that the practical difficulties of collecting and enforcing payment of rates from the large number of weekly tenants who, in urban areas, frequently move from one tenement to another, are insuperable. It should not, however, be forgotten, that as a rule these tenants move to a fresh tenement in the near neighbourhood, and that although the number of removals is large, in very many cases accommodation is found in the same rating area. The conclusion in regard to compounding at which the Royal Commission on Local Taxation arrived was based on the consideration of these difficulties; but the recommendation, it would appear, was founded on the evidence of officials directly concerned with the collection of rates.⁴ Now while we attach full weight to the conclusions of local administrators of great experience, we venture to suggest that public servants familiar with present methods of collection may be disposed to over-estimate the difficulties involved in any change of system. At the same time we have to report that official witnesses have pressed on us their opinion that any radical change in the method of collection would be a matter of very serious difficulty.⁵ The Local Taxation Commission recommended that compounding should be permitted where the rateable value of the hereditaments does not exceed £10 in localities other than London and Liverpool. The effect of this proposal would be to increase the number of hereditaments to which "compounding" might be applied in all places except London, Liverpool, Manchester and Birmingham.⁶

269. Assuming that in principle it is desirable to abolish compounding we proceed to consider whether any practicable scheme has been laid before us. We have evidence from the Metropolitan Rate Collectors' Association⁷ to the effect that the abolition of compounding would result in a considerable increase in the total rates collected, but that if direct application to the occupiers were the established system, loss from empties, increased cost of collection and irrecoverables would be greater than the allowance made for compounding. But seeing how large the compounding allowance is not only in London but in other parts of the country, we question whether this forecast would be borne out by experience. Another consideration must be weighed. Local Authorities when estimating their financial requirements and framing their budgets require to know the amount which the precept will produce, otherwise they will be driven to make "speculative precepts," in order to compensate for the losses entailed by direct collection. We are, however, of opinion that if the compounding system were gradually abolished this difficulty would prove much less than is anticipated. With a certain class of tenant in

our judgment no evil results would follow. This opinion is based, as we have said, on the recommendation of the Local Taxation Commission, and is supported by witnesses, such as Mr. F. B. Crouch,¹ the Secretary of the Peabody Donation Fund. Miss Constance Bartlett, and Mr. J. T. Baker, the senior rate collector for the Borough of Islington, who possess intimate knowledge of the financial difficulties of those inhabiting tenements of low rateable value. Mr. Crouch informed us that in one of the Metropolitan Boroughs an attempt was made by the Local Authority to reduce the compounding allowance. This proposal was resisted by a combination of property owners. The authorities decided to abolish the compounding system in certain selected districts; in consequence of this on two of the Peabody estates accommodating 366 tenants, rates have been paid direct by the occupiers to the collectors appointed by the rating authority for more than five years. These tenants earn but small incomes, and no special arrangement as to collection has been made by the rating authority, but we are informed the arrangement has been for the advantage of the Municipal Authorities, and the tenants have not suffered. In several properties in the Metropolis, as we are told by Miss Bartlett,² an interesting experiment has been made in order to prove whether it is possible to get rid of the compounding system. The tenements in question are separately rated, and the tenants have paid direct with satisfactory results. In other groups of houses the rates are collected weekly with the rents, the former rising and falling with the amount levied, special rent books being now published containing scales showing amounts payable under various assessments and various rates. The result has been what might have been expected. The tenants take an intelligent interest in local administration; they take advantage of their privilege as direct ratepayers, not only to grumble at the amounts required, but they are on the alert to get full value for their money as regards street cleansing and the like. They realise that if the administration becomes slack they are the sufferers. If rates rise they have to pay their share, and even a small increase has a disturbing influence on the family budget. If the rates, owing to the watchfulness and efficiency of their representatives and the officials diminish, they get a direct and immediate advantage. They realise what too many forget, viz., that no small proportion of the burden which results from increased municipal expenditure falls heavily on the class least able to bear it, and that when rates rise by reason of a progressive increase in loan charges spread over a period of years, no relief can be anticipated. In other words, the increase in rates is the result of increased loan charge. We should travel far beyond our terms of reference were we to attempt a description of the serious burden laid on the poorer class of the community by extravagant or inefficient administration. And as need hardly be stated, owing to the increase in rates, rents and the cost of all commodities rise. The tenants, as we have been informed, have to rest satisfied with less adequate accommodation than they would rightly desire, for they cannot afford to take an extra room if such be needed.

270. We must also allude to the evidence which has been submitted to us by Mr. J. T. Baker,³ the senior rate collector of the Metropolitan borough of Islington. The rateable value of this borough is £1,945,113; its population, 334,991; and its rateable value, therefore, amounts to £5·68 per head of population, thus showing that within its borders are contained a considerable amount of small property. The compounding system was abolished some years ago, and the change has resulted in a large saving to the ratepayers. Thus, according to a statement for the quarter ending Michaelmas, 1907, the loss on irrecoverables, etc., throughout the whole district amounted only to 8s. 4½d. per £100.*

271. Now, in principle we are of opinion that the compounding system should be abolished wherever practicable, and that, as far as possible, rates should be collected weekly, monthly or quarterly, as are rents. Collectors, either men or women, should be appointed at a small fixed salary, and a commission on collection. In this connection we desire to point out that in the last forty years a vast system of industrial insurance for funeral benefit and other purposes has spread over the whole country. Premiums are collected weekly in very small sums, which, in the aggregate, reach large amounts by collectors calling weekly on the occupiers of property of very low rateable value; and the system, from a commercial point of view, is eminently satisfactory. If, as a commercial undertaking, a weekly collection of small premiums is remunerative to the collectors, and provides the poorer classes with a method of insurance of which they approve, it can scarcely be affirmed that if a similar method were adopted in regard to the collection of rates, satisfactory results would not be obtained. There is little doubt

* It should perhaps be observed that, in consequence of an understanding between owner and occupier, the rates were paid in many cases by the former, but without commission or other allowance. The demand note, was, however, served on the occupier, and the arrangement in question did not affect his liability to the Borough Council.

¹ Vol. IX., App. xxxiii.; Bartlett, Vol. IX., App. xxiv.; Baer, Vol. IX., App. xxiii.

² Vol. IX.,

³ Vol. IX., App. xxiii.

App. xxiv.

but that the abolition of compounding gradually introduced would result in direct saving to the community as a whole, and to those who now pay weekly their rates with their rents. There would also result an increased interest in the administration of local affairs. But it would be impossible to carry into effect so radical a change, unless the rating authorities were so convinced of its desirability that they would resolutely enforce any changes in administration which the new method might involve. No doubt in certain districts the system would have to be introduced experimentally, but, as far as the local government of the Metropolis is concerned (and in a less degree this consideration applies to the country as a whole), a democratic system cannot be satisfactorily administered unless those who control policy are directly responsible for the expenditure involved.

272. A survey of the evidence upon this subject submitted to the Local Taxation Commission as well as to ourselves has convinced us of the desirability of the direct payment of rates by those who elect Local Authorities ; and although we are well aware of the difficulties which would prevent a sudden abolition of the compounding system, we are fully persuaded that it should be reduced to the lowest possible limit. This would involve more careful and detailed arrangements for the direct collection of rates ; but in the long run the community would benefit not only from less extravagant administration, but from a more active and intelligent interest in local self-government on the part of the electorate. If this policy were pursued, it might also be found desirable to modify the provisions of the Poor Rate Assessment and Collection Act of 1869, in the direction of reducing the limit of rateable value for compounding purposes.

Chapter 9.

CONSTRUCTIVE RELIEF IN THE CASE OF THE AFFLICTED.

273. There is, so far as we know, no express definition of a pauper. Generally Constructive it may be said, however, that a pauper is a person maintained wholly or in part by pauperism. any Union at the cost of the Poor Rate. But it may be pointed out that, in the case of relief given to a dependent, the Law regards as a pauper the husband or parent liable for the support of the dependant, although such husband or parent may not be maintained wholly or in part by any Union at the cost of the Poor Rate.

274. This enactment is contained in Sec. 56 of 4 & 5 Will. IV., c. 76, which runs :—

“All relief given to or on account of the wife, or to or on account of any child or children under the age of sixteen, not being blind or deaf and dumb, shall be considered as given to the husband of such wife or to the father of such child or children, as the case may be, and any relief given to or on account of any child or children under the age of sixteen of any widow shall be considered as given to such widow.”

275. It will be observed that exceptions are made to the rule of constructive Extension of relief in the case of the blind or deaf and dumb. We see no reason why the exceptions rule of should be limited to those classes, for there are other forms of affliction which cannot constructive be prevented. It was suggested to us by Mr. R. J. Curtis, Clerk to the Guardians pauperism. of the King's Norton Union, that “no electoral disability should attach to the father or mother of any person maintained out of the rates (either wholly or partially) in an asylum, or a registered institution for the care and control of epileptics and feeble-minded persons,”¹ and not only do we agree with this suggestion but we also think that the exceptions should be extended to include the following classes of the afflicted, viz., the mentally defective, epileptic, lame, deformed, and crippled, provided that the assistance rendered from public funds to or on account of the afflicted wife or child is occasioned by such infirmity.

¹ Vol. IV. App. cxxiii. 13 (d).

Chapter 10.

THE COMPILATION OF THE STATISTICS OF PUBLIC ASSISTANCE.

Necessity of adequate statistics.

276. A well-considered system of statistics is an essential of efficient administrative control. We need not dwell upon the importance of obtaining adequate statistical information on the multitude of questions which will confront the future Authorities. The effect, both as to numbers and cost, of the different forms of administration, the progress made from time to time in the country as a whole and in different districts, the nature of the distress calling for public assistance and the best methods of dealing with it, are questions, *inter alia*, upon which statistics can furnish most valuable information, and such statistics should be in the hands not only of the Local Authorities but also of the Central Department, of Parliament, and of the public generally.

277. The statistics of pauperism have been much improved in recent years, and a great deal more statistical information on the subject is now presented to Parliament than formerly. There is room, however, for development in the present scheme, and if effect be given to the far-reaching suggestions we make in regard to the administration of the Law it is obvious that modifications will be required in the statistical forms and methods employed.

Present system of collecting statistics.

278. In the compilation of the statistics of persons relieved it has always been the practice of the Central Department to call for tabulated Returns in a prescribed form from the Clerks to the Boards of Guardians. These Returns are made up from various sources, *e.g.*, the Indoor and Outdoor Relief Lists, and the Medical Relief Register, and there is reason to suppose that the Returns are not always made up upon generally uniform lines. Some development has recently taken place in the instructions issued to the Poor Law Authorities in regard to the method of compiling the Returns, but these instructions have in the past been too meagre and are still capable of considerable expansion if the Local Authorities continue to render their Returns in the condensed form now in use.

Proposed system of collecting statistics for half-yearly and annual returns.

279. It has been suggested elsewhere in this Report that case-papers should be brought into use throughout England and Wales. They are now used with great advantage in a large number of Unions, and, under the scheme of Authorities we propose, their adoption universally will be essential if the Public Assistance Authorities are to supervise effectively the work of the Public Assistance Committees. Moreover, with a carefully arranged system of case-papers the existing books might be simplified. If, then, case-papers are adopted we suggest that the form should be prescribed by the Local Government Board, though it should be permissible for the Public Assistance Authority to amplify the form in any way it thought fit, and that the case-paper should form the foundation of the statistical records of persons assisted. We have printed in Part XIX. of the Statistical Appendix a specimen case-paper which would contain the necessary data for the compilation of the future statistics.

280. It has been suggested that, this system of case-papers having been established, the original tabulation of the particulars of the persons assisted should be transferred from the Local Authorities to the Central Department. Under this system the Public Assistance Committee, under whose care the case-papers would be, would prepare copies of so much of the case-papers as would be required by the Local Government Board for statistical purposes. We print in Part XIX. of the Statistical Appendix a specimen form for the statistical Return which would be rendered to the Central Authority half-yearly. These Returns would be filled in from the case-papers, and would contain all the necessary details of each case. They would be transmitted through the Public Assistance Authorities to the Local Government Board, and the information they contained would there be tabulated in whatever form might be found necessary. The Local Government Board would, no doubt, require additional staff for the purpose, but it is suggested that the necessary expenditure would be justified by the greater accuracy and intelligence with which the Returns would be prepared. The persons assisted must be classified and cross-classified statistically, and such work, it is urged, can only be done efficiently by clerks trained for the purpose. It is also urged that it would be impossible for every

Public Assistance Committee, or even every Public Assistance Authority, to employ a special staff of this nature. The suggestion thus made would simplify considerably the work of the Public Assistance officials, who would thus be enabled to devote more time to their administrative duties, for the clerical work involved in making copies of the prescribed portions of the case-papers would require no more labour than is now involved in the present system of statistical Returns. And further, as the work could be performed without special training, it might, under supervision, become the duty of the junior clerks.

281. The Census of persons in receipt of relief on March 31st, 1906, which we obtained for the purposes of our inquiry, was carried out on these lines. Each Board of Guardians furnished a Return giving certain particulars of every person in receipt of relief, and the Returns were then tabulated by our staff. The novelty of the Return probably gave the Poor Law officials more trouble than would be involved in furnishing a Return the details of which were settled on permanent lines. But the examination of the Returns received by us clearly showed that there was a great lack of uniformity in the method of recording the details required for statistical purposes. It is not always possible to detect this divergence of practice in summarised Returns such as are now furnished to the Local Government Board half-yearly, and it is contended that uniformity would be greatly promoted by the adoption of the system of central tabulation. We may here refer to an omission in the half-yearly Returns which has recently been brought to light by the Local Government Board. Where indoor relief is given to a dependant, the head of the family should be treated as receiving constructive relief, but in the half-yearly Return for January 1st, 1908, it is stated that:—

“There is ground for the belief that these persons have not usually been included in the Returns, as the rules relating to the Outdoor Relief lists, under which the heads of families have been included in those lists, have not expressly required any similar record to be kept for cases of Indoor Relief. . . . The total number thus excluded is slightly over 5,000.”

With central tabulation such an omission as this would have been discovered at once.

282. Under the system thus outlined, the preparation of special Returns would often be effected with less delay and labour than at present. Any special Return now required must be obtained by the issue of a special Circular to the Local Authorities, whose officials must be detached from their ordinary duties to furnish the material, or must compile the Return during extra official hours. The system sometimes leads to friction between the Central and Local Authorities and demands for payment for the extra work performed are often made by the local officials. To a large extent these difficulties would be removed under the plan proposed. Again, it may sometimes occur that the results of a statistical Return suggest further lines of inquiry of great importance, which could hardly have been foreseen at the outset. Unless separate details of the persons relieved are in the possession of the Central Department the further prosecution of the inquiry can only be effected by the issue of a new Circular involving much labour to the Local Authorities.

283. This suggestion, would, however, we are informed, impose so heavy a burden upon the Central Authority that we pass it by and turn to another proposal. We would suggest that the Director of Public Assistance in each Public Assistance area of sufficient size should have a statistical officer whose duty it should be to prepare the Returns for transmission to the Local Government Board. This office might be combined with that of accountant. The Assistance Officer of each Public Assistance Committee would prepare a Return for the required dates, and these Returns would be sent to the Director of the Public Assistance Authority, who would summarise them and send the results, with all information and Returns required, to the Local Government Board.

284. The detailed counts should, we think, continue to be taken on the dates which have now been adopted for a long series of years. Arguments might be advanced for altering the date of the January count, for January 1st seldom marks the highest point of pauperism for the season, but we do not think that this is an adequate reason for breaking the continuity of the existing statistics. We suggest, however, that a new Return should be prepared at regular intervals on the lines of the Special Return obtained for us by the Local Government Board, showing the aggregate period and

Dates of
half-yearly
returns.
Proposed
return of periods
and occasions of
relief.

occasions of relief granted to each person during the year ended September 30th, 1907. Reference has been made to the results of this Return in Part II. of this Report, and we attach the greatest importance to the facts which have been elicited. They have thrown a new light on many questions coming within the terms of our reference and have confirmed our views regarding the great part which organised charity might successfully and profitably play in the assistance of "first cases." The principal details which should be obtained in this Return are the periods and recurrence of relief, but it is important to distinguish in the classification between Institutional Relief and Outdoor Relief, as well as between persons of various ages, in perhaps three or four groups. Experience would show whether anything more than this was desirable. Under a system of central tabulation the details might be recorded, and forwarded to the Local Government Board at such periods as might be prescribed in the form attached to the specimen of the "Statistical Return" printed in Part XIX. of the Statistical Appendix.

The unit of the
statistics of
pauperism.

285. In the compilation of all statistics it is of the first importance that the unit should be carefully defined. In the majority of cases no difficulty arises in regard to the unit, but the question of constructive relief has produced some uncertainty in the statistics of the past, for some of the Poor Law officials do not appear to have understood the system. We would suggest, therefore, that a person should be considered to be in receipt of public assistance when he or any dependant of his, subject to the exceptions we propose to the rule of constructive relief,* or, being a dependant, when he or the head of the family receives money, kind, or medical attention at the cost of public funds, notwithstanding that the whole or part of such cost may be repaid by the person assisted or by relatives or others, and that the Local Government Board should bring this rule to the notice of all the Local Authorities concerned.

286. Separate statistics should be obtained of the cases involving constructive pauperism both as to the persons actually relieved and the persons only constructively relieved, as well as of the exceptions to the rule, such exceptions being classified according to the various classes of the afflicted. The necessity for separate statistics of constructive pauperism will be apparent when it is pointed out that an able-bodied father of a child receiving no relief other than medical treatment is recorded in the statistics as an able-bodied man in receipt of outdoor relief, although he may be at work and in all other respects supporting a large family.

Classification by
physical
condition.
Constructive
Pauperism.

287. One of the most difficult questions in connection with the statistics of persons relieved is that of classification by physical condition. Under the present system the "able-bodied" are distinguished from those "not able-bodied," but no definition is given of these terms and the resulting statistics are acknowledged to be unreliable.

288. Reference is made in the Memorandum on the Census of Paupers printed in Part II. of the Statistical Appendix to the anomalies produced by the classification, and we need not here say more than that we think terms should be used to which some standard of capability can be applied. We suggest the terms "ordinarily able to work" and "not ordinarily able to work," and, if the definition of "able to work" be ability to perform (1) light, (2) moderate, or (3) hard work of a suitable character within an Institution, a practical standard might be established.

289. The term "able-bodied" involves medical questions, and its use has in a large number of unions, resulted in the classification following the medical officer's classification for dietary purposes. On the other hand, the term "able to work" is one which does not involve so much difficulty, and it is within the power of any experienced administrator to determine whether a person is able to perform the work by which he is accustomed to earn his living, or work to which unskilled hands in an Institution might be put.

290. The class "ordinarily able to work" should, however, be subdivided in order to distinguish those able to work on the date of the Return from those ordinarily able to work, but who are temporarily incapacitated on the date of the Return. There is an analogy for this distinction in the existing classification, and the separate statistics should, we think, be continued, as they will give the actual number of persons who are apparently in want of employment and for whom

* See Chapter 9.

the special Institutions for dealing with those able to work will be required. Finally, we suggest that under each class those on the Medical Relief Lists should be distinguished from those who are not on those lists. The distinction of those under medical treatment from other persons has hitherto only been applied to the able-bodied, but we see no reason why it should not be applied to all classes, thus giving statistics of some value from the medical standpoint, and in considering the causes of pauperism.

291. In connection with the classification thus suggested, we may draw attention to two points requiring consideration in the present system. The first has reference to the classification of wives of men in receipt of outdoor relief, who for a long series of years have been classed according to the physical condition of their husbands, though the Local Government Board has recently obtained the numbers of those who were themselves able-bodied. We think the latter course is preferable, and that, in the new statistics it should supersede the older method. The second point relates to the classification of persons in separate Infirmaries. There is some difficulty in correctly classifying such persons, owing to the form of the Relief Lists for those Institutions. In several of the separate Infirmaries the inmates have all been classed as not able-bodied, although many were only temporarily disabled. The classification we have suggested should, we think, be embodied in the Relief Lists for these Institutions when such of the patients as were not permanently disabled would fall into the class of those ordinarily able to work, but who are not able to work at the date of the Return, and are on the Medical Relief List. The correct classification would then be returned to the Local Government Board.

Classification of wives according to physical condition.

Classification of persons in separate infirmaries.

292. The classification according to physical condition would then be as follows:—

PROPOSED CLASSIFICATION ACCORDING TO PHYSICAL CONDITION, IN TABULAR FORM.

| — | Ordinarily able to work. | | | Not Ordinarily able to work. | |
|---------|----------------------------------|-------------------------|--|------------------------------|-------------------------|
| | Able to work at date of Return.* | | On Medical Relief List and not able to work at date of Return. | Not on Medical Relief List. | On Medical Relief List. |
| | Not on Medical Relief List. | On Medical Relief List. | | | |
| Males | | | | | |
| Females | | | | | |

* The *grade* of work should be recorded by filling in these columns with the letter H.M. or L. (for Hard : Moderate : or Light work) as the case might be.

293. It will be observed that the classification provides for those able to work on the date of the Return but who are on the medical relief list. There is some doubt as to the correct classification of such persons in the existing scheme, and not only would this difficulty be removed, but we should also obtain complete totals of those under medical treatment, and of those able to work at the moment.

294. Some difficulty arises in regard to the reckoning for the day counts, of persons in receipt of medical relief only. It is often doubtful whether a person who has received medical attention will again call upon the Medical Officer, who must consequently be in doubt whether the persons should be counted as in receipt of assistance on any given day. In Part II. the Statistical Appendix it is shown that a great many different systems are in force, and we think that, in order to secure uniformity in this respect, some guidance should be given to the Local Authorities. We suggest that the Local Government Board should lay down the rule that the persons counted should be those patients who were dealt with during the week preceding the date of the Return.

Statistics of medical relief only.

295. The medical statistics of persons in receipt of public assistance should, however, be further developed. Reference has been made to a special Return on the subject which we obtained in 1907 from certain unions, showing the numbers under

Further development of medical statistics

medical treatment by the Poor Law Officers on a certain day, and the nature of the diseases from which the persons were suffering, and we recommend that details similar to those obtained in that Return should in future be rendered yearly. The diseases specified in the Return of 1907 might be usefully extended. It would be essential to the preparation of such statistics that a system of medical case-papers for indoor cases (similar to that recommended by the Workhouse Accounts Committee), and a more comprehensive Medical Relief Register for outdoor cases should be inaugurated.

296. Two matters to which we would specially draw attention in connection with medical statistics are the desirability of obtaining statistics:—

- (1) Of the average stay of patients in the Infirmaries of the Local Authorities; and
- (2) Of all births and deaths in the Institutions of those Authorities.

Such statistics would be of great value from the administrative standpoint, and should, we think, be obtained without further delay. We need not indicate the details to be included in the Returns, the precise form of which should be considered by the Local Government Board.

Age statistics of persons relieved.

297. Another statistical question which appears to require attention is that of the ages of persons in receipt of relief. Age statistics have only been collected at irregular intervals in the past, and nearly all the Returns differ in form. Consequently, comparisons of the age statistics we obtained from the Census of 31st March, 1906, with others, could only be made with difficulty, and the utility of the statistics was thus limited. The value of all statistics is greatly enhanced when comparisons with former periods are available, and, in view of the great importance of age statistics for this large section of the population, we think that the ages of persons relieved should be regularly tabulated on uniform lines.

298. In considering the causes of pauperism, such information is invaluable. To what extent is pauperism a question of old age, of the displacement by younger persons of those who have passed the prime of life but are still able to work, or of inability to obtain work by young persons with health and vigour? In determining the causes the remedies are indicated. In proportion to the magnitude of the different classes so must attention be concentrated on the remedies with a view to their perfection. Administratively, the information is also of great importance. If district be compared with district in regard to the burden of pauperism or to the effect of administration, false conclusions will inevitably be drawn in the absence of information as to ages. For instance, uncorrected for age distribution the rate of pauperism in London is lower than in the rural groups of Unions, but the corrected rate for London is considerably in excess of the rates for all the other six groups in which we have arranged the extra-Metropolitan Unions.

Combination of age statistics with other statistical data.

299. Of secondary importance is the question of the combination of age statistics with other statistical facts. In the Census of Paupers of 31st March, 1906, ages were tabulated in conjunction with:—

- (1) Physical condition, etc.;
- (2) Method of Relief;

and these two classifications were also combined. From the results it was possible to say (1) how many persons of specified ages were able-bodied, etc. It was possible to show (2) the number of persons of specified ages in receipt of each form of relief. And it was possible to indicate (3) the number of the able-bodied, etc., in receipt of each form of relief.

300. Taking the first combination, viz., age with physical condition, the questions to which it furnishes answers are:—To what extent are those able to work made up of persons just past the prime of life who may have been displaced from their employment by younger men, and what tendency in this respect is observable over

a period? Of whom do the class of persons described as “not able-bodied” consist? Are they all old people, or are they to an appreciable extent persons of middle age or younger who are permanently incapacitated? Still more important perhaps are age statistics of sickness. The sickness returns obtained by the Commission have shown the great extent to which persons under fifty receive the benefits of the infirmary accommodation in London and other urban areas, and although administrators of the Poor Law were more or less conscious of that fact, it had hardly been proved statistically.

301. By means of the second combination, that of age with form of relief, many facts of importance may be ascertained. For instance, how far are persons of pension age in Poor Law Institutions? And in regard to children what proportion of those in workhouses are infants and what proportion are of school age? At what ages do indoor and outdoor children respectively drop out of the lists, and, presumably, go to work?

302. The third combination, that of physical condition with method of relief is not so important, but in obtaining the other two combinations this is obtained automatically. The physical condition of indoor and outdoor paupers respectively is, of course, obtained at the present time.

303. As the Institutions of the Public Assistance Authority would be very different from those of the present Poor Law Authorities we do not suggest a list for separate enumeration. The list at present in use (see the Memorandum on Census of Paupers in Part II. of the Statistical Appendix, or the Half-Yearly Returns) is perhaps more detailed than is necessary for the purposes of age statistics.

304. Apart from the combinations thus dealt with, age statistics are useful in connection with special classes, *e.g.*, widows with children, casuals, insane, mothers of illegitimate children, etc. etc. And age statistics would be useful in any further analysis of the persons relieved for very short periods, or on a great many different occasions.

305. If the present system of collecting the statistical material were continued it would be necessary to indicate upon the blank forms issued to the Public Assistance Authorities the particular combination of ages and other statistical data required. On the other hand, under a system of central tabulation, the question need not be settled until the commencement of the tabulation in the offices of the Local Government Board, and if at a later date it appeared that further details were desirable the information could be obtained without the issue of a new circular to the Public Assistance Authorities.

306. It will be observed that, under a system of central tabulation, provision could be made in the “Statistical Return” (See Part XIX. of the Statistical Appendix) for a record of the “usual occupations” of persons assisted. Questions will sometimes arise regarding the social position of those persons assisted who are able to work, and the records of occupations would thus be furnished to the Local Government Board, where they would be available if required. By the term “usual occupation” we wish to denote the calling which the person has habitually followed and not any chance occupation by which he may have gained a living just previous to the receipt of relief. Such chance occupations would not represent the term “industrial conditions.”

307. There appears to be a difference of practice in regard to the reckoning of children under sixteen years of age of persons in receipt of outdoor relief. In some Unions the children are struck off the lists and the allowance in respect of them is stopped at fourteen years of age with the object of inducing the parents to find work for them. In other Unions the children are not struck off the Lists until they have actually found work; and in others they are retained on the Lists until sixteen years of age whether at work or not. Bearing in mind the difficulty of determining the amount of the earnings which would constitute self-support in the case of a child living with his or her parents, we think it would be desirable that all children under sixteen years of age of parents in receipt of relief should

be counted whether the children are earning or not. Children adopted by the guardians should not be counted after they have reached the age of sixteen, unless they continue to be dependent.

308. We would also recommend:—

Other
recommenda-
tions.

(1) That the present classification by “families” or “cases” should be continued, and be supplementary to the classification of individuals according to their industrial ability and physical condition.

(2) That there should be a further classification of individuals under the heads of:—

(a) Indoor paupers; (b) Outdoor paupers, and (c) Boarded-out paupers; and that, subject to reconsideration when the scheme we recommend is put into force, the present classification by Institutions should be continued.

(3) That statistics should be obtained of the number of deserted wives and children.

(4) That for the purpose of the half-yearly Returns the numbers relieved at midnight on the date selected be recorded instead of those relieved on a given day. By this means persons who received both indoor and outdoor relief on the date of the return would no longer be counted twice over.

Cost of various
classes, and of
various methods
of relief.

309. In regard to the relation of finance to statistics we think it eminently desirable that periodical Returns should be obtained of the cost per head (in the case of annual expenditure) or per unit of accommodation (in the case of capital expenditure) of various classes of persons relieved and of the various methods of relief. Returns of this nature have been obtained from time to time, of which we may mention the Return included in Dr. Downes' evidence before the Commission relating to the cost of the Separate Infirmaries and Sick Asylums in the Metropolitan District;¹ the Return attached to Dr. Macnamara's Report on “Children under the Poor Law” showing the cost of Poor Law Schools and Cottage and Scattered Homes in the same district;² a Return showing the weekly cost of the maintenance of paupers in the various workhouses in the same district; and a Return as to the numbers of, and cost of, relief to aged paupers in Homes for Aged Poor in England and Wales.³ It is desirable that these Returns should be made up on uniform bases in order that comparisons may be made, so far as possible, between different institutions of the same class, and in order to compare the cost of each institution in different years. With a view to the establishment of this uniformity, not only for the purposes of the Returns suggested, but also for the purposes of the annual and half-yearly financial Returns, it would, we think, be desirable that the items of expenditure of Public Assistance Authorities should be classified and an Index prepared on the lines of the “Index of Classification” included in “The Uniform System of Hospital Accounts.” That uniformity in the accounts can be obtained without such an Index seems highly improbable.

Period of
Poor Law
accounts.

310. We would also recommend that the accounts of the Public Assistance Authorities should, in all cases, be made up to 31st March and 30th September.

311. With regard to the statistics of unemployment we do not wish to add to the remarks we have made in Part VI. of this Report.*

PART IX.

REVIEW OF EXISTING CONDITIONS AND PROPOSED CHANGES.

In this Part we propose to give a general review of the existing conditions of Poor Law administration, and to enumerate the chief recommendations we propose to make.

(1). LEADING DEFECTS OF THE POOR LAW SYSTEM.

1. The preceding pages of this Report, and the voluminous evidence we have collected, will have laid bare the main defects in our present system of Poor Law administration. They may be briefly summarised under the following heads:—

(i) The inadequacy of existing Poor Law areas to meet the growing needs of administration.

(ii) The excessive size of many Boards of Guardians.

(iii) The absence of any general interest in Poor Law work and Poor Law elections, due in great part to the fact that Poor Law work stands in no organic relation to the rest of local government.

(iv) The lack of intelligent uniformity in the application of principles and in general administration.

(v) The want of proper investigation and discrimination in dealing with applicants.

(vi) The tendency in many Boards of Guardians to give outdoor relief without plan or purpose.

(vii) The unsuitability of the general workhouse as a test or deterrent for the able-bodied; the aggregation in it of all classes without sufficient classification; and the absence of any system of friendly and restorative help.

(viii) The lack of co-operation between Poor Law and charity.

(ix) The tendency of candidates to make lavish promises of out-relief and of Guardians to favour their constituents in its distribution.

(x) General failure to attract capable social workers and leading citizens.

(xi) The general rise in expenditure, not always accompanied by an increase of efficiency in administration.

(xii) The want of sufficient control and continuity of policy on the part of the Central Authority.

2. These defects have produced, notably in urban districts, a want of confidence in the local administration of the Poor Law. They have also been mainly the cause of the introduction of other forms of relief from public funds which are unaccompanied by such conditions as are imperatively necessary as safeguards.

Any reform to be effective must be thorough. We will now state what portion of the old system we propose to sweep away, what to retain, and the conditions necessary in order to create for the future a trustworthy and elastic administrative system of Public Assistance.

(2). PUBLIC ASSISTANCE.

3. It has been impressed upon us in the course of our enquiry that the name "Poor Law" has gathered about it associations of harshness, and still more of hopelessness, which we fear might seriously obstruct the reforms which we desire to see initiated. We are aware that a mere change of name will not prevent the old associations from recurring, if it does not represent an essential change in the spirit of the work. But in our criticism and recommendations we hope to show the way to a system of help which will be better expressed by the title of Public Assistance than by that of Poor Law.

We therefore recommend that the new Local Authority shall be known as the Public Assistance Authority, and that the Committees which will carry on its work locally shall be known as the Public Assistance Committees. The name is not intended to disguise the fact that those who come within the scope of the operations of the new authority are receiving help at the public expense; but it is intended to emphasise the importance of making that help of real assistance. We hope also that the change may make it easier for those directly engaged in administering relief to build up new traditions, and to carry on their work with a higher aim before them.

(3). DESCRIPTION OF THOSE QUALIFIED FOR PUBLIC ASSISTANCE.

4. The principles dominating the spirit of the existing English Poor Law, so far as they determine the definition of those qualified for relief, seem to us both sound and humane. They contain a positive and a negative element; to relieve those who are qualified for public relief, and to discourage those who do not legitimately come within this category from becoming a public burden. The conditions under which relief is given ought to be prescribed, not by the applicant, but by the authority that relieves the applicant. We do not recommend any alteration of the law which would extend the qualification for relief to individuals not now entitled to it, or which would bring within the operation of assistance from public funds classes not now legally within its operation. The term "destitute" is now in use to describe those entitled to claim relief. Mr. Adrian, Legal Adviser to the Local Government Board, thus defined those who, in his judgment, come under the term "destitute":—

"Destitution, when used to describe the condition of a person as a subject for relief, implies that he is, for the time being, without material resources (i.) directly available and (ii.) appropriate for satisfying his physical needs—(a) whether actually existing or (b) likely to arise immediately. By physical needs in this definition are meant such needs as must be satisfied (i.) in order to maintain life or (ii.) in order to obviate, mitigate, or remove causes endangering life, or likely to endanger life or impair health or bodily fitness for self-support."

We prefer the term "necessitous," for we believe that it more accurately describes those who are at present held to be qualified for relief. We recommend, therefore, that the term "necessitous" take the place of "destitute."

Those, however, who are now qualified for relief by coming within the definition of destitution, fall into many classes, and the treatment of each class, and of each individual within that class, should be governed by the conditions surrounding the class or the individual. Help, prevention, cure, and instruction, should each find its place within the processes at the disposal of the new authorities. Too much importance cannot be attached to the organisation to which the selection of the appropriate treatment is to be entrusted.

(4). AREA OF THE PUBLIC ASSISTANCE AUTHORITY.*

5. As a preliminary to any scheme of public assistance it was necessary to form areas for administrative purposes. In doing so we have been guided by the experience of the past and by the needs of the present, and both, in our judgment, point to great changes.

We are fully conscious of the difficulties involved. In the matter of areas, public opinion is tenaciously conservative. The sentiment, based on associations and traditions, which unites those within an area and detaches them from those without it, is a force in local government which cannot be ignored. Consequently, it is wiser to take, if possible, areas well defined and familiar, and to attach to them new administrative functions, rather than to create a fresh area for each successive development.

The Royal Commissioners of 1832 found that the parish was almost universally the unit for Poor Law purposes. They were impressed with its inadequacy. They found in the great majority of cases no guarantee that a supply would be forthcoming of persons qualified for the difficult and delicate duties of administering relief. Even were such persons forthcoming, there was a complete lack of any healthy public opinion to support them. Continuity and uniformity, whether of policy or practice, were hardly to be hoped for; a proper classification was impossible.

* Cf. Part IV., Chapter 4.; also Part V., Chapter 2, pars 145 and 151.

True, this inadequacy of the parish had been realised by the statesmen of the eighteenth century, and they had fallen back on the magistracy to correct its shortcomings. In a sense, therefore, they endeavoured to make the county the area for administration, inasmuch as its government was vested in quarter sessions. The attempt proved a failure, partly because joint action on the part of magistrates was uncommon, at least in Poor Law matters, and individual magistrates were unequal to the strain put upon them; partly because the statesmen themselves had no real grasp of the problems involved.

The Commissioners in their Report recommended that a new area should be formed, half way between the parish and the county, viz., the union. It is now our duty to report that in our judgment, the union, as an area, is open to many of the same objections as attached to the parish at the date of the Report.

I.—We think that the number of areas is in itself a source of weakness in administration. There are 643 unions in England and Wales. They vary in size from Welwyn, with a population of 2,200, to West Ham, with a population of 580,000. Such variations are inconsistent with uniformity of administration. The difference again in the number of members of Boards of Guardians, as representing a varying number of parishes, is a disturbing factor. A reduction in the number of areas by their enlargement is essential to any reform.

II.—It was objected to the parish, as an area, that, in the great majority of cases, it was not large enough to guarantee a supply of persons qualified for the work of administration. The Royal Commissioners were sanguine that with a larger area this defect would be remedied, and experience has to some extent justified them. But the evidence we have received goes to show that often the policy of a Board of Guardians and its successful application have been due to the influence of an individual. Sometimes it has been a chairman, who set before himself a clear line of discrimination and decision and explained it so as to win the suffrages even of those who might on other grounds have been opposed to his views. Sometimes a similar deference has been paid to a clerk who, remaining in office while the *personnel* of the board was constantly changing, acquired authority and used it with good effect. Sometimes, again, a relieving officer who was devoted to his duty, and had experience of the people among whom he worked, was able, without presumption, to make acceptable suggestions in individual cases and in the general conduct of the business of relief. On such men as these and on the grouping of members round them in carrying out different branches of inspection and supervision, the goodness of the administration has depended. But of late years two important changes have taken place. First, the Act of 1894 has made it necessary for all those who are desirous of entering upon this form of public service to go through the "storm and stress" of public election. There is evidence to show that there is a growing reluctance to face this ordeal. And, second, the migration from the country districts is not confined to any one class, and it is increasingly difficult to find men who, by local associations or a sense of public duty, are qualified for the office of Guardian. With an enlarged area, the chances of securing men with the requisite insight and sympathy will be greater than now. Again, the scale of the work being larger and the work itself more important, it will be more attractive to capable men. We rely on these causes to bring about a rise in the standard of administration.

III.—The history of Poor Law administration since 1834 shows that the hopes of the Commissioners have not been realised. Boards of Guardians have wavered and vacillated in their application of principles. This failure to secure continuity has inflicted great hardship on the poor. Within certain limits the inhabitants of a union will adapt themselves to the policy of a board. But uncertainty as to that policy, and a doubt whether it will be consistently followed, year by year, or even week by week, is fatal to the formation of habits of foresight and thrift. We hope and believe that, with the larger area which we propose, this uncertainty will be very greatly reduced.

IV.—Another complaint against the present area is that it makes uniformity of treatment difficult to obtain. The complaint, indeed, is often made without regard to the special characteristics of poor relief. Of mechanical uniformity there is more than enough in Poor Law administration. The repetition of routine decisions, *e.g.*, the indiscriminate application of a scale of outdoor relief to case after case, without regard to individual differences, is the bane of administration. But true uniformity lies rather in the general acceptance of certain definite principles and their consistent application. Such principles are thorough enquiry, the consideration of each case in all its bearings with a view to ascertaining how it can best be treated, the granting of assistance at once appropriate and adequate, the securing of co-operation between all the various agencies of public assistance. We believe that one supervising authority acting over a large area will produce a uniformity of this kind.

V.—Again, we need but repeat in this connection what we have before urged, namely, that only with an enlarged area is it possible to secure that classification of institutions which is so necessary to-day. In the great majority of unions there is but one workhouse; and it is the practice of those unions to keep within that workhouse and its curtilage all those, with the exception of children, to whom institutional relief is given. They are kept there because there is no other available building or institution at the disposal of the Guardians. The Royal Commission of 1832, as has been stated more than once, attached great importance to classification; the old Poor Law unit, *i.e.*, the parish, was in their opinion too small and too poor for the purpose of classification; and one of the reasons for the extension of area which they advocated was the belief that it would facilitate classification. But the Commission also pointed out that, even in large workhouses, a proper classification was difficult and could be much better obtained in separate buildings than under one roof.* It may safely be asserted that the universal experience of the last eighty years endorses this opinion. A proper or thorough system of classification is very difficult, if not impossible in a workhouse through whose doors all classes of paupers pass. We advocate a change in this method of administration. Until the present areas are enlarged, no proper classification on uniform lines throughout the country can take place, but the substitution of a large area, within whose limits are several institutions, will at once place at the disposal of the new authority much of the necessary accommodation for carrying through and developing this most urgent reform.†

* Report of Poor Law Commission of Inquiry, 1834, pp. 306-7.

† The following table giving the available institutional accommodation respectively in London, in County Boroughs, and in Administrative Counties, as compared with the number of inmates receiving institutional relief, shows a very large surplus of accommodation over needs in the Administrative Counties, and a smaller surplus in the County Boroughs and London (*see* Statistical Appendix, Part IX.) —

| | Number of Unions. | Acreage. | Population (1901). | Number of Poor Law Institutions. | Accommodation | | Number of Inmates on 31st March, 1906. |
|-----------------------------|-------------------|------------|--------------------|----------------------------------|--|--|--|
| | | | | | According to Lists furnished by L.G.B. Inspectors. | According to Lists of Guardians and Paid Officers, 1908. | |
| London | 31 | 74,817 | 4,536,429 | 144 | 78,336 | 78,293 | 72,483 |
| | | | | <i>51</i> | <i>40,797</i> | <i>40,748</i> | <i>37,860</i> |
| County Boroughs | 85 | 2,323,664 | 12,725,306 | 174 | 102,476 | 100,964 | 87,062 |
| | | | | <i>102</i> | <i>84,809</i> | <i>83,135</i> | <i>72,919</i> |
| Administrative Counties ... | 528 | 34,928,998 | 15,266,108 | 565 | 119,135 | 143,378 | 79,454 |
| | | | | <i>529</i> | <i>114,953</i> | <i>138,951</i> | <i>76,012</i> |
| England and Wales ... | 644* | 37,327,479 | 32,527,843 | 883 | 299,947 | 322,635 | 238,949 |
| | | | | <i>682</i> | <i>240,559</i> | <i>262,834</i> | <i>186,791</i> |

The figures in italics denote the number of Workhouses, their accommodation, and number of inmates.

* The number of Unions in England and Wales was reduced to 643 in March, 1908

VI.—With an enlarged area we believe that it will be possible to improve the position and the prospects of the officials engaged in administration. Division of labour can be carried further, promotion can be made more common, the scale of salaries and pensions can be brought into accord with the scale of the work. We welcome the opportunity which this change will give for adequate recognition of a class of men whose services to the community have not always been valued, as our experience leads us to think that they deserve.

6. We have set out at some length our reasons for proposing an enlarged area, because we feel that, cogent as is each individual reason, the cumulative effect of the whole is irresistible.

We propose that in future the unit of administration shall be the County and the County Borough. In view of the strength of sentiment as regards areas, we have thought it better to adopt an existing area. We are well aware that objections may be made to it, but the fact that it is already recognised and familiar has had great weight with us.

7. The main objection urged against any enlargement of area, and the association under one authority of institutions distant from one another, is that some of the recipients of institutional relief may be so far away from their friends and relatives as to make visits to them difficult. We believe that any such inconvenience is greatly exaggerated. Communication has been so far facilitated and cheapened that the several parts of a county are now, for practical purposes, no more distant from one another than were the individual parishes of a union in 1834. Moreover, analysis of the inmates of a country workhouse shows that the greater proportion of the adults so relieved are infirm or old persons. We have recommended that the old shall in future be cared for in small homes, and these would be available in different parts of the county. For those needing special care, we think that the superior treatment offered in a county institution would far outweigh any inconvenience to relatives and friends. In pursuance of our proposals we would therefore lay down the following principles as governing the readjustment of areas:—

(a) That the area of the Public Assistance Authority shall be coterminous with the area of the county or county borough, and that no exception from this principle shall be permissible unless the Local Government Board is satisfied that such exception would, in each particular case, be in the best interests of administration.

(b) Any union area, which at present overlaps a county or county borough, shall be divided up so that each part of it will be attached for Public Assistance purposes to the county or county borough within the boundaries of which such part is at present situated.

(c) Any injustice or anomaly arising from this arrangement may be remedied subsequently by the ordinary procedure for altering county or county borough boundaries, supplemented, if necessary, by further powers to the Local Government Board.

(d) Financial adjustments necessitated by the partition of a union area shall be determined by agreement between the authorities concerned, and, failing agreement, by arbitration as under Section 62 of the Local Government Act, 1888.

8. It remains to determine the area of charge. The Royal Commissioners of 1832 found that under the 43rd Eliz. the area of charge was the parish. The changes which they proposed necessitated its enlargement, and by successive Acts of Parliament, the Union was gradually substituted for the parish. In view of the fresh changes which we suggest, we have been led to the conclusion that the area must be once more enlarged. If the classification of institutions which we propose is adopted, it will logically follow that the area of charge should coincide with the area of administration. It may well be that some new institutions will be required, and that some of the old can be dispensed with. But however that may be, it would

clearly be difficult or impossible for the new Authority to enforce a common standard of efficiency in the institutions in their area, unless the cost of maintaining such institutions was a charge common to the whole area. And with regard to out-relief, or, as we shall call it, home assistance, the same holds good. We anticipate that the Public Assistance Authority of the future will supervise the work of its Committees. If this supervision is to be thorough and effective, the Committees must be dependent upon the Authority for the necessary funds. We propose therefore that the cost of Public Assistance, so far as its incidence remains local, shall be borne by a County or County Borough rate.

(5). DIVISION OF EXISTING POOR LAW WORK.

9. The enlargement of the area will in itself be an administrative benefit in many ways; but it is only one item in the list of improvements we suggest in the existing machinery of the Poor Law. By increasing the size of each administrative unit, classification and specialised treatment, so far as institutional relief is concerned, will be facilitated. But a proper and discriminating classification can be successfully carried out only by a careful inquiry into the case of every applicant for relief, and this inquiry must be common to all applicants whether they receive ultimately outdoor or institutional relief or whether their claim is rejected. The treatment of all who apply should be individualised; that is to say, special inquiries should be made into the circumstances connected with the individual case; and the treatment should be governed by consistent principles. The construction of the machinery for this investigation requires close and careful consideration. The decisions arrived at upon individual cases, even although those who do this work may form but a fraction of the Board, initiate and govern the practice of the whole Board. This work is in one sense the most difficult and invidious that falls to the lot of the Guardians. A knowledge of the principles which should govern the distribution of public money,—kindliness, firmness, impartiality, an aptitude for discerning truth,—are required, and in addition the administrator should be familiar with the locality and with the needs and characteristics of its inhabitants.

10. Under a system of enlarged areas the work of Public Assistance would seem naturally to divide itself between:—

(1) A Local Authority for the central administration and control of Public Assistance within the enlarged area.

(2) Local committees for dealing with applications and for the investigation and supervision of cases and such other duties as may be delegated by the Local Authority.

Those who are best qualified to discharge the one service not infrequently have less aptitude for the other, and the two kinds of work are so different that both would be better done if thus distributed.

11. Devolution rather than division is the term which should be associated with the distribution of work which we propose. Where a public service affecting the whole community is placed under local supervision, it is generally found to be necessary, if good and uniform administration is to be secured, to combine unduly small areas until they attain a considerable and convenient size as an administrative unit. This has been done in connection with various services, and recently with education, but this process of enlargement, if it is to be really successful in combining effective supervision with a knowledge of local wants and peculiarities, should carry with it another change—the association of unpaid nominated persons of local experience and knowledge with the paid officials of the enlarged local authority. To these non-elected persons duties can be entrusted of investigation, inspection, and report, which should give the authority at headquarters of the enlarged area, the local information it requires, the trend of opinion in outlying districts, and an accurate measure of the wants and efficiency of the services locally rendered. As we have before shown, the principles dominating our system of poor relief, whether we regard the laws themselves or the orders and regulations issued in their explanation, are humane and sensible in their intention. The difficulty for centuries past of giving intelligent expression to this intention has been the want of an efficient and suitable local machinery. Instruments of high finish and fine temper are required, and under our present system

of popular election in small areas these are not easily found. Enlarged areas for relief purposes, if they are to confer real benefits in the shape of improved administration, carry with them as a necessary concomitant the recognition and utilisation of non-elected and nominated members for purely local and district work.

(6). BREAKING UP OF THE POOR LAW.*

12. There was a scheme brought to our notice known as the "Breaking up of the Poor Law." Its ideas appear to be the foundation of the alternative proposals recommended by certain of our colleagues who dissent from our Report. Under this scheme the whole existing machinery of Poor Law administration would disappear with the abolition of the Guardians, and the work previously performed by them would be broken up into sections and transferred to existing Committees of County and County Borough Councils.

13. Though we have had the scheme fully before us, we do not propose to criticise it in detail. It seems clear to us that the idea upon which it is founded is faulty and unworkable. The question at issue is, whether the work of maintaining those members of the community who have lost their economic independence can be safely entrusted to authorities whose primary duty is something quite distinct—such as that of Education or Sanitation—or whether it is essential that there should be an authority devoting itself entirely to the work. We consider that the many and subtle problems associated with Public Assistance, especially when it is a family rather than an individual that requires rehabilitation, cannot be solved by the simple process of sending off each unit to a separate authority for maintenance and treatment. What is needed is a disinterested authority, practised in looking at all sides of a question, and able to call in skilled assistance. The specialist is too apt to see only what interests him in the first instance and to disregard wider issues.

Moreover, the existing educational and sanitary authorities ought not, in our judgment, to be converted into agencies for the distribution of relief; and the less their functions are associated with the idea of relief, the better will they perform the public work for which they were specially called into existence. To thrust upon these Authorities, while their work is still incomplete, the far more difficult and delicate duties of dealing with families which have already broken down, would be to court failure in both directions—that of prevention and that of cure.

14. There are further difficulties which would inevitably arise from this multiplication of agencies authorised to grant public relief. Whilst a combination of incompatible duties is imposed upon the Education and the Health Committees by the scheme, its operation in another direction is to dislocate and separate work which cannot be effectively discharged unless it is combined and under the control of one authority or committee. The functions of granting relief, and of the recovery of the cost either from the recipients or those legally liable for them, should be in the hands of one body and not divided between two or more organisations with separate staffs, and methods of investigation. Such a separation must result in a multiplication of inquiries and visitations, causing annoyance and waste of time and money. The same criticism applies to domiciliary and institutional relief. Being the two recognised methods of Public Assistance they should be utilised together as one system under one supervision. Their disconnection by being placed under two tribunals must lead to administrative inefficiency and confusion. Whilst a multiplication of authorities and organisations for the discharge of local duties is to be deprecated as tending to delay and friction, care must be taken not to run to the other extreme by the abolition of organisations specially qualified for a certain class of work and the transfer of such work to existing bodies who are not specially qualified for its discharge.

(7). COMPARISON OF FOREIGN AND BRITISH METHODS OF ADMINISTRATION.

15. Before coming to any conclusion as to the form which the organisation of Public Assistance should take, we were careful to make inquiry into the experience of other countries. We invited evidence from those best qualified to give it, and some of our members visited the Continent and reported to us on the working of different systems. We are greatly indebted to both these sources of information.

* Cf. Part V., Chapter III., pars. 206-10

16. We found at the outset a sharp contrast between this country and others in the constitution of the bodies administering Public Assistance. Nowhere, save in our own country, is this duty placed in the hands of a body of men directly elected for the purpose. In most cases it is entrusted to a Committee appointed by the general administrative authority of the town, district, or place. It is thus regarded and treated as a branch of municipal government. Moreover, there is no special rate in aid of the poor, but grants are made for the purpose by the Municipal Authority on an annual estimate. By this means the relations between the department of Public Assistance and the other branches of the public service are made much closer than in this country. All form part of one great organisation, and all are maintained out of the same general fund.

17. Still more in contrast with our methods is the place and power of the official element. In many cases a paid and trained official presides over the local administrative body. In Paris, the Director is a member of a consultative committee of supervision. In Hamburg, he sits and votes on the Committee as Assessor to the President.

18. In the Colonies the work is mainly carried on by paid officials holding permanent office. These officials, both in Europe and in the Colonies, may be credited with expert knowledge upon the subject of relief. Many of them have been thoroughly trained and have risen to their position after having given proof of capacity. An expert knowledge may, therefore, be said in foreign systems to be at the head of local administration. In this country the reverse method largely prevails. The unpaid and elected element dominates the paid, or expert element. We do not in any way wish to decry the splendid service which has been, and is still being rendered to the public by the elected and unpaid members of local administration. When a man of ability, probity, and leisure can be found willing to give his continuous services gratuitously to the public to promote good government in his locality, his freedom from remuneration or official ties not infrequently gives him an authority and an influence in excess of that which any official could exercise. But a system of voluntary unpaid workers has its limits, and there are certain forms of work which are apt to strain the capacity of all but the ablest and most conscientious. The work of investigating and deciding upon the relative claims of applicants for public relief is of this character. The expert or official element ought in this class of work to have great weight. We would strongly recommend that, whenever an Assistance Committee sits and adjudicates upon claims, the official associated with that Committee should be in a position of greater authority and influence than the clerk or the relieving officer is now supposed to possess. What his authority and influence will be in any particular case must always depend in great measure on his personal qualities. We propose that definite guarantees of his efficiency shall be forthcoming, and that he shall be a man who by capacity and training is qualified to share and even to guide the deliberations of the body to which he is attached. We propose further to safeguard his independence by making him irremovable, save by or with the assent of the Central Authority, and to improve his position by throwing open to him a wider prospect of promotion.

19. There should be associated with each Public Assistance Committee, both in London and the provinces, an official of experience whose position towards such committee should, as regards decisions upon the claims of applicants for assistance, resemble that of an Inspector of the Poor in Scotland, whose duties, as defined by statute, are mentioned in the note below.* He should be designated the Superin-

* Section 55 of the Poor Law (Scotland) Act, 1845, which defines the duties of the Inspector of the Poor is as follows :—" The Inspector of the Poor in each parish or division of a parish for which he may be appointed, shall have the custody of, and be responsible for, all books, writings, accounts, and other documents whatsoever relating to the management or relief of the poor in such parish or division of a parish, and it shall be the duty of the said Inspector to inquire into and make himself acquainted with the particular circumstances of the case of each individual poor person receiving relief from the poor funds, and to keep a register of all such persons and of the sums paid to them, and of all persons who have applied for and been refused relief, and the grounds of refusal, and to visit and inspect personally at least twice in the year, or oftener if required by the [Parish Council] or [Local Government Board] at their places of residence, all the poor persons belonging to the parish or division of the parish in the receipt of parochial relief, provided that such poor persons be resident within five miles of any part of such parish or division of a parish, and to report to the [Parish Council] and to the [Local Government Board] upon all matters connected with the management of the poor, in conformity with the instructions which he may receive from the said Boards respectively, and to perform such other duties as the said Boards may direct, provided always, that in populous and extensive parishes or divisions of parishes the duties of inspecting and visiting the poor may be performed by assistant Inspectors or other competent persons, to be appointed and paid by the [Parish Council] for these duties, and for whose conduct and accuracy the Inspector of the Poor shall be responsible to the [Local Government Board]."

tendent of Public Assistance, and he would be responsible for all the Relieving Officers, or, as we propose to call them, Assistance Officers working within the area of the Committee. He should be a whole-time officer and the Assistance Officers referred to should stand to him in the position of assistants. He should attend all meetings of the Committee.

Similarly the Clerk to the new County or County Borough Authority, whom we propose to call the Director of Public Assistance, will have greater responsibilities than the average clerk to the Guardians of the present day. We have also made elsewhere* in our Report a number of important recommendations which should go far to maintain and increase the efficiency of Officers generally. There will thus be a Public Assistance Service of trained and competent officials to assist the new local authorities in their work.

Taking then the division of that work as above defined, we would designate the Local Authority entrusted with the central supervision and control in each new area as "the Public Assistance Authority" and the body discharging the local duties of hearing and deciding individual cases, as "the Public Assistance Committee."

(8). DUTIES AND POWERS OF THE PUBLIC ASSISTANCE AUTHORITY.

20. We now propose to define more carefully the duties each of the two bodies should be asked to undertake, their respective composition and the relative positions of the one to the other so far as finance, area, and authority are concerned.

We have separated the duties now performed by Boards of Guardians into two categories, and we propose to call into existence two bodies for the discharge of the two sets of functions, viz., Public Assistance Authorities and Public Assistance Committees. The powers and duties of the Public Assistance Authorities would, subject to the regulations and general control of the Local Government Board, be as follows:—

(a) To set up and supervise the Public Assistance Committees for investigating and deciding applications for Assistance, and for dealing with applicants in accordance with the regulations of the Local Government Board.

(b) To make rules and standing-orders for the guidance of the Public Assistance Committees.

(c) To dissolve any Public Assistance Committee subject to the assent of the Local Government Board.

(d) To organise, provide, and maintain the institutions necessary for the supply of sufficient and suitable Assistance within their area, or to combine with other Public Assistance Authorities for that purpose,† and to be responsible for all contracts and stocktaking.

(e) To provide for the cost of the administration of Public Assistance within their area, and, generally, to undertake financial responsibility for such administration.

(f) To appoint and allocate to the Public Assistance Committees such officers as are necessary for their work.

The expenditure which each Public Assistance Authority determines to be required for the administration of public assistance within its area, should, in the case of a County, be paid out of the County fund in the same way as the expenditure of a Standing Joint Committee is payable under Section 30 of the Local Government Act, 1888, and it should be the duty of the County Council to provide for such payment accordingly.

Similarly in the case of a County Borough, the expenditure should be made payable by the Town Council out of the Borough fund.

Any loan required would be raised by the Council of the County or County Borough as the case may be.

* Cf. Part IX., par. 69, and Part IV., Chapter 3.

† It is understood that the Local Government Board shall have power to compel two or more Public Assistance Authorities to combine in any case where sufficient and suitable relief cannot otherwise be provided.

(9). CONSTITUTION OF THE PUBLIC ASSISTANCE AUTHORITY.

21. We now approach the most difficult part of our proposed reconstruction, namely, the constitution of the Public Assistance Authority. The simplest method would be that of direct election by the existing County Council and Borough Council electorates. But direct election for Poor Law purposes, as our evidence over and over again shows, has brought in its wake, whether the elected body be the old Vestry or the more modern Board of Guardians, unmistakable evils which in our judgment ought not to be perpetuated. We cannot recommend this method of selection. Going to the other extreme, namely, that of direct appointment, it has been suggested to us that a local authority, composed of a limited number of Commissioners appointed by the county council and the Government in the ratio of three to one for a fixed period, would, for all purposes of administration, best discharge the duties we propose to assign to the Public Assistance Authority. We are not prepared to contest this assertion. A body so constituted, if composed of capable men would, being free from outside pressure, in all probability discharge the work of Public Assistance better than any elected body. But we hesitate to put this suggestion forward as an authoritative proposal. The difficulties of selection, and of fixing the tenure constitute together obstacles of a most serious character to the realisation of such an idea, and it is difficult to believe that local authorities would consent to power being given to a body of this kind to spend funds derived from local rates.

22. Rejecting these two proposals, there remains the creation of a Statutory Committee of the County Council and County Borough Council, to whom the existing work of the Guardians might be given. We are well acquainted with the objections to this proposal. It is alleged that the County Councils are overworked; that they have no aptitude or inclination for this kind of work; that all power would ultimately slip into the hands of the permanent officials in their employ. But if the alternative is a second elected body with power to rate the whole county, the finance and credit of the county would be prejudicially affected by this duplicated spending power. In proposing the creation of a Statutory Committee of the County Councils and County Borough Councils, it is very desirable that the change should not break continuity of administration, and we hope that Guardians of ability and experience will not be dissociated from future participation in the work with which they are already well acquainted. Accordingly we recommend that one half of the members of the new Statutory Committee shall consist of persons of experience in Public Assistance and cognate work.

23. As regards the constitution of the Public Assistance Authority then, we propose:—

(a) That the Public Assistance Authority shall be a Statutory Committee of the County or County Borough Council constituted as follows:—

(i) One-half of [the members to be appointed by the council of the County or County Borough, and the persons so appointed may be persons who are members of the council.

(ii) The other half of the members to be appointed by the council from outside their number, and to consist of persons experienced in the local administration of public assistance or other cognate work.

(iii) The actual number of members of the Public Assistance Authority, in each case and from time to time, to be determined by the Local Government Board, after consideration of a scheme submitted on the first occasion by the council of the County or County Borough, and on subsequent occasions by the Public Assistance Authority.

(iv) Women to be eligible for appointment under either head (i) or (ii).

(b) That one-third of the members of the Public Assistance Authority shall retire each year, but shall be eligible for reappointment if duly qualified. A member ceasing to be a member of County Council or County Borough Council shall *ipso facto* cease to be a member of the Public Assistance Authority, but shall be eligible for reappointment if otherwise qualified.

(10). AREA OF THE PUBLIC ASSISTANCE COMMITTEE.

24. The area of the Public Assistance Authority being determined, we now define within those limits the area of the Public Assistance Committee:—

(a) In the first instance the areas of the Public Assistance Committees shall be the union areas.

(b) Ultimately, the areas of the Public Assistance Committees shall be such as the Public Assistance Authority, with the consent of the Local Government Board, shall prescribe, and those areas shall as far as possible be coterminous with one or more rural or urban districts.

(c) Every union overlapping the boundaries of a County or County Borough shall be dealt with so that each part of such union entirely within a County or County Borough shall be either provisionally constituted a separate Public Assistance Committee area, or else provisionally attached to another Public Assistance Committee area within the County or County Borough in which such part is situated, and the Local Government Board shall issue Orders accordingly.

(11). DUTIES OF THE PUBLIC ASSISTANCE COMMITTEE.

25. The following will be the duties of the Public Assistance Committee, under rules laid down by the Public Assistance Authority:—

(a) To make careful inquiry into the circumstances and condition of all persons applying for Assistance within their area with a view to ascertaining the cause and nature of their distress.

(b) To review periodically the circumstances and condition of persons in receipt of Assistance.

(c) To investigate the means of persons liable for maintenance and to take the measures necessary for the recovery of the cost of the Assistance given.

(d) To sub-divide their area when desirable for the purposes of local Assistance, subject to the assent of the Public Assistance Authority.

(e) To determine in the case of each person applying for or receiving Public Assistance whether such person is by law entitled to such Assistance.

(f) To decide upon the best method of assisting applicants with a view to removing the cause of distress.

(g) To co-operate with the Voluntary Aid Committee* with a view to the assistance of cases of distress.

(h) To co-operate with other public and voluntary agencies.

(i) To inspect, supervise, and administer the Public Assistance Authority's institutions within their area and such other institutions as the Public Assistance Authority shall direct.

(j) To secure periodical visitation of all cases in receipt of Home Assistance.

(k) To make half yearly an estimate of their expenditure and requirements, and submit it to the Public Assistance Authority who shall from time to time remit such sum or sums as may be necessary.

(l) To control and supervise the officers assigned to them by the Public Assistance Authority.

(m) To furnish the Public Assistance Authority from time to time with such information concerning the proceedings and work of the Committee as the Authority may require.

(n) To discharge such other duties as the Public Assistance Authority may, from time to time, call upon them to undertake.

* See pars. 105-109 and Part VII.

(12). CONSTITUTION OF THE PUBLIC ASSISTANCE COMMITTEE.

26. For each area constituted as in paragraph 24, the Public Assistance Authority shall appoint a Public Assistance Committee, which shall include a certain proportion of persons nominated by the Urban and Rural District Councils, and, where a Voluntary Aid Committee* has been established, a certain proportion nominated by that Committee. The persons so nominated shall be experienced in the local administration of Public Assistance or other cognate work and shall include a proportion of women, in our judgment not ordinarily less than one-third. One-third of the members shall retire each year, but shall be eligible for re-appointment.

(13). POOR LAW AUTHORITY FOR LONDON.

27. Whilst the general principles we have laid down as to the future administration and distribution of relief work apply with equal force to London as to other parts of England, the area to be included in the London district and the administrative machinery to be established within that area require special attention. The case for the abolition of Boards of Guardians has been more conclusively demonstrated in London than in any other part of the kingdom. Quite independently of inquiries proving corruption and malversation in certain unions, we found that there was an almost universal opinion amongst those acquainted with Poor Law work in the Metropolis that the present system, based on popular election in a multiplicity of separate districts, does not, under the conditions surrounding it, produce the right class of Poor Law administrator, or secure generally economical and efficient administration. That there are many capable hard-working Guardians in London at this moment, and that there are unions in London well-worked and managed, is not disputed. But London unions, as separate and distinct organisations, have not been able to adapt themselves to the needs of the Metropolis, and the legislation of the last half-century for the improvement of poor relief in London is based on a recognition of this fact. The characteristic of almost every statute effecting changes in London has been in the direction of throwing fresh charges upon a common fund. The variations of rateable value, as compared with needs and population, make it very difficult to establish a common standard of treatment without an equalisation of expenditure. An examination into the policy, practice, scale of relief, and cost of institutions shows a wide divergence between the different unions and sometimes between unions immediately adjacent to one another. These differences exist whether the unions in contrast are rich or poor, in the south, the east, or the west. Neither locality, nor wealth, nor poverty seems to have been the main contributing cause of this variation of treatment and of policy. An inquiry into the amount of public interest shown in the elections or in the subsequent policy of the Guardians, gives little hope that outside pressure is likely to revive such interest, so long as the present system prevails. The first reform necessary in our judgment is the total abolition of the present Boards of Guardians, and the establishment of a unified London for all purposes of Public Assistance. The financial effect of such a change would be comparatively small, as under the present system by far the largest proportion of Poor Law expenditure is not a union charge. The charges upon the Common Poor Fund, the disbursements made by the County Council to the separate Boards of Guardians, and the expenses of the Metropolitan Asylums Board, in the aggregate, amount to about 70 per cent. of the whole Poor Law expenditure in London, and they are directly or indirectly levied upon the whole rateable area of London. The transfer of the remaining 30 per cent. to a common fund would, we believe, be economical to London as a whole.

28. There are, outside the boundaries of the London County Council area, a number of urban communities, such as West Ham, Edmonton, Hornsey, and Kilburn, rapidly growing in population, and with a very low valuation per head of the population. These areas are, practically, a continuation of London. The poor rate in some of them is high and will probably rise. Although these districts possibly might, for administrative purposes, be advantageously included in the London of the future, we cannot on the knowledge before us make this recommendation. The question involves many considerations relating to other local branches of expenditure and administration which are outside our purview. We therefore suggest that

Area of London
Poor Law
Authority.

* See Part VII. par. 237.

a series of local inquiries should be undertaken by the Local Government Board in these districts, to ascertain what are the opinions of the localities themselves as to incorporation with London.

29. The area for the new Public Assistance Authority which we would recommend would be that of the London County Council. The areas of the Public Assistance Committees would generally be the areas of existing unions, though in certain cases some re-adjustment would be necessary.

Constitution of
Public Assistance
Authority for
London.

30. The County of London with its central body in the shape of the London County Council, and with its borough councils within that area, some of which have control over populations exceeding 300,000 persons, presents a different problem from that of the ordinary county. The abolition of Boards of Guardians is necessitated by the impossibility of establishing a good general system of Public Assistance, so long as London is divided into sections,—each having an independent and separate authority of its own. There must be one central body for the control of the administration. If this reasoning be sound, it is equally effective against any proposal to put the Metropolitan Borough Councils in the place of the deposed Boards of Guardians.

31. This was the plan officially placed before us by the London County Council. The scheme, as well as the examination of those recommending it, will be found in Vol. IX., Qs. 97473 to 98066. They suggested a committee of the London County Council as a central administrative body, and the substitution of the Borough Councils for the Guardians, each borough council to discharge locally the work of their predecessors, subject to certain restrictions, and supervision by the London County Council as a central authority. These restrictions and supervision were not clearly defined. The division of charges between those falling on local rates and those met out of a fund common to the whole Metropolis were to be much the same as before, with this one exception. The responsibility for maintaining children, either those in institutions or those whose parents were in receipt of poor relief, was to be transferred to the Education Committee of the London County Council, and the cost was to be defrayed as an item of expenditure separate from that relating to education. We fail, however, to understand how, or by what machinery, this was to be done, unless the relief of the child was to be dissociated from the relief given to the parent.

32. From an administrative point of view, this scheme has little, if any, advantage over the system now in force. It might be summed up as a practical continuance of the present plan of separate and independent Poor Law administration in London, Borough Councils being substituted for Boards of Guardians, accompanied by a transfer to the London County Council of some of the powers of supervision now exercised by the Local Government Board. It gives little hope of better classification or of improved or uniform general treatment; the control proposed to be given to the London County Council over the Borough Councils would not, in our opinion, be administratively effective.

33. We are not inclined to favour this scheme, as it does not seem to conform with the main principles we had laid down as the foundation of a reformed administration.

There remain, then, the following alternatives viz.:—

First.—Direct election.

Second.—Nominated Commissioners.

Third.—A transformed Metropolitan Asylums Board.

Fourth.—A Statutory Committee of the London County Council.

Direct election.

34. We have already given our opinion upon the evils resulting from a direct system of election for Poor Law purposes, and we are not disposed to perpetuate a system by which Poor Law administration in London would be disturbed by the oscillatory results of triennial political contests concentrated upon the one subject of eleemosynary relief.

35. Some of us are of opinion that, looking to the enormous size of London, to the constant shifting of its population, and to the lack of cohesion between, and the different character and wants of, individual districts, the nomination of Commissioners as a central and controlling authority would be the best form of administration for it; such a body to be small in numbers, partly appointed by the London County Council and the Local Government Board, and assisted by local committees. We think that such a scheme would well suit the case of London and would give the best results both as regards efficiency and economy. It would, however, be an innovation certain to be strongly opposed and it may be that the political difficulties attendant upon it would be more than any Government would care to encounter.

Nominated
Commissioners.

36. The Metropolitan Asylums Board, whose duties and composition have been described in evidence, have efficiently discharged as a central body for London the task entrusted to them. The Board, as was shown by the statements and examination of Mr. Helby, the Chairman, and Mr. Duncombe Mann, the clerk, believe in their ability to undertake other duties. In fact, Mr. Helby was confident that they could discharge as the central controlling and supervising body, in addition to their existing work, all the duties now performed by the Guardians.

A Public Assistance Authority for London on the lines of the Metropolitan Asylums Board.

We have, in a previous portion of our recommendations, expressed a strong opinion that the work now performed by the Guardians, especially if areas of administration be enlarged, should be divided into two branches:—

Firstly.—That of administration and control to be discharged by a central body.

Secondly.—That of dealing with individual cases to be discharged by local bodies.

37. The division of labour would hold good whatever the character and composition of the Public Assistance Authority for London. Assuming, then, that satisfactory Public Assistance Committees can be established, each in an area corresponding to an existing union, it remains to consider whether the constitution of the Authority should follow the lines of the Metropolitan Asylums Board. It would then be in part representative, in part nominated, and independent of the political issues of the day. It would in many respects resemble the Conseil de Surveillance in Paris.

Two methods have been suggested for supplying the representative element, viz. :—

1. Direct election in each borough.
2. Direct selection or nomination by each borough council.

It is not suggested that the whole of the Public Assistance Authority should be elected by the ratepayers in the various boroughs, but that a part only—say, two-fifths—should be so elected. By this means the Authority would be kept in touch with the several districts, each of which would contribute a representative.

38. Though some of our colleagues favour the first of the two methods suggested above, the evils of direct election for Poor Law purposes seem to the majority of us too patent to permit of their continuance in London. If the representative area of the future is to be the Metropolitan borough, its magnitude, and the fact that there are within each borough political organisations actively employed in promoting the candidature of their nominees for Parliament, county councils, and municipal work, would inevitably draw the administration of relief into the vortex of local politics. A direct election for Poor Law purposes has this danger; if the poll be small, it is in the power of a small fraction of the electorate to reverse the whole existing policy of relief; if the poll be large, then the question of how relief was, or was not, to be locally dispensed would be a burning question in the locality, with corresponding discontent and unsettlement. The Public Assistance Committee in the locality where the election took place might, under the instructions of the Public Assistance Authority, be conducting investigations and granting relief on principles which a majority of those polling in the district condemned, and friction would at once arise.

39. There remains the selection and nomination by the borough councils, and, assuming that it was considered that these bodies generally were, in *personnel* and standing greatly superior to the Boards of Guardians, they might be entrusted with the selection of nominees to the Public Assistance Authority. But we have no reason to believe that direct nomination by the Borough Councils of representatives to serve upon the Public Assistance Authority would result in securing the services of those best qualified for the work.

A Statutory Committee of the London County Council as the Public Assistance Authority for London.

40. The main objections to the fourth suggestion are two. The London County Council is already heavily worked, and would with difficulty, therefore, it is said, find the *personnel* for yet another committee, whose work would be responsible and exacting. Again, the county councillors are, to a greater extent than in the country, mainly elected on political grounds, and the echoes of the platform are not unfrequently heard in the council chamber. These drawbacks must be admitted, even though the first of them may be minimised by providing that the new committee shall consist, to a great extent, of persons who are not members of the council. On the other hand, if there be an advantage in including the relief of the poor within the purview of a municipal authority—and this assumption has prompted our proposed reconstitution of the Public Assistance Authority throughout England—it does not seem reasonable to exclude London from participating in this advantage. Nowhere are problems of poverty, under-employment, and public assistance more acute and more difficult, and nowhere do they require a more sympathetic and firm handling than in London.

41. After a full consideration of the advantages and disadvantages of the various schemes we have considered in connection with the establishment of a Public Assistance Authority for London, we recommend a Statutory Committee of the London County Council with statutory duties as being most in harmony with modern developments of local government.

42. In fact, we apply to London the scheme drawn up for Counties and County Boroughs with the following modifications:—

(a) One-half of the members of the Statutory Committee to be nominated by the London County Council either from their own number or from outside;

(b) One-quarter of the members of the Statutory Committee to be appointed by the London County Council from outside their own number and to consist of persons of skill and experience in the administration of Public Assistance or other cognate work;

(c) One-quarter of the members of the Statutory Committee to be nominated by the Local Government Board so as to secure representation on the Committee of such interests as the medical and legal professions, employers and working men, hospital administration, charitable organisations, etc.

(d) We propose that a scheme on these lines should be drawn up by the London County Council and submitted to the Local Government Board for approval. The scheme should secure a considerable number (such as fifty or sixty) of members on the Committee and the inclusion of a certain proportion of women.

43. The Statutory Committee of the London County Council thus constituted we would call the Public Assistance Authority for London, and to it we would transfer the Poor Law work of the Metropolis.

Constitution of Public Assistance Committees.

44. As in the country, so in London, we propose that the work of hearing and deciding applications for Assistance shall devolve on local Public Assistance Committees to be constituted in London as follows:—

(a) Each Public Assistance Committee shall be appointed by the Public Assistance Authority, care being taken that, amongst those so appointed, there shall be included a certain proportion of persons nominated by the Metropolitan Borough councils, and, where a Voluntary Aid Committee* has been established in a district, a certain proportion nominated by that Committee. The persons so nominated shall be experienced in the local administration of Public Assistance or other cognate work and shall include a certain proportion of women, which proportion in our judgment should not ordinarily be less than one-third.

* See pars. 105-9 and Part VII.

(b) One-third of the members shall retire each year, but shall be eligible for re-appointment.

(c) The number of members on the Public Assistance Committees should be largely regulated by the area and population of the districts in which they will act, and should be fixed by schemes submitted by the Public Assistance Authority to the Local Government Board for approval. As a large area will require a considerable body of members, such schemes should provide, if necessary, for sub-divisions of the Committee, it being understood that each sub-committee will act in a smaller area as a section of the Committee.

45. We also propose that Poor Law expenditure in London be a uniform charge Poor Rate for London. over the whole area according to rateable value.

(14). THE CENTRAL AUTHORITY.*

46. Having laid down the area, constitution, and functions of the future local authority to be established for the purpose of public assistance, we will now consider what should be the *status* and powers of the Central Authority, and its relations to, and control over the local authority.

47. We have given a full account in a preceding chapter* of the origin and growth of the Local Government Board so far as Poor Law control was concerned. We have shown that out of the Poor Law Commissioners appointed in 1834 grew the Poor Law Board with its Parliamentary representatives, and how that Board was merged later in the Local Government Board. This Board has now to perform many duties relating to the local administration of the country in addition to those connected with Poor Law. To a large extent it discharges the duties of a Ministry of the Interior. Its *status* does not seem to us to be adequate, considering the importance, authority, and character of the multifarious work it discharges. We are in full accord with the proposal to raise the salary and *status* of the head of the Department to that of a Secretary of State.

48. Although our reference brought us into contact chiefly with the Poor Law side of the Local Government Board, yet this was sufficient to convince us that the Department is greatly over-worked. The enormous mass of administrative questions brought within its cognisance, upon subjects which do not brook of delay, gives to the higher officials insufficient time for the study of new and perplexing problems as they arise and come up before them. The volume and importance of such questions are on the increase. We feel it, therefore, of great importance that the staff of the Office should be adequately increased so as to relieve the Permanent Secretary and the higher officials of the undue strain which the present conditions often impose upon them. These considerations are of special weight at a time when it is proposed to re-organise the whole service of Public Assistance.

49. There are five "Divisions" of work in the Local Government Board, of which Poor Law is one; and this is again divided into two branches—the Poor Law Administration Department and the Poor Law Officers' Department. There are incidental and general questions connected with the Poor Law, such as questions of law, the issue of orders and statistics, questions of audit and accounts which are referred to and dealt with by the Order and Audit Departments of the Board. The aggregate powers and control exercised by this combination of departments over the local Poor Law administration and expenditure have already been fully explained. But we think it would be an advantage if the public generally could recognise that there is a separate "Division" of the Local Government Board, devoting its whole attention to Poor Law work. To this end we recommend that greater prominence should be given to the fact that there is a separate Division of the Local Government Board, under a separate Assistant Secretary, which will deal with the work of Public Assistance. We also recommend that in future the annual Report of the Public Assistance Division should be printed and presented to Parliament in a volume separate from the rest of the Report of the Local Government Board.

50. We recommend that there should be closer co-operation between the Public Assistance Division, and the Statistical and Audit Divisions of the Local Government Board. Similarly, the Public Assistance Division of the Local Government

* Cf. Part IV., Chapter 1.

Board should be in close touch with other Government offices in work in which they are commonly interested. One other large department which fulfils similar duties is the Home Office: and we think that there should be the closest co-operation between the Home Office and the Local Government Board. In the hands of the Local Government Board and the Public Assistance Authorities of the future will be the management of Public Assistance. In the hands of the Home Office is the provision made for persons who have been convicted and are placed in detention. These cases and the cases of persons who, amongst others, should be detained as inebriates, "ins-and-outs," or vagrants can be rightly treated only by measures which fall within the province of the Home Office, and we recommend that they should all be placed under the control of that office.* It is only by the recognition of this division of labour and by its observance by the Local Authorities and the Central Government Departments that the task of either can be properly accomplished.

51. The eyes and ears of the Local Government Board are the General Inspectors and, in Part IV., Chapter 1 of our Report, we have made a number of recommendations in regard to them. Appointments should in the future be given only to those who have special qualifications, and these qualifications should, as a general rule, be tested by service for a probationary period as an Assistant Inspector.

The number of Assistant Inspectors should be increased. This would relieve the Inspectors of their routine and less important duties, and enable them to strengthen their grasp of the administration of Public Assistance in their districts. We have already described the existing duties of Inspectors. We think that, for the future, these duties should be extended, and that the Inspectors should be authorised to attend, not only the meetings of the Public Assistance Authority, but also those of the Public Assistance Committees and sub-committees, as well as to visit institutions. They should be ready to advise the Public Assistance Committee in regard to the general principles and methods of Public Assistance; they should, in conjunction with the Assistance Officers† and otherwise, visit individual cases, so as to ascertain whether the Assistance is given under suitable conditions.

Upon appointment, Inspectors should receive written or printed instructions as to their duties, and such instructions should be periodically revised. Conferences should take place between the Inspectors, at least annually, to enable them to exchange views and experiences, and thus to carry out methodically the policy of the Department.

52. With regard to the Auditors of the Local Government Board, we recommend that appointments should be made from the ranks of Assistant Auditors; that qualifications for Assistant Auditors should be defined and tested by examination; and that there should be an increase of the auditing staff.

53. We consider that the increase in the number and efficiency of the inspectors and auditors which we propose is no more than is essential for the normal control and supervision of the administration of Public Assistance. But, in addition, we recommend that adequate funds should be placed at the disposal of the Local Government Board, to enable it from time to time to undertake inquiries, or to obtain expert assistance, upon particular subjects. The Central Authority responsible for the administration of Public Assistance should be abreast of expert knowledge, both at home and abroad, in regard to the constantly changing problems with which it has to deal.

54. We will now consider the relations of the Central Authority to the new Local Authorities. We see every reason to anticipate that, under the new *régime*, it will be possible for the Local Government Board to keep more closely in touch with the Public Assistance Authorities than it has been in the past with the Guardians.

Under the existing law, while the poor relief administration is in the hands of 643 different Boards of Guardians, meeting as a rule weekly or fortnightly, it is obviously out of the question for the Local Government Board to follow very closely the various methods and proceedings of each and all of them. The Board is not responsible for the due and effectual relief of the poor in the direct sense that the law has made the Irish Local Government Board responsible. For both these

* Cf. pars. 138 and 151.

† See par. 19.

reasons the periodic survey by the Board at Whitehall of the Guardians' work, by means of Inspectors' and auditors' reports and statistical returns, must be a review of the past rather than of the current questions of administration, although the Board is frequently consulted by Boards of Guardians on questions of importance and as regards many current matters as to which some action on its part is required.*

55. The change which will be effected by concentrating everything but the routine work of these 643 bodies in the hands of 133 County and County Borough Authorities, gives an opportunity for a great advance in the way of a closer linking up of the central and local authorities in regard to important matters of current administration, and we suggest that this object might perhaps be achieved by the transmission of the minutes of Public Assistance Authorities to the Local Government Board immediately after each meeting.

56. The minutes might set forth not only the proceedings and orders of the Public Assistance Authority upon all reports and correspondence received, but also the financial position of the Authority and its subordinate Committees at the end of each month, as well as the statistics of admissions and discharges and other relief afforded during the same period. In Ireland this practice is adopted, and it is found that the minutes form a convenient means of communication between the Local Government Board and the Authorities; and when any matter comes up for consideration upon which the sanction, approval, or advice of the Local Government Board is desired, the clerk indicates the fact by a marginal note on the minute in question, thereby obviating the necessity for a separate letter on the subject. We suggest whether this practice might not be found suitable for adoption in England.

57. If such a system were adopted, the whole policy of each Public Assistance Authority would, as it were, be passed in review before the eyes of the Local Government Board and its Inspectors. The difficulties of the Authorities would be seen, their successes and failures would be followed and understood, and the Inspectors would be enabled to judge when their attendance at the meetings of the Authorities would be most likely to be helpful. Whether this system would be necessary or expedient as a permanent arrangement, time alone can show, but at all events, when these new county Authorities are first started and the reins of the new administration are thrust into their hands, it seems desirable that, if the new *régime* is to be carried out wisely and with uniformity throughout the country, with due regard to the principles laid down by Parliament and the orders of the Local Government Board, there should be some such intercommunication in the progress of business, between the Central and the County and County Borough Authorities.

58. To assist the new local authorities to understand the spirit of their duties and the intention of the legislature, the codification and consolidation of existing Poor Law statutes should at once be undertaken as well as of the orders and circulars issued under the authority of those statutes. To expedite this work, we would suggest the appointment of a small committee of Poor Law and legal experts to sit continuously until the task is completed.

59. We think also that it would be useful for the Central Authority to issue, or cause to be issued, a small manual of instructions for the guidance of the local authorities. The manual should contain a clear exposition of the main features of the law relating to Public Assistance, and of the policy of the Central Authority as laid down in their orders and circulars. The manual should be periodically revised and brought up to date.

60. We will next briefly review the changes which we propose in the powers and functions of the Central Authority.

We have not attempted to draw up a detailed list of those minor functions of the Local Government Board which might be handed over to the new Public Assistance Authorities, but we trust that the constitution of these bodies will enable the

* Moreover a statement is sent to the Inspector weekly by the clerk of each Board of Guardians in his district, and in this statement a copy of any special minute or notice of motion at the last meeting of the Guardians is included, together with any observation in reference to any unusual increase or decrease in the number of persons relieved.

Local Government Board to devolve upon them the power to give assent to many individual cases of relief, such as emigration cases, children sent to homes, etc. The devolution of such powers would lighten the work of the Local Government Board considerably and advantageously.

We have recommended that, subject to more precise qualifications being laid down for higher officers, the local authorities should have full discretion to appoint such officers so long as the prescribed qualifications are fulfilled.

We have also recommended that the power of the Local Government Board to sanction prospective expenditure under the Local Authorities Expenses Act should be abolished.

With these exceptions we do not propose any diminution in the powers of the Local Government Board. On the contrary, we think it of importance that its powers should be increased in the following directions.

61. The Local Government Board at present cannot order a new workhouse to be built unless a majority of the Guardians of the union or of the owners and ratepayers consent. It is desirable that this limitation should cease, and that the Board should have power to compel the local authority to provide adequate buildings and adequate classification.

The Local Government Board should have power to direct that a particular class or classes of paupers for whom there is no suitable accommodation in the area of a Public Assistance Authority should be removed to and treated in any available and suitable institution of another Public Assistance Authority.

62. We feel that a stronger check should be exercised than heretofore over the cost of buildings erected by loan. To prevent extravagance, they should be built more in accord with some accepted plan, and care should be taken that the buildings are actually erected in accordance with the approved plans.

The Local Government Board should have power to authorise the Public Assistance Authority to purchase land compulsorily for the provision or enlargement of institutions.

63. Previous to 1894 the Central Authority were able through the *ex officio* Guardians to carry on the business if the elected Guardians refused to act. Though we do not contemplate the likelihood of any such hitch occurring as that the new authority would decline to act, it would be well, in the legislation which will be necessary to give effect to our recommendations, that the Local Government Board should be given authority in such a contingency to empower persons to exercise temporarily all or any of the powers which they may consider necessary for the object in view.

64. We recommend further that the Local Government Board should be empowered to compel Public Assistance Authorities to combine to provide for certain classes of cases, when sufficient and suitable accommodation is not otherwise available, and failing agreement between the authorities concerned.*

(15) GRANTS IN AID OF LOCAL TAXATION.**

65. The control to be exercised over Government grants to local authorities for Poor Law purposes is a more complicated question. At present the Guardians do not receive any grant direct from the Government, except that in respect of agricultural rates, which is given to make good part of the deficiency caused by an alteration in the law of rating. The other grants are given to the Guardians through the County and County Borough Councils, and are paid to them by such Councils in connection with certain specified services and payments. When the County and County Borough Councils become the Poor Law authority, they will retain the money they previously passed on to the Guardians, and, if the poor rate be a county and county borough rate, the Government grants will simply be an annual sum in reduction of the county and county borough rates, which would otherwise have to be raised.

* See also par. 109 (16) as to placing Charities Commission under the Local Government Board.

** See also Part IV., Chapter 4, pars. 172-6.

66. The principle upon which for the future these grants should be calculated and paid over to the various localities has been a subject of much controversy, and the Royal Commission on Local Taxation were divided upon it.

The majority of the Commission were in favour of grants being made in respect of selected items of expenditure, but the minority, including Lord Balfour of Burleigh, Sir Edward Hamilton, and Sir George Murray, believed that the sounder principle would be to base the amount on calculations made from the assessable value, the population and the expenditure in each locality. Tersely expressed, their argument was that the grant should be measured by necessity and ability, necessity being represented by the population and expenditure, ability by the assessable value.

67. When, after years of special investigation, authorities, so high as those quoted above, differ upon a question of such intricacy, it is difficult for us, who have not been able to give any exceptional attention to the subject, to express a decided opinion one way or the other. What we feel strongly is that these grants should be conditional; that is to say, that there should be a power to refuse any or all of such grants to a local authority, if the services or work towards which they are a contribution is not up to a proper standard. The plea upon which such grants are given from the Imperial Exchequer is that the services towards which they go are national in their character; if they be of that character the nation, through its recognised authorities, has a right to see that the services are efficiently rendered.

We are, therefore, of opinion that such grants, or portions of such grants, should be withheld from any County or County Borough authority, in cases where the Local Government Board reports that the administration, or branches of administration, of Public Assistance are not efficient, in the same way as the police grant may be forfeited if the Secretary of State withholds his certificate as to efficiency in discipline. We should be disposed to favour that system of calculation which makes the withholding of such grants under the conditions contemplated the most effective weapon for enforcing efficiency, and it would seem to us, as at present advised, that the block grant system would be the most suitable in this respect.

68. As regards the amount of the grant, we note that both Reports of the Local Taxation Commission recommended an increase. We concur in that view, and recommend that it be raised to the sum of £5,000,000 per annum, the amount suggested by the minority.

(16). OFFICERS OF THE LOCAL AUTHORITIES.

69. We have recognised that the efficiency of the officers of the local authority entrusted with Public Assistance is a matter of the utmost importance and we have made a number of detailed recommendations (Part IV., Chapter 3) as regards their qualifications, appointment, terms of service and superannuation with a view of establishing and maintaining a high standard of efficiency. We repeat verbatim here for purposes of convenience these recommendations:—

(1) When a Local Authority and the Local Government Board concur in the opinion that the retention of any officer is, on general grounds, detrimental to the administration, the Local Authority should have power to terminate that officer's appointment after proper notice.

(2) No person should be appointed as Clerk who has not some knowledge and experience of the Poor Law, no person as superintendent of an institution who has not had some experience in dealing with the classes which the institution contains, and no person as a relieving officer who has not had some previous training as an assistant relieving officer or has not passed an examination and obtained a certificate of an examining authority recognised by the Local Government Board.

(3) There should be qualifying examinations for the higher officers. Once qualifications for each office are laid down, and the Local Government Board satisfied that they are fulfilled, the entire responsibility for the appointment of all officers might be left to the new Local Authorities.

(4) The Local Government Board might sanction a scale of officers' salaries for each Local Authority, and so long as the salaries, or increases of salaries, were in accordance with that scale, it should not be necessary for the Local Authority to require the sanction of the Local Government Board to individual salaries.

(5) A Central Superannuation Fund should be established for the whole service, and in the case of teachers transferring themselves from public elementary schools to the Poor Law service and *vice versa*, arrangements should be made by which any sacrifice of pension is avoided.

(6) The Clerk of the future or any officer performing analogous duties to any Local Authority shall not, save under very exceptional circumstances, and subject to the consent of the Local Government Board, be a part-time officer.

(7) If the General Workhouse is abolished, each of the specialised institutions which takes its place, will require a superintendent, qualified by knowledge and experience, for its management. The salary offered must be sufficient to attract men not merely of organising power, but having the moral qualities necessary to develop the capacities of those under their charge.

(8) Highly trained officers will be required in what are now regarded as less important posts, as *e.g.*, that of labour master.

(9) Provision should be made for inmates of all denominations receiving religious administration and instruction from the clergy of their respective churches.

(10) The indoor staff should be allowed to live out, where circumstances permit, and so far as is consistent with discipline and the proper discharge of their duties.

(11) Where adequate relief is offered and refused, the responsibility for the consequences arising from such refusal should not rest with the relieving officer.

(12) The relieving officer must not be burdened with too large a number of cases. In any scheme or regulations for the administration of relief in local areas, the proportion of cases to officers should be carefully and periodically revised.

(13) Pay stations should be abolished.

(14) In some places an officer might be appointed who, like the Inspector of Poor in Scotland, might fill the position both of Clerk and relieving officer with such assistance as is necessary.

(15) A Local Authority should not be allowed to appoint an ex-member as a paid officer, unless he or she has ceased to be a member of the Local Authority for a period of, say, twelve months before appointment.

(16) Women visitors might be employed for certain classes of out-relief cases.

(17) A graded Public Assistance Service should be set up which should include all officers concerned with the supervision, control, and disciplinary treatment of the poor, including relieving officers, both male and female, masters, matrons and superintendents of institutions of every grade, labour masters and mistresses. In this service there should be more opportunity of promotion from the lower to the higher ranks, and no question of superannuation should hinder the transfer of efficient and promising officers from one Local Authority to another.

70. We have also recommended, in this Part of our Report, that the officer referred to in recommendation No. 14 above, who will be the chief officer of the Public Assistance Committee, shall be called the Superintendent of Public Assistance, and that the relieving officers working under him shall be called Assistance Officers. The Clerk of the Public Assistance Authority we propose to call the Director of Public Assistance.

(17). MAIN PRINCIPLES OF A REFORMED POOR LAW.*

71. We have now completed the description of the new machinery we propose to set up in the place of the Boards of Guardians and their officers, and we turn to the principles which we hope this new organisation will keep before it in its exercise of its powers. These principles may be thus epitomised :—

(1) That the treatment of the poor who apply for Public Assistance should be adapted to the needs of the individual, and, if institutional, should be governed by classification.

(2) That the public administration established for the assistance of the poor should work in co-operation with the local and private charities of the district.

(3) That the system of Public Assistance thus established should include processes of help which would be preventive, curative and restorative.

(4) That every effort should be made to foster the instincts of independence and self-maintenance amongst those assisted.

72. Any treatment adapted to the needs of cases, especially if applied on a large scale, requires not only many helpers but also such a distribution of cases amongst officials and workers as will allow time and attention to be given to each individual case. Our scheme of organisation permits of this sub-division, for it will always be competent for the Public Assistance Authority to increase the number of Public Assistance Committees in any district, or to divide the district.

73. We now pass on to the methods of Public Assistance, and the treatment to be applied to the different classes who seek it.

(18) "INDOOR" OR INSTITUTIONAL RELIEF.†

74. The Royal Commission of 1832 intended that the workhouse should be a place in which the able-bodied could be set to work, and that for other recipients of indoor relief provision should be made in separate and appropriate institutions. We have found that this intention has been only partially realised. In the great majority of Unions the workhouse contains several distinct classes of inmates. As the outcome of this system we have found that :—

- (i.) Proper classification is impossible.
- (ii.) There is a great want of uniformity in the various workhouses.
- (iii.) Indoor relief is deterrent to some and attractive to others.
- (iv.) The cost of erection, equipment, and indoor maintenance all tend to rise.
- (v.) A class of "ins and outs" has come into existence.
- (vi.) Residence in a workhouse has a demoralising effect.

75. We recommend that in the future :—

- (i.) General workhouses should be abolished.
- (ii.) Indoor relief should be given in separate institutions appropriate to the following classes of applicants, viz. :—

- (1) Children.
- (2) Aged and Infirm.
- (3) Sick.
- (4) Able-bodied men.
- (5) Able-bodied women.
- (6) Vagrants.
- (7) Feeble-minded and epileptics.

* *Vide* also pars. 143 and 144 as to General Principles governing Public Assistance to the Able-Bodied.

† *Cf.* Part IV., Chapter 5, and Part VI., Chapter 4 (2.) (d).

- (iii.) All indoor cases should be revised from time to time.
- (iv.) Powers of removal to and detention in institutions should be given, with proper safeguards, to the Public Assistance Authority.
- (v.) The treatment of inmates should be made as far as possible curative and restorative.
- (vi.) The Central Authority should exercise a more strict control over expenditure on buildings and equipment.
- (vii.) In every institution for the aged and for the able-bodied a system of classification should be adopted on the basis of conduct before and after admission.

(19) OUTDOOR RELIEF * OR "HOME ASSISTANCE."

76. We have dealt at some length with the history of outdoor relief and the problems which are bound up with it. We have seen that the Royal Commission of 1832 proposed the abolition of outdoor relief in the case of the able-bodied, and that Parliament accepted that principle. We have described the various orders issued from time to time by the Poor Law Commissioners, the Poor Law Board and the Local Government Board for its prohibition or regulation. We have also traced the fluctuations of public opinion which have greatly influenced its administration in those cases in which it is permitted.

77. The results of our investigations into its history, of our own observation in visiting Boards of Guardians in different parts of the country, and of the evidence given before us, may be summarised as follows:—

We have found a total want of principle and of uniformity in its administration, due, as we think, in part at least, to a lack of sufficient supervision. This want of uniformity does not necessarily arise from a difference in the circumstances of unions, but is generally the result of careless administration. We have been impressed by the inadequacy which often characterises it, particularly in the case of widows with families, and by the absence of thorough knowledge of applicants on the part of Boards of Guardians, and sometimes even of their officers. We have had to record cases in which it was distributed with a complete disregard of sound policy, and, though rarely, on grounds, so far as we could judge, inconsistent with any high standard of administrative honesty. We have found that in few cases is any care or thought given to the conditions under which those who receive it are living. We do not recommend its abolition, partly because we hope that, if our proposals are adopted, the need for it will gradually disappear, and, in any case, its mischiefs will be reduced to a minimum, and partly because we feel that time is needed for the development of a curative system of treatment, and that the abolition of out-relief might cause hardship. We also feel that it may be, if used wisely, a means of restoring to independence those to whom it is given, and that the strict supervision which we recommend of the housing, surroundings and habits of the recipients may do much to raise the level of a neighbourhood.

78. We think that the work done by out-relief, so far as it is useful, might be better done by voluntary agencies, and we hope that in the future it will be so, and that a clear line will be drawn between the "necessitous," who are properly relieved by the community, and the "poor" who are the proper objects of voluntary aid.

79. Our chief recommendations are:—

- (1) That Out-relief, or as we shall call it, Home Assistance, should be given only after thorough inquiry, except in cases of sudden and urgent necessity.
- (2) That it should be adequate to meet the needs of those to whom it is given.
- (3) That persons so assisted should be subject to supervision.
- (4) That, with a view to inquiry and supervision, the case-paper system should be everywhere adopted.

* Cf. Part IV., Chapter 6, and Part VI., Chapter 4 (2) (d).

(5) That such supervision should include in its purview the conditions, moral and sanitary, under which the recipient is living.

(6) That voluntary agencies should be utilised as far as possible for the personal care of individual cases.

(7) That there should be one uniform Order governing Outdoor Relief or "Home Assistance."

(20) CHILDREN. *

80. Prior to 1834, of all the classes that came under the authority of the Poor Law, children were, perhaps, the most neglected. According to the evidence then given, the majority of the Poor Law children in workhouses outside London were merely trained in ignorance, idleness and vice, and not one-third of them found any respectable employment. The majority dropped almost mechanically into the ranks of pauperism and crime.

81. It is gratifying to us to be able to give a very different account of the present condition of the children. The evidence was almost unanimous as to the good results obtained under the various systems of education and training in force, and this evidence was confirmed by our own experience when visiting and inspecting the various educational institutions and domiciles. Few such children in after life fall back into pauperism, and it is probable that the children in some, at least, of the present Poor Law schools are being better fitted for earning their living than those educated outside. This substantial improvement must be put to the credit of the existing Poor Law administrators. We consider that they have, through the educational methods now in force, weakened if not stopped an old and copious source of pauperism.

82. We may briefly summarise our opinion upon the different systems of dealing with Poor Law children now in force.

83. First of all, we are strongly of opinion that effective steps should be taken to secure that the maintenance of children in the workhouse be no longer recognised as a legitimate way of dealing with them. We put this in the forefront of our recommendations.

84. As to the other systems in force, viz.: District Schools, Grouped Cottage Homes, Scattered Homes, Boarding-out, we consider that each system has its merits and its drawbacks, and that more depends upon the administrators than upon the system.

85. The District Schools, established first in 1844, give an excellent education, and those trained therein do well in after life. We do not endorse the wholesale condemnation of these institutions by the Committee on the Care of Poor Law Children in 1896. All large schools have inherent evils connected with the aggregation of children of various ages, and the District Schools are not free from such defects. We would not, however, in any case, recommend the multiplication of large institutional schools, as we think that there are other methods of education and training, particularly for girls, which are more adaptable and produce even better results.

86. Grouped Cottage Homes, introduced in 1867, give an excellent education and training, but there are grave objections to their elaborate construction and equipment, and the growing cost of maintenance in them.

87. The Scattered Homes, which have the great advantage of involving very little capital expenditure and of securing a kind of home life particularly valuable for girls, have been increasingly adopted by other unions since they were started in Sheffield. Such Homes, when closely supervised and under competent foster-mothers, promise good results.

88. Boarding-out is another method of training children which might and should be greatly extended. Here the expense is comparatively small and involves no capital outlay whatever, and where the system is well managed a real home life is secured for the children, and they enter upon industrial life on the same terms as

* Cf. Part IV., Chapter 8.

the children of the independent working classes. In Scotland, it is the general system for the upbringing of Poor Law children, and there it works exceedingly well; but a most careful and constant supervision over all such children is indispensable, and where such a system of inspection cannot be had, boarding-out ought not to be attempted. So far as our evidence and special investigations go, the system of boarding-out within the Union has been liable to be very unsatisfactory owing to lack of proper supervision.

We have recommended that the work of supervision of boarding-out within the Union by the Public Assistance Committee should be placed in the hands of competent women officers, and that special care should be taken when the boarding-out is with relatives.

89. We think that the power to adopt children of vicious parents should be more frequently exercised and accompanied by a stricter dealing with the parent, and that the Public Assistance Authorities should, in future, retain supervision of adopted children up to the age of twenty-one.

90. We think also that, in all cases, there should be systematic records of the after life of children leaving the care of the Public Assistance Authorities.

91. The condition of the out-relief children—that is, children whose parents are in receipt of out-relief—is much less satisfactory. The Guardians have not in the past assumed the same responsibility, or, in fact, in some cases, any responsibility for these children. The condition of many of them is far from what it should be.

It should be a direction to the Public Assistance Authority that when Home Assistance is given for the maintenance of children, it should see that the assistance is adequate in amount; that the children are being properly nourished; that the housing conditions are satisfactory; and, particularly that no children are maintained in immoral surroundings. Otherwise the children should be sent to an institution or industrial school.

92. As regards the difficult question of the employment of widows in receipt of Public Assistance, we have recommended that the mother, when a widow and respectable woman, should not be separated from her children, and that the Assistance should be such as to enable her to give the time necessary for taking care of her children. If the children are more numerous than she can manage, they or some of them should be sent as day boarders to a school where they can be fed during school hours. In populous districts these schools might be started much on the lines of the day industrial schools, but care must be taken to give to them such a designation and surrounding as will altogether dissociate them from crime or misconduct. When the children are too young to go to school, the mother should not go to work unless a sufficient substitute for her can be provided.

93. As regards the emigration of children, we are of opinion that its advantages on the whole outweigh its dangers, particularly where the parents are neglectful and unworthy. Boards of Guardians are well advised in taking advantage of this mode of treatment.

94. Since 1834, a large number of specialised charitable institutions dealing with special classes of children have grown up. These, when certified and put under inspection, have been largely utilised for Poor Law children, and we see in this a beginning of co-operation between Poor Law and voluntary charities which might form the basis of a much wider scheme. As regards other large charitable institutions for dealing with poor children generally which are not certified, it is a question whether they should not be registered as proposed in Part VII. and subject to some supervision.

95. Whilst we recommend special co-operation between the Poor Law and the Education Authorities, we are not in favour of transferring the education of Poor Law children wholly to the local Education Authorities, but we would recommend a scheme by which teachers in either service should have the same status and be interchangeable.

(21). THE AGED.*

96. The question of the aged poor, as is shown in the chapter relating to that class, has in recent years received much attention; their diet and institutional accommodation have been improved, and the scale of outdoor relief has been raised. Of all the adult classes receiving relief, there is none whose condition appeals more strongly to public sympathy, and whose treatment requires more discrimination and greater variety.

97. The respectable aged regard a good character as their most precious possession; those who have sunk low in the scale of respectability consider good or bad character as a matter of indifference. By associating the respectable and the disreputable in institutions without classification, a sense of wrong is aroused in the minds of those of good character. They feel that a public authority, by forcing them to associate with the depraved, has stained and tarnished their most valued treasure. This feeling is recognised by many Boards of Guardians, who have classified the aged by character as far as the accommodation of a single institution permitted.

98. The health and strength of the individual which, in any case, must be on the wane, is a factor which obviously must be carefully taken into account in the treatment and classification of the aged. But there is another human element which, under our present system, is not called into action—that is, the capacity and willingness of the old person to help himself. When the institution is on a large scale he may become a mere *numero*; the aged person is, day by day, fed, clothed, and accommodated mechanically as one unit amongst many. His everyday life is deprived of all opportunity for exertion, thought and independence, and this has its inevitable effect upon the *morale* of even the active and the willing. The physical comfort of such a life may be enhanced, but that again is purchased by the loss of much that makes existence pleasant and cheerful even to the aged.

99. By the reforms we propose, the Public Assistance Authority will have at their disposal all the institutions within a county, and will, therefore, have facilities for classifying the necessitous poor by institutions. We recommend that one or more of those institutions, according to the requirements of each county area, should be set aside for the necessitous aged, and that their classification should be determined by their physical condition, the record of their lives previous to their admission into the institution, and their behaviour after admission.

100. We have greatly admired the small homes which some Boards of Guardians have erected, purchased, or rented for the accommodation of a limited number of respectable aged persons, who are there helped and looked after by a matron. The cost per head, including maintenance, rent, or repayment of building loan, is not greater than the cost in the workhouse, but the tone, and vivacity of the individual and his willingness to help himself is incomparably greater. In each room are the little treasures of the inmates—sometimes furniture, sometimes china, sometimes a keepsake,—intrinsically worth little, but the very sight of them, and the daily task they suggest, make the life of their owner very different from the colourless and dreary routine of workhouse existence. Whenever additional accommodation for the respectable aged is required, we recommend that the system of small homes should be adopted; but, with its adoption, visitation and supervision must at the same time be organised.

101. As regards outdoor relief or Home Assistance given to the aged, we recommend that greater care be taken to ensure its adequacy; and that the recipients be periodically visited by the officers of the Public Assistance Committee and by voluntary visitors. In rare cases in which the old person is helpless, has no friends, and is neglected, there should be power for compulsory removal to an institution to secure the comfort and even the safety of the person concerned.

* Cf. Part IV, Chapter 7.

(22). MEDICAL RELIEF AND ITS PROPOSED REORGANISATION.*

102. In a previous part of our Report we have dealt at some length with the development of the present system of Poor Law medical relief. We have enumerated its main defects. We have described the working of the various agencies, public and private, which provide medical assistance to poor persons outside the Poor Law. We have shown the evils which arise from the present want of co-operation, and the consequent overlapping between these agencies and the Poor Law. We have also stated our objections to proposals which were submitted to us for making medical assistance gratuitous for all who cared to apply for it, and for transferring to the Sanitary Authorities the work of the Guardians in connection with medical relief.

103. We have drawn up a scheme with the object of co-ordinating and systematising the work of the various agencies now administering medical assistance to poor persons in sickness. Among other advantages we are hopeful that it will do much to bring the voluntary hospitals into closer co-operation with the rate-supported hospitals. So urgent and difficult is this question that it has been suggested to us that a special Royal Commission should forthwith be appointed for the purpose of endeavouring to secure a *modus vivendi* on reasonable and advantageous terms between all those agencies. Such a Commission may ultimately be necessary, but in the first instance we are inclined to await the results of the efforts at co-operation which will be initiated all over the country if the organisation which we propose to set up be adopted.

104. The organisation we propose will not only fit into and utilise existing medical agencies and institutions, but, by inducing the wage-earning population to provide medical assistance for themselves on a contributory basis, it will, we hope, encourage qualities of providence and independence. Our main proposals for medical assistance are as follows:—

(1) That, the Public Assistance Authority, to assist them in carrying out their functions in connection with medical assistance, shall appoint a committee from among their number, to which shall be added representatives of the Health Committee of the County Council or of the County Borough Council, and of the local branch or branches of the British Medical Association. This committee shall be called the County or County Borough Medical Assistance Committee, as the case may be, and shall have power to co-opt representatives of local hospitals, county or county borough nursing associations, dispensaries, and registered friendly societies.

(2) That where necessary a local committee on similar lines shall be appointed by each Public Assistance Committee for the purposes of the local administration of medical assistance. This committee shall be termed the Local Medical Assistance Committee.

(3) That all or any of the functions of the Public Assistance Authority in regard to medical assistance may be referred to the County or County Borough Medical Assistance Committee.

(4) That, in all matters affecting medical assistance, there should be systematic co-operation between the Public Assistance Authorities, the Public Health Authorities, the Education Authorities, and the Voluntary Medical Institutions, based on a clear definition of their respective functions.

(5) That the medical and nursing needs of each area, whether institutional or otherwise, should be reviewed, and, if necessary, supplemented, regard being had to the available provision made by Poor Law, Sanitary, or Voluntary Authorities.

(6) That Medical Assistance should be organised on a provident basis.

(7) That a general system of provident dispensaries should be established, of which existing voluntary outdoor medical organisations be invited to form an integral part, and that every inducement should be offered to the working classes below a certain wage limit to become, or to continue

* Cf. Part V.

to be, members of a provident dispensary. To this end the subscription to the provident dispensary should cover the following advantages to its members:—

(a) Power to choose their own doctor from the doctors upon the list of the dispensary.

(b) The provision of adequate medical assistance at a rate or fee within the reach of those subscribing to the Provident Dispensary.

(c) Institutional treatment upon a recommendation from the dispensary doctor.

(8) That medical treatment should be more readily accessible to all who are in need of it; that, in cases of illness in which immediate treatment is necessary, the physical condition of the patient should be the first consideration; that in such cases medical aid should be obtainable in the first instance by application to any medical officer in the service of the Provident Dispensary.

(9) That, except as regards the cases requiring immediate attention above referred to, all necessitous persons shall receive medical assistance through the Public Assistance Committee.

(10) That certain cases in receipt of public assistance, such as the aged and widows with young children, might be made members of the Provident Dispensary on payment of the necessary fees by the Public Assistance Committee.

(11) That domiciliary medical assistance at the public cost should be conditional upon the maintenance of a healthy domicile and good habits.

(12) That no disfranchisement should be attached to any form of medical assistance.

(23). THE VOLUNTARY AID ORGANISATION.*

105. We have said so much in preceding parts of our Report as to the reorganisation of charity, that we need not here do more than indicate generally what the functions of charity should be, and the position it should occupy towards Public Assistance. The Public Assistance Authority can help only those who are destitute or, as we prefer to call it, necessitous, it cannot help many others who are, from various causes, steadily slipping downwards in the social scale. To stop this downward progress is the special duty of charity which, if properly organised, should be an effective agent combating the incipient development of destitution and distress.

But, in addition to this, charity has a still larger task of effective co-operation with the Poor Law, and Mr. Goschen's Minute of 1869 sent to Metropolitan Boards of Guardians laid down admirable principles as a foundation for such co-operation. We believe that it is mainly due to the want of general and systematic organisation that the principles there enunciated have not been extensively applied and made an operative force in our national system of relief.

106. We have endeavoured to create out of existing voluntary and charitable agencies an organisation, established by statute, to form a recognised link between Public Assistance and charity. We have therefore proposed that in every County and County Borough there shall be a Council of Voluntary Aid, and in every district a Voluntary Aid Committee, which shall carry on and develop the functions of charity by methods which we have detailed in Part VII.

107. The functions of Public Assistance and Voluntary Aid, as we have sketched them, are so closely allied that it may be asked whether the applicants for help can be divided out between them, and, if so, on what principle. The materials for an answer are supplied

* Cf. Part VII.

partly by the evidence tendered to us, and partly by our own personal observation. In addition to those of the able-bodied whom we have referred to in Part VI. as suitable for Voluntary Aid, there is a class of case which is in constant danger of falling into pauperism, viz.:—the mother of a family who is suddenly left a widow. To such cases Boards of Guardians make a grant of money and do little more. But money is the least of a widow's many needs. If her independence is to be preserved and her family to be well started in the world, she must have encouragement to persevere, opportunities for self-help, and openings for her children. Such a case should clearly be dealt with by Voluntary Aid; for Voluntary Aid is more sympathetic and more elastic than official assistance can be. Old people, again, who have done their best to make provision for themselves, and perhaps through the dishonesty of others have been disappointed, may be appropriately helped by Voluntary Aid. Even where a pension has been provided under the Old-Age Pensions Act, additions to the comforts may very fairly be made by charity. But we go further than this and express the hope that, when our proposed reforms are in full working order, the great majority of cases will pass, as it were, through the sieve of Voluntary Aid before they reach Public Assistance.

108. The special return of persons relieved during the year ended 30th September, 1907, suggests that many cases of temporary distress might be dealt with by voluntary agencies instead of by the Poor Law. Thirty per cent. of the applications to the Poor Law were cases of persons whose aggregate period of relief during the year did not exceed one month, and who were not relieved on more than two occasions during the year.

109. Our recommendations in regard to the Voluntary Aid Organisation are as follows:—

(a) *Establishment of the Voluntary Aid Councils and Committees.*

(1.) That in the area of each Public Assistance Authority, that is in each County or County Borough, there be formed a Voluntary Aid Council, consisting in part of Trustees of endowed charities, of members of registered voluntary charities, as defined below, of some members of the Public Assistance Authority, and of such persons as members of friendly societies and trade associations, of clergy and ministers, and of other persons being co-opted members, as may be settled in schemes approved by the Charities Commission.*

(2.) That a statutory obligation be imposed upon the Lord Lieutenants, the Chairmen of County Councils, the Lord Mayors, and Mayors of County Boroughs to take steps, within a given period, and after consultation with the managers of charitable societies, Trustees of Endowed Charities and members of the Public Assistance Authority, for drawing up schemes in accordance with the preceding recommendation, which schemes must be submitted to the Charities Commission for approval.

(3.) That the Voluntary Aid Council submit to the Charities Commission proposals for the formation of Voluntary Aid Committees to be drawn up in the form of schemes to be approved by the Commission, and that the Voluntary Aid Council under such schemes appoint as members of the Voluntary Aid Committees persons such as those mentioned in Recommendation I.

(4.) That Voluntary Societies or Charities as defined in Recommendation 17, be entitled to register at the Charities Commission on lines similar to those of the registration of Friendly Societies under the Friendly Societies' Act.

(5.) That a registered voluntary society be entitled to nominate members of its own body for appointment to the Voluntary Aid Council and to the Voluntary Aid Committee of the district in which either its institution or any branch of its institution has an office.

(6.) That it is desirable that the Voluntary Aid Committee have its offices in the same building as the Committee of Public Assistance.

* See Recommendation No. 18 as to the proposed change in the name of Charity Commission.

(b) Functions of the Voluntary Aid Council.

(7.) The duties of the Voluntary Aid Councils would be for the most part not executive but supervisory. The executive work would be assigned to the Voluntary Aid Committees. The Voluntary Aid Council would supervise the operations of these Committees generally and would, as far as possible, maintain the same principles of help and relief throughout County or County Borough. They would collect funds for distribution to Voluntary Aid Committees, and they would allocate funds to poor districts. The County is already the accepted area for many benevolent and philanthropic purposes. The local infirmary or hospital is frequently a County institution. There are County nursing associations, and the County is the recognised centre in connection with various naval and military charitable associations. We propose that the Voluntary Aid Council acting for the County should promote any voluntary institutions, associations, or societies for which the County, as a whole, has need. Its duties would thus be important and distinctive.

(c) Functions of the Voluntary Aid Committee.

(8.) That the Voluntary Aid Committee aid (1) persons in distress whose cases do not appear to be suitable for treatment by the Public Assistance Committee, and (2) applicants for Public Assistance whose cases have been referred to the Committee by the Public Assistance Committee.

(9.) That, with a view to the thorough treatment of individual cases, the Voluntary Aid Committee make such arrangements for the investigation of the applications made to them as the Charities Commission may deem necessary and sufficient.

(10.) That in dealing with persons in distress for whom it is desired to provide aid by way of monetary relief, it shall be the duty of the Voluntary Aid Committee to obtain such sums as may be possible from relations of the applicant, from friends, and from charitable sources generally for the aid of individual cases.

(11.) That with the administration of aid on the part of the Voluntary Aid Committee there should be associated such a system of voluntary visitation as the Committee may deem advisable in view of the responsibilities of their work in providing effectual aid, and in view of the physical needs and the habits of those whom they decide to assist.

(12.) That the Voluntary Aid Committee be empowered to appoint such Local Committees as it may deem necessary, subject to the approval of the Voluntary Aid Council.

(13.) That a Voluntary Aid Committee shall, as far as possible, register the cases dealt with by the Public Assistance Committee and by the Charitable societies and institutions in the district.

(14.) That Voluntary Aid Committees receive the support of the Public Assistance Committee, and of the Inspectors of the Local Government Board, with a view to systematising the relations between the Public Assistance and Voluntary Aid Committees and promoting co-operation between them.

(15.) That Voluntary Aid Councils or Committees be eligible for subscriptions from the Public Assistance Authority, on the lines of 42 and 43 Vict., c. 54, Section 10.

(d) The Charities Commission.

(16.) That the Charity Commission be attached to the Local Government Board, and that the Commissioners and Assistant Commissioners, permanent or temporary, be appointed by the Local Government Board, whose President should represent it in the House of Commons.

(17.) That the Charity Commission be enlarged, and that there be assigned to it two departments of work, the supervision of endowed charities on the lines of the Charitable Trusts Acts, and the registration of Voluntary charities or Societies which hold any property in land or houses by purchase, or by leasehold, or are the tenants of any property under yearly or other agreements.

(18.) That the name of the Charity Commission be the Charities Commission.

(19.) That the staff of the Commission be strengthened so as to fulfil all the various additional duties that may devolve upon them :—

1. As a centre for the registration of voluntary charities.
2. In assisting in the preparation of schemes for the establishment of Voluntary Aid Councils and for registering such schemes.
3. In assisting in the preparation of schemes for the establishment of Voluntary Aid Committees and for registering and supervising their administration.
4. In the scrutiny of accounts and statements relating to Voluntary Aid Councils and Committees.
5. In the supervision of other schemes ; and
6. In the scrutiny of the accounts of endowed and registered charities.

(20.) That Section 30 of the Endowed Schools Act, 1869, by which certain charities founded for purposes of relief may be applied to purposes of education, be repealed.

(21.) That it be provided in a Statute amending the Charitable Trusts Acts that, by order of the Charities Commission, any charities, as defined in Section 30 of the Endowed Schools Acts, 1869, exclusive of Loan Charities, Apprenticeship Charities, and Charities for Advancement in Life, may be used for the relief of distress, subject to such conditions respecting enquiry and other matters as the Commissioners may determine under a general order.

[To prevent misunderstanding, it should, perhaps, be mentioned that we are not concerned with educational charities, whether ecclesiastical or not ecclesiastical, but with eleemosynary charities ; and further, neither here nor elsewhere do we intend to include in our recommendations the endowed or the voluntary charities of churches or congregations granted for religious purposes, nor the voluntary charities of churches or congregations provided for eleemosynary purposes.]

(24). INVALIDITY INSURANCE.*

110. On the very difficult and complex question of Invalidity Insurance, we arrived at certain tentative conclusions which we stated concisely in Part VIII of our Report. To further compress these views might lead to ambiguity or misunderstanding. We therefore here repeat the opinions we have already expressed.

111. We have shown in another Chapter† the great changes that have taken place in the organisation of industry during the last eighty years. The more intimate and inter-dependent relations that often used to exist between employers and employed have been superseded by a system which, in appearance and also largely in fact, divides the interests of the employers from those of the workmen. This in turn tends to efface duties which might have been urged on the one side or on the other as a kind of moral obligation.

112. The evidence shows that, with very few exceptions, what working-men desire is the "cash nexus"—the bare wage contract uninfluenced by any but purely economic considerations—and the employing classes generally have accepted the situation and consider their obligations fulfilled when they pay the wage. Over the great trades, wages are determined by collective bargaining between Trade Unions on the one side, and large employers and associations of employers on the other. The issue of the system is, for those who find employment, a maximum wage during the prime of life, and no wage at all when the prime is passed.

113. The theory of industry which used to prevail was that the worker should maintain himself throughout life by his own exertions, providing for contingencies and for old age by thrift, or that, if he could not do so and his relatives were unable

* Cf. Part VIII., Chapter 1. † Part VI., Chapter 1

to help, he should receive poor relief. But of late years the "cash nexus" has been supplemented and modified in two different ways—the Employers' Liability and the Workmen's Compensation Acts and the Old Age Pensions Act—the one insuring the operative against the accidents more incidental to work than heretofore, the other providing for a time when he is no longer able to work for his own support.

But it has become evident that these two methods do not meet all the exigencies which have arisen under this system. Accidents are not the only checks to wage-earning during active life, and wage-earning itself, as we have seen, generally ceases long before the pension age of seventy.

114. From the Chapter on "Social and Industrial Developments since 1834,"* it seems clear that the present organisation of industry, with its excessive specialisation and universal application of machinery, has raised the standard of work required from the ordinary operative. From such an organisation, many, we fear, owing to want of original capacity and want of early training, must always be excluded and fall into intermittent and ill-paid occupations. Trade Union regulations have worked in the same direction. The "standard wage" is based on the assumption that the worker employed is worth that wage to his employer; if the employer does not consider him so, the man is dismissed. The same tendency seems to have been strengthened by the working out of the Employers' Liability Act and the Workmen's Compensation Acts. Whatever be the cause, the fact remains that, since the passing of these Acts, the number of injuries registered has constantly increased. Against the undue extension of this liability, the insuring bodies, whether employers themselves or outside companies, must protect themselves, and the system necessarily excludes many who cannot fulfil the insurance standard whatever it may be. Those presumably more liable to accident, though still more or less efficient, are excluded, and a new standard of ability is created which reacts on industry generally. A large class grows up of partially efficient unemployed men. They accept the situation, with complaint, indeed, but with submission, and thus assume a new position which imposes on society many new anxieties and difficulties.

115. We have, again, evidence to show that industrial demand, as it now exists, draws many younger unskilled men into a kind of employment, in its early stages remunerated by a wage which will not increase at any later period of their lives but will rather diminish. Such a demand in effect puts a premium on want of skill; if it be inevitable, it suggests that measures should be taken by way of insurance to prevent in part the evil results which must follow.

116. The years between the withdrawal from wage-earning and the pension age present a more serious problem than ever before. Trade Union regulations make it difficult for men skilled in the great trades to work on at their trades and accept a lower wage, and partial employment is more difficult to get. If, as frequently happens, there is not enough put by to cover this period, insufficiency of means or the acceptance of relief seems inevitable. In such cases the fact of other men getting a State pension at the age of seventy, on the ground that they are unable to earn a wage, may create a feeling of injustice on the part of those who have not attained the age and are yet as effectually barred from wage-earning.

Unless, therefore, some system of wages graduated according to age can be adopted, it is clear that workmen above a certain period of life will for the future find it more difficult to keep themselves in continuous employment. We do not forget that, for the solution of these and other industrial problems, we may look with growing confidence to methods of remuneration such as co-operation and co-partnership. Of their importance and promise we are convinced; but we have felt that to deal with them fully would take us far beyond the terms of our reference.

117. We seem almost driven to the conclusion that a new form of insurance is required, which, for want of a better name, we may call Invalidity Insurance. The early superannuation of the best workmen is so well recognised that it will, in all probability, give rise to demands for lowering the pension age, and will, at some point or other, entail a financial burden beyond the power of the national resources to bear.

* Part VI., Chapter 1.

118. We have made strong recommendations as regards insurance against temporary unemployment, but this does not meet the case of such persons when entirely incapacitated from wage-earning. It would, at any rate, be more agreeable to them, and more consonant with the feeling of the community, that they should fall back on an insurance fund to which they had at least contributed a part, than that they should be forced to have recourse to the Public Assistance Authorities. Such a scheme of Invalidity Insurance strongly appeals to us as calculated to meet many of the evils which we have been discussing. One thing, however, must be borne in mind, Whatever be the risk insured against, whether it be sickness, accident, old age, or unemployment, the possibility of such insurance depends on the existence of savings, whether these savings be in private or collective hands, or be put in the hands of the State by taxes which represent the savings, or what otherwise might be the savings, of its citizens. Insurance, in short, is only a method for the utilisation of those savings. Whatever may be said, in order to insure, some people must have saved individually or collectively.

119. As the necessity for such insurance seems to arise from the very organisation of industry which the nation has adopted, such a fund, it seems to us, might appropriately be supported partly by contributions from employers, partly by contributions from employees, and partly by a subsidy from the State. But in considering the amount of any subsidies to be granted by the State, we think that full weight should be given to the fact that a very heavy charge has recently been imposed upon the revenue of the country by the Statute granting gratuitous old age pensions to all persons above 70 years of age who comply with certain conditions.

120. We have consulted three eminent actuaries as to the weekly premiums for which a man, aged twenty-one, in good health, and employed in a healthy occupation, could ensure the receipt of 10s. 6d. a week during the first twenty-six weeks of illness, and 7s. 6d. a week during the remainder of illness up to age sixty-five. Mr. T. G. Ackland, F.I.A., taking a 3 per cent. basis, places the amount at 3·9d.; Mr. George King, F.I.A., assuming $2\frac{1}{2}$ per cent. as the rate of interest, estimates the amount at 3·74d., and Mr. F. G. P. Neison, F.I.A., at 3·62d. These sums are little in excess of the average weekly fee payable per child at school up to 1891, and remitted by the Act of that year.

121. Though we have obtained a good deal of information from the Board of Trade concerning systems of insurance, both at home and abroad, and also from a number of witnesses representing the provident and benefit societies of this country, the information is not sufficient to enable us to make specific recommendations. An account of some of the foreign systems of Insurance will be found in Part VIII.* It will be seen that none of them exactly meets the case, and, moreover, generally the schemes have not been long enough in operation to enable us to judge as to their measure of success. The foundations of any future legislation ought to be very closely scrutinised. They should be broad, solid, and capable of continuous extension, and the organisations resting upon them should be so constructed as to expand automatically according to need. The great trade and benefit organisations in existence in this country ought to be very freely consulted before any proposals are made in Parliament. If time had permitted, we might have been able to make definite recommendations under this head, but in view of the urgent necessity of laying our more important proposals before Your Majesty, all we feel justified in doing is to state our opinion that the information at our disposal requires to be supplemented before legislation can be attempted.

(25). THE ABLE-BODIED AND UNEMPLOYMENT.†

122. In the sections of the Report dealing with distress from unemployment, we gave a consecutive narrative of the social and industrial developments since 1834. Such a recital was necessary to establish the groundwork of our subsequent conclusions. A review of existing conditions has led us to two definite conclusions:—

(1) We have an increased aggregation of unskilled labour at our great ports and in certain populous districts.

(2) This aggregation of low-grade labour is so much in excess of the normal local needs as to promote and perpetuate under-employment.

* See Chapter I.

† Cf. Part VI.

123. We went on to consider the conditions connected with skilled and high-grade labour, in order to ascertain if they were such as tended towards the alleviation or towards the aggravation of under-employment in the unskilled labour market. Though the survey of this part of our industrial system was far more satisfactory, yet there were causes in operation even here, which tended from time to time to add to the number of those seeking casual or intermittent employment. The growth and continuous expansion of our trade places cyclical fluctuations more and more beyond the control of any one single industrial district. The high pressure of competition raises the standard and shortens the period of efficiency of the worker, whilst changes both in fashion and in methods of production are becoming not only more sudden but also more uncertain in their duration. Employment once lost by the middle-aged and less efficient is regained with greater difficulty than heretofore. When to these ordinary conditions are added the cyclical depressions in trade, a serious state of affairs is created, and we came to our third conclusion that—

(3) This normal condition of under-employment, when aggravated by periodic contraction of trade or by the inevitable changes in methods of production, assumes such dimensions as to require special machinery and organisation for its relief and treatment.

124. We then carefully scrutinised the constitution and operations of the various relief organisations, both public and private, normal and abnormal, that are now in existence. We looked at their work from various points of view and asked ourselves, firstly: was the relief given in times of distress adequate and suitable? and secondly: were the after consequences of such relief beneficial or prejudicial to the community affected—did it, in a word, strengthen or weaken the original causes of the distress?

125. We regret to state that our investigations point to the conclusion that the relief given was frequently unsuitable and inadequate, and that its effects were often pernicious.

Poor Law relief, if deterrent, is at times deterrent to the wrong people and restorative treatment plays a very small part in its methods.

Charity, when organised and working in co-operation with the Poor Law and other relief agencies, is always helpful, but, in the absence of these conditions, charitable effort too frequently takes the form of doles to the unworthy and results in demoralisation.

The relief works carried on by Municipal Authorities, and by Distress Committees under the Unemployed Workmen Act, have in certain instances been successful in reaching the class for whom they were intended. In the vast majority of cases, however, they have perpetuated a system of able-bodied relief reproducing some of the bad features of the methods in force before 1834, which the Commission of that date so vigorously condemned.

It is impossible to contend that the relief measures and organisations now at work in any degree come within the category of "special machinery or organisation for the relief or treatment of distress" caused by under-employment.

126. But, during the Cotton Famine, there was a period of distress, historic both by reason of its duration and of the number of skilled workers affected by it, and in its latter phases we there found charitable and Poor Law organisations working in co-operation with marked smoothness and success. Charity and the Poor Law were supplemented not by relief works but by public works of utility managed on commercial principles, and not only was this combination most effective in times of distress but, when the distress was over, it left the community with a minimum of demoralisation. We propose to refer to these methods—which contrast so favourably with recent failures—together with certain other suggestions, which, while preventive in their character, are designed to elicit co-operation and self-support from those whom they assist. We will deal with preventive measures first.

*(a) Education.**

127. In previous parts of our Report we have shown how serious and widespread is the tendency for children to slip into occupations and callings which lead first to casuality and then to unemployment. Unless we can arrest at its source this increasing stream of casuality and under-employment our subsequent remedial measures may be futile. We therefore regard with favour the proposals of our Special Investigator Mr. Cyril Jackson:—

- (1) That boys should be kept at school until the age of 15.
- (2) That exemption below this age should be granted only for boys leaving to learn a skilled trade.
- (3) That there should be school supervision till 16, and replacement in school of boys not properly employed.

We also believe that there is urgent need of improved facilities for technical education being offered to young people after the present age for leaving school. We consider that to prevent the deterioration of physique it is necessary that physical drill should be more prolonged and thorough than it has hitherto been. Although we are not unanimous upon this point, some of us believe that the most effective and thorough method of infusing into boys approaching adolescence a sense of discipline and self-restraint, both physical and moral, and of improving their physique for subsequent industrial occupations, would be a universal system of a short period of military training.

128. Before we leave the subject of education we must refer to one criticism that has been made with almost absolute unanimity. There seems to be outside the circle of the teaching profession a very strong general feeling that the education of our children in elementary schools is not of the kind which is helpful to them in after life. Education is the accepted antidote to unemployment and pauperism. The cost of elementary education in this country in 1905-6 was twenty million sterling. This is an almost entirely new national charge since 1870. It should have steadily reduced unemployment and diminished pauperism. If it has failed in this, its accepted mission, it cannot be said that the failure is due to lack of funds. The desire of the young to raise themselves in the social scale and improve their position should ever be encouraged, but this desire seems to us too frequently to take the shape of trying to avoid handicraft and manual labour by recourse to other occupations which, though associated with a black coat, are less remunerative and less progressive than skilled handiwork. Clerical labour is a glut upon the market; high-class artisans are, according to our evidence, at times obtained with difficulty. We doubt if the atmosphere of our school life is altogether congenial to a career of manual labour. We would suggest to the Board of Education the advisability of meeting these criticisms by a thorough reconsideration of the time table and curriculum in our elementary schools as well as of the aims and ideals of elementary education. Though employers of labour may perhaps be apt to look at questions too much from their own standpoint, still, the unanimity of opinion that our school curriculum does not supply the right class of instruction and training for industrial purposes, cannot lightly be put on one side.

(b) Labour Exchanges.†

129. In the forefront of our proposals we place labour exchanges. We propose their establishment under the control and direction of the Board of Trade. We look to them to achieve two distinct objects:—

- (1) An increase in the mobility of labour. To do this it is essential that they should be used freely by employers and employed, and that their management should be associated with a joint committee of these two classes. We think that Local Authorities and Government Departments should be encouraged to make use of them when engaging either skilled or unskilled labour. Their usefulness will be greatly increased if they are linked up all over the United Kingdom.

* Cf. Part VI., Chapter 1 (11), and Chapter 4 (1) (b).

† Cf. Part VI., Chapter 4. (1) (a).

(2) The collection and distribution of information. The most obvious form of this would be the dissemination of information as to demand and supply of labour in the country, and as to public works and other large contracts. But their area of usefulness should extend much further. The Board of Trade should receive weekly from the labour exchanges accurate and detailed information as to the amount of unemployment and also as to the demand for employment throughout the whole country. Owing to our vast international trade and our dependence upon external sources for the supply of the raw material we require, industrial depression in this country is not unfrequently due to causes far away from the districts affected. We see no reason why the Board of Trade, availing itself of the information obtainable from our Consuls and other officials stationed abroad, might not in course of time become a kind of trade meteorologist, and by publishing the information received, which gradually will become greater and more exact, indicate the causes likely to affect our home industries. With this information from abroad and the returns of the labour exchanges at home, trade storm signals might be hoisted in time to prepare the districts likely to be afterwards affected.

Such a scheme would require time, money, and trouble to be expended upon it before it became a trustworthy source of advice and guidance; but in our judgment the experiment is well worth attempting.

Associated with the labour exchange there should be, in connection with every public elementary school, an intelligence bureau which would advise parents and teachers as to the branches of employment likely to give the best opening for children leaving school. By this means we hope to divert boys from the "blind-alley occupations" which so many enter at present, into occupations which will lead to permanent employment.

If this be accomplished we hope to cut off at its source one of the most fruitful supplies of casual labour.

(c) *Casual Labour.**

130. We have dwelt in several parts of our Report on the phenomena of casual labour and its far-reaching evils, both as regards the character of the man and the disastrous effect on his family life, and we have ventured on the statement that a system so dangerous to the social life of the whole community cannot be regarded solely from the standpoint of the employer and the employee.

The remedies, however, are not very obvious, as they must be undertaken in face of a dead weight of apathy on the part of the public, and perhaps an active opposition on the part of the various interests.

131. So far as casual labour is encouraged and fostered by mere thoughtlessness on the part of those who employ it, the remedy lies in an awakening of the public conscience, and we hope that some good may be done by the mere exposure of the evils entailed. We are convinced that Government Departments and municipal bodies might do more than they do to regularise the work of those they employ.

But in its most prominent form, dock labour, the more serious problem is that, at the great ports of the kingdom, many thousands of men are engaged in an occupation which seems almost of necessity casual, and moreover, the occupation is one which seems as attractive to the docker himself as it is advantageous to his employer. Here the formidable objection is that if decasualisation on something like the lines adopted by the London and India Dock Company is attempted, a certain proportion of persons at present under-employed will be thrown out of employment altogether until re-absorbed in other industries.

With full consciousness of the gravity of this issue, we venture to think that such an effort must be made, and we have recommended that the Board of Trade should send to our large ports and industrial centres, officers who might confer with masters and workmen, with a view to reducing casual and intermittent employment to the smallest dimensions.

* Cf. Part VI., Chapter 1 (15) and (21) and Chapter 4 (1) (b).

*(d) Insurance Against Unemployment.**

132. Whatever the methods adopted to promote regularity of employment, the old-fashioned virtue of thrift must still occupy a central place in preventing distress. Since 1834 the opportunities of husbanding small savings and making insurance against sickness, accident, old age, and death have very greatly increased. But there seems room and necessity for a great extension of insurance against Unemployment, and in this case we have not hesitated to recommend the encouragement of a State subsidy.

The difficulty here is that the classes who are not insured against unemployment are the classes most liable to unemployment, and that the uncertainty and intermittence of their occupation makes it very difficult for them to raise by combination the necessary aggregate amount for individual insurance.

We have examined the many experiments now being tried in other countries in this direction. None of them have been quite effective in reaching these classes. But by encouraging and promoting unemployment insurance amongst the labouring classes above the rank of casualty, we hope to foster the downward growth of a desire for it.

133. Our review of unemployment insurance enabled us to arrive at the following conclusions :—

First, that the establishment and promotion of Unemployment Insurance, especially amongst unskilled and unorganised labour, is of paramount importance in averting the distress arising from unemployment.

Second, that the attainment of this object is of such national importance as to justify, under specified conditions, contributions from public funds towards its furtherance.

Third, that this form of insurance can best be promoted by utilising the agency of existing trade organisations or of organisations of a similar character which may be brought into existence by a hope of participation in public contributions.

Fourth, that no scheme either foreign or British which has been brought before us is so free from objections as to justify us in specifically recommending it for general adoption.

134. Accordingly, we have recommended that a small Commission or [Inter-Departmental Committee of experts and representatives of existing trade benefit organisations be appointed, with an instruction to frame a scheme or schemes for consideration.

135. Before leaving the question of insurance against unemployment, there is one point in connection with it to which we would draw attention. We have referred to the excellent work done by trade unionists in insuring against unemployment, and thus protecting themselves against one of the most formidable risks of a workman's life. But the attention of trade unions seems to us too much concentrated upon the amount of wage, too little upon the duration and regularity of the work. Irregular work, even if paid per hour at a high rate, is the workman's bane; regular and continuous work, even if the rate per hour be somewhat low, is his salvation. Whilst we admit that both considerations should be taken into account, we think that the first ought not to entirely override the second.

(e) Voluntary Aid and Unemployment.†

136. We have already indicated our general proposals for establishing a Voluntary Aid Organisation. At a time of general unemployment there is usually a widespread desire to render voluntary assistance of some kind. This, as we have shown, can be done in many ways (*see* Part VI. and Part VII.), by help given to the man and his family, or to some member of his family. Voluntary Aid Committees, working in close co-operation with Public Assistance Committees, may prevent distress due to want of work at its earlier stages, and often a little aid for a comparatively short time will prove effectual in making other and more elaborate measures for the provision of unemployment relief unnecessary. Assistance should by this means be forthcoming to

* *Cf.* Part VI., Chapter 4 (1) (c).

† *Cf.* Part VI., Chapter 4 (2).

an unemployed workman who has a prospect of work in any quarter. Men and women who have acquired some experience of the personal administration of relief become then most serviceable. Indeed, we look forward to the provision by means of Voluntary Aid Committees of an outlet for the countless forms of personal service which now, owing to lack of insight and co-operation, run to waste. We hope to find here, even more than in carefully administered money help, the prevention and cure of much of the poverty and suffering which form so sad a picture at the present day.

(f) *Public Assistance and Unemployment.**

137. Behind the organisation of Voluntary Aid will be the new Public Assistance Authority, which, freshly constituted and with increased powers, will be a far more potent agency in dealing with distress amongst the able-bodied than the bodies which it will supersede.

138. The methods at its disposal for dealing with the able-bodied out of employment will be many and graded. They have been described in much detail in Part VI. of our Report and include:—

(1) Home Assistance, on condition of daily work, which will be available for men of good character requiring only temporary employment.

(2) Industrial and Agricultural Institutions and Labour Colonies, with classification for those whose industrial antecedents perhaps are not so good, or who require more prolonged treatment.

(3) Detention Colonies under the Home Office to which the “ins-and-outs,” the work-shy, and the loafer will be committed for periods of detention and training.

139. If the powers thus given to the new authority are exercised with discrimination, firmness and kindness, and if the treatment of all those of inferior efficiency and character applying for Assistance is governed by the idea of industrial and moral restoration, a change for the better should soon be effected in the management of that heterogeneous mass of persons now known as the Unemployed. At the root of the new system lies the principle of classification. Classification will in future be aided by the system of case-papers and by the records of workmen registered at the Labour Exchange.

(g) *Transitional Measures as to Distress from Unemployment.†*

140. The changes which we have proposed will take some time before they can fully mature themselves. When they have separately and in combination attained a reasonable standard of working efficiency, we believe that they will be adequate to deal with local distress. But, pending their development, we consider it necessary to formulate a supplemental scheme, so safeguarded as to be put into operation only under a number of specified conditions, to meet any exceptional and protracted distress. Under this scheme, the Local Government Board may after consultation with the Board of Trade authorise the Public Works Loan Board to grant special financial facilities to Local Authorities for the prosecution of public works. Before any such authorisation is given, the two first-mentioned Departments must be convinced, by ascertained and verified facts, that local distress due to severe and prolonged industrial depression is overtaking the resources of the newly-established Public Assistance Authorities. The works must, moreover, be of public utility in the locality, and the plans and estimates in respect of them be approved beforehand by the Local Government Board.

141. We lay great stress on the condition attaching to such works, that they should be promoted and managed on ordinary commercial lines, and that those employed should be taken on not as paupers, nor as persons to whom work will be found because they are in distress, but as workmen capable of giving an adequate return for the wage paid. Fitness for the work will in fact be the governing consideration in the engagement and retention of such workmen as may be required.

142. We are well aware that this doctrine is very unpopular in certain quarters, where it is held that the mere existence of distress is sufficient to entitle everyone affected

* Cf. Part VI., Chapter 4 (2).

† Cf. Part VI., Chapter 4 (3).

by the distress to have work provided for him at standard wages. We contest this proposition, not from lack of humanity, but because we know that such a theory is absolutely subversive of self-respect, self-exertion, and independence, and is detrimental to the industrial efficiency of the community.

(h) *General Principles Governing Public Assistance to the Able-bodied.*

143. Efficiency and inefficiency cannot work side by side at the same rate of pay without the certainty of inefficiency in the course of time lowering the standard of efficiency and determining the rate of pay and of progress. In all our proposals for dealing with poverty, distress, destitution, loafing, and laziness we have relied upon being able, under the treatment we suggest, to appeal to the better and worthier instincts of the individual. These may sometimes seem to be dead, and in certain cases even may be so, but in the vast majority of cases, by working for the moral regeneration of the individual, we may hope to restore him to independence and respectability. Such a process must often be slow, and in its earlier stages inflict personal discomfort. But in no case ought it to be possible to reverse this process and to allow the malingerer or the loafer to obtain a better payment than the diligent and well-conducted.

144. It has been pointed out that the increased comfort of our workhouses has made them attractive to a class of able-bodied to whose comfort it is not desirable to add. The elaborate proposals we now make will be nugatory unless for the future it is possible to segregate and deal separately with this class. It is not easy to formulate the principles of classification; but as, in the great majority of cases, it is curative treatment which is needed, we think that the determining factor should be the hopefulness of the case in the light of the present position and past life of the applicant. In some cases, no doubt, it will be found that a certain amount of preliminary discipline is indispensable before an applicant can be trusted to make a proper use of the opportunity and assistance given to him.

(26). *POLITICAL DISQUALIFICATIONS ON ACCOUNT OF PUBLIC ASSISTANCE.**

145. The question how far relief from the Public Assistance Authority should disfranchise its recipient is more closely connected with the relief of the able-bodied than with that of any other class of recipients of public assistance. We hold generally to the principle that those who, either from misfortune or otherwise, have failed to manage their own affairs successfully ought not by law to have power to interfere in the management of the affairs of others. But public assistance often assumes a transient form, and we are not disposed to disfranchise wholesale and unconditionally all who receive it. We therefore recommend that only those persons be disfranchised on account of public assistance who have received assistance other than medical relief for three months or more in the aggregate in the qualifying year.

As we have already stated, we do not think that medical assistance in any form should entail disfranchisement.

(27). *RECOVERY OF COST OF PUBLIC ASSISTANCE.†*

146. In our review of the working of the present law as regards the recovery of the cost of relief from the persons relieved and from their relatives, we point out that, even under the present uneven and irregular application of the law, a considerable sum is annually obtained. We in no sense wish to diminish this help to the ratepayer. On the contrary we think that the present procedure requires strengthening in various details, and we make the following recommendations:—

(a) *Loan Relief.*

Procedure for recovery should be simplified.

(b) *Recovery from Relatives.*

(1) Relatives who are liable should be required to contribute, and this policy should be pursued uniformly and with firmness and discretion.

* Cf. Part VI., Chapter 4 (2). † Cf. Part VIII., Chapter 3.

(2) Poor persons should have power to proceed directly against liable relatives, and the Public Assistance Authorities should have power to proceed against liable relatives before the applicant becomes actually chargeable.

(3) Simplification of procedure applicable to recovery of relief from relatives.

(4) The cost of relief given should be recoverable from relatives after the person has ceased to be chargeable.

(5) A man should be liable to contribute to the support of his grandparents.

(6) Non-liable relatives should also be induced to contribute where they are able to do so.

(28). BASTARDY.*

147. Representations have been made to us that the procedure as to the recovery of maintenance under Bastardy Orders is difficult and uncertain, and that the power of the Guardians to obtain such orders is too limited. These representations appear to us to be generally well founded. We have, therefore, made a number of detailed recommendations which will operate to the advantage of the Public Assistance Authorities and of the mothers. One recommendation which we make in the interests of morality is that the money paid by a putative father to the mother of an illegitimate child under a Bastardy Order should be paid through the agency of a third person.

148. As to the treatment of unmarried mothers, regarding which we have received a great deal of evidence, we make the following recommendations:—

(a) *Single Lapse Cases*.—These should be dealt with in institutions apart from the workhouse, preferably in charitable institutions, but if these are not available the Public Assistance Authorities should institute homes of their own. Charitable workers to watch over the girls on their first return to the world.

(b) *Depraved, Immoral Women*.—Detention and reformatory treatment on lines similar to those adopted for “in-and-out” cases should be organised.

(c) *Feeble-minded Unmarried Mothers*.—These should be dealt with in accordance with the recommendations of the Royal Commission on the Feeble-minded. Meantime the Public Assistance Authorities should have power to detain such mothers.**

(d) For the purpose of advising in regard to all maternity cases, a Women's Committee should be appointed in connection with every Public Assistance Committee, consisting of members of that Committee and of voluntary workers.

(29) THE DETENTION OR CONTINUOUS TREATMENT OF CERTAIN CLASSES OF PERSONS RECEIVING OR APPLYING FOR PUBLIC ASSISTANCE.†

149. It will have been observed that from time to time in our Report, we have recommended “detention” for certain classes of cases. We now propose to summarise our various proposals in this respect and explain very shortly our reasons for recommending this form of treatment.

150. The term “detention” is perhaps, however, infelicitous. It is generally associated with the idea of punishment by imprisonment. Our primary object in proposing detention is neither punishment nor imprisonment. We aim at obtaining opportunities for applying ameliorative treatment to particular individuals over a continuous period. We desire to substitute, for the present system of incontinuous and inefficacious relief, a continuity of care and treatment which shall benefit both the recipient and the community. To secure this continuity of treatment, some powers of control are necessary, but these powers of control are intended in the vast majority of cases to be curative and stimulative rather than punitive, nor need they necessarily be always exercised in an institution, as we shall see when we go into particulars of the various classes of cases.

* Cf. Part VIII., Chapter 4.

† Cf. Part IV., Chapters 5, 6, 7, 8 and 9; Part V., Chapter 2; Part VI., Chapter 4 (2); and Part VIII. Chapters 4 and 7.

** See par. 151, Class III (a), page 638.

Sometimes the continuity of treatment which we propose, is required primarily in the interests of the individual, sometimes primarily in the interests of the community, and sometimes indistinguishably in the interests of both the community and the individual. But all these cases have this common characteristic, viz., that the absence of power of continuous treatment constitutes a danger either to the individual or the State.

(A) Classes of Cases requiring Continuous Treatment.

151. We may classify the cases according as the Continuous Treatment is necessitated by :—

I.—Extreme Age or Extreme Youth.

II.—Illness or Disease of Mind or Body.

III.—Persistent Indulgence in Vice or Pernicious Habits.

We will now describe more particularly the cases coming within these categories, and the conditions and safeguards under which we think that Continuous Treatment should be applied to them.

Class I.—Those Requiring Continuous Care and Treatment on Account of Extreme Age or Extreme Youth.

This class will be subdivided into :—

(a) The Aged, and

(b) Children.

(a) The Aged.—There are certain helpless, friendless, old people receiving or needing relief, and living in a state of neglect which is very harmful. Such, for instance, would be frail old persons who might fall into the fire or otherwise injure themselves, who cannot clean or feed themselves properly, or, again, who are suffering from some ailment which, though slight in itself, is yet crippling to advanced age. It does not seem right that such old people should be maintained by public money in conditions so distressing and so dangerous. They should clearly be dealt with either in almshouses or, if necessary, in infirmaries, where their wants and ailments could be properly attended to. But these cases require very considerate treatment, and it is only in the event of their being friendless, or, of the inability of their friends or relatives to look after them in their own homes, that we think that, in their own interests, what we shall call an Order for Continuous Treatment should be obtained in regard to them. The conditions under which such an Order should be obtainable are as follows :—

(1) A medical certificate that continuous care and treatment are essential in the interests of the health or safety of the person concerned.

(2) Sufficient proof that neither such person, nor his or her friends or relatives are able and willing to provide the continuous care and treatment.

(b) Children.—The children to whom we think “Continuous Treatment” should be applied are children of “ins-and outs” and of parents whose mode of life is so harmful to the children, that in the interests, both of the children and of the State whose future citizens they will be, the children should be separated from parental control. Under existing Acts, the Guardians already have the power to take over the rights of the parents of children until the age of eighteen, where they are of opinion that a parent of a child, by reason of mental deficiency or of vicious habits or mode of life, is unfit to have control of it. We consider that the principle of these Acts should be applied to the class of children we have specified, and that the control should continue until the age of twenty-one. More especially the Acts should automatically apply in all cases where parents have rendered themselves liable to detention through indulgence in vice or pernicious habits as explained in Class III. below.

Class II.—Those requiring Continuous Care and Treatment owing to Illness or Disease of Mind or Body.

(a) *Feeble-minded.*—Under this heading come those persons who, though not certified as insane, are yet not in such sufficient possession of their faculties as to be capable of properly looking after themselves. With regard to this class, their case is fully dealt with in the report of the Royal Commission on the Care and Control of the Feeble-minded. If, as we hope, the recommendations of that Commission are carried into effect, a system of control over the feeble-minded will be initiated which will free the Poor Law administrator from one of his greatest difficulties. Meanwhile, we think that as a provisional measure, the Poor Law Authorities should be given power to detain feeble-minded persons who come under their care.

(b) *Persons Suffering from Serious (Non-infectious) Illness.*—Such cases would be, for instance, persons bedridden with rheumatism, or suffering from some malignant disease which could not properly be treated in their own homes. The conditions under which such persons should become liable for Continuous Treatment should be those which we have specified for the “Aged” above, viz. :—

(1) A medical certificate that Continuous Care and Treatment is essential in the interests of the health or safety of the person concerned.

(2) Sufficient proof that neither such person, nor his or her friends or relatives are able and willing to provide the Continuous Care and Treatment.

(c) *Persons Suffering from Certain Infectious or Contagious Diseases.*—These may be divided into three classes :—

(1) *Phthisis in an Advanced Stage.*—We have dealt in Par. 155, Part V., with the difficulties surrounding this class of case, and with the difference of opinion in the medical profession as to when the development of this disease does become so infectious as to be a danger to those with whom the afflicted one may come in contact. We would, therefore, only advocate a compulsory Order for Continuous Treatment in advanced cases where a medical certificate is produced, certifying that the patient is likely to infect others, or where the home conditions of the patient are such as to lead, with practical certainty, to the spread of the disease.

(2) *Children Suffering from Ophthalmia or some other Infectious Complaint.*—As regards ophthalmic children of “in-and-out” parents, we have recommended that they should be “detained,” and the same recommendation should be applied to all children suffering from infectious complaints of such a character as to be a source of danger to other children. In their case an Order for Continuous Treatment should be obtainable upon the production of a medical certificate to the effect that the diseased child is either in a state dangerous to others, or else is likely to communicate the disease to others, and that such danger or likelihood is not being obviated by the treatment provided by the parents, guardians, relatives, or friends.

(3) *Venereal Diseases.*—Those affected by these diseases come under a different category. In the vast majority of cases, they have contracted this ailment by their own misconduct. We have received evidence to the effect that these diseases work terrible havoc with the physique and stamina of the community, and that much of the infant mortality and bad health of children is due to their after consequence. If the object be the arrest and stamping out of these poisonous ailments, caution must be exercised in not prescribing treatment so drastic as to lead to their concealment. We are, however, clearly of opinion that whenever sufficient proof is produced that an individual is in such a condition as to be a danger to the community amongst whom he or she may be living, an Order for Detention or Continuous Treatment should be obtainable.

Class III.—Those Requiring Continuous Care and Treatment Owing to Indulgence in Vice or Pernicious Habits.

(a) *Unmarried Mothers.*—We have recommended that “first” cases should be dealt with in charitable institutions, and where the mothers are feeble-minded, they will be dealt with under that head. We have, however, to consider the case of the more depraved women who habitually make a convenience of the workhouse for the purpose of being confined with illegitimate children, who in their turn become a permanent charge upon the rates. We recognise the difficulty of dealing with these cases; on the one hand, they may not resort to the workhouse sufficiently frequently within the year to come within the ordinary category of “ins-and-outs”; on the other hand, whilst it is right to check, if possible, their career of vice, it must at the same time be recognised that the not always accessible putative father is largely to blame. We think that women of this class should be liable to an Order by Justices for a period of Continuous Treatment, and that after recovery from confinement they should be sent to some suitable institutions for a fixed period and placed under reformatory influence.

We commend this course in the interest of the woman herself. Unfortunate women, when they have fallen thus low, have often no means of subsistence except through a resumption of their vicious mode of life. The treatment we suggest may afford them some chance of regaining a respectable existence.

(b) *Adults Repeatedly Becoming Chargeable through Wilful Neglect or Misconduct.*—The last class of cases which we have to consider are those in which there appears to be no hope of applying beneficial continuous treatment, except under conditions of discipline and deterrence, such as could more efficiently and more suitably be exercised by an authority other than the Public Assistance Authority.

We have accordingly recommended that persons should be committed to a “Detention Colony” under the Home Office, for any period between six months and three years, who have been guilty of wilful and persistent repetition within a given period of any of the following offences:—

(1) Wilful refusal or neglect of persons to maintain themselves or their families (although such persons are wholly or in part able to do so), the result of such refusal or neglect being that the persons or their families have become chargeable to the Public Assistance Authority.

(2) Wilful refusal on the part of a person receiving assistance, to perform the work or to observe the regulations duly prescribed in regard to such assistance.

(3) Wilful refusal to comply with the conditions, laid down by the Public Assistance Authority, upon which assistance can be obtained, with the result that a person's family thereby becomes chargeable.

(4) Giving way to gambling, drink, or idleness, with the result that a person or his or her family thereby becomes chargeable.

The results of this provision will be, we hope, that the loafer, the “in-and-out,” the person who neglects his family, or who makes them chargeable owing to habits of gambling, drink, or idleness, etc., etc., will be submitted to a course of severe discipline and training, which, even if it does not restore the man to a comparative state of industrial efficiency, will at the least for a certain period prevent him from further demoralisation, and will to some extent deter both himself and others from indulging in the vice or habit responsible for his downfall.

(B) *Procedure for Obtaining Order for Continuous Treatment for Classes I. and II. and Class III. (a).*

152. We will now consider the procedure by which an Order for Continuous Treatment should be obtained, and also what the effects of that Order should be.

It has been suggested that in certain cases an Order for Detention or Continuous Treatment should be an administrative matter in the hands of the Public Assistance Authority, just as the Guardians now have power to detain certain paupers for short periods in the Workhouse. It must be remembered, however, that the Continuous Treatment which we now propose would extend in some cases to three years. We feel, therefore, that a proposal to commit a person to compulsory control for such a period on a mere Order of the Public Assistance Authority might meet with great opposition, and would not, in the present state of public opinion, be accepted. We therefore propose that in all these cases an Order for Continuous Treatment should only be obtainable after an application on behalf of the Public Assistance Authority to Justices of the Peace and upon such Justices being satisfied that the conditions which we have specified as rendering persons liable to continuous treatment have been fulfilled. In making these suggestions we have in mind the existing procedure under the Public Health Act, 1875 (Sect. 124), and the Infectious Disease Prevention Act, 1890 (Sect. 12), under which persons suffering from certain diseases can be removed to or detained in infectious hospitals on a Justice's order. We do not think that the application for an Order for Continuous Treatment need be made in open court; but we would allow an appeal to Quarter Sessions. Such appeal, however, should not be allowed to interfere with the temporary validity of the Order.

We have suggested that cases of inebriety should be dealt with as far as possible in their earlier stages, on the ground that the inebriate is reducing himself and his family to such straits that he will have to apply to the Public Assistance Authorities for maintenance. We have already drawn attention to the recent report of the Departmental Committee on the subject generally, with which we are in substantial agreement.

(C) Effect of an Order for Continuous Treatment.

153. Persons against whom an Order for Continuous Treatment had been obtained would be under continuous control for the period named in the Order, or for a lesser period, if the Public Assistance Authority were satisfied that the conditions which had given rise to the order had ceased to exist.

It would not always be necessary that the control of the Public Assistance or other Authority should be exercised for the whole, or in some cases, for any part of the period in an institution. For instance, it would be within our view of what was right that an able-bodied man in a Detention Colony might be let out from such colony before the expiry of his Order for Continuous Treatment, on condition of reporting himself periodically to the Public Assistance Authority, in order to test the progress he had made in overcoming the habit which had led to his detention. If necessary, however, the issue of an Order for Continuous Treatment would empower the Public Assistance Authority to remove the cases to which the Order applied to an institution and to detain them in such institution for the whole period of the Order.

154. Our survey of the evils and futilities of the present system convinces us that it is not possible to deal humanely, adequately, and restoratively with the cases we are considering unless there is power to give them continuous treatment under conditions which can be enforced.

(30). SETTLEMENT AND REMOVAL.*

155. Theoretically, there is much to be said in favour of the proposal to abolish the Law of Settlement and Removal. From a practical point of view, however, there is much to be said against its entire abolition, and, accordingly, until experience has been gained of the work of our new organisation of Public Assistance, we think it better to retain the law, but in a modified and simplified form. The specific recommendations we make are:—

(a) That the County or County Borough shall be the area for all purposes of settlement and removal.

* Cf. Part VIII., Chapter 2.

- (b) That the forms of settlement be reduced to four, viz. :—
 Birth.
 Parentage.
 Marriage.
 Residence.

(c) That a settlement be acquired by one year's residence in a County or County Borough.

(d) That the Local Government Board determine all cases of disputed settlement unless the Board consider that a particular case should be decided in a Court of Law.

(e) That there be reciprocity of removal as between England, Scotland and Ireland.

If these changes be given effect to, the labour of inquiry, the cost of litigation, and the hardship of removal under the existing law will be very greatly diminished. We would thus hope that most of the objections to the law would be met. But, if experience showed that total abolition of the law was preferable, that course might be adopted later.

(31). VACCINATION AND REGISTRATION OF BIRTHS, ETC.

156. If the Boards of Guardians are abolished, and their Poor Law functions are transferred to a Statutory Committee of the County and County Borough Councils, their duties in connection with vaccination and registration of births, etc., which are altogether extraneous to the work of public assistance, should be handed over to the committees of those councils dealing with kindred matters. The Registrar-General considers that a closer relation between the Sanitary and Registration Districts is highly desirable, and has furnished us with a Memorandum containing a proposal having this object in view.

(32). COMPOUNDING FOR RATES.*

157. A survey of the evidence upon the subject of Compounding for Rates submitted to the Local Taxation Commission as well as to ourselves has convinced us of the desirability of the direct payment of rates by those who elect Local Authorities; and although we are well aware of the difficulties which would prevent a sudden abolition of the compounding system, we are fully persuaded that it should be reduced to the lowest possible limit. This would involve more careful and detailed arrangements for the direct collection of rates; but in the long run the community would benefit not only from less extravagant administration, but from a more active and intelligent interest in local self-government on the part of the electorate. If this policy were pursued, it might also be found desirable to modify the provisions of the Poor Rate Assessment and Collection Act of 1869, in the direction of reducing the limit of rateable value for compounding purposes.

(33). THE COMPILATION OF THE STATISTICS OF PUBLIC ASSISTANCE.†

158. The marshalling and interpretation of the mass of statistical evidence on the subject of our inquiry has been a matter of some difficulty. Notwithstanding the many Poor Law statistical returns issued periodically we found it essential to call for further statistical information. Reference is made elsewhere to the various statistics we obtained, and to which we attach considerable value. Most important, perhaps, was the Return of the persons relieved during the twelve months ended September 30th, 1907, and of the periods and recurrence of their relief. The results of this Return have thrown a flood of light upon the character of the pauper population, and they reveal in a striking manner the varying problems which confront the Poor Law Authorities. On the one hand there are cases in which relief has been obtained on four or five different occasions during the year whilst not extending to a period of one week in the total, and on the other hand there are the many cases chargeable uninterruptedly throughout the year. Between those extremes all manner of cases are to be found, cases of the merest touch with the

* Cf. Part VIII., Chapter 8.

† Cf. Part VIII., Chapter 10.

Poor Law, persistently recurring cases, and cases of protracted, though not permanent relief. So important do we consider this information that we recommend the collection at regular intervals of statistics upon the same lines.

We also recommend the regular compilation of medical and age statistics, an amendment in the principle of classification according to physical ability and special Returns as to the cost of various classes of persons relieved and of various methods of relief.

(34). CONSTRUCTIVE RELIEF IN THE CASE OF THE AFFLICTED.†

159. We suggest an extension of the exceptions to the rule of constructive pauperism. Under the existing law a man or a widow whose dependents receive relief is considered to be constructively relieved and may be disfranchised. If, however, the dependent be blind, or deaf and dumb, this rule does not apply, and we think that similar exceptions should be made in the case of the mentally defective, epileptic, lame, deformed, and crippled, provided that the assistance rendered from public funds to or on account of the afflicted wife or child is occasioned by such infirmity. It will be seen that this extension has an important bearing on the question of disfranchisement on account of relief.

(35). TEMPORARY COMMISSION, ETC.

160. If our proposals are accepted and passed into law, we recommend that a small Temporary Commission working under the Local Government Board be appointed composed of persons of administrative experience, who should place themselves in direct communication with the Local Authorities with a view to securing the early and effective development of the new system. The appointment of such a Commission and a definition of their powers and objects should, in our judgment, be made part of the Act reforming the present Poor Law system.

We do not feel called upon to set out in much detail the transitional arrangements which may be necessary to carry the reforms we suggest into operation, and we believe that it would not even be possible to do so in an Act of Parliament.

We assume that the Local Government Board will be given the widest possible discretion to make all orders and regulations which may be necessary, and to take any steps which, in their opinion and upon the advice of the Temporary Commission, may be required to remove any difficulties arising in the establishment of the new authorities and the organisation of their work. There are one or two points, however, which we must notice. We believe that the appointed day upon which the new bodies will be constituted and the expenses will become chargeable upon the new areas, cannot be earlier than the commencement of the financial year next ensuing after the passing of the Act. But we see no necessity for any similar postponement in the formation of the Labour Exchanges, and the appointment of the Central organisation to control them. In our opinion, this part of our proposal might be embodied in a separate Bill which should be passed at the earliest possible date. It will, of course, be understood that the new Public Assistance Authority and their Committees will, on the appointed day, take over the existing Poor Law institutions and officers, and will carry on the work of relief.

(36). OUR PROPOSALS IN RELATION TO SCOTLAND.

161. The case of Scotland will be dealt with in a separate report which is being prepared, and will be issued as soon as possible. The Poor Law system of Scotland is in many respects essentially different from those of England and Ireland. For example:—

1. The area of Poor Law administration in Scotland is the parish. The parish is also the area for educational purposes.

2. The Parochial Boards established under the Poor Law Act, 1845, for administering the Poor Laws were superseded as recently as 1894 by Parish Councils—the present authority—and these Councils discharge other functions besides those connected with the relief of the poor.

† Cf. Part VIII., Chapter 9.

3. An able-bodied person is not legally entitled to poor relief.

4. The form of relief granted (although not to the same extent in large burghal parishes) is mainly outdoor relief.

It is thus apparent that, while the principles of the scheme of Public Assistance which we have recommended for England may be applied to Scotland, modifications will be required. It should perhaps also be observed that, so recently as 1904, a Departmental Committee of the Local Government Board for Scotland took evidence and reported on the system of Poor Law Medical Relief and on the Rules and Regulations for the management of Poorhouses in Scotland.

162. It is thus apparent that, while the principles of the scheme of Public Assistance which we have recommended for England may be applied to Scotland, considerable modifications will in any case be required. It is also to be observed that, so recently as 1904, a Departmental Committee of the Local Government Board for Scotland took evidence and reported on the system of Poor Law Medical Relief and on the Rules and Regulations for the management of Poorhouses in Scotland. Further, the administration of medical relief in Scotland is not on all-fours with the practice of England. For instance, in Scotland, there is an obligation resting on the Sanitary Authority to deal with and control Pulmonary Phthisis as an infectious disease in terms of the Public Health Statutes. It would be inadvisable to alter that law which is now in operation, and there may therefore be, in this and other respects, deviation as regards Scotland from the principles and scheme which we have proposed for England.

163. The Unemployed Workmen Act of 1905 applies to Scotland as well as to England, and although we are aware that the conditions and the methods of administration are not wholly identical in the two countries, we think that, in the main, our recommendations as regards the unemployed and relief of distress are applicable equally to Scotland and England. The sections of our Report describing the preventive measures which we propose, such as the decasualisation of labour, the establishment of a national system of labour exchanges, and the institution of a system of insurance against unemployment are of general application, and could be put in operation simultaneously in England and Scotland.

(37). OUR PROPOSALS IN RELATION TO IRELAND.

164. We also deal in a separate volume with Poor Law administration in Ireland. The Poor Laws of England and Ireland have much in common, on many points they are identical. Thus we have often found that the experience of one country suggests a reform in the other, and it may be convenient to state here that we intend that our recommendations in regard to the extension of areas, the constitution of the new authorities, and the classification of institutions should apply equally to both. At the outset of our inquiry we found that a Vice-Regal Commission had lately reported on several points in connection with Poor Law administration in Ireland, and had formulated certain proposals for reform. The Commissioners were men of great experience and wide local knowledge, and their recommendations appear to have received general support throughout the country. We are greatly indebted to their Report, so much so that we have not thought it necessary to take any further evidence on matters with which they had dealt exhaustively. But we visited Ireland in order to make ourselves acquainted with the existing state of things, and some reports on the institutions, etc., in different parts of the country will be found in the Appendix. Our scheme, it will be seen, in the main falls in with the views of the Vice-Regal Commission, and although, in recommending the abolition of Boards of Guardians and the substitution of Statutory Committees, we have carried the reform a step further than the Vice-Regal Commissioners have gone, still we believe this will be found on the whole to be an advantage, as it will secure that the authority which provides the funds for the relief of the poor will also be responsible for their administration.

It is true that the suggestion of the Irish Commissioners to revert to the old District Electoral Division as the area of rating for outdoor relief would not harmonise with the general principle of central county administration we have outlined. But now that the Old-Age Pensions Act has so greatly restricted the sphere of out-relief, this will become a minor consideration. Moreover we believe that in practice the experiment of collecting separate rates over different areas for indoor and outdoor relief might be found difficult of application.

165. Save as regards their proposals affecting outdoor relief, and the retention of the old Boards of Guardians to administer the county rates for the relief of the poor, we find ourselves generally in accord with the recommendations summed up in the concluding chapters of the Vice-Regal Commissioners' Report, and it appears clear that the statutory enactment required to give effect to our scheme of Poor Law reform would, if extended to Ireland, be found to give legislative authority for carrying out the almost identical reforms in Ireland which were recommended by the Commissioners in 1906.

166. We do not suggest that our transitional arrangements for the relief of temporary exceptional distress should be applied to Ireland. The Local Government (Ireland) Act of 1898 has already made provision for any temporary emergencies which may arise, by a system which is no doubt better suited to the requirements of an agricultural country like Ireland than that which we propose for the relief of distress in centres of industrial population in England.

Our separate Report in regard to Ireland will fully describe the differences between the English and the Irish Poor Law systems, and will explain in detail the application of the suggested reforms to Ireland.

(38). CONCLUSION.

167. The proposals we make cover a large field of administration, will conflict with many old traditions, and will take time before they can come into really effective operation. But the evils we have had to describe are so widespread and deep-rooted, and form so integral a part of the social life of the country, that no remedies less in scope or in force would in our judgment be sufficient.

168. But great as are the administrative changes which we propose, and costly as some of the new establishments may be, we feel strongly that the pauperism and distress we have described can never be successfully combated by administration and expenditure. The causes of distress are not only economic and industrial; in their origin and character they are largely moral. Government by itself cannot correct or remove such influences. Something more is required. The co-operation, spontaneous and whole-hearted, of the community at large, and especially of those sections of it which are well-to-do and free from the pressure of poverty, is indispensable. There is evidence from many quarters to show that the weak part of our system is not want of public spirit or benevolence, or lack of funds or of social workers, or of the material out of which these can be made. Its weakness is lack of organisation, of method, and of confidence in those who administer the system. We have so framed the new system as to invite and bring into positions of authority the best talent and experience that the locality can provide. In addition to those vested with such authority we have left a place in the new system for all capable and willing social workers; but they must work in accord, under guidance, and in the sphere allotted to them.

169. Great Britain is the home of voluntary effort, and its triumphs and successes constitute in themselves much of the history of the country. But voluntary effort when attacking a common and ubiquitous evil must be disciplined and led. We have here to learn a lesson from foreign countries whose charitable and social organisations, notably in France, Germany, Belgium and Holland, work under official guidance with efficacy, promptitude, and success. Looking at the voluntary resources and societies at our disposal there is every reason to believe that we can vie with and surpass any results obtained abroad. To this end it is organisation we need, and this organisation we now suggest.

170. There are other forms of assistance and prevention which we hope this Report may evoke from certain sections of society whose attitude hitherto has not been helpful. "Example is the school of mankind," and this aphorism was never truer than in these days of publicity. In every community the mode of life, the habits and the expenditure of the rich and ostentatious, reflect and reproduce themselves in the lower grades of society. Witness after witness has noted the extravagance in dress, the restless craving for amusement, the increasing time spent in watching sports or games—in a word, the subordination of the more serious duties of life to the frivolity and amusements of the moment. These are habits which cannot exist side by side with thrift, self-restraint, and self-improvement.

In the judgment of these witnesses these habits are largely responsible for much of modern pauperism and distress. A reform in these respects is required. May it not be fairly urged that to be effective and rapid the lead and example should be given from above?

171. But over and above these we must notice two other causes which exercise a subtle but important influence—we mean irregularity of demand and the confusion which exists in the minds of many consumers between cheapness and low price:—

(1) It is perhaps Utopian to imagine that men and women will ever free themselves from the bondage of fashion, and indeed its power seems to be greater now than ever. But fashion with its incessant changes exercises a powerful influence on production. The lace-trade at Nottingham may be cited as a typical case. The popular use or disuse of lace determines to a large extent, the amount of employment in Nottingham, which is thus dependent on a demand of which it can only be said with certainty that it is irregular.

(2) It was laid down by Adam Smith that the consumer is the best judge of the quality of a product, and the dictum had an important bearing on legislation. But experience shows that many people, and the working classes themselves at least as much as any other, prefer commodities which are not durable, and which have the apparent advantage of being low priced. It is in the production of such commodities that much of the worst paid labour is employed. Furniture and clothing are prominent examples, but the list might be greatly enlarged. If consumers could be induced to spend their money thoughtfully on articles of permanent value, and of real use, many of the labour problems of the day would be in a fair way towards solution.

172. In our analysis of the modern development of industry we have drawn attention to the inherent evils of casual and intermittent employment upon those so engaged. We are convinced that the reason why the bulk of those employing this kind of labour have made no serious or combined effort to mitigate its evils is that they are unaware of their magnitude. We hope to remove from all sections of society this unconsciousness of and unconcern in the wants, the failings and the sufferings of those outside their immediate circle, and to replace them by knowledge, sympathy and co-operation.

173. "Land of Hope and Glory" is a popular and patriotic lyric sung each year with rapture by thousands of voices. The enthusiasm is partly evoked by the beauty of the idea itself, but more by the belief that Great Britain does, above other countries, merit this eulogium, and that the conditions in existence here are such that the fulfilment of hope and the achievement of glory are more open to the individual than in other and less favoured lands. To certain classes of the community into whose moral and material condition it has been our duty to enquire, these words are a mockery and a falshood. To many of them, possibly from their own failure and faults, there is in this life but little hope, and to many more "glory" or its realisation is an unknown ideal. Our investigations prove the existence in our midst of a class whose condition and environment are a discredit, and a peril to the whole community. Each and every section of society has a common duty to perform in combating this evil and contracting its area, a duty which can only be performed by united and untiring effort to convert useless and costly inefficient into self-sustaining and respectable members of the community. No country, however rich, can permanently hold its own in the race of international competition, if hampered by an increasing load of this dead weight; or can successfully perform the role of sovereignty beyond the seas, if a portion of its own folk at home are sinking below the civilization and aspirations of its subject races abroad.

We have from the outset worked under the knowledge that it was necessary to report upon the questions referred to us in time to guide impending legislation. The pressure thus imposed compelled us to accelerate our proceedings and in consequence we have not been able to give to all the subjects brought under our cognisance the time and investigation we desire. Even so it would have been quite impossible for us to have compressed our work into a period of three years, but for the exceptional assistance we have received from the staff placed at our disposal. This staff, though small for the burden of work imposed upon it, was admirably organised and skilfully handled. The arranging, distribution, annotation, and correction of the vast masses of evidence and papers brought before us was daily performed with unfailing punctuality and precision.

Our Secretary, Mr. Duff, of the Local Government Board, displayed great organising power, a clear judgment, and a complete grasp of the problems involved. His tact, energy, and enthusiasm have gone far to smooth the way and lighten the work of the Commission.

Of our Assistant Secretaries, Mr. Jeffrey, of the Scottish Local Government Board, over and above the invaluable assistance which he gave to us in all matters relating to Scotland, has throughout been fertile in suggestions, as well as clear and accurate in his handling of detail.

Mr. Craven, of the Statistical Department of the Customs, to whose conversance with statistical methods we are specially indebted, has shown conspicuous ability in dealing with these and with all the other matters that have come under his charge.

We desire to bring to the notice of the heads of their respective Departments our strong sense of the value of the services which these gentlemen have rendered to the Commission.

ALL WHICH WE HUMBLY SUBMIT FOR YOUR MAJESTY'S GRACIOUS
CONSIDERATION.

LIST OF PRINCIPAL RECOMMENDATIONS CONTAINED IN THE REPORT.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(A) THE LOCAL GOVERNMENT BOARD AND ITS OFFICERS. (See Part IV., Chap. I., and Part IX., 46–64.)

(1) The Central Authority should assume a more direct position of guidance and initiative in regard to the Local Authorities. (IV., 47.)

(2) The *status* of the Local Government Board does not seem to us to be adequate, considering the importance, authority, and character of the multifarious work it discharges. We are in full accord with the proposal to raise the salary and *status* of the head of the Department to that of a Secretary of State. (IX., 47.)

(3) We feel it of great importance that the staff of the Office should be adequately increased so as to relieve the Permanent Secretary and the higher officials of the undue strain which the present conditions often impose upon them. (IX., 48.)

(4) The Division of the Local Government Board which has hitherto dealt with “the Relief of the Poor” should in future be known as the Public Assistance Division. (IV., 49.)

(5) We recommend that there should be closer co-operation between the Public Assistance Division, and the Statistical and Audit Divisions of the Local Government Board. Similarly the Public Assistance Division of the Local Government Board should be in close touch with other Government Offices in work in which they are commonly interested. (IX., 50.)

(6) We recommend that in future the annual Report of the Public Assistance Division should be printed and presented to Parliament in a volume separate from the rest of the Report of the Local Government Board. (IX., 49.)

(7) To assist the new local authorities to understand the spirit of their duties and the intention of the legislature, the codification and consolidation of existing Poor Law statutes should at once be undertaken as well as of the orders and circulars issued under the authority of those statutes. To expedite this work, we would suggest the appointment of a small committee of Poor Law and legal experts to sit continuously until the task is completed. (IX., 58.)

(8) We think also that it would be useful for the Central Authority to issue or cause to be issued a small manual of instructions for the guidance of the local authorities. The manual should contain a clear exposition of the main features of the law relating to Public Assistance, and of the policy of the Central Authority as laid down in their orders and circulars. The manual should be periodically revised and brought up to date. (IX., 59.)

(9) We trust that the constitution of the new Local Authorities will enable the Local Government Board to devolve upon them the power to give assent to many individual cases of relief, such as emigration cases, children sent to homes, etc. The devolution of such powers would lighten the work of the Local Government Board considerably and advantageously. (IX., 60.)

(10) The powers of the Local Government Board under the Local Authorities (Expenses) Act, 1887, should be strictly limited to sanctioning expenditure after it has been incurred. (IV., 24.)

(11) The Local Government Board at present cannot order a new workhouse to be built unless a majority of the Guardians of the union or of the owners and ratepayers consent. It is desirable that this limitation should cease, and that the Board should have power to compel the local authority to provide adequate buildings and adequate classification. (IX., 61.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(A) THE LOCAL GOVERNMENT BOARD AND ITS OFFICERS—*cont.*

(12) The Local Government Board should have power to direct that a particular class or classes of paupers for whom there is no suitable accommodation in the area of a Public Assistance Authority should be removed to and treated in any available and suitable institution of another Public Assistance Authority. (IX., 61.)

(13) We feel that a stronger check should be exercised than heretofore over the cost of buildings erected by loan. To prevent extravagance, they should be built more in accord with some accepted plan, and care should be taken that the buildings are actually erected in accordance with the approved plans, estimates, and quantities (IX., 62, IV., 204., & V., 134). *Cf.* Recommendation 70

(14) The Local Government Board should have power to authorise the Public Assistance Authority to purchase land compulsorily for the provision or enlargement of institutions. (IX., 62.)

(15) Previous to 1894 the Central Authority were able through the *ex officio* Guardians to carry on the business if the elected Guardians refused to act. Though we do not contemplate the likelihood of any such hitch occurring as that the new authority would decline to act, it would be well that the Local Government Board should be given authority in such a contingency to empower persons to exercise temporarily all or any of the powers which they may consider necessary for the object in view. (IX., 63.)

(16) We recommend that the Local Government Board should be empowered to compel Public Assistance Authorities to combine to provide for certain classes of cases, when sufficient and suitable accommodation is not otherwise available, and failing agreement between the authorities concerned. (IX., 64.)

Grants in Aid of Local Taxation.

(17) Grants or portions of grants in aid of Local Taxation should be withheld from a County or County Borough Authority in cases where the Local Government Board reports that the administration, or branches of the administration of Public Assistance are not efficient (IX., 67), and the amount of the grants should be raised to £5,000,000, as recommended by the Minority Report of the Royal Commission on Local Taxation.

Inspectors, Auditors, etc.

(17a). The staff of Medical Inspectors should be increased. (V., 127.)

(18) Definite qualifications should be laid down for the office of General Inspector, and prior to appointment Inspectors should, as a rule, be appointed Assistant Inspectors, and in that capacity should have opportunities of learning the character of the administration of relief, both legal and voluntary. (IV., 35.)

(19) The General Inspectors should have afforded them the help of Assistant Inspectors, to whom they might depute some of their routine and less important duties, and should be given the assistance of experts when needed. (IV., 33.)

(20) We think that for the future the Inspectors should be authorised to attend, not only the meetings of the Public Assistance Authority, but also those of the Public Assistance Committees and sub-committees, as well as to visit institutions. They should be ready to advise the Public Assistance Committee in regard to the general principles and methods of Public Assistance; they should, in conjunction with the Assistance Officers and otherwise, visit individual cases, so as to ascertain whether the Assistance is given under suitable conditions. (IX., 51.)

(21) Upon appointment Inspectors should receive written or printed instructions as to their duties, and such instructions should be periodically revised. Conferences should take place between the Inspectors, at least annually, to enable them to exchange views and experiences, and thus to carry out methodically the policy of the Department. IX., 51.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(A) THE LOCAL GOVERNMENT BOARD AND ITS OFFICERS.—*cont.*

(22) The present system of audit should be maintained, on the understanding that persons appointed as Auditors should be experts, both in the law and in the practice of the Poor Law, and should, as a rule, have served, in the first instance, as Assistant Auditors; Assistant Auditors should, before appointment, be required to show that they have definite qualifications for the post, both by reason of their knowledge of the general administration of the Poor Law and by reason of their professional ability as Accountants; and as a rule the possession of such qualifications should be tested by examination or otherwise. (IV., 18.)

(23) The Audit Staff should be increased. (IV., 19.)

(24) We consider that the increase in the number and efficiency of the inspectors and auditors which we propose is no more than is essential for the normal control and supervision of the administration of Public Assistance. But in addition we recommend that adequate funds should be placed at the disposal of the Local Government Board, to enable it from time to time to undertake inquiries or to obtain expert assistance upon particular subjects. (IX., 53.)

(B) THE LOCAL AUTHORITIES AND THEIR OFFICERS (*See Part IV., Chap. 2, and Part IX.*).

Magistrates.

(25) The powers of Magistrates to visit and report on the state of Workhouses and to order relief may be regarded as obsolete and should be abolished. (IV., 61.)

Public Assistance Authorities and Committees.

(26) We have separated the duties now performed by Boards of Guardians into two categories, and we propose to call into existence two bodies for the discharge of the two sets of functions, viz: (IX., 20.)

(1) A Local Authority for central administration and control within an enlarged area.

(2) Local Committees for dealing with applications, investigating and supervising cases, and undertaking such other duties as may be delegated by the Local Authority.

(27) We recommend that the new Local Authority shall be known as the Public Assistance Authority, and that the Committees which will carry on its work locally shall be known as Public Assistance Committees. (IX., 3.)

Area of the Public Assistance Authority.

(28) The area of the Public Assistance Authority shall be coterminous with the area of the county or county borough, and no exception from this principle shall be permissible unless the Local Government Board is satisfied that such exception would, in each particular case, be in the best interests of administration. (IX., 7.)

(29) Any union area, which at present overlaps a county or county borough, shall be divided up so that each part of it will be attached for Public Assistance purposes to the county or county borough within the boundaries of which such part is at present situated. (IX., 7.)

(30) Any injustice or anomaly arising from this arrangement may be remedied subsequently by the ordinary procedure for altering county or county borough boundaries, supplemented, if necessary, by further powers to the Local Government Board. (IX. 7.)

(31) Financial adjustments necessitated by the partition of a union area shall be determined by agreement between the authorities concerned, and, failing agreement, by arbitration as under Section 62 of the Local Government Act, 1888. (IX., 7.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(B) THE LOCAL AUTHORITIES AND THEIR OFFICERS.—*cont.**Constitution of the Public Assistance Authority.*

(32) The Public Assistance Authority shall be a statutory committee of the County or County Borough Council constituted as follows (IX., 23):—

(i.) One-half of the members to be appointed by the council of the County or County Borough, and the persons so appointed may be persons who are members of the council.

(ii.) The other half of the members to be appointed by the council from outside their number, and to consist of persons experienced in the local administration of Public Assistance or other cognate work.

(iii.) The actual number of members of the Public Assistance Authority, in each case and from time to time, to be determined by the Local Government Board, after consideration of a scheme submitted on the first occasion by the council of the County or County Borough, and on subsequent occasions by the Public Assistance Authority.

(iv.) Women to be eligible for appointment under either head (i.) or (ii.).

(33) One-third of the members of the Public Assistance Authority shall retire each year, but shall be eligible for reappointment if duly qualified. A member ceasing to be a member of County Council or County Borough Council shall *ipso facto* cease to be a member of the Public Assistance Authority, but shall be eligible for reappointment if otherwise qualified. (IX., 23.)

Duties and Powers of the Public Assistance Authority.

(34) The powers and duties of the Public Assistance Authority would, subject to the regulations and general control of the Local Government Board, be as follows:—(IX., 20.)

(a) To set up and supervise Public Assistance Committees for investigating and deciding applications for Assistance, and for dealing with applicants in accordance with the regulations of the Local Government Board.

(b) To make rules and standing-orders for the guidance of the Public Assistance Committees.

(c) To dissolve any Public Assistance Committee subject to the assent of the Local Government Board.

(d) To organise, provide and maintain the institutions necessary for the supply of sufficient and suitable Assistance within their area, or to combine with other Public Assistance Authorities for that purpose, and to be responsible for all contracts and stocktaking.

(e) To provide for the cost of the administration of Public Assistance within their area, and, generally, to undertake financial responsibility for such administration.

(f) To appoint and allocate to the Public Assistance Committees such officers as are necessary for their work.

(35) The expenditure which each Public Assistance Authority determines to be required for the administration of Public Assistance within its area, should, in the case of a County, be paid out of the County fund in the same way as the expenditure of a Standing Joint Committee is payable under Section 30 of the Local Government Act, 1888, and it should be the duty of the County Council to provide for such payment accordingly. (IX., 20.)

Similarly in the case of a County Borough, the expenditure should be made payable by the Town Council out of the Borough fund. (IX., 20.)

(36) Any loan required would be raised by the Council of the County or County Borough as the case may be. (IX., 20.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

B. THE LOCAL AUTHORITIES AND THEIR OFFICERS—*cont.**Areas of the Public Assistance Committees.*

(37) In the first instance the areas of the Public Assistance Committees shall be the union areas. (IX., 24.)

(38) Ultimately, the areas of the Public Assistance Committees shall be such as the Public Assistance Authority, with the consent of the Local Government Board, shall prescribe, and those areas shall as far as possible be coterminous with one or more rural or urban districts. (IX., 24.)

(39) Every union overlapping the boundaries of a County or County Borough shall be dealt with so that each part of such union entirely within a County or County Borough shall be either provisionally constituted a separate Public Assistance Committee area, or else provisionally attached to another Public Assistance Committee area within the County or County Borough in which such part is situated, and the Local Government Board shall issue Orders accordingly. (IX. 24.)

Constitution of the Public Assistance Committee.

(40) For each area constituted as in Recommendations 37 to 39, the Public Assistance Authority shall appoint a Public Assistance Committee, which shall include a certain proportion of persons nominated by the Urban and Rural District Councils, and, where a Voluntary Aid Committee has been established, a certain proportion nominated by that Committee. The persons so nominated shall be experienced in the local administration of Public Assistance or other cognate work and shall include a proportion of women, in our judgment not ordinarily less than one-third. One-third of the members shall retire each year, but shall be eligible for re-appointment. (IX., 26.)

Duties of the Public Assistance Committee.

(41) The following will be the duties of the Public Assistance Committee under rules laid down by the Public Assistance Authority (IX., 25):—

(a) To make careful inquiry into the circumstances and condition of all persons applying for Assistance within their area with a view to ascertaining the cause and nature of their distress.

(b) To review periodically the circumstances and condition of persons in receipt of Assistance.

(c) To investigate the means of persons liable for maintenance and to take the measures necessary for the recovery of the cost of the Assistance given.

(d) To sub-divide their area when desirable for the purposes of local Assistance, subject to the assent of the Public Assistance Authority.

(e) To determine in the case of each person applying for or receiving Public Assistance whether such person is by law entitled to such Assistance.

(f) To decide upon the best method of assisting applicants with a view to removing the cause of distress.

(g) To co-operate with the Voluntary Aid Committee* with a view to the assistance of cases of distress.

(h) To co-operate with other public and voluntary agencies.

(i) To inspect, supervise, and administer the Public Assistance Authority's institutions within their area and such other institutions as the Public Assistance Authority shall direct.

(j) To secure periodical visitation of all cases in receipt of Home Assistance.

(k) To make half yearly an estimate of their expenditure and requirements, and submit it to the Public Assistance Authority who shall from time to time remit such sum or sums as may be necessary.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

* See Recommendation 175.

(B) THE LOCAL AUTHORITIES AND THEIR OFFICERS—*cont.*

(l) To control and supervise the officers assigned to them by the Public Assistance Authority.

(m) To furnish the Public Assistance Authority from time to time with such information concerning the proceedings and work of the Committee as the Authority may require.

(n) To discharge such other duties as the Public Assistance Authority may, from time to time, call upon them to undertake.

Scheme of Local Authorities for London.

(42) We apply to London the scheme drawn up for Counties and County Boroughs with the following modifications. (IX., 42):—

(a) The area for the new Public Assistance Authority would be that of the London County Council. The areas of the Public Assistance Committees would generally be the areas of the existing Unions, though in certain cases some readjustment would be necessary. (IX., 29.)

(b) The Public Assistance Authority for London would be a Statutory Committee of the London County Council, with statutory duties. (IX., 41.)

(c) One-half of the members of the Statutory Committee to be nominated by the London County Council either from their own number or from outside;

(d) One-quarter of the members of the Statutory Committee to be appointed by the London County Council from outside their own number and to consist of persons of skill and experience in the administration of Public Assistance or other cognate work;

(e) One-quarter of the members of the Statutory Committee to be nominated by the Local Government Board so as to secure representation on the committee of such interests as the medical and legal professions, employers and working men, hospital administration, charitable organisations, etc.

(f) We propose that a scheme on these lines be drawn up by the London County Council and submitted to the Local Government Board for approval. The scheme should secure a considerable number (such as fifty or sixty) of members on the committee and the inclusion of a certain proportion of women.

(43) The Statutory Committee of the London County Council thus constituted we would call the Public Assistance Authority for London, and to it we would transfer the Poor Law work of the Metropolis. (IX., 43.)

(44) As in the country, so in London, we propose that the work of hearing and deciding applications for Assistance shall devolve on local Public Assistance Committees to be constituted in London as follows (IX., 44):—

(a) Each Public Assistance Committee shall be appointed by the Public Assistance Authority, care being taken that, amongst those so appointed, there shall be included a certain proportion of persons nominated by the Metropolitan Borough councils, and, where a Voluntary Aid Committee has been established in a district, a certain proportion nominated by that Committee. The persons so nominated shall be experienced in the local administration of Public Assistance or other cognate work and shall include a certain proportion of women, which proportion in our judgment should not ordinarily be less than one-third.

(b) One-third of the members shall retire each year, but shall be eligible for re-appointment.

(c) The number of members on the Public Assistance Committees should be largely regulated by the area and population of the districts in which they will act, and should be fixed by schemes submitted by the Public Assistance Authority to the Local Government Board for approval. As a large area will require a considerable body of members, such schemes should provide, if necessary, for sub-divisions of the Committee, it being understood that each sub-committee will act in a smaller area as a section of the Committee.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(B) THE LOCAL AUTHORITIES AND THEIR OFFICERS—*cont.*

(45) We also propose that Poor Law expenditure in London be a uniform charge over the whole area according to rateable value. (IX., 45.)

Officers of the Local Authorities. (See Part IV., Chapt. 3, and IX., 69.)

(46) When a Local Authority and the Local Government Board concur in the opinion that the retention of any officer is, on general grounds, detrimental to the administration, the Local Authority should have power to terminate that officer's appointment after proper notice (IV., 101).

(47) We think that the Local Government Board should lay down more precisely the qualifications for the higher offices under the new system. (IV., 104.) No person should be appointed as Clerk who has not some knowledge and experience of the Poor Law, no person as superintendent of an institution who has not had some experience in dealing with the classes which the institution contains, and no person as a relieving officer who has not had some previous training as an assistant relieving officer or has not passed an examination and obtained a certificate of an examining authority recognised by the Local Government Board. (IV., 106.)

(48) There should be qualifying examinations for the higher officers. Once qualifications for each office are laid down, and the Local Government Board satisfied that they are fulfilled, the entire responsibility for the appointment of all officers might be left to the new Local Authorities. (IV., 107.)

(49) The Local Government Board might sanction a scale of officers' salaries for each Local Authority, and so long as the salaries, or increases of salaries, were in accordance with that scale, it should not be necessary for the Local Authority to require the sanction of the Local Government Board to individual salaries. (IV., 107.)

(50) A Central Superannuation Fund should be established for the whole service, and in the case of teachers transferring themselves from public elementary schools to the Public Assistance service and vice versa, arrangements should be made by which any sacrifice of pension is avoided. (IV., 114.)

(51) The Clerk of the future or any officer performing analogous duties to any Local Authority shall not, save under very exceptional circumstances, and subject to the consent of the Local Government Board, be a part-time officer. (IV., 117.)

(52) If the General Workhouse is abolished, each of the specialised institutions which takes its place, will require a Superintendent, qualified by knowledge and experience, for its management. The salary offered must be sufficient to attract men not merely of organising power, but having the moral qualities necessary to develop the capacities of those under their charge. (IV., 118.)

(53) Highly-trained officers will be required in what are now regarded as less important posts, as *e.g.*, that of labour master. (IV., 119.)

(54) Provision should be made for inmates of all denominations receiving religious administration and instruction from the clergy of their respective churches. (IV., 120.)

(55) The indoor staff should be allowed to live out, where circumstances permit, and so far as is consistent with discipline and the proper discharge of their duties. (IV., 121.)

(56) Where adequate relief is offered and refused, the responsibility for the consequences arising from such refusal should not rest with the relieving officer. (IV., 127-8.)

(57) The relieving officer must not be burdened with too large a number of cases. In any scheme or regulations for the administration of relief in local areas, the proportion of cases to officers should be carefully and periodically revised, and pay stations should be abolished. (IV., 36; 130 & 131.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(B) THE LOCAL AUTHORITIES AND THEIR OFFICERS—*cont.*

(58) In some places an officer might be appointed who, like the Inspector of Poor in Scotland, might fill the position both of Clerk and relieving officer with such assistance as is necessary. (IV., 134, & IX., 19.)

(59) A Local Authority should not be allowed to appoint an ex-member as a paid officer, unless he or she has ceased to be a member of the Local Authority for a period of, say, twelve months before appointment. (IV., 136.)

(60) Women visitors might be employed for certain classes of out-relief cases. (IV., 142.)

(61) A graded Public Assistance Service should be set up which should include all officers concerned with the supervision, control, and disciplinary treatment of the poor, including relieving officers, both male and female, masters, matrons and superintendents of institutions of every grade, labour masters and mistresses. In this service there should be more opportunity of promotion from the lower to the higher ranks, and no question of superannuation should hinder the transfer of efficient and promising officers from one Local Authority to another. (IV., 143.)

(62) We have also recommended that the officer referred to in recommendation No. 58 above, who will be the chief officer of the Public Assistance Committee, shall be called the Superintendent of Public Assistance, and that the relieving officers working under him shall be called Assistance Officers. The Clerk of the Public Assistance Authority we propose to call the Director of Public Assistance. (IX., 19.)

(C) METHODS OF ASSISTANCE.

Indoor Relief or Institutional Assistance (See Part IV., Chap. 5).

(63) General workhouses should be abolished. (IX., 75.)

(64) Classification by Institutions is an essential preliminary to making indoor relief rightly effective (IV., 224; *Cf.*, 145–167), and accordingly indoor relief should be given in separate institutions appropriate to the following classes of applicants, viz. : (IX., 75.)

- (1) Children.
- (2) Aged and Infirm.
- (3) Sick.
- (4) Able-bodied men.
- (5) Able-bodied women.
- (6) Vagrants.
- (7) Feeble-minded and epileptics.

(65) All indoor cases should be revised from time to time (IX., 75) by a responsible Committee with a view to seeing whether the existing treatment is producing the desired result, or whether it is desirable that the treatment should be altered. (IV., 212.)

(66) Powers of removal to and detention in institutions should be given to the Public Assistance Authority under proper safeguards. *See (J) page 667.*

(67) The treatment of inmates should be made as far as possible curative and restorative.

(68) The Central Authority should exercise a more strict control over expenditure on buildings and equipment.

(69) In every institution for the aged and for the able-bodied a system of classification should be adopted on the basis of conduct before and after admission.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(C) METHODS OF ASSISTANCE—*cont.*

(70) We think that the Local Government Board should exercise its authority more strictly in checking excessive expenditure. (See Recommendation No. 13) and that, on any proposal being made for building new institutions, it should be considered

(1) Whether some part of the demand for institutional treatment could not be met by a greater and more systematic use of voluntary homes and hospitals;

(2) Whether the institution is necessary in view of the desirability of breaking up the existing workhouses into institutions specialised for different classes, and, if so, what the policy of the local authority should be in utilising the workhouse or a particular class or classes and not for applicants of all or many kinds;

(3) Whether the proposals for building do, or do not, exceed a recognised standard of cost per bed, which buildings for the particular class of inmates should in no circumstances be allowed to exceed;

(4) Whether the land on which it is proposed to build is not, in view of modern facilities for movement, unduly near the large towns and unduly expensive, considering the particular class of inmates for which the accommodation is desired.

Outdoor Relief or Home Assistance. (See Part IV., Chap. 6.)

Our chief recommendations are (IX., 79):—

(71) That Out-relief, or as we shall call it, Home Assistance, be given only after thorough inquiry, except in cases of sudden and urgent necessity.

(72) That it should be adequate to meet the needs of those to whom it is given.

(73) That persons so assisted should be subject to supervision.

(74) That, with a view to inquiry and supervision, the case-paper system be everywhere adopted.

(75) That such supervision should include in its purview the conditions, moral and sanitary, under which the recipient is living (IX., 79 (5)); it should be a condition of out-relief that the recipients are living respectable lives in decent houses, and, as a step towards this, the Public Assistance Authority should have power to refuse relief in certain areas where the conditions of living are bad. (IV., 268.)

(76) The provision which obtains in London, that it is the duty of the relieving officer to inform the Sanitary Authority of overcrowded and insanitary premises, should be extended to the rest of the country and enforced, and the Public Assistance Authority should be required, if the Sanitary Authority refuses to take action, to report the fact to the Local Government Board. (IV., 268.)

(77) Power should be given to the Public Assistance Authority, under due precautions, to remove persons living in a state of neglect to an institution (IV., 270). Cf. (J) page 667.

(78) Every case of out-relief to widows should have special and individual attention. (IV., 285.)

(79) Outdoor relief should not, except in special cases, be granted to any woman deserted by her husband during the first twelve months after desertion. (IV., 286.)

(80) There should be systematic co-operation between the Public Assistance Authorities and recognised Voluntary Aid Committees in the care and treatment of cases of distress (IV., 301) and voluntary agencies should be utilised as far as possible for the personal care of individual cases. (IX., 79 (6)).

(81) There should be one uniform Order governing outdoor relief or Home Assistance. (IV., 230.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(C) METHODS OF ASSISTANCE—*cont.**Children.* (See Part IV., Chap. 8.)

(82) The supervision of children boarded-out within the Union should be placed in the hands of competent women officers, and should be brought under Local Government Board inspection. Special care should be given when the boarding-out is with relatives, and all such cases should be specially notified to the Local Government Board. (IV., 383.)

(83) Whilst strongly advocating the extension of boarding-out as far as possible, we do not recommend any relaxation in the care exercised. (IV., 389.)

(84) In all cases of boarding-out the fullest inquiry should be made into the character of the foster-parents and the suitability of the home before, rather than after, the children are handed over. (IV., 390.)

(85) In all cases of adoption, no person should be eligible as a foster-parent who does not profess the same religious belief as is indicated on the creed register of the child. (IV., 390.)

(86) Effective steps should be taken to secure that the maintenance of children in the workhouse be no longer recognised as a legitimate way of dealing with them. (IV., 394.)

(87) The Public Assistance Authority should have power to keep the children of "ins-and-outs" in institutions, while their parents are detained in a Detention Colony. (IV., 394.)

(88) Children under treatment for ophthalmia, or some chronic contagious ailment, should not be discharged along with their parents. (IV., 394.)

(89) Guardians should have power to retain supervision of adopted children up to the age of twenty-one, and in such cases parental responsibility should be more strictly enforced, in some cases by detention in an institution, and, wherever practicable, by charging to the parents the whole or a part of the cost of maintenance of the children; such children should become the Wards of the Local Authority up to the age of twenty-one; the children, whether removed from their parents or left with them, should be kept under supervision; and one of the parents, if found worthy, or some other responsible person should, if willing to act in that capacity, be associated with the Local Authority as the official guardian. Every case in which a conviction is obtained should be reported to the authority by the police. (IV., 396.)

(90) Voluntary agencies should be recognised by the Public Assistance Authorities as regards the after-care of Poor Law children, and should report to them; such reports to be entered on a record. (IV., 399.)

(91) A system of supervision and record such as prevails in the case of children leaving industrial schools and reformatories, should be applied to the children leaving the care of the Poor Law Authorities. (IV., 400.)

(92) The provision of Homes for boys who leave Poor Law schools to take up work should be undertaken by voluntary agencies. (IV., 401.)

(93) There should be closer supervision of the condition of children in receipt of out-relief. (IV., 413.) Care should be taken that the total income from whatever source is sufficient to afford proper food, clothing, and housing conditions for the whole family (414), and the Public Assistance Authorities should ascertain that the children are being properly nourished. (IV., 415.)

(94) Unless satisfactory conditions in the home can be assured, the children should be maintained in a Public Assistance institution or an industrial school, and no children should be maintained by out-relief in immoral surroundings. (IV., 416.)

(95) There should be more medical supervision of all children under the Poor Law, both indoor and outdoor. (IV., 417.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(C) METHODS OF ASSISTANCE—*cont.*

(96) Care should be taken that the children of widows get a fair start on leaving school. (IV., 418).

(97) The employment of mothers in receipt of out-relief should not in all cases be prohibited. But the circumstances in each case should be carefully considered, and watched, and the mothers should not be expected to earn unless satisfactory arrangements can be made for the children (IV., 419); for many such children provision might be most satisfactorily made by means of day boarding schools. When the children are too young to go to school, the mother should not go out to work where it is impossible to provide a sufficient substitute. Special provision should, where necessary, be made for the children of widowers. (IV., 420.)

(98) Voluntary agencies should be enlisted for the supervision of out-relief children; when such are not available additional officials—in many cases women—should be appointed. (IV., 421.)

(99) The increased expenditure in connection with the assistance of children should be accompanied by a strenuous effort to return to a simpler, though not less effective, way of dealing with the children for whom institutional life is necessary. (IV., 421.)

(100) In the case of children of neglectful and unworthy parents (adopted under the Poor Law Act, 1899) as well as in the case of orphan and deserted children, Boards of Guardians might take advantage of emigration, so long as adequate inspection is ensured. (IV., 426.)

(101) Consideration should be given to the question whether all voluntary charitable institutions dealing with children should not be registered and subject to the same supervision and be required to co-operate with the public authority. (IV., 432.)

(102) Children now under the Poor Law should not be transferred entirely to the care of the Local Educational Authorities. (IV., 435.)

(103) Teachers in Poor Law schools should have the same status as teachers in the public elementary schools, and every facility, including pension, should be given them for passing from one class of schools to the other. (IV., 436.)

(104) The policy and terms of the Education (Provision of Meals) Act, 1906, should be reconsidered in its relation to the relief of distress generally; if relief for necessitous children is required, and is not, and cannot be, met from voluntary sources, it should become part of the duty of the Public Assistance Committees to provide such assistance as may be necessary by way of meals or otherwise. (IV., 440.)

The Aged. (See Part IV., Chap. 7.)

As regards institutional relief:—

(105) The aged should have accommodation and treatment apart from the able-bodied, and be housed on a separate site, and be further sub-divided into classes as far as practicable with reference to their physical condition and their moral character. (IV., 354.)

(106) The system of small homes such as has been instituted at Kingston-on-Hull and Woolwich should be promoted and extended, both on the ground of economy to the ratepayer and increased happiness to the recipients. (IV., 328, 354.)

As regards outdoor relief:—

(107) Greater care should be taken to ensure adequacy of relief.

(108) The aged recipients of out-relief should be periodically visited both by officers of the local authority (who might be women) and by voluntary visitors, as may be arranged with a local committee for voluntary aid. (IV., 339-40.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(C) METHODS OF ASSISTANCE—*cont.*

(109) As regards old persons given to drink, or of dirty habits, they should not be enabled to remove themselves from control either by a pension or by the granting of outdoor relief. (IV., 354.)

Medical Relief or Assistance. (See Part V.)

Our main proposals for medical assistance are as follows, viz.: (IX., 104.)

(109a) The primary responsibility of the Public Assistance Authorities for the inspection and supervision of Medical Assistance should be clearly recognised and carefully maintained; but, meanwhile, the arrangements for both indoor and outdoor Medical Assistance should be periodically inspected by Medical Inspectors on behalf of the Local Government Board; to this end the Board's staff of Medical Inspectors should be increased. (V., 127.)

(110) That, the Public Assistance Authority, to assist them in carrying out their functions in connection with medical assistance, shall appoint a committee from among their number, to which shall be added representatives of the Health Committee of the County Council, or of the County Borough Council, and of the local branch or branches of the British Medical Association. This committee shall be called the County or County Borough Medical Assistance Committee, as the case may be, and shall have power to co-opt representatives of local hospitals, county or county borough nursing associations, dispensaries, and registered friendly societies.

(111) That where necessary a local committee on similar lines shall be appointed by each Public Assistance Committee for the purposes of the local administration of medical assistance. This committee shall be termed the Local Medical Assistance Committee.

(112) That all or any of the functions of the Public Assistance Authority in regard to medical assistance may be referred to the County or County Borough Medical Assistance Committee.

(113) That, in all matters affecting medical assistance, there should be systematic co-operation between the Public Assistance Authorities, the Public Health Authorities, the Education Authorities, and the Voluntary Medical Institutions, based on a clear definition of their respective functions.

(114) That the medical and nursing needs of each area, whether institutional or otherwise, be reviewed, and, if necessary, supplemented, regard being had to the available provision made by Poor Law, Sanitary, or Voluntary Authorities.

(115) That Medical Assistance should be organised on a provident basis.

(116) That a general system of provident dispensaries should be established, of which existing voluntary outdoor medical organisations be invited to form an integral part, and that every inducement should be offered to the working classes below a certain wage limit to become, or to continue to be, members of a provident dispensary. To this end the subscription to the provident dispensary should cover the following advantages to its members:—

(a) Power to choose their own doctor from the doctors upon the list of the dispensary.

(b) The provision of adequate medical assistance at a rate or fee within the reach of those subscribing to the Provident Dispensary.

(c) Institutional treatment upon a recommendation from the dispensary doctor.

(116a) That the Public Assistance Authority should have power to subscribe, if necessary, to the purposes indicated in Recommendations 114, 115 and 116. (V., 237.)

(117) That medical treatment should be more readily accessible to all who are in need of it; that, in cases of illness in which immediate treatment is necessary, the physical condition of the patient should be the first consideration; that in such cases medical aid should be obtainable in the first instance by application to any medical officer in the service of the Provident Dispensary.

(118) That, except as regards the cases requiring immediate attention above referred to, all necessitous persons shall receive medical relief through the Public Assistance Committee.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(C) METHODS OF ASSISTANCE—*cont.*

(119) That certain cases in receipt of Public Assistance, such as the aged and widows with young children, might be made members of the Provident Dispensary on payment of the necessary fees by the Public Assistance Committee.

(120) That domiciliary medical assistance at the public cost should be conditional upon the maintenance of a healthy domicile and good habits.

(121) That no disfranchisement should be attached to any form of medical assistance.

(D) THE ABLE-BODIED AND UNEMPLOYMENT. (*See Part VI. Chapter 4.*)*I.—Labour Exchanges.*

(122) A national system of Labour Exchanges should be established and worked by the Board of Trade (507) for the general purposes of assisting the mobility of labour and of collecting accurate information as to unemployment. (VI., 487.)

(123) The Labour Exchanges should be in charge of officers of the Board of Trade, assisted by Committees of employers, workmen, and representatives of local authorities. (VI., 507.)

(124) There should be no compulsion to use the Labour Exchanges, but the object of the Government and the Local Authorities should be to encourage and popularise them in every way, *e.g.*, by propaganda and by making use of the exchanges in engaging workmen. (VI., 519, 528.)

(125) The Labour Exchanges should be granted free postal and telephone facilities by the State. (IV., 520, 528.)

(126) Arrangements should be made to enable the Labour Exchanges to grant passes entitling workmen travelling to a situation to specially cheap railway fares; in suitable cases the cost of the passes might be defrayed by the Labour Exchange and recovered afterwards from the workmen. (VI., 528.)

II.—The Education and Training of the Young for Industrial Life.

(127) The education in our public elementary schools should be made less literary and more practical, and better calculated than at present to adapt the child to its future occupation. To this end the curriculum should be revised. (VI., 553.)

(128) We regard with favour the suggestions (VI., 549) :—

(a) That boys should be kept at school until the age of fifteen instead of fourteen.

(b) That exemption below this age should be granted only for boys leaving to learn a skilled trade;

(c) That there should be school supervision till sixteen and replacing in school of boys not properly employed.

(129) There is urgent need of improved facilities for technical education after the present age for leaving school. (VI., 550.)

(130) With a view to the improvement of physique, a continuous system of physical drill should be instituted which might be commenced during school life, and be continued afterwards. (VI., 582.)

(131) In order to discourage boys from entering uneducative occupations which offer no prospect of permanent employment, there should be established, in connection with the Labour Exchange, a special organisation for giving boys, parents, teachers, and school managers, information and guidance as to suitable occupations for children leaving school. (VI., 527; 537–546).

NOTE.—The Roman figures at the end of each Recommendation refer to the Part of the Report, the Arabic figures to the paragraph in those Parts.

(D) THE ABLE-BODIED AND UNEMPLOYMENT—*cont.**III.—The Regularisation of Employment.*

(132) Government Departments and Local and Public Authorities should be enjoined :

(a) To regularise their work as far as possible. (VI., 561, 568.)

(b) To endeavour, as far as possible, to undertake their irregular work when the general demand for labour is slack. (VI., 566, 568.)

(133) The Board of Trade should send officers to visit and hold inquiries in localities where intermittent employment prevails, and should endeavour through conference with employers and employed to arrange schemes for the progressive decasualisation of such employment. (VI., 563, 568.)

IV.—Unemployment Insurance.

(134) The establishment and promotion of unemployment insurance, especially amongst unskilled and unorganised labour, is of paramount importance in averting distress arising from unemployment. (VI., 604.)

(135) The attainment of this object is of such national importance as to justify under specified condition, contributions from public funds towards its furtherance. (VI., 604.)

(136) This form of insurance can best be promoted by utilising the agency of existing trade organisations, or of organisations of a similar character, which may be brought into existence by a hope of participation in the public contributions. (VI., 604.)

(137) No scheme of Unemployment Insurance, either foreign or British, which has been brought before us, is so free from objections as to justify us in specifically recommending it for general adoption. (VI., 604.)

(138) A small Commission or Inter-Departmental Committee of experts and representatives of existing trade benefit organisations should be at once appointed with an instruction to frame as quickly as possible a scheme or schemes for consideration. (VI., 605.)

(139) After that Committee has reported, a special Advisory Board should be set up to help and promote schemes adapted to the varying conditions of different industrial communities. (VI., 606.)

V.—Organisations engaged in the Public Assistance of the Able-bodied, and their Functions.

(140) There shall be in every district four separate but closely co-operating organisations with the common object of maintaining or restoring the workman's independence (VI., 607, 608), viz. :—

(a) An organisation for insurance against unemployment, to develop and secure (with contributions from public funds (604)) the greatest possible benefits to the workmen from co-operative insurance against unemployment. (VI., 608.)

(b) A Labour Exchange established and maintained by the Board of Trade to provide efficient machinery for putting those requiring work and those requiring workers into prompt communication. (VI., 608.)

(c) A Voluntary Aid Committee to give advice and aid out of voluntary funds especially to the better class of workmen reduced to want through unemployment. (VI., 607–608.) (See also Part VII.)

(d) A Public Assistance Authority representing the County or County Borough and acting locally through a Public Assistance Committee, to assist necessitous workmen under specified conditions at the public expense (VI., 607, 608, 609). Cf. Recommendations 32 and 40.

(141) It shall be a fundamental principle of the system of Public Assistance that the responsibility for the due and effective assistance of all necessitous persons at the public expense shall be in the hands of one and only one authority in each County and County

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(D)—THE ABLE-BODIED AND UNEMPLOYMENT—*cont.*

Borough, viz., the Public Assistance Authority (VI., 609), a Statutory Committee of the County or County Borough Council (*See Recommendation 32*).

(142) The guiding principles of the organisations engaged in the work of Public Assistance should be :—

(a) Co-operation, so as to secure prompt and efficacious treatment of appropriate cases by the various agencies. (VI., 611-614.)

(b) Discrimination, so as to select treatment appropriate for each case and yet encourage general thrift and independence. (VI., 615.)

(c) Restoration, so as to prepare workmen by restorative treatment, for return to independent life. (VI., 616-618.)

(143) From the point of view of treatment, the necessitous unemployed may be divided into three classes (VI., 619, 622, 627, 628) :—

Class I.—Those requiring temporary maintenance and work. (VI., 620-622.)

Class II.—Those requiring for a longer period maintenance and work with training. (VI., 627.)

Class III.—Those requiring detention and discipline. (VI., 628.)

(144) For Class I. and Class II., there will be available various methods of treatment under the Public Assistance Authority (VI., 622, 626, 627), but Class III. will be handed over to another authority—the Home Office—and dealt with in Detention Colonies. (VI., 629, 655-666.)

VI.—Methods of Treatment of Able-bodied.

(145) There will be available for the Public Assistance Authority the following methods of treatment of the able-bodied (VI., 630) :—

(1) Home Assistance.

(2) Partial Home Assistance.

(3) Institutional Assistance.

(4) Continuous maintenance in a Detention Colony under the Home Office.

(5) Emigration. (VI., 663.)

VII.—Home Assistance.

(146) By Home Assistance we mean assistance at the home, whether in money or in kind, and given without requiring the recipient to live entirely in an institution. The conditions under which such assistance should be granted to the able-bodied would be as follows (VI., 630) :—

(a) That the requisite assistance is not forthcoming from any other source.

(b) That the assistance be given on condition of daily work, in an industrial or agricultural institution or colony, or otherwise as the Public Assistance Authority may decide within regulations laid down by the Local Government Board.

(c) That the assistance should only be given to an applicant with a decent home and a good industrial record.

(d) That the order for assistance should only be for a strictly limited period, and subject to revision.

(e) That the applicant should be registered at the Labour Exchange, and that the relief should cease as soon as suitable occupation has been offered through the Labour Exchange.

(147) An essential principle to be observed in connection with Home Assistance to the able-bodied is that it should be, in some way, less agreeable than aid given by the Voluntary Aid Committee or than the receipt of Unemployed Benefit through Insurance. (VI., 623.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(D) THE ABLE-BODIED AND UNEMPLOYMENT—*cont.**VIII.—Partial Home Assistance.*

(148) By Partial Home Assistance we mean Home Assistance for the family of an applicant, the applicant himself being maintained in an institution and given work. (VI., 624, 630.)

IX.—Institutional Assistance.

(149) By Institutional Assistance we mean continuous maintenance in an Industrial or Agricultural Institution or Colony without detention, except in so far as the applicant binds himself by a written agreement to stay for a definite period. (VI., 630.)

X.—Industrial or Agricultural Institutions.

(150) Industrial or Agricultural Institutions should be situated in the country or on the outskirts of towns (VI., 631–632), in many cases a disused workhouse might be adapted. (VI., 631.)

(151) They should include housing accommodation for those receiving Institutional or Partial Home Assistance. (VI., 635.)

(152) They should be built in an inexpensive manner and with sufficient land to employ a large number of persons. (VI., 631.)

(153) For industrial occupations, inexpensive workshops should be erected. (VI., 631.)

(154) The workshops and land need not necessarily be adjacent to the housing accommodation. (VI., 635.)

(155) The Industrial and Agricultural Institutions will be in direct communication with the Labour Exchange, and one of the primary objects of their officials should be the restoration to industrial efficiency and independence of the inmates under their care. (VI., 634.)

(156) On entrance into the institution the applicant should, as far as possible, be placed on work adapted to his previous occupation, and his capability and willingness to work will thus be ascertained. (VI., 634.)

(157) The different treatment and classification of the able-bodied should commence from the time that the application for assistance is entertained, and every effort should be made, at an early stage, to dissociate the respectable unemployed from the habitual “in-and-out.” (VI., 634)

(158) It will probably be found necessary to establish separate industrial institutions for women. (VI., 635.)

XI.—Labour Colonies.

(159) While appreciating the limited experience and success of Labour Colonies, we recommend their establishment (VI., 641) and use on the following grounds:—

(a) The open-air life will conduce to the rehabilitation of those subjected to its influence. (VI., 641.)

(b) The expense of maintenance, site, and building should be less than in the case of Urban Workhouses. (VI., 642.)

(c) The colony affords better opportunities than the workhouses for more varied methods of industrial treatment (VI., 641), and for classification. (VI., 643.)

(160) The colony system should provide several distinct classes of treatment, either in separate colonies or in distinct divisions of the same colony. (VI., 647.)

(161) Public Assistance Authorities might combine to establish a colony or colonies for their common use. (VI., 647.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(D) THE ABLE-BODIED AND UNEMPLOYMENT—*cont.*

(162) The colonies of voluntary and religious bodies should be utilised by the Public Assistance Authorities for restorative treatment in suitable cases. (VI., 648.)

(163) The colony system should be carefully controlled and supervised by special additional officers of the Local Government Board. (VI., 650.)

XII.—Good-Conduct Pay in Public Assistance Authorities' Institutions and Colonies.

(164) Well-conducted men in institutions or colonies might, if they show industry, be awarded small gratuities in the shape of good-conduct pay, the greater part of such pay to accumulate and be given to the men on leaving the colony or institution. (VI., 651.)

XIII.—Detention Colonies.

(165) Compulsory Detention Colonies are essential to the success of a system of voluntary Labour Colonies. (VI., 629, 653.)

(166) Detention Colonies under the control and supervision of the Home Office should be established (655); to which might be committed, for any period between six months and three years (658) persons guilty of a wilful and persistent repetition of any of the following offences (VI., 657):—

(a) Wilful refusal or neglect of persons to maintain themselves or their families (although such persons are wholly or in part able to do so), the result of such refusal or neglect being that the persons or their families have become chargeable to the Public Assistance Authority.

(b) Wilful refusal on the part of a person receiving Assistance to perform the work or to observe the regulations duly prescribed in regard to such assistance.

(c) Wilful refusal to comply with the conditions laid down by the Public Assistance Authority, upon which Assistance can be obtained, with the result that a person's family thereby become chargeable.

(d) Giving way to gambling, drink, or idleness, with the result that a person or his or her family thereby become chargeable.

(167) Public Assistance Authorities should pay the full cost of maintenance of persons sent to Detention Colonies by them. (VI., 656.)

XIV.—Emigration.

(168) While emigration by itself cannot be considered as a sufficient remedy for unemployment, it is, nevertheless, a valuable means of dealing with a certain class of cases, which are likely to make a fresh start under new conditions. More especially is it indispensable in dealing with districts where an excessive congestion of labour has taken place, and where exceptional treatment is called for. (VI., 662.)

(169) This work of emigrating poor persons at the public expense falls well within the functions of the Public Assistance Authority, which would, however, naturally co-operate with established emigration agencies, and would be—either through those agencies or immediately—in close touch with the responsible authorities in the country of destination. (VI., 663.)

Disfranchisement of Able-bodied receiving Public Assistance.

(170) Only persons receiving assistance (other than medical relief) for not less than three months in the qualifying year shall be disfranchised on account of such Assistance. (VI., 667.)

XVI.—Discontinuance of Unemployed Workmen Act.

(171) The Unemployed Workmen Act, 1905, should expire so soon as the new system of Public Assistance has come into operation. (VI., 677.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

XVII.—TRANSITIONAL MEASURES AS REGARDS DISTRESS FROM UNEMPLOYMENT.

Special Works and Loans for times of Exceptional and Protracted Distress.

(172) For a strictly limited period during the earlier years of the reforms which we suggest (VI., 678), the following arrangements should be made :—

(a) The various existing Local Authorities (VI., 692) should draw up, either singly or in co-operation, and submit to the Local Government Board for approval (702) schemes of works of public utility (703) which might be put in operation in times of exceptional and protracted distress due to severe industrial depression. (VI., 695.)

(b) If the Local Government Board are satisfied, after consultation with the Board of Trade (VI., 697, 703), that there exists exceptional and protracted distress, to meet which the resources of the Voluntary Aid committees and Public Assistance Authorities are inadequate (698), then the local authorities (other than the Public Assistance Authorities (692), may obtain loans from the Public Works Loan Commissioners at the rate of interest at which the Imperial Government can borrow, so as to enable special works approved under (a) to be carried out. (VI., 695, 703.)

(c) The Special works should be carried out on ordinary commercial lines, by contract, and the fitness or unfitness of workmen for the work shall be the main consideration in engaging or dismissing them, and in determining the conditions of their employment. All workmen so employed shall, as far as practicable, be taken from the register of the Local Labour Exchange. (VI., 703.)

(d) The wages paid will be the ordinary market wages for the kind of work done, whether piece-work or time rates. (VI., 703.)

(E) CHARITY AND VOLUNTARY AID. (See Part VII.)

Our recommendations in regard to the Organisation of Voluntary Aid are as follows (Part VII., 237):—

Establishment of Voluntary Aid Councils and Committees.

(173) That in the area of each Public Assistance Authority, that is, in each County or County Borough, there be formed a Voluntary Aid Council, consisting in part of Trustees of endowed charities, of members of registered voluntary charities, as defined below, of some members of the Public Assistance Authority, and of such persons as members of friendly societies and trade associations, of clergy and ministers, and of other persons being co-opted members, as may be settled in schemes approved by the Charities Commission.*

(174) That a statutory obligation be imposed upon the Lords Lieutenants, the Chairmen of County Councils, the Lord Mayors, and Mayors of County Boroughs to take steps, within a given period, and after consultation with the managers of charitable societies, trustees of endowed charities, and members of the Public Assistance Authority, for drawing up schemes in accordance with the preceding recommendation, which schemes must be submitted to the Charities Commission for approval.

(175) That the Voluntary Aid Council submit to the Charities Commission proposals for the formation of Voluntary Aid Committees to be drawn up in the form of schemes to be approved by the Commission, and that the Voluntary Aid Council under such schemes appoint as members of the Voluntary Aid Committees persons such as those mentioned in Recommendation 173.

(176) That Voluntary Societies and Charities, as defined in Recommendation 189, be entitled to register at the Charities Commission on lines similar to those of the registration of Friendly Societies under the Friendly Societies' Act.

(177) That a registered Voluntary Society be entitled to nominate members of its own body for appointment to the Voluntary Aid Council and to the Voluntary Aid Committee of the district in which either its institution or any branch of its institution has an office.

* See below as to the proposed change in name of the Charity Commission.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(E) CHARITY AND VOLUNTARY AID—*cont.*

(178) That it is desirable that the Voluntary Aid Committee have its offices in the same building as the Committee of Public Assistance.

Functions of the Voluntary Aid Council.

(179) The duties of the Voluntary Aid Councils would be for the most part not executive, but supervisory. The executive work would be assigned to the Voluntary Aid Committees. The Voluntary Aid Council would supervise the operations of these Committees generally and would, as far as possible, maintain the same principles of help and relief throughout County or County Boroughs. They would collect funds for distribution to Voluntary Aid Committees, and they would allocate funds to poor districts. The County is already the accepted area for many benevolent and philanthropic purposes. The local infirmary or hospital is frequently a County institution. There are County nursing associations, and the County is the recognised centre in connection with various naval and military charitable associations. We propose that the Voluntary Aid Council acting for the County should promote any voluntary institutions, associations, or societies for which the County, as a whole, has need. Its duties would thus be important and distinctive.

Functions of the Voluntary Aid Committee.

(180) That the Voluntary Aid Committee aid (1) persons in distress whose cases do not appear to be suitable for treatment by the Public Assistance Committee, and (2) applicants for Public Assistance whose cases have been referred to the Committee by the Public Assistance Committee.

(181) That, with a view to the thorough treatment of individual cases, the Voluntary Aid Committee make such arrangements for the investigation of the applications made to them as the Charities Commission may deem necessary and sufficient.

(182) That in dealing with persons in distress for whom it is desired to provide aid by way of monetary relief, it shall be the duty of the Voluntary Aid Committee to obtain such sums as may be possible from relations of the applicant, from friends, and from charitable sources generally for the aid of individual cases.

(183) That with the administration of aid on the part of the Voluntary Aid Committee there should be associated such a system of voluntary visitation as the Committee may deem advisable in view of the responsibilities of their work in providing effectual aid and in view of the physical needs and the habits of those whom they decide to assist.

(184) That the Voluntary Aid Committee be empowered to appoint such Local Committees as it may deem necessary, subject to the approval of the Voluntary Aid Council.

(185) That a Voluntary Aid Committee shall, as far as possible, register the cases dealt with by the Public Assistance Committee and by the Charitable societies and institutions in the district.

(186) That Voluntary Aid Committees receive the support of the Public Assistance Committee, and of the Inspectors of the Local Government Board, with a view to systematising the relations between the Public Assistance and Voluntary Aid Committees and promoting co-operation between them.

(187) That Voluntary Aid Councils or Committees be eligible for subscriptions from the Public Assistance Authority, on the lines of 42 and 43 Vict., c. 54, Section 10.

The Charities Commission.

(188) That the Charity Commission be attached to the Local Government Board, and that the Commissioners and Assistant Commissioners, permanent or temporary, be appointed by the Local Government Board, whose President should represent it in the House of Commons.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(E) CHARITY AND VOLUNTARY AID—*cont.*

(189) That the Charity Commission be enlarged, and that there be assigned to it two departments of work, the supervision of endowed charities on the lines of the Charitable Trusts Acts, and the registration of Voluntary Charities or Societies which hold any property in land or houses by purchase, or by leasehold, or are the tenants of any property under yearly or other agreements.

(190) That the name of the Charity Commission be the Charities Commission.

(191) That the staff of the Commission be strengthened so as to fulfil all the various additional duties that may devolve upon them : —

- (1) As a centre for the registration of voluntary charities.
- (2) In assisting in the preparation of schemes for the establishment of Voluntary Aid Councils and for registering such schemes.
- (3) In assisting in the preparation of schemes for the establishment of Voluntary Aid Committees and for registering and supervising their administration.
- (4) In the scrutiny of accounts and statements relating to Voluntary Aid Councils and Committees.
- (5) In the supervision of other schemes ; and
- (6) In the scrutiny of the accounts of endowed and registered charities.

(192) That Section 30 of the Endowed Schools Act, 1869, by which certain charities founded for purposes of relief may be applied to purposes of education, be repealed.

(193) That it be provided in a Statute amending the Charitable Trusts Acts that, by order of the Charities Commission, any charities, as defined in Section 30 of the Endowed Schools Acts, 1869, exclusive of Loan Charities, Apprenticeship Charities, and Charities for Advancement in Life, may be used for the relief of distress, subject to such conditions respecting enquiry and other matters as the Commissioners may determine under a general order.

(F) DISFRANCHISEMENT ON ACCOUNT OF PUBLIC ASSISTANCE.

(194) We recommend that only those persons be disfranchised on account of Public Assistance who have received assistance other than Medical Relief for three months or more in the qualifying year. (IX., 145.)

(195) We do not think that Medical Assistance in any form should entail disfranchisement. (IX., 145.)

(G) RECOVERY OF COST OF PUBLIC ASSISTANCE. (*See Part VIII., Chapter 3.*)

(196) Procedure for recovery of relief on loan should be simplified. (VIII., 80.)

(197) Liable relatives should be required to contribute, and this policy should be pursued uniformly and with firmness and discretion. (IX., 146.)

(198) Poor persons should have power to proceed directly against liable relatives, and the Public Assistance Authorities should have power to proceed against liable relatives before the applicant becomes actually chargeable. (IX., 146.)

(199) Simplification of procedure applicable to recovery of relief from relatives. (IX., 146.)

(200) The cost of relief given should be recoverable from relatives after the person has ceased to be chargeable. (IX., 146.)

(201) A man should be liable to contribute to the support of his grandparents. (IX., 146.)

(202) Non-liable relatives should also be induced to contribute where they are able to do so. (IX., 146.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(H) BASTARDY ORDERS. (*See* PART VIII., CHAPTER 4.)

(203) An order once obtained, either by the mother or the Guardians, should be available by whichever party is maintaining the child, and where the order has been obtained by the mother, the Guardians, if maintaining the child, should be empowered to apply for an increase in the amount of the allowance. (VIII., 138.)

(204) Action for recovery of expenses of chargeability should be brought against the putative father by the Guardians immediately on the birth of the child, irrespective of the fact whether the mother is then able at once to give evidence or not; and, if the mother is then unable to give evidence on account of her state of health, the man should be bound over to appear at a later date. (VIII., 139.)

(205) We recommend that the putative father be chargeable for the maintenance of the mother of his child from the date of the mother's admission to relief, and for the child after birth; and that, immediately on the mother's admission, inquiry on behalf of the local authority be made in regard to the paternity of the child. If the cases be numerous these inquiries should be made by a special officer suitable for the work; but the interrogation of the mother should be by a woman. (VIII., 141.)

(206) Money paid under a Bastardy Order by a putative father to the mother of an illegitimate child should be paid through the agency of a third person. (IX., 147.)

(I) TREATMENT OF UNMARRIED MOTHERS. (*See* PART VIII., CHAPTER 4.)

(207) *Single Lapse Cases.*—These should be dealt with in institutions apart from the workhouse, preferably in charitable institutions, but if these are not available the Public Assistance Authorities should institute homes of their own. Charitable workers to watch over the girls on their first return to the world. (IX., 148.)

(208) *Depraved, Immoral Women.*—Detention and reformatory treatment on lines similar to those adopted for "in-and-out" cases should be organised. (IX., 148.)

(209) *Feeble-minded Unmarried Mothers.*—These should be dealt with in accordance with the recommendations of the Royal Commission on the Feeble-minded. Meantime, the Public Assistance Authorities should have power to detain such mothers. (IX., 148.)

(210) For the purpose of advising in regard to all maternity cases, a Women's Committee should be appointed in connection with every Public Assistance Committee, consisting of members of that Committee and of voluntary workers. (IX., 148.)

(J) ORDERS FOR DETENTION OR CONTINUOUS TREATMENT.

(211) Certain classes of persons applying for or receiving Public Assistance (*see* Part IX., paragraphs 149–154) should, subject to appeal, be liable to an Order for Continuous Treatment after an application by the Public Assistance Authority to Justices of the Peace. (IX., 152.)

(212) Persons against whom an Order for Continuous Treatment had been obtained would be under continuous control for the period named in the Order: this control need not be exercised in an institution for the whole of such period, but, if necessary, the Order would authorise the Public Assistance Authority to remove persons to and detain them in institutions. (IX., 153.)

(213) We have recommended that persons should be committed to a "Detention Colony" under the Home Office, for any period between six months and three years, who have been guilty of wilful and persistent repetition within a given period of any of the following offences (IX., 151 Class III. (b)):

(1) Wilful refusal or neglect of persons to maintain themselves or their families (although such persons are wholly or in part able to do so), the result of such refusal or neglect being that the persons or their families have become chargeable to the Public Assistance Authority.

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(J) ORDERS FOR DETENTION OR CONTINUOUS TREATMENT—*contd.*

(2) Wilful refusal, on the part of a person receiving assistance, to perform the work or to observe the regulations duly prescribed in regard to such assistance.

(3) Wilful refusal to comply with the conditions, laid down by the Public Assistance Authority, upon which assistance can be obtained, with the result that a person's family thereby becomes chargeable.

(4) Giving way to gambling, drink, or idleness, with the result that a person or his or her family thereby becomes chargeable.

(K) SETTLEMENT AND REMOVAL. (*See PART VIII., CHAPTER 2.*)

(214) Theoretically, there is much to be said in favour of the proposal to abolish the Law of Settlement and Removal. From a practical point of view, however, there is much to be said against its entire abolition, and, accordingly, until experience has been gained of the work of our new organisation of Public Assistance, we think it better to retain the law, but in a modified and simplified form. The specific recommendations we make are:—

(a) That the County or County Borough shall be the area for all purposes of settlement and removal.

(b) That the forms of settlement be reduced to four, viz.:—

Birth.

Parentage

Marriage.

Residence.

(c) That a settlement be acquired by one year's residence in a County or County Borough.

(d) That the Local Government Board determine all cases of disputed settlement unless the Board consider that a particular case should be decided in a Court of Law.

(e) That there be reciprocity of removal as between England, Scotland and Ireland.

(L) COMPOUNDING FOR RATES. (*See PART VIII., CHAPTER 8.*)

(215) Compounding for Rates should be reduced as much as possible and it might be found desirable to reduce the limit of rateable value for compounding purposes under the Poor Rate Assessment and Collection Act, 1869. (IX., 157.)

(M) CONSTRUCTIVE RELIEF IN THE CASE OF THE AFFLICTED.

(216) A person should not be considered constructively a pauper on account of Public Assistance to a dependant, occasioned by such dependant being mentally defective, epileptic, lame, deformed, or crippled. (IX., 159.)

(N) STOCKTAKING AND WORKHOUSE ACCOUNTS.

(217) A paid Stocktaker should be appointed by each Public Assistance Authority to undertake the double duty of taking stock and checking the necessary books. (VIII., 256.)

(218) The keeping of accounts should be simplified as far as possible, and the number of books and forms reduced to a minimum consistent with sufficient safeguards to prevent or detect fraud, and to prevent laxity of method. (VIII., 257.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(O) THE COMPILATION OF THE STATISTICS OF PUBLIC ASSISTANCE. (See PART VIII., CHAPTER 10.)

(219) The Director of Public Assistance in each Public Assistance area of sufficient size should have a Statistical Officer whose duty it should be to prepare the Returns of persons assisted and transmit them to the Local Government Board. (VIII., 283.)

(220) A Return should be prepared at regular intervals showing the aggregate period and occasions of relief granted to each person, distinguishing between Institutional Relief and Outdoor Relief, and classifying by ages (in three or four groups), the persons assisted. (VIII., 284.)

(221) A person should be considered to be in receipt of public assistance when he, or any dependant of his, subject to certain exceptions to the rule of constructive relief, or, being a dependant, when he or the head of the family receives money, kind, or medical attention at the cost of public funds, notwithstanding that the whole or part of such cost be repaid by the person assisted or by relatives or others. The Local Government Board should bring this rule to the notice of the Public Assistance Authorities. (VIII., 285.)

(222) Separate statistics should be obtained of the cases involving constructive pauperism both as to the persons actually relieved and the persons only constructively relieved, as well as of the exceptions to the rule, such exceptions being classified according to the various classes of the afflicted. (VIII., 286.)

(223) The use of the terms "able-bodied" and "not able-bodied" should be discontinued, and the terms "ordinarily able to work" and "not ordinarily able to work" should be substituted therefore. If the definition of "able to work" be ability to perform (1) light (2) moderate or (3) hard work of a suitable character within an institution, a practical standard might be established. (VIII., 288.)

(224) The class "ordinarily able to work" should be sub-divided in order to distinguish those able to work on the date of the Return from those ordinarily able to work who are temporarily incapacitated on the date of the Return. (VIII., 290.)

(225) Under each of the above classes those on the Medical Relief Lists should be distinguished from those who are not on those Lists. (VIII., 290.)

(226) Wives of men in receipt of outdoor relief should be classified according to their own physical condition, and not according to the physical condition of their husbands. (VIII., 291.)

(227) The classification by physical condition should be embodied in the Relief Lists for separate infirmaries. (VIII., 291.)

(228) In regard to the statistics of medical relief only for the day counts the Local Government Board should lay down the rule that the persons counted should be those patients dealt with during the week preceding the date of the Return. (VIII., 294.)

(229) The medical statistics of persons in receipt of public assistance should be further developed. (VIII., 295.)

(230) The ages of persons relieved should be regularly tabulated on uniform lines and this information might be combined with other statistical facts. (VIII., 297.)

(231) All children under 16 years of age, of parents in receipt of relief, should be counted, whether the children are earning or not. (VIII., 307.)

(232) The present classification by "families" or "cases" should be continued, and be supplementary to the classification of individuals according to their industrial ability and physical condition. (VIII., 308.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

(O) THE COMPILATION OF THE STATISTICS OF PUBLIC ASSISTANCE—*cont.*

(233) There should be a further classification of individuals under the heads of:—

(a) Indoor paupers; (b) Outdoor paupers, and (c) Boarded-out paupers;

and that, subject to reconsideration when the scheme we recommend is put into force, the present classification by Institutions should be continued. (VIII., 308.)

(234) Statistics should be obtained of the number of deserted wives and children. (VIII., 308.)

(235) For the purpose of the half-yearly Returns, the numbers relieved at midnight on the day selected should be recorded instead of those relieved on a given day. By this means persons who received both indoor and outdoor relief on the date of the Return would no longer be counted twice over. (VIII., 308.)

(236) Periodical returns should be obtained of the cost per head (in the case of annual expenditure) or per unit of accommodation (in the case of capital expenditure) of various classes of persons relieved and of the various methods of relief. (VIII., 309.)

(237) The items of expenditure of Public Assistance Authorities should be classified and an Index prepared on the lines of the "Index of Classification" included in the "Uniform System of Hospital Accounts." (VIII., 309.)

(238) The accounts of the Public Assistance Authorities should in all cases be made up to the 31st March and 30th September. (VIII., 310.)

(P) TEMPORARY COMMISSION.

(239) A temporary Commission, working under the Local Government Board, should be appointed with a view to securing the early and effective development of the new system of Public Assistance. (IX., 160.)

NOTE.—The Roman figures at the end of each Recommendation refer to the Parts of the Report, the Arabic figures to the paragraphs in those Parts.

MEMORANDUM BY DR. DOWNES ON THE REPORTS OF THE COMMISSION.

I have signed the Majority Report because I desire to support the principle that public relief in every form should be administered and controlled by one local authority in each area. The control of assistance from public funds is a foremost function of Government, but it is not one which the people of this country would willingly surrender to a *regime* of officialism, however this may commend itself to the ultimate aims which have inspired the Minority Report.

But I regret that I must dissent from the scheme of administration proposed in the Majority Report. I view with grave misgiving the wholesale and imminent disruption of existing agencies and the transference of the work of relief to a complicated, untried, and, as I venture to think, unworkable system of machinery with manifold and inherent dangers. It is doubtless true that the present elective basis of our local government has in some places proved insufficient to secure efficiency or to exclude corruption, and that it has failed to preserve a due balance of representation of interests or to enlist the services of many well-qualified workers and administrators. But all this could be adjusted by other measures, and a proposal to sweep away all directly elected representation in this great field of local government is so contrary to the national instinct and to our established principles, and so fraught with contingent dangers, as to demand the most rigid proof of its necessity. The sufficiency of such proof, either in the Majority or in the Minority Report may, I think, be justly challenged, and it is improbable that the picture drawn in the latter Report will be generally recognised as an accurate or impartial presentment of the actual facts.

In so momentous an issue it is perhaps unfortunate that the Evidence should not have been previously made public, and that even now it will not be accessible to many. It is important that every statement should be carefully tested, and that all contingent conditions should be taken into account. I do not think that the extracts given, even in the Majority Report, sufficiently comply with this in all cases. As an example I may refer to the extracts given in Part IV., Chapter 6, from certain Reports. These extracts fail to convey the very important fact that there is in the original Reports abundant evidence to show that the conditions of life of the outdoor paupers described are certainly no worse than those of the neighbouring independent people of the poorest class. What is there in question is, in fact, not so much the administration of relief to which prominence is given, as shortcomings of education, of sanitation, and of housing.

That defects exist would be denied by no one, and that the machinery must advance with the times and be adjusted continually to the standard of the age is clear. But in a balanced consideration of those defects we should not lose a just sense of proportion, nor omit to take into account the advance which has been and continues to be made, in the general welfare and standard of living, and in the administration of the Poor Law itself.

To take an example :—The Commissioners are impressed, and rightly, with the importance of classification : this, indeed, is a pivot of both Reports, but the illustration of shortcomings is so prominent that, as I have said above, there is danger of injustice. For in this matter of classification it is a fact to the credit of the country that of the indoor poor—exclusive of lunatics in asylums and of casuals—more than 38 per cent. were in 1908 already provided for in specialised institutions quite apart from the ordinary workhouse,* and the proportion in London was more than 50 per cent. There may indeed be a danger of classification being carried too far, to the verge of hardship or even tyranny. The breaking up of families, the removal of old folk from their associates and friends, may outweigh many administrative advantages. And administrative difficulties may themselves arise of minor import compared with the above, but well to be remembered. Classification run to an ideal entails many practical difficulties and even evils.

* The percentage might be increased by the inclusion of a large number of indoor poor accommodated in "homes for the aged," etc., but technically included in the list of "workhouses" so-called. Moreover, it is irrespective of all the classifications, sometimes highly elaborated, within the workhouses themselves. Nor does it take into account the great and ever-extending use of voluntary institutions by the existing relief authorities.

To take another example: It is surely no mean thing to be able to say that now all the children in receipt of relief, not 7 per cent. are housed in a workhouse proper, and that there is hardly a union which does not send this remnant out to the public elementary school to mingle with their fellows. In 1838 nearly half of the entire number of the inmates of the workhouses were children under sixteen years of age. Now only one-tenth of the inmates of "workhouses," are children under sixteen; of these one-half are in the sick wards or separate infirmaries, and a large proportion of the remainder are babies under three years of age.

Not less satisfactory is the record that within the same period the number of paid nurses of the sick indoor poor has risen from less than 200 to more than 6,000, many of whom are highly trained in their profession. The beds in the separate infirmaries of London alone now nearly equal if they do not outnumber those of all the general hospitals in the whole country. It is a significant proof of the public appreciation of these infirmaries that the proportion of the total deaths in London which occur in the Poor Law institutions has risen from 12·3 per cent. in 1890 to 20·5 per cent. in 1907. We should be careful, in considering statements of cases in which the Poor Law is asserted to be deterrent, not to lose sight of these broad truths. I regret that there is not in the Reports a fuller recognition of them and of the work that has been accomplished by the guardians and their officers, a work in which the co-operation of many voluntary agencies has greatly aided.

I have studied the list of defects on which the sweeping changes advocated in the Majority Report are based. My experience convinces me that there is not one which could not be met, and I venture to say, better met by a revision, a strengthening, and an extension of existing powers on lines already established. Powers exist, more elastic and more extensive than the proposals of the Report, whereby any necessary extension of area, any combination of local administration, or any classification could be effected. Some revision or addition of detail and a public mandate is alone needed to set them in operation.

The Report, premising that extended areas are necessary, proposes that the future area of local Poor Law administration shall be the county or the county borough. The vast amount of readjustment involved in this will best be realised by those who have had experience of the difficulties entailed. "There would have to be no less than 225 adjustments of existing properties and liabilities, involving much time, trouble, and expense, and *without finality being secured*. Urban districts grow into populous places and may be organised as boroughs. Boroughs increase in importance and will claim to rank as county boroughs. Each change will necessitate further adjustments, and the more complete the institutional service provided by the administrative county from which the population would pass, the more difficult the rearrangement would become. With what confidence could institutions be established for so uncertain a population?" * The scheme of the Report indeed is inconsistent with the object of self-contained classification on which it is chiefly based. There are even cases in which the area would be reduced; the union of West Ham with a population in 1901 of more than half a million, would be replaced by a county borough of only half the population of the dissolved union, while the remnant would be incongruously grouped for relief purposes with the sparsely peopled marshes of the coast.

At present there are ninety-two Poor Law unions, each with a population of more than 100,000. Among the administrative counties and county boroughs by which it is proposed that these unions should be replaced, seventy-seven only have populations exceeding 100,000. The scheme in fact does not solve the problem of the great urban populations where necessity for reform is greatest, while it threatens a maximum of disturbance to the rural districts where the need is least pressing. It may indeed, be doubted whether many of the proposed areas would after all suffice for a complete self-contained scheme of classification; some of them are manifestly too small for moderate or even elementary requirements. But the grouping of county or county borough areas would be difficult or practically impossible, in proportion to the incongruity of social and industrial conditions and to the jealousies of strong municipalities. And thus the problem of the fringe of the great cities would still remain.

* Memorandum by the Right Hon. Charles Booth. See Appendix.

From these objections a policy of grouping or amalgamating existing unions would be largely free. The adjustment of properties and liabilities would be comparatively simple. "The plan could look forward to and automatically provide for the future: existing machinery would be available and could be used for all it was worth." * And in this connection the question of the existing officers should not be forgotten. The scheme before the Commissioners does not fully deal with this, and no estimate of possible cost of compensation for loss of office is given. Nor is there any indication of possible cost as regards the scheme as a whole, although it is apparently contemplated that the change shall be applied by one measure to the whole country.

But such an upheaval would, I think, be rather astonishing to the rural districts, where pauperism is largely an affair of old age, and may reasonably be expected to be substantially relieved by the Old-Age Pensions Act, and where enormous reductions have taken place in child pauperism. The necessity of drastic interference with these areas is not apparent. It is in fact not in the rural districts but in London and in the urban centres, and in regard to adult pauperism, especially of men, that the position is serious. The most disquieting index of urban pauperism is the increasing proportion of able-bodied men in health who are dependent on the rates, and the growing percentages of previous applicants to committees under the Unemployed Workmen Act.

The following table (Report Part II.), seems to me so significant that I reproduce it:—

INCREASE OR DECREASE PER CENT. IN NUMBER OF ABLE-BODIED MEN IN HEALTH IN RECEIPT OF POOR LAW RELIEF.

| Groups of Unions. | Indoor. | | Outdoor. | |
|---|--------------------|--------------------|--------------------|--------------------|
| | Between 1891-1900. | Between 1895-1905. | Between 1891-1900. | Between 1895-1905. |
| <i>London</i> - - - - - | + 0·7 | + 38·4 | + 6·6 | + 137·9 |
| <i>Extra Metropolitan.</i> | | | | |
| Wholly urban - - - - - | + 12·8 | + 24·4 | - 5·5 | + 133·8 |
| Partly urban and partly rural, of which the following proportions are comprised in boroughs and urban districts:— | | | | |
| (a) 75 per cent. and upwards - - - | + 34·0 | + 19·2 | - 32·6 | + 56·3 |
| (b) 50 per cent. and under 75 per cent. - | - 3·5 | + 2·3 | - 48·9 | - 18·5 |
| (c) 25 per cent. and under 50 per cent. - | - 6·4 | + 8·4 | - 45·0 | - 39·3 |
| (d) under 25 per cent. - - - - - | - 26·1 | - 19·0 | - 44·2 | - 34·4 |
| Wholly rural - - - - - | - 30·0 | - 33·7 | - 41·0 | - 37·7 |
| <i>England and Wales</i> - - - - - | + 6·5 | + 21·2 | - 28·4 | + 49·9 |

The decreased rate of able-bodied pauperism in the rural or semi-rural districts is as striking as the progressive increase in the urban districts, culminating in the Metropolis, is disquieting. There is indeed abundance of statistical evidence to show that the present position is more serious in London than in any other part of the country, and this seems to demand that with London and the urban centres reform should begin.

So far I have spoken of objections to the adoption of the county or county borough as an area. There are further reasons for opposing any step which tends to municipalise the administration of public relief under the existing conditions of municipal government in this country; conditions which are devoid of essential safeguards, and are fundamentally different from those of continental cities, a point which appears to be too often forgotten.

A strong control of public relief is a vital necessity; I repeat that I wholly agree with the recommendation that this control should govern public relief in every form and that it should be in the hands of one authority. But I hold that that authority should be directly constituted for its special purpose: its functions are too great to warrant

* Mr. Booth's Memorandum.

its attachment as an appendage to a borough council. The device of a statutory committee is at best but a makeshift of representative government: the great county or county borough councils are already over-burthened with duties, and the minor municipal bodies can claim no such *status* as would entitle them to a dominant control of public relief.

Any idea that the scheme would promote co-operation of departments—public health, education, works, relief—I believe to be illusory and dangerous. The mutual jealousies of committees, even of the same body, are familiar to those engaged in practical administration, and statutory committees may be expected to revolve in their own orbits apart from the rest. There is a greater probability of eventual fusion, the children to the education committee, medical relief to the sanitary officers, the able-bodied to the works department. In this light the scheme would appear to be but a halfway step to the multiplication of relief authorities advocated by the Minority, and to the very end which the whole argument of the Majority Report condemns.

I should favour, then, for London a scheme under which a relief authority should be constituted for its set purpose, partly elected and partly nominated, with an administrative area which could, if and when thought fit, be extended to include the "fringe" of London. I am convinced that it would be a mistake to make such a body too large: one elected member from each borough area should suffice, the nominated members being representative of defined interests. This body would set up its local relief committees on the lines generally suggested in the report, and I desire to especially support the proposed association of each committee with a chief and expert officer charged with very responsible duties—such as are now discharged by the clerk of a board of guardians, but with powers superadded on the lines of the office of inspector of poor in Scotland. For the control of institutions, numerous though they be, a large body is not requisite: to this the experience of many railways and other commercial concerns will testify. I believe that a small temporary Commission of, say, five experienced administrators could initiate the whole machinery. Strong and systematic central financial control is indispensable throughout, and I am not sure that this has been sufficiently emphasised.

Although London presents an exceptional problem, I see no reason why a similar machinery should not in turn be applicable to great urban areas elsewhere, each area being built up of existing units of Poor Law administration, according to their community of social and industrial interests. It was calculated by Mr. Booth, in a memorandum from which I have largely drawn, that 154 urban unions, out of a total of 645, with two-thirds of the entire population of the country, might be thus dealt with, leaving the remaining 491 more or less rural unions, in which no great change is required, largely undisturbed for the present, further than by some adjustment in the numbers of guardians and the adoption of representative nomination, or by a grouping and possible provision of a federal district board to co-ordinate the general administration, and to make better provision for certain classes such as the sick* or the able-bodied. On these lines I believe that efficiency may be secured and a large measure of devolution obtained.

Where the relief administration is thus systematically organised, it might properly take over the administration of the lunatic asylums and fever hospitals. Both of these are essentially instruments of public relief, and there would be obvious advantage in consolidating the administration of these public institutions under one body specially equipped for such a duty. The experience of London has shewn that the fever hospitals and the ambulance services may be admirably administered by such an authority, and that the arrangement admits of many advantages which could not otherwise be secured. The scientific application of principles of administration, the development of a trained and organised service, the control of finance, of contracts and supplies, and the adaptation of accommodation according to the need of the time, may be instanced in illustration.

As regards medical relief I fear that the scheme proposed in the Report is too complicated for adoption in practice, and too dependent on agencies beyond the

* I have great hope that, in the Counties, much may be done for the sick by nursing organization, and by the development of County Infirmaries and Cottage Hospitals under the auspices of the Voluntary Aid Councils and Committees proposed to be established in Part VII. of the Majority Report. With this portion of the scheme, I am heartily in accord. But on these Councils and Committees the medical profession should be represented.

control of the Poor Law. The future must largely depend on the action of the great voluntary hospitals and institutions of charity and self-help. There are signs that this will be forthcoming when the future of Poor Law relief has been settled, but this settlement should be the first step, and alignment of the other agencies should follow. The interest taken in this matter by the representative medical association, by some of the leaders of the medical profession and by the hospital organisations is a guarantee that the matter will not rest. The building up of the provident dispensaries, their relation to the voluntary hospitals, the reciprocity of each with any system of public medical relief, and the ever-increasing public demands upon the services of the medical profession, involve problems which should, I submit, be considered by some body more representative of the interests concerned and more directly equipped to deal with detailed difficulties than the present Commission. The scheme set out in the Report appears to me to offer what amounts to a large measure of free medical relief without adequate safeguard either to the medical profession generally or to the ratepayer. Provident dispensaries established by the enrolment of paupers and subsidised by the rates would, I fear, become provident in name only, and the offer, or inducement, of free institutional relief to any member of these dispensaries is one which in my judgment could not be met until the available accommodation for the sick has been largely augmented. The margin of spare accommodation at present lies in remote country workhouses and not in the infirmaries of the urban centres of demand. This offer of free institutional relief implies also, but does not insure, a settled scheme of reciprocity between the voluntary and the rate-supported hospitals; unless this is done, the Poor Law in order to fulfil the obligation incurred, would be compelled to establish a costly system of specialised hospitals parallel to and competing with the voluntary institutions.

The problem of institutional medical relief lies mainly in the question of the man who is not ordinarily dependent on the rates. His necessity may be very real and urgent; a sudden requirement of costly and imperative surgery may be ruinous or even prohibitive to many who for the ordinary needs of life would be counted well-to-do. The solution will doubtless be eventually found partly in increased facilities of accommodation for those who can and wish to pay according to their means, partly in the resources of co-operation and insurance, and partly in the re-organisation and mutual reciprocity of the existing medical services, whether voluntary or rate-supported, which, I hope, may not be long deferred. As matters stand the position of the pauper may in this respect be not of less, but of greater eligibility than that of the man who has maintained his independence.

Meanwhile, the grouping or combination of existing Poor Law units on the lines contemplated in this Memorandum into broad areas of administration for medical relief should with the widened choice of institutions, facilitate the classification of the sick poor, with advantage and economy, and at the same time enlarge the scope and conditions of the medical service. If this step is well assured Poor Law medical relief will, I think, progress on safe lines and will be prepared for systematic extension of co-operation with the voluntary agencies at the proper time. For co-operation with the Sanitary services provision already exists and could be developed without difficulty. The separate functions of the two services, however, are quite definite, and any amalgamation of them such as is suggested in the Minority Report would, in my judgment, and I have had experience of both, be detrimental and contrary to the public interest.

On the question of disfranchisement the following observations of our Investigators, Mr. Steel-Maitland and Miss Squire are, very pertinent, "at present medical out relief does not disfranchise," infirmary treatment does so in some cases and in some places but not in others. . . . The origin of the present state of affairs lay in the cry 'Why should a man lose his vote just for a bottle of medicine.'" And the distinction "is precisely the reverse of what is really reasonable. In the case of a serious illness demanding institutional treatment the expense might well be beyond the resources of a thrifty man. The opposite is the case with a medical order. Hence at present a man is not disfranchised if he gets relief which he ought to have been able to provide for himself. He may be disfranchised for seeking relief he could not reasonably be expected to provide and which in addition it was often to the public benefit as well as his own that he should get."* Personally I think that disfranchisement should at any rate be reserved for certain cases, *e.g.*, persons able to pay but failing to repay for infirmary relief obtained by them.

* Memorandum "On certain aspects," etc., paragraph 2.

Finally, I am of opinion that the whole question of the cost of hospital and infirmary construction and administration, and the standard of equipment generally should be inquired into by a Departmental Committee.

The most pressing need for action is occasioned by the distress which is associated with lack of employment. Few things could be more injurious to the commonweal or more unsettling to men's minds than hesitation or delay in such a matter. And this, even if it stood alone, would to my mind be a fatal objection to the revolutionary schemes and to the breaking up of existing machinery proposed by the Reports. I fully agree that the provision of public relief made by the Poor Law should be such as may be offered without loss of self-respect to the well-conducted man who is obliged to resort to it. To every man should be given a chance in the first instance and a possibility of hope even in the last resort. It needs no great enlargement of present powers to secure this, and to extend the arrangements whereby a decent home shall not be broken up in time of depression. This demands a more effectual severance of the idle and vicious from the industrious, a severance which can only be effectually enforced if the relief is in the hands of one authority in the first instance. To this end I would urge the promotion of legislation on the lines of the Report of the Departmental Committee on Vagrancy, and I regret the inconclusive reference of the Majority Report to the recommendations of that Committee.

I dissent from any recommendation for the provision of special work by local authorities at times of depression. The machinery of the Relief Authority should be so constituted as to suffice, and it should include provision for the use of spare accommodation in other localities if the accommodation of a distressed area should be found to be inadequate. More power for the utilization of distant accommodation is indeed needed for ordinary administration, and it is imperative if great towns are to deal with able-bodied men in workhouses with sufficient land attached. In the rare case of local industrial disaster, such as the Lancashire cotton famine, I should desire to see provision for financial assistance on the principle of a rate-in-aid over an extended area. I regret that this and the financial considerations of public relief generally have not been more fully dealt with by the Commission, and especially so, because the proposals of either Report must, in my judgment, inevitably involve an immediate but uncalculated outlay of public money.

The hurried issue of the Reports does not permit me to consider them in further detail, and I will only in conclusion refer to the proposed tabulation of statistics by the Central Authority. The experience of the statistical work of the Commission itself and of various public departments certainly does not support the conclusion that this work would impose too great a burden on the Central Department. I attach great importance to a proper and accurate system of statistics as an instrument of administration, and I trust that a strong Statistical Department and Intelligence Bureau will be established as a division or branch of the Central Authority.

MEMORANDUM BY MR. C. S. LOCH AND MRS. BOSANQUET.

 THE TREATMENT OF UNEMPLOYED PERSONS.

We accept the necessity of making some provision for meeting exceptional distress, if it should arise in the transitional period, before the system of Public Assistance has been actually established. But we think that the ability of the Public Assistance Authorities to meet exceptional distress of all kinds, after that period, might have been more fully explained and illustrated in the Report. We regret that this has not been done.

The Commission have agreed to the principle of there being one relief authority only. This authority it is proposed to call the Public Assistance Authority. The change of name from Poor Law to Public Assistance implies and indicates a change in spirit and purpose, methods and organisation. In these circumstances there seems to us to be no reason, why, when the new system has been set on foot, the Public Assistance Authorities should not meet all the exigencies of exceptional distress of whatever kind they may be, subject to the enforcement of the principle, which is based alike on general experience and on the dictates of common sense, that the provision made for persons in distress who are able to work should not be more attractive than the conditions of self-support.

We see no reason, why, under obvious safeguards, the Public Assistance Authorities should not be empowered to purchase land or to take any other measures which they may deem desirable to deal with exceptional or severe distress, as, for instance, such measures as might be required to meet the distress of a Cotton Famine or the difficulties that might arise in a cyclical want of employment.

We are strongly of opinion that the treatment of distress, exceptional or other, should be entirely dissociated from the municipalities and from municipal employment.

We should very greatly regret it, if the methods proposed in the Report, in order to meet exceptional distress during the period of transition, should become permanent methods of procedure.

(Signed) CHARLES S. LOCH,
HELEN BOSANQUET.

MEMORANDUM BY MISS OCTAVIA HILL.

While signing the Report because I agree, in the main, with its conclusions, I regret that I must differ from my colleagues on the following points:—

Machinery.

A statutory Committee of the County Council appears to me to be open to the following objections:—

- (1) It tends to the municipalisation of the Poor Law.
- (2) It is comparatively untried machinery.
- (3) It is, at best, composed mainly of those elected for other duties, and already over-weighted with work.

I should have recommended an *ad hoc* authority elected from an enlarged area, and with a strong nominated, or co-opted element. The prospect of more hopeful work which must open out under the fresh arrangements would probably attract the services of those interested in the poor, and able to devote undivided strength and thought to them, as they would not be burdened with County Council business, nor eager for political advancement.

Medical Relief.

The scheme for Medical Relief sketched in the Report is not, in my opinion, workable, moreover it opens the door too widely to free Medical Relief.

Disfranchisement.

I regret that the recommendations with regard to disfranchisement extend, rather than diminish, the number of those dependent on public funds, who would have votes.

Special Schemes of Work under Authorities other than those for Public Assistance.

But, finally, and chiefly, I emphatically dissent from the recommendation as to the provision of special work at times of depression. However guarded the conditions may be, the mere knowledge of the existence of such schemes would, I believe, do harm. Artificial work provided by State or Municipality has never yet been successful, whether financially, industrially, or in its influence on character. There is also danger of corruption creeping in, the more industrial enterprises are carried on by Municipalities. The relation between these and their employés, who are also their constituents, is not satisfactory. Moreover, the duty of inspecting private enterprise cannot be properly performed by those who are competing with it.

But there are far more important objections to a supply of artificial work. Such supply withdraws attention from those radical changes which can alone meet the difficulties of unemployment. If, as I believe, we must trust to the energy, resolution, and keen practical sense of our people to find the places where they are wanted, and to fit themselves for the work which is needed; if we must look to them to provide against times of crisis by foresight, insurance, and savings; we must not buoy them up by visions of State, or Municipal, employment,—schemes specially devised to meet their capacity instead of developing their power to do what is really wanted. Nor must we keep them in congested districts.

It may be that the provisions recommended in the Report, *i.e.*, Insurance and Labour Exchanges for the industrious, and places of detention for vagrants and wastrels, may still leave a certain number of unemployed. Then let our Workhouses—called, if it is thought well, Industrial and Agricultural Institutions or Labour Colonies—be, as the Report recommends, such that we shall not be ashamed to offer them to a respectable man out of work, where he can wait, in healthy surroundings, withdrawn from the labour market, afforded special training and employment, until he can resume his place in the industrial world.

(Signed) OCTAVIA HILL.

MEMORANDUM BY MR. T. HANCOCK NUNN AS TO THE FUNCTIONS AND CONSTITUTION OF THE NEW PUBLIC ASSISTANCE AUTHORITY AND ITS LOCAL COMMITTEES, WITH A NOTE UPON THE HAMPSTEAD SYSTEM OF CO-OPERATION BY MEANS OF A COUNCIL OF SOCIAL WELFARE.

(A). INTRODUCTION.

This Memorandum is written to indicate an alternative view of the functions of the future committees of Public Assistance, and to suggest an alternative method of appointing them. This view and this method are derived very largely from my experience of the Hampstead system of co-operation by means of a Council of Social Welfare. Accordingly, I have, in the Note following the Memorandum, described the genesis and functions of that Council. It is, I think, the only constructive and comprehensive attempt made in England, so far, to federate all the Public Bodies and Friendly Societies in one Borough in one organized effort of social beneficence: alleviative, restorative, and preventive.

The Commission has been practically unanimous in selecting the County Area as the unit of administration of Public Assistance in the future, and in recommending that the organization of Public Assistance be given to a Statutory Committee of the County Council. Concurring as I do most cordially with this cardinal reform of our present Poor Law system, I feel bound to make the following alternative suggestions as to the functions of the new Authority, and consequently as to the constitution of the new Authority and the method of appointment of their local managers.

(B.) ALTERNATIVE SUGGESTIONS.

I would recommend:—

1. That in each local area a Council of Social Welfare be formed on a scheme made by the Public Assistance Authorities, and approved by the Charities Commission Department of the Local Government Board, representative of all the Public, Voluntary, Endowed, and Friendly Bodies at work in that local area for the social betterment of the people. That the functions of this Council of Social Welfare be deliberative and electoral only.

2. That in each County, or County Borough Area, a Council of Social Welfare be formed on a scheme drawn up by the County or County Borough Council and approved by the County Council Department of the local Government Board, representative of all the Public, Voluntary Endowed and Friendly Bodies at work in the County, or County Borough, but over areas transcending the local areas, for the social betterment of the people. That the functions of this Council of Social Welfare be deliberative and electoral only.

3. That the majority of the Public Assistance Authority be members of the County Council or County Borough Council, whilst the minority consist of persons nominated by the County Council of Social Welfare and appointed by the County Council or County Borough Council.

4. That the local Committee of Public Assistance consist of persons nominated by the local Council of Social Welfare and appointed by the Public Assistance Authority.

5. That in addition to the Duties and Powers recommended in Part IX. of our Report the Public Assistance Authority be empowered to effect organized co-operation amongst the constituent Bodies of the County and local Councils of Social Welfare, but that no special Statutory powers be given them for this purpose beyond the power of making grants towards the working expenses involved in effecting such co-ordination as they might recommend. This would involve an extension of 42 & 43 Vict., c. 54, Section 10.

6. That in addition to the duties laid down for the Public Assistance Committee in Part IX. of our Report, it be the duty of these committees, with the approval of the Public Assistance Authority and in consultation with the Local Council of Social Welfare, to organize co-operation amongst the constituent Bodies of the local Council of Social Welfare, and to recommend to the Public Assistance Authority grants to voluntary agencies under the extended powers of 42 & 43 Vict., c. 54, Section 10.

I would venture further to recommend, in order to mark the fact that the powers and duties, greatly enlarged no doubt, of the present Poor Law Guardians, are to be transferred to a Statutory Committee of the County Council,

7. That the Public Assistance Authority be referred to as the County Guardians and their local committees as the Guardians' Managers.

Under this system, although it would be open to the County Guardians and the local Managers to appoint Medical Committees, these would not be related to the Authority in such a way as to absorb most of the organising work of what I describe as the democratic base of the system. Nor can I entirely subscribe to the suggestion in our Report that through the Medical Committee a direct path should be opened from an application to the Guardians directly into a Provident Dispensary. Under this system the better way would surely be to promote such an organisation of combined Medical Aid as is actually in progress at Hampstead as sketched in Section XIII. of the following Note. The path to the Provident Dispensary is there opened up, not through an application for relief, but by the enthusiasm, good fellowship and brotherhood, that links the members of a great Friendly Society.

(C.) AN ORGANIC RELATION BETWEEN THE STATUTORY AND VOLUNTARY BODIES.

The general effect of these proposals is to make the County Guardians a real democratic base to the New System of Public Assistance; to place in the hands of these Guardians not only the provision and organization of Public Assistance but the promotion of co-operation amongst *all* institutions that aim at the betterment of the people; and to do this by means of County Committees and local Managers; but to secure the representation on both of these, of the bodies whose co-operation is sought. These alternative proposals are based upon my confirmed opinion that no reform of our present Poor Law will be effective if the new system is not fortified by, and at the same time safeguarded from, the operations of equally powerful Bodies in the same field; and that the way to effect this is to connect organically the Statutory and the Voluntary Bodies.

I.—*Electoral.*

It is now agreed on all hands that the direct election of the local administrators of Public assistance is a failure. Overwhelming evidence has been submitted to us proving that the great majority of the local electorates are not sufficiently interested to vote *ad hoc*. On the other hand it is felt that the electoral dependence of the local administrator of relief upon the individuals who may themselves become applicants for relief is demoralizing to the representative and to the electorate. This very kind of demoralization, followed by a reversion to those condemned methods of relief at once pauperizing to the poorer classes, and impoverishing to all classes of the community, has been only too conspicuous of late.

But if we are forced, owing to the apathy of the electorate to abandon one form of representative government for the appointment of the local managers of the democratic Authority, have we then exhausted the possibilities of representative government? If the ordinary elector is not sufficiently interested in Public Assistance to go to the poll, who is sufficiently interested, to whom is it of importance? The answer is that it is of importance, it is of vital interest, to certain classes of the community—to those who, by adopting certain professions, or as voluntary workers, or as organizers of Friendly Societies, are devoting all or a large portion of their time, strength and abilities to the service of their poorer neighbours. The clergy of a Ruri-decanal Chapter, the members of a Free Church Council, a Branch of the British Medical Association, the Governing Bodies of our great Hospitals, Nursing Associations and Dispensaries, the Trades Councils representing the Trades Unions of their districts, the Committees of the great affiliated and other Friendly Societies, the members of Public Health Committees, Bath Committees, Libraries Committees, and Distress Committees of our Municipal bodies, Committees—men and women—of

Voluntary Societies, Trustees of local and county Endowments—to these people, a great and constantly increasing number of influential persons drawn from all classes of society, all religious denominations, and every shade of political opinion. To these certainly the election of the local managers of the Public Assistance Authorities is of extreme importance. Their work may be upheld and aided, or undone altogether, by the local administration of the laws relating to the poor. On the other hand, since by their maladministration they may flood the local managers of the Guardians with applications for relief or wreck the policy conceived by the County Authority, their sympathy and co-operation are essential to Public Assistance.

It has been shown in Hampstead how easy it is to form out of these elements an Electoral Council by which the local managers of Public Assistance might be nominated—their appointment—like the constitution of the Electoral Council itself—remaining in the hands of the democratic Public Assistance Authority of the Council.

It must be remembered that we are face to face with a real political difficulty—the astonishing apathy of the elector at the triennial election of Guardians; and that we are also face to face with an administration of the Poor Laws which—although there are many shining exceptions to prove the rule—reflects the temper of the electorate in its want of heart, want of mind, and general want of power to deal with the most difficult problems presented by the present condition of the Poor.

II.—*Personal.*

Now is it not true that in the community itself what is wanted is just that kind of concentration or rallying ground for social sympathy, social aspiration and enthusiasm, social effort, and social co-operation, which a Council of Social Welfare affords? In the sporadic efforts now being made to imitate unofficially the official Elberfeld system, in the Guilds of Help which are springing up in the provinces and competing, it is to be feared rather unhappily, with existing charity organization societies, in the efforts more or less successful to reform the Charity Organisation Society itself and adapt it to the needs of this generation, in the excellent organization of Health Visitors in London and in the country, in Mrs. Asquith's admirable league of Personal Service in London, which must be *established* or it will evaporate—in all these efforts one sees an awakening of the public conscience—a desire to “serve God in the State,” a civic enthusiasm that cries aloud for organization. This need has been met in Hampstead by the gradual building up of a representative Council of Social Welfare. Such a council meet two needs at once because the needs are so intimately connected. It can form an electorate for the nomination of the local managers to be appointed by the Public Assistance Authority. And it can concentrate and rally all the personal service of the community—now more or less isolated and to that extent ineffective. But I have to show that it can perform two more services not a whit less important. For, thirdly, in appointing an Executive as in Hampstead, or in nominating (not appointing) the local Managers of the Guardians in our new system, it can give them its mandate to promote co-operation amongst its own constituent Bodies. And, fourthly, by seating the representatives of the Voluntary, Friendly and Municipal Services, which are largely preventive in their operation, in the heart of the system of Public Assistance (which is now mainly alleviative but increasingly remedial), it may enable the Public Assistance Authority to harmonize the whole system of assistance within and without its statutory limits. These two later propositions I proceed to illustrate from the Hampstead system, only premising that what obtains there under a purely voluntary system would in my opinion obtain with greatly enhanced advantage in the case of a County Council of Social Welfare nominating a minority of the County Authority, and in the case of a local Council of Social Welfare nominating all or nearly all of the local Managers of Public Assistance.

III.—*Executive.*

The need of co-operation is enforced at some length in the following Note, because I feel that in our Report we have regarded the Voluntary Aid Committee too much as a Voluntary Committee of Assistance for individual cases of distress. What each community needs is a co-operative civic Body which will secure the organisation that makes all case work effective. Such a Body concentrates effort upon Social Welfare itself, and minimises the need of relief, not by charitable relief of individual cases, but by raising the whole standard of life and character by the development of social responsibility.

The principle underlying the co-operation, that is, the distinctive features of the Hampstead System, is the Representative Control by all the agencies of those departments of their work which come into contact with one another, which may therefore clash by overlapping, or gather power by co-operation. This Representative Control is in its turn based upon the principle that growth takes place from within, in other words, that all successful co-operation must depend upon the consent of the co-operating parties. We may go further and say that where co-operation is to be of real value the point of view of each agency must be sympathetically grasped by some central Body; and that not until all sides have been heard and understood can the true solution of any complicated social problem be indicated. These considerations are elaborated in the concluding section of the following Note, in which the need and use of a Representative Council and Executive of Social Welfare are advanced.

Now the point about the Executive which I am anxious to make quite clear is this:—that the control it exercises over Agencies is, as I suggest that the control of the County Guardians should be, indirect. By an appeal which is backed by no statutory powers at all, it brings into conference the Agencies whose co-operation in some departments of their common work is required. The agencies themselves exercise in common whatever direct control is necessary, and this control goes as far, and goes on as long as it is found to be useful. Only the points of contact between the Agencies come under common control, each Agency retaining its entire independence in all other matters. In Section XVI. of the Note it is suggested that only under very exceptional circumstances would it be possible for any Body with less than Municipal Authority to compass the co-ordination here indicated; but at the present time the trend of public opinion is distinctly in favour of municipal intervention, provided it does not take the form of absolute control over voluntary enterprise. The Note that follows this Memorandum illustrates the kind of co-operation that may be brought about, provided it is the duty of some permanent body to bring it about. In the new scheme of Public Assistance we advocate, the work would fall to Standing Committees of the County Guardians and of the Guardians' Managers respectively. The Chairmen of these Committees would need to be men of influence in the County and in the local area, and their chief officers men of liberal education, experienced in all departments of local work.

IV.—*Organic.*

But one of the greatest of our social problems is—how to provide preventive assistance just at the very point where dependence or pauperism may begin, such a backthrust—such an automatic backthrust—as shall start the applicant for Poor Relief upon the path of independence. Here again the application of the principle of representative control has been applied with success. The Note shows how the Board of Guardians in Hampstead, already containing several earnest social workers, was gradually reinforced until it became practically a representative body of social workers. These workers, recognising the unsuitability of the machinery of a Destitution Authority for the purposes of charitable relief, and having full scope for voluntary enterprise in the Charitable Friendly and Municipal Bodies to which they already belonged, were able to apply what we may call the principle of Mr. Goschen's Circular to the relations between Voluntary and Statutory Relief. That principle, surely, is that, just as it is the function of the general local authorities to provide services for the public convenience or the public health where private interest or enterprise is not equal to the task, so the appeal to the Guardians is not so much determined by the kind or degree of calamity into which a family has fallen, but upon the answer to this question:—Is there or is there not available the voluntary help adequate to the right treatment of the case. The idea that the Poor Law was to deal with all destitute cases, and charity with all poor persons in need but not actually destitute, is apparently derived from the fact that upon an application for Relief the Poor Law Authority must relieve all who are destitute and only those who are destitute. But as a matter of fact some of the most destitute cases are regarded as the special province of charity; whilst the Commission has found all over England and hardly any Board of Guardians confine their help to cases of destitution.

The principle that the State and the Municipality should supplement Voluntary Services only where the need of such supplement is proved to exist, seems to me to be the principle that should govern this confessedly difficult relation. On the one hand it gives free play to all the positive spiritual and social influences which are needed for social or individual reform. On the other hand it secures municipal intervention

where individual or social enterprise fails. The necessity of the position is that these forces should interact. What is needed is, not that there should be anything like parallelism between Statutory Relief and Voluntary Assistance, but that the exactly opposite relation should subsist. Parallel lines are lines that never meet. Charity and a Poor Law should never part. Each should have within the other an organ of co-operation. That is, the Guardians' Managers should be representative of the Voluntary Bodies, and so be enabled without friction and by means of organic relation, to promote the co-operation that safeguards both lines of action. This is provided by the system of which the Council of Social Welfare is the pivot, either in the local area or in the County or County Borough.

(D). THE ACTUAL ADMINISTRATION OF RELIEF.

(1). Under this system one of the first duties of the Organising Committee of the Guardians Managers would be to promote local committees of assistance on the lines laid down in Part VI., Section VII., of the following Note. When they were formed all applicants for Domiciliary Aid would be at first referred to them. Afterwards they would soon learn to apply to them direct. The Guardians would still have the power of granting Out-relief in cases where they considered the local Committee of Assistance had failed to take the right line. But this is a power they would use very sparingly. Being members of voluntary agencies themselves, they would know that relief from the rates would tend to dry up relief from charitable sources. Their power would largely consist in their personal influence as members of the Voluntary Bodies, in the fact that the local committees would themselves be representative, and last but not least in their power of recommending grants for working expenses based upon the efficiency with which the local committees co-operated.

(2). All Domiciliary Relief, whether asked by a joint Medical Committee, or by an Infants' Health Committee, or by a Children's Care Committee, or any other mediate organizing Body, would be administered by the local Committees of Assistance, representative of all the agencies, religious and otherwise, in an area of two or three parishes.

(3). All relief given in the home would be raised from voluntary sources, through appeals, collections and voluntary subscriptions. Such a system would, however, carry with it the principle of personal friendly visiting, and would thus convert the mechanical allowance system of the present Poor Law which pauperises into a system of personal influence in the direction of self-reliance and mutual dependence.

(E). CONCLUSION.

The objections I have tried to meet in our present Poor Law System are :—First, that no Body of men and women appointed to act as a Destitution Authority will stop short of relieving Destitution only. Humanitarian motives will draw them over the border line that is supposed to separate Poor Law from Charity. On the other hand, the human feelings that prompt charitable assistance will inevitably deal most readily with the most destitute cases. If therefore this interaction cannot be avoided, it must be met and organized. And it may as well be organized as thoroughly as possible by a constant organic relationship between the Body that relieves Destitution and the Bodies (1) that aim at saving and restoring human wreckage, (2) that aim at promoting Preventive and Constructive methods of Social Welfare. It will be objected that I am advocating Municipal Socialism in a region hitherto exempt altogether from the ravages of that bogey. I can only meet this objection by saying that any dread of Municipal Socialism that I harbour lies in the danger it involves of destroying Individual or Social Enterprise. But as a matter of fact the system I am advocating is proposed largely with a view of meeting and disposing of this very difficulty. A reference to Sections X., XI. and XII. of the following Note will show that in the domain of Public Health, Elementary Education and Poor Law Relief the field of Municipal administration in Hampstead is simply packed with voluntary workers whose activities are trained and heightened and fortified by their contact with expert officials, whilst the officials are freed from many of the trammels incidental to statutory regulations by the presence of a body of free but trained and organized visitors. This is in fact the chief contribution of the Hampstead system to the most pressing Problem of the Day. It offers a fair and as I think a final answer to the old antagonism between State and Voluntary enterprise. That answer is this, and it is of the essence of our system—That the cure for these Social antagonisms is—not that they should part, but that they should meet.

(Signed) THOMAS HANCOCK NUNN.

NOTE BY MR. T. HANCOCK NUNN ON THE HAMPSTEAD SYSTEM OF CO-OPERATION BY MEANS OF A COUNCIL OF SOCIAL WELFARE.

PART I.—COMMUNAL CO-OPERATION.

I.—INTRODUCTION.

For the past nine years a sustained effort has been made in Hampstead to co-ordinate all the agencies in the borough that deal with the social betterment of the people. And the instrument adopted for this purpose has been an old and very simple one—the principle of representative control. This principle has been applied in the earlier stages of the movement to small local groups or for special purposes, *e.g.*, the prevention of phthisis, or the prevention of overlapping in relief. But it has been applied more and more widely as its advantages were gradually recognised and accepted, until at the present time the whole of the agencies in the borough—religious, municipal, voluntary, endowed, mutual—are represented on one council whose object—the improvement of the condition of the people—is sufficiently general, if rightly interpreted, to include all further social developments.

It is this fact, that the system has grown, group by group and purpose by purpose, that differentiates it from most of the associations that have since adopted its main principle. At Edinburgh the only completely similar undertaking was inaugurated about three years ago with a complete representative constitution. The same thing is now being attempted in some English provincial towns. This is all to the good. But these associations, until they have gained their experience and produced their organization, prove the desire, but not the power, to co-operate. In Hampstead* the constitution of the representative council† has been built up very gradually out of smaller representative groups of men and women interested in one particular locality or in one special phase of the social problem. This constitutes the unique interest of the Hampstead experiment. It is not a paper constitution from which men hope for things they cannot see. It is a point of view and a habit of action reached by the representatives of a whole community through their own experience and their own acts. It is a natural growth. It proves—what it is.

Consideration then is claimed for this experiment, because up to a certain point it has proved successful. It has virtually eliminated overlapping of relief. It has strengthened, instead of weakening, the agencies associated. It has given to their combined efforts an effectiveness they could never have achieved in isolation. And it has unified and standardised many, and often conflicting, methods of social reform.

Up to a certain point the system has succeeded. But beyond that point it has failed. And it is submitted that its failures are even more instructive than its successes.

But successful or unsuccessful, *it is here*. Embodied in the resolutions of every agency—religious, municipal, voluntary, endowed, or mutual—in one not unimportant borough of London, are agreements to act in concert with all the other agencies for social betterment. The minutes of the Council of Representatives indicate those lines of least resistance upon which agreement is not only desired but approved as practicable. The reports of the Executive Committee show how co-operation is actually practised in direct relation to the lives of the poor.

* And in Stepney, where a similar association of agencies is now being built up by the Bishop of Stepney and Canon Barnett.

† See Charities Appendix.

It has been urged that Hampstead is so small, and that its conditions are so exceptional, that the experiment is valueless to the social investigator. But will a social investigator of any eminence say this? No practical thinker would neglect the study of republican government in Switzerland, for instance, because Switzerland is small and exceptionally situated. These factors might, indeed, give to the Swiss variant its special interest. It might be argued that under those conditions, if any, the referendum, for instance, should prove a success; that if it is not successful under those conditions, it is difficult to conceive any conditions under which it might safely be used. So with the voluntary, as opposed to any municipal, system of public assistance. It might be argued that if it could succeed anywhere, it should have succeeded in Hampstead; that it has failed there; and that therefore it will be hopeless to depend upon it, say, in Bethnal Green.

But the gravamen of the case against Hampstead as a fair ground for a social experiment is not that it is small and active, cultivated and liberal, but that it is *rich*. As a matter of fact, the Borough of Hampstead contains the poor of Kilburn. This is often forgotten in Hampstead, and quite unrealised by outsiders. Indeed, Hampstead, with its rich side and its poor side, is an epitome of London itself. It has the poverty neither of Bethnal Green nor of Southwark. Nor has it the riches of the City or of Mayfair. Still it strikes much the same average. It is an ordinary borough, and like most London boroughs, very progressive in thought, very moderate in action. But like every other borough in London, and like London itself, the community needs communion; and, like them, must owe its social salvation to whatever trains its citizens, heart and mind and will, to realize their mutual dependence, their membership of one body. This it is that the Hampstead system professes to do.

II.—THE CHARITY ORGANISATION SOCIETY.

For such an attempt as was conceived in Hampstead there could be no better starting point than a local centre of the Charity Organisation Society. Indeed, the object of that society as set forth in its manual, viz., the improvement of the condition of the poor, is sufficiently wide to include all forms of social work within its scope. Compared with the public services of the municipal bodies, or with the partial schemes of ordinary philanthropic enterprise, it strikes one at once by its comprehensive and ideal character.

It has been partly the misfortune and partly the fault of the society that the public have never been persuaded to take this larger view of its programme. Criticism has halted between two ideas as to its functions—the idea that it was a relief society that gave too little, and the idea that it was a detective agency that inquired too much. Both these misconceptions arose from the conscientiousness of the society's older members. They were determined, according to their lights, to sift every case thoroughly—and they were dubbed inquisitorial. They were honestly of opinion that relief should be minimised—and they were stigmatised, by those who mistake cash for charity, as hard-hearted. They were confronted by a mass of cases of whose need and deserts they were satisfied; they raised money for them, giving in carefully selected cases relief that was adequate; then their own friends turned upon them, and reproached them with pauperising the people! Indeed, a society which, in London alone, enlists the active services of some thousand almoners and actually administers £35,000 per annum in the relief of distress, has found it hard to convince the public that it is not a relief society. It is useless to contend that by inquiries, reports, and organisation, it has probably directed into right channels a much larger sum; or that a still larger amount has been probably saved for useful objects by its criticism of bogus or inefficient institutions, and its detection of fraudulent applicants for alms. The fact remains that in the past it has fed relief and starved organisation, and has allowed charity or "love made wise" to appear too often as a mere almsgiver. But at the same time, in criticising the action of others, it has led public opinion to demand wiser methods of relief. The Lady Bountiful, on her merciful errand of creating paupers at a shilling a ticket, is giving place to a District Visitor, a Deaconess, or a C.O.S. Almoner, who gives *herself* to strengthen character and family life in some relation to the needs of the community. As such friends of the poor learn to wield the instrument organisation can place in their hands, doles and allowances fall back; schemes of moral or economic help, carefully planned and patiently carried out, take their place. In such service, money plays a subsidiary, although an important, part; and is used not to replace, and so to wither, moral fibre, but to save where effort has been unavailing against physical and moral weakness or social calamity.

The third complaint against the society, viz., that it hard-heartedly rejected more than half the applications made to it by the poor or their helpers, is so intimately connected with the society's relation to the Poor Law, that a short historical retrospect is necessary to clear the ground.

The society was founded at a time when enlightened public opinion was deeply impressed by the evils resulting from indiscriminate relief. During the last three decades of the nineteenth century it was constantly combating the idea that relief can be regarded, from any point of view, as a social lever. Accordingly, the society's earlier case-books show a large percentage of what are called "rejected" applications—cases in which a man's difficulties were found to be irremovable by any method of material relief; in which the applicant was therefore "thrown back" upon his own resources. Unfortunately this negative policy was usually applied to precisely those unhappy members of the community whose resources in character or circumstances were least able to stand the strain. In them self-reliance needed to be most carefully fostered, and upon them the Poor Law, to which they were "left," could exercise only a sterilising influence. During these earlier years the society was moved more by fear than by love—the wholesome fear of indiscriminate relief. During the 'eighties public feeling about the condition of the poor, the resulting Universities' Settlements movement, and such fresh light upon their lives as was given by Mr. Charles Booth's "Life and Labour of the People," aided an inevitable reaction towards a more positive, a more thorough, and a more humane treatment of distress. The members of the C.O.S., like other people, were asking, What can we do to share the burdens of the very poor, to learn their life, to cultivate their friendship, and so to create character? As men learned more about that self upon which the poor were expected to rely, and about the conditions under which they were expected to thrive, they learned that the doctrine of self-reliance needs to be supplemented by the doctrine of our mutual dependence, our membership of one spiritual body. Thenceforward, in the C.O.S. as elsewhere, men and women made greater efforts at individual and social reconstruction, borrowing from the American systems of friendly visiting. The result is seen in an almost paradoxical reversal, not in C.O.S. principles, but in their application. District committees of the society are now to a large extent occupied in the prevention of distress. The school and the club are becoming matters of first importance to them. Whole classes of cases formerly "rejected" as hopeless are found to yield to treatment. The case quoted on page 15 is one which, ten years ago, very few, if any, C.O.S. committees would have dared to take up. It is one which, two years ago, was only taken up by the Hampstead committee in faith and blind hope. Its difficulties yielded to the combined power of organised enthusiasm.

But an objection far more serious because more fundamental than any of these, was felt by thoughtful men and women, not so much without as within the society. Whilst the central council was propagating sound doctrine on charitable relief, and the district committees were devoting themselves with ceaseless energy to enquiries and reports—yes, and adequate assistance—in thousands of cases per annum, a vast and growing complex of religious, endowed, voluntary, and municipal forms of assistance, largely inspired by the society's own teaching, were cutting athwart, and often undermining, the small and scattered work of the C.O.S. The first year the Hampstead Associated Agencies registered their assistance, for instance, it was found that the C.O.S. was dealing with less than ten per cent. of the total number of cases assisted in the borough. And yet co-operation has been put forward by the society as the first means of promoting any improvement in the condition of the poor. Let us glance at the genesis of some of the contemporary movements to which we have alluded. The Society was founded in 1869—the year of Lord Goschen's circular on "Charitable Co-operation with the Poor Law Guardians." The Elementary Education Act followed in 1870. In the next decade the county councils were created. The Act of 1894 extended, with far-reaching results, the qualifications and electorate for poor law guardians. A few years later the borough councils were formed; and, still later, under the Unemployed Workmen's Act, the Distress Committees began their work. Alongside of this rapid development of municipal activity there has been a no less vigorous growth in the sphere of voluntary assistance, in the largest sense of the word, in the rise and influence of the Universities Settlements, and in a vast output of social work organised by the churches of all denominations, and by innumerable lay societies. The same period has witnessed a parallel extension of the great Industrial and Friendly Societies' mutual provident movement.

In one generation the very foundations of public assistance had been shifted. The improvement of the condition of the poor was now seen to be no longer, if it ever had appeared, a mere matter of the organisation of charitable relief. Voluntary assistance, altogether transcending mere schemes of relief, had enormously expanded, largely, it is true, owing to the society's initiative. The mutual help of workmen's associations had achieved a commanding position in trade, in industry, and in charity. Meanwhile municipal and legislative control already threatened to seize much of the ground thus occupied. It is not strange if the mid-Victorian name and practice of the C.O.S. have become antiquated in the face of a much larger need for the co-ordination not of some, but of all the social forces that aim at the "Improvement of the Condition of the Poor." Nor would it be anything but a sign of paralysis if, in the new conditions with which we have to deal, the application of the old principles were not profoundly altered.

In Hampstead the agencies—religious, municipal, voluntary and provident—united to prevent this danger, and saved the C.O.S. from itself. For years smaller groups of agencies, brought together by local contiguity or by common interest in special departments of social work, learned by mutual concessions and common efforts the value of unity and co-operation. These smaller groupings, growing in strength, efficiency, and mutual confidence, have rendered possible the Council of Social Welfare representative of all the local agencies in the borough.

III.—CO-OPERATION.

Those who conceived the Hampstead system, endeavoured to rid themselves of the cant that pins its faith to any one form of social enterprise—the cant of municipal socialism—the cant of the C.O.S.—the cant of the unemployed banner: "Damn your charity." The religious, municipal, voluntary, mutual movements were here. The effectiveness of their total services depended not upon the predominance of one, but upon the harmony of all. They were different arms of an army actually in the field. They must either clog and cancel or support and fulfil one another's efforts. In such a host of agencies social effort must federate or fail.

Now the enemy within the gate was a virtue in disguise—the loyalty and sense of duty that inspire the "local body" jealous of any assistance from without, that institutional exclusiveness, that perverted sense of doing one's own duty, which, while it narrows our own action, cabins and confines on every side the action of our fellow-workers in the same field. It was felt that in our social world at any rate, with its complex of agencies, no one social problem could be solved by one agency alone, and by no number of agencies acting without unity; but that as it takes a soul to save a soul, so it must take all that is best in the community to save all that is worst. This means that the guerilla warfare that has so long been maintained against carelessness, ignorance, and sin, must be given up, and a highly-organised and well-equipped army take the field.

But our belief in co-operation was tempered by a lively fear of over-organisation since much of the best social work consists in the personal influence of one human being over another. We did our utmost to secure that our system should present these three conditions:—

- (1) That the actual hand felt by those in distress be the hand of a friend, and not of an official organisation.
- (2) That the helper should yet be backed by a powerful instrument for handling the network of agencies that exist for social betterment.
- (3) That the relationship between helper and helped should continue long enough to develop the knowledge essential to friendly help.

But the individuality of a society, its spontaneity, and freshness, and *esprit de corps*, are as important to any combination to which it belongs as is the individuality of a member of a community.

Accordingly, whilst our system aimed at—

- (1) Complete intercommunication between the associated agencies, it contented itself with merely offering—
- (2) Opportunities for any closer co-operation that might be desired, either permanently or as a temporary expedient, and maintained—
- (3) The complete freedom of action of each agency.

Above all things we were anxious to escape the dangers of a too highly centralised system, and to build one up which would fairly lend itself to influences that were local, personal, generic, and co-operative. For effecting this something very different from the existing relief society machinery of the local C.O.S. was needed. What was wanted was a *nidus* for a mutual association not yet formed. This in turn would depend upon an effort of faith, imagination, sympathy, and patience in a constantly growing body of persons.

Fortunately this effort was forthcoming. In the little meetings at which our plans were laid some nine years ago, now a neighbouring vicar or guardian, now the minister of one of the Free Churches, or a district visitor, or again a Friendly Society man, or some quite unofficial person who had heard of what was going on, would come forward with helpful advice or a promise to bring into the work a fresh colleague or agency. Thus the mutual association, which for so long did not receive a constitution, became a real thing because it met a real need by the most potent and the most fruitful instrument in use amongst human beings, band work, the support of something that grows, and can grow only by effort and sacrifice that are mutual. The closer association of the Hampstead Agencies has not been the work of one committee or of one society. It has been a gradual growth in unity of spirit amongst those who recognised the necessity of co-operation; and its motive force has been the growing realisation of this truth, that any improvement in the condition of the poor is not forwarded, but is seriously menaced, by relief; and to be compassed only by mutual personal influences that develop individual character, family life, and social responsibility.

IV.—ANTECEDENT ORGANISATION.

It is indeed lamentable that the only thorough effort made in modern England to introduce order in the chaos of philanthropic effort should have suffered such a series of disasters as befell the C.O.S. Conceived on the broadest lines and launched under most favourable circumstances, the local committees of the Society, out of sheer humanity, abandoned the ideal of co-operation, and added one more, although an excellent one and the best, to the many relieving agencies they had set themselves to co-ordinate. Out of sheer humanity. Those who blame the C.O.S. for its "freezing reason's colder part" misconceive its mistake. In a spirit of catholicity which has been maintained at a high pitch through a whole generation, the doors of the Society have been open to the poor daily in some forty districts of London for nearly forty years. Failing to secure the right treatment for its cases from the various societies to which it referred them, the C.O.S. set about the heroic task of securing *by its own efforts* that all helpable cases should be adequately relieved. The Society suffered the defeat that attends those who start with the intention of standardising effort, and then enter the lists with those they would regulate. What was the result? Through sheer pressure of case-work the Committees of the Society had to confine themselves almost exclusively to the relief of those who applied at their own offices. Their larger and harder task had been, so to co-ordinate and harmonise the work of all the agencies in each district that every distressed person, and not merely those applying at their offices, should be adequately assisted and permanently benefitted. Their aim, indeed, had been to go still further to build up an organisation preventive of future distress. These larger tasks were by the local committees perforce abandoned.* Until lately the self-constituted Committees of the C.O.S. have on the whole been glad if they could secure some co-operation on their own cases only.

Antecedent organisation, secured by representative control, for dealing effectually with all the distress in the borough has been the mediate aim of the Hampstead Society. The successive stages and departments of this antecedent organisation have now to be described.

* By the local committees. In a pamphlet of great interest Mr. W. A. Bailward has shown how steady, persistent and powerful the influence of the Central Council has been upon public and political opinion.

PART II.—CHURCHES AND CHARITIES.

V.—REGISTRATION OF AGENCIES AND OF ASSISTANCE GIVEN.

As the last act of the reformed C.O.S. in Hampstead, in 1908, was to hand itself over to all the agencies in the borough, to be merged in their general executive, so its first act in 1900 was to endeavour to realise *their* point of view, *their* methods, and *their* ideals; and its second to become, as it were, the *general servant* of all the agencies in the borough.

A complete survey was made of the whole borough. The legal limits of each parish were carefully investigated, and the limits in use for practical purposes were duly registered and "agreed" amongst the vicars concerned. The head of every agency in the borough—municipal, endowed, voluntary, or mutual—was interviewed, printed matter obtained, and the objects and methods elicited. It was not until four bulky volumes containing this information had been carefully considered throughout a winter session, that the first practical move was made. Many points of departure suggested themselves; but the registration of assistance was selected for a beginning, because of all the reforms needed, it seemed likely, from the outcry already heard against overlapping of relief, to indicate the line of least resistance in the direction of one goal of our efforts—the establishment in small local areas, of representative committees of assistance. The goodwill of our fellow workers favoured us. Nearly all the agencies in time agreed to register weekly, fortnightly, or monthly;* but they agreed upon two conditions. One was that the information given should be confidential information—given not to the C.O.S. generally, but to a small group of persons, the Registrar and his immediate assistants—the beginning of our new organisation. The second condition was that each agency should reserve from registration the help given to certain cases of a specially confidential character. These conditions were very willingly accepted, for we were confident that this form of wisdom would ultimately be justified of all her children. And so it has turned out. Some of the clergy, for instance, began to use it rather tentatively. But they soon found in it a simple and effectual method of systematising, and therefore of supervising, the record of their district visitors' work.† Very soon a demand arose for the registration of the membership of mothers' meetings, and later of the membership of some of the boys' clubs. Very early in its course, registration was applied quietly, but most effectually, for mingling justice with generosity in such matters as Christmas dinners and Christmas coals.

VI.—INTERPAROCHIAL CONFERENCES.

The mere notification of overlapping did not suffice for its prevention. Still less did it meet the need of co-operation such cases so palpably presented. For the agencies notified often did not take the trouble to compare notes. A case soon occurred to crystallise registration of help into local conferences of helpers:—

Before we had been registering a month, a certain widow, a Mrs. A., had applied to the Guardians for relief, deliberately and fraudulently concealing the fact that she had just received £20 from her late husband's benefit society. The causes of this double dealing began to unfold themselves as two more agencies reported help. An experienced visitor was then appointed to deal with the case, on the understanding that personal influence and not monetary aid was the chief need. Shortly after, a fourth agency reported relief given to the case, and was asked to leave it in the hands of the lady in charge. All this took place in July, the first month of registration. Then came the summer break, during which time no new lists came in. The lady strove with Mrs. A., but ineffectually. In October, Agency 5 began to send in lists, and was found to be giving a "little help regularly." In November, Agency 6 had commenced to register, and informed us that it was giving Mrs. A. 3s. per week.

This little story is cited because it illustrates exactly the chief evil registration is devised to prevent. Had registration been started three months earlier, all these six agencies would probably have notified their case simultaneously, and the courageous worker who essayed the difficult task of moral reconstruction, would have been free from the cross-currents of relief which were constantly thwarting her efforts. Those who do such work have enough of wasted power, disappointed hopes and tragical results to contend with already. This clashing of relief agencies seemed so humiliating in itself, so fruitful of evil, and so easily preventable as to make the action of those

* For a statement of the order that guides the Guardians in this matter see Charities Appendix.

† For a statement of the method of registration, see Charities Appendix.

who declined to notify quite unintelligible. But the case further suggested that some division of labour was the only justifiable sequel to the discovery of overlapping. We must decide in such cases either that one agency shall become solely responsible, or in a less difficult case, where co-operation is desirable, that two or more agencies shall work together on understood lines. This meant that besides performing the written work, which had answered admirably up to a certain point, we must form two or three monthly or fortnightly conferences, for the oral settlement of the overlapping cases. The representatives of the six agencies involved in the above case met at once, and have met every month since, with the utmost regularity. They met, filled with a sense that the degradation of this woman's character was the fault, in a less degree of the woman detected in fraud, and in a greater degree of those whose negligence had tempted her to deceive.

Within two years practically all the agencies had entered into the combination; and four (since five) interparochial conferences had been formed,* meeting monthly, to consider how co-operation might be effected in the cases in which overlapping occurred. Used at first merely to consider cases of overlapping, these meetings became useful in other ways. At these conferences, the helpers met, in many instances, for the first time. Misunderstandings which had been the growth of years were corrected at a single meeting. Recognised spheres of influence were established, where, before, constant cross-currents of work had confused and tempted the poor. For instance, for various religious, educational, and social purposes, one family often uses several agencies. The conferences have made a monthly partition of such families as belonging, for purposes of assistance, to one agency alone. As the list of such families in the hands of each agency increases, the chances of overlapping are reduced to a minimum, and tend to disappear, except for new families arriving in the district. Then again, any wide divergence of principle amongst the agencies that assist within a given area is seen, when viewed from a common standpoint, to be unjust to those who are so unequally treated. A common effort to act up to a good average standard in our decisions upon case work has been recognised as more effective in preventing poverty than a scale of standards, one or two of which in certain particulars may be very high indeed.† In various ways the conferences, at first used solely to arrange co-operation in overlapping cases, have taken up case work, either where members have desired to consult the conference on a case of special difficulty; or at such a period of exceptional distress as occurred in the winter of 1904-5, when cases which could not be helped by employment were referred by the Distress Committee to these conferences for other assistance. The conferences have also been used as common meeting-places to promote special organisation, local schemes for the improvement of the condition of the poor, or any meetings of common interest.

Throughout all this, the representatives at the conferences were jealous to preserve the freedom of action of each agency in its own work, co-operating whenever spheres of influence were found to overlap. But it was always recognised that as their members learned to work together in harmony, the conferences might become increasingly useful for other purposes. They gave rise to the Board of Social Study, whose work is described elsewhere. And they suggested another fresh departure.

VII.—INTERPAROCHIAL COMMITTEES OF ASSISTANCE.

It was, indeed, an obvious development of the system, that the voluntary agencies, at least, should meet and consider their cases not after, but before, assisting them. But the change thus indicated, although undoubtedly logical and convenient, and pursuant of the best interests of the poor, would probably never have been attempted but for the growing sense that the personal influence of the district visitor as a friend of her people is hampered almost fatally by one fact—that the poorest and weakest look to her, and to a large extent adapt their conduct towards her, as to a dispenser of alms.‡ The improved personal relation between visitor and people is not, of course, the only advantage likely to accrue from the formation of local committees. These

* Hampstead is about a mile and a half square. It is divided into fifteen ecclesiastical parishes and has a population of 80,000 persons.

† e.g. The District Visitor's standard of religious influence and constant friendly visiting, the C.O.S. standard of thorough enquiry, family responsibility, and adequate assistance.

‡ See Charities Appendix for addresses (1) to the Clergy of the Hampstead Ruridecanal Chapter; (2) to the Visitors of the Council of Social Welfare.

will probably be better equipped for the actual work of making wise decisions than the district visitor; for, besides the fact that much of her knowledge is at their service (in many cases she is herself the almoner of the committee), the committee is reinforced by the presence of men of business and working men, who are perhaps more keenly alive to the economic dangers of too much or too little relief. An important incidental advantage lies in the fact that municipal and other bodies are more likely to co-operate with a responsible committee than with an isolated district visitor.

The Parochial Committee is valuable because it shifts responsibility for relief, *but not for personal care*, from the district visitor, who is the Church's spiritual messenger, to a body to whom the recipient is un beholden. The Interparochial or Local Committee carries this principle one stage further, and saves any church that co-operates thus from any who might be tempted by the loaves and fishes. It is a recognition of the principle that the administration of relief is so important, and is attended by such grave social and religious difficulties, that it calls for a combination and a division of labour amongst all the religious and social workers concerned.

As the conferences upon overlapping-cases gave place to the far more effective local committees for the consideration of *all* cases, the outlines of a new system of domiciliary visitation began to emerge. Groups of local committees, connected by a central council on the one side with various agencies of social reform throughout the Borough, and on the other side with the district and other visitors within its own area, might make it possible that no family really in need of assistance should be left uncared for, and that no family should be visited as a rule by more than one visitor. The full development of such a system was two years ago still beyond the reach of the Associated Agencies; but there were active tendencies in those departments of our work that deal with Social Study, Poor Law Reform, and the Friendly Societies' Movement, that showed how many and how hopeful were the elements for an important reconstruction. By this time all relief—municipal, voluntary, or endowed—was registered. Overlapping was prevented. One temptation to deceive (so strengthened where donors act without knowledge of each other's gifts) was virtually removed. The representatives of the agencies came to know one another's aims and methods. Differences tended to disappear. Large-hearted combined efforts took their place. Doles were discarded. Grants or allowances were made in effective amounts.* More and more the building up of character in the home, in the workshop, and in the club were recognised as the great social aim. As Lady Bountiful passes away with her tickets and her tracts, the friendly visitor, the spiritual adviser, finds her way to the people's hearts, unbarred by any supposed nexus of cash or kind. Relinquishing the actual administration of relief to an Interparochial Committee, she finds a new and fertile region open for her cultivation, a new dignity in her calling, a new hope in her work. Where, as in four pairs of parishes in Hampstead, the latest step has been taken, and every church and chapel, and every charitable society, and every affiliated benefit society in the area has resolved that this immensely important question of relief shall be their common concern, the religious life of the neighbourhood enters imperceptibly upon a new phase. It is no longer a chance or a choice which church or chapel may earn an applicant's "anticipative gratitude." No doubtful adherents are gained by dole or ticket. No appearance of competition discounts religious zeal. The decision of a common committee on which all churches are alike represented, frees the souls of poor men and poor women from a taint suffered for ages.

After much consideration, indeed, after actual experience of a committee working over one parish, the area comprising two or more parishes was selected as preferable on several grounds. We have found that the extended area, by bringing in more points of view, liberalised and broadened the whole work of the committee; whilst the population usually to be found in two parishes—about 15,000 persons—does not present an unmanageable number of families to be dealt with. A great deal of very local up-to-date knowledge of the poor is still available from the representatives of the churches and friendly societies. The distances, too, are quite manageable, and the whole machinery of assistance works at a mechanical advantage.

* An Incumbent who was most helpful in forming one of these Interparochial Committees, the Vicar of Christ Church, Hampstead, has publicly stated that within six months from the commencement of the Committee's work, the ticket doles given in his parish were reduced by 75 per cent. There was no diminution in the amount of relief administered. The same sum was more effectively spent in the permanent benefit of a smaller number of families.

Besides this, the chairmanship of a parochial committee is inevitably and properly accorded to the incumbent of the parish; and an official chairmanship like that of a clergyman in a purely parochial organisation is one of far greater predominance than that of an ordinary chairman chosen annually by his colleagues. It was felt by the clergy of the Established Church that in a relation which might offer not a few possibilities of friction, anything that might give to an interdenominational undertaking the appearance of denominational control should be eliminated. This one the clergy, by selecting the wider area, eliminated straight away. The Ward was rejected as an area for such a committee, first, because it corresponds with no area of assistance already in use for purposes of assistance; and secondly, because we were anxious, in view of still later possible developments, to eliminate the coincidence of a relief area with a voting area.

VIII.—BOARD OF SOCIAL STUDY.

The Interparochial Committees of Assistance were a direct development of the conferences of workers for the prevention of overlapping and the promotion of co-operation. But they were responsible for a development in another direction, which must now be described. Composed as they were of representatives of widely differing points of view, they could not meet and discuss concrete cases of distress without feeling the need of a common standard. The feeling grew that such an association of workers was inadequately equipped without some body of doctrine based on experience and guided by theory as to the best methods of attacking the social problem. Turning to the local societies that make such study their first object—the Christian Social Union and the Christian Social Brotherhood—we found that whilst doctrinal differences had hitherto prevented their formal co-operation, both were willing to meet and work on the interdenominational lines of the “Associated Agencies.”* Pourparlers, meetings, and a final meeting at the Town Hall resulted in the formation of a Board of Social Study, consisting of the chairman of the four interparochial conferences and about half a dozen economists and other experts.

The Board's first business was to circulate amongst the churches and social institutions in Hampstead an account of its objects and provisional plan, with a somewhat full list of subjects and books to be read in each course of study suggested. The circular suggested that social study circles should be formed in every congregation and social agency in the Borough, and that these circles should be formed upon the following lines:—

(1) They should be small circles consisting of friends, members of the same congregation, society, or club, who would co-operate in preparing their subject for consideration, would understand one another's point of view, and would not be afraid of their own ignorance or their neighbours' knowledge.

(2) They should drop the occasional papers and speeches of the debating society and the mutual improvement guild, attack one subject, and master a few solid books, in a continuous course extending through at least one session.

(3) They should not only attack their subject in practical co-operation but should guide it towards some practical outcome. The courses were intended to meet two needs and to bring together two classes of persons:—(1) Workers feeling the need of more knowledge; (2) Social students desiring to train for social service. A fair intermixture of both these classes at the study circles would, it was hoped, secure the best elements for the study itself, a higher standard of efficiency amongst present workers, and at once a recruiting ground and a training ground for future workers.

These proposals caught on immediately. In the first winter, 1905–6 no less than ten Social Study Circles were at work, taking such subjects as:—The English Poor Law; The Problem of the Unemployed; The Interdepartmental Report on Physical Deterioration; Friendly Visiting; Phthisis Visiting; Luxury; The Friendly Societies and Relief; Principles of the C.O.S. For each circle a leader, who was more an organiser of study than a teacher, was appointed by the Board of Social Study. The circle on the Unemployed has continued through three winter sessions. That on Friendly Visiting consisted of the district visitors of an incumbent who was helping in the formation of an

* The name under which the present Council of Social Welfare was developed.

Interparochial Committee. Those who studied the relation between the Friendly Societies and Relief became the nucleus of our Women's Court of the Ancient Order of Foresters—the first in Hampstead and the largest ever started anywhere. The students of physical deterioration were definitely asked at the outset to equip themselves for a fresh development in the work of our Health Society. At the end of the session they formed themselves into the Infants' Health Committee, whose work has progressed steadily ever since.

The experience of the first two sessions suggested to those who were intimate with the social work going on in this borough that we might impress upon all those who intended to devote themselves to social service, the desirability of securing at the beginning of their labours for others, a more comprehensive course of training for themselves.

The entry of each fresh band of social workers tends to imperil the privacy of the homes of the poor, and at the same time, in spite of our careful system of mutual registration of assistance, tends to create overlapping. Now, overlapping is even more destructive where personal influence is aimed at, than in the mere administration of material relief. Would it, we asked, be demanding too much of a district or other visitor entering upon her work, to attend such a course and apply herself to attain in social method and general knowledge something like professional skill? Such a system of training would enable those who are responsible for social or religious work to organise workers on the basis of one worker to each family; and whilst it would not, we may be sure, interfere with normal friendly relations between different classes of society, it would generally prevent the necessity of calling a fresh worker into a family because of some fresh need, which the ordinary visitor had not studied, *e.g.*, the need of advice and guidance in the case of a careless phthisis patient, or in that of an ignorant young mother in a poor home.

It has been felt that some such unity of knowledge, the kind of training connoted by the word "University," is as necessary to voluntary social workers as it is to the members of any liberal profession. Accordingly we have aimed at a training which should inform the social worker generally; giving an introduction to the theory and practice of social work—a vade mecum to all sources of information—a point of view from which to realise the relations of the individual, the family, and society; and a method of interpreting individual experiences by the aid of wider experience and social theory.

One of the first acts of the Council of Social Welfare has been the inauguration of a sessional course, partly theoretical, partly practical, for the guidance of district and other visitors. It is attended by some seventy students.

PART III.—MUNICIPAL AND MUTUAL AID.

In the preceding sections a sketch has been attempted of the combinations effected, chiefly, amongst the voluntary charities, strictly so called, and the churches. We have now to consider the leading municipal, mutual, and endowed institutions in the Borough, and review the efforts that have been made to harmonise their action. It will be convenient to deal with one institution at a time, and see how others have been led to co-operate at whatever point their services might otherwise have overlapped. That, it will be remembered, is the distinctive feature of the Hampstead system; whilst leaving each agency full scope for its own work so long as it does not interfere with others—to promote co-operation at all points of contact with other bodies, and to do this by means of representative control. In this section we shall make it abundantly clear that in and about every Municipal Body, and in connection with several Voluntary and Friendly Societies, numerous bands of visitors are being recruited and trained; and that unless the visitors of the churches are willing not only to accept a similar training, but to share their work with the men and women who are now coming forward to befriend those in distress, a new kind of overlapping—a confusion of personal influences—must inevitably result.

IX.—THE FRIENDLY SOCIETIES.

When, in 1900, a survey was made of all the agencies in the Borough, the Friendly Societies, and especially the branches of the great Benefit Societies, claimed our most careful attention. An examination was made of their financial soundness at the office of the Registrar of Friendly Societies; and, after a careful comparison on this point and upon the *personnel* of the respective societies, we chose a Court of the Ancient Order of Foresters for the development of a long-cherished scheme. We found that some of the clergy harboured in their Institutes—Slate Clubs, of whose unsoundness they were aware, but whose popularity amongst a certain class of workmen they were unable to resist. On the other hand, the affiliated societies saving their surplus funds from year to year found the improvident but popular societies, that shared out every Christmas, the greatest stumbling-block in their path. On the common ground afforded by our organisation, the idea was conceived of joining forces for the attainment of several objects we had in common—to undermine the influence of the Slate Club—to plant juvenile branches of the Foresters throughout the Borough—to secure unlicensed premises for the meetings of Benefit Societies and Trade Unions—to promote branches of the Foresters for Girls and Women*—and to bring the great Friendly Societies and the other social agencies of the borough generally, into active co-operation in all schemes for social betterment. The campaign has been carried on with unflagging interest for seven years, and during that period one Men's Branch (the first adult branch in the London United District), one Women's Court (the largest ever started), and six Juvenile Branches, of the A.O.F. have been formed in the Borough, with over 800 new members. All these meet in unlicensed premises. One of them sent a deputation to a neighbouring Court (meeting in a public-house), which was objecting to the extension of the new movement. Opportunity was taken to point out the advantages of meeting on unlicensed premises. Within six months the Court visited had moved out into a provident dispensary. Another deputation visited a Slate Club, in order to try to convert it to Forestry. It met with a cold reception, but before leaving, arranged for a Juvenile Branch of the Foresters amongst the men's sons. The membership of the Juvenile Court is now three times that of the Slate Club. Nearly all the Juvenile Courts are formed in Sunday or Day Schools. In clubs, cadet corps, boy's brigades, we have tried, but so far have failed, to establish them. Still, so far, the alliance effected between the National Church and a national movement of workmen in furtherance of mutual help, has been fruitful of good work, and the numbers of self-reliant, mutually dependent workmen, who now throng some of the Hampstead churches on Foresters' Sundays, bear witness to a new understanding between the Church and the people.

In all this the C.O.S., or, as it was now being called, the Associated Agencies, was simply acting as a connecting link between agencies whose co-operation was most desirable. But what did it mean? It meant that here, in Hampstead, if these forces of self-reliance and mutual aid were thus prevailing against pauperism, and other forms of dependence, the workmen of the next generation might, to an extent hitherto unknown, provide against sickness, put by their savings in club banks, buy their own houses by advances from the club funds, and secure pensions as they now secure sick benefit. A Court or Lodge of one of the great affiliated Orders, apart from its sick benefit and life assurance, is the cheapest form of building society, the most profitable of savings banks, and quite the most suitable agency to effect the provision of infirmity insurance. Taking into account the influence these great Orders exercise upon the character and circumstances of their members, it is easy to see how vitally their development must affect the future of both legal and voluntary aid.

Mr. Long's proposals for dealing with the unemployed were used as an opportunity of securing fresh co-operation in matters relating to the welfare of the workman.

The Joint Committee in Hampstead was the first to be formed in London, and was composed, on the initiative of the then C.O.S., of five representatives nominated by that body from the Associated Agencies, five from the Guardians, and five from the Borough Council. Some of its members, supplemented by representatives of all the registered Benefit Societies and Trades Unions in Hampstead, and several leading employers, were appointed a Standing Committee to consider and assist the cases of

* See Charities Appendix for an Address to the Girls of the Welfare Club.

such of the unemployed as were found to belong to Friendly Societies. This committee was continued after the Act of 1905 as a Standing Committee of the Associated Agencies. It is representative of the Hampstead Trades Council, three Trades Unions, all the Hampstead branches of the leading Sick Benefit Societies (Hearts of Oak, Oddfellows, and Foresters), one (registered) Slate Club, the Employment Exchange Committee, and one or two other workmen's associations. Its objects have been :—

(1) To co-operate with the Distress Committee by dealing with applications belonging to Friendly Societies.

(2) To aid in the movement for the provision in other than licensed premises of the various Hampstead agencies (especially provident) for improving the condition of the working classes.

(3) To propagate opinion in favour of sound finance in the administration of Benefit Societies.

(4) To take up selected cases of men past work, referred to it by the Distress Committee.

(5) To enquire into the conditions and aid the members of decaying industries.

The committee has devoted half its time each session to the study of some subject connected with Friendly Societies' interests. In one session, "A Minimum Wage"; in the next, "Sharing-out Societies"; in the last, Shelford's "Industrial Efficiency"; in the current session, "Medical Aid." With the introduction of medical inspection of elementary school children, and the removal of both the out-patient departments of the two Hampstead hospitals, it was felt that an important move might be made in strengthening the position at once of Provident Dispensaries and of Friendly Societies. Four conferences were held on the relation of these to hospitals and Poor Law infirmaries, and a careful examination was made of the Medical Associations in the provinces. In these associations, the Friendly Societies in many towns federate for the purposes of medical attendance and drugs, paying a medical officer, or medical officers, resident at the common dispensary. One or two meetings had already been organised by the committee with a view to securing a common hall for workmen's association meetings. It was thought that a Central Dispensary, supplementing the four local dispensaries already situate on the borders of the Borough, might supply this want, and afford a home for the various voluntary societies in the Borough. Here the matter began to transcend the scope of this committee, became a subject for, and was accordingly referred to, the Council of Social Welfare.

The Under-employed.

The Distress Committees, as conceived by Mr. Walter Long and Mr. Gerald Balfour, were in themselves an achievement in co-operation; and if the central authorities had upheld the administrative arrangements they had made for applying their excellent regulations, the Distress Committees would have found work for steady, regular, thrifty workmen, suffering from depression of trade. These were the men to whom preference was to have been given. But the means of identifying these were removed, under popular pressure, from the application forms. The committees were left without the means of discriminating. And the standard inevitably fell. In Hampstead the influence of the Industrial and Provident Committee secured that at least membership of a sick club or trades union should be ascertained; and the cases of such members were dealt with either (1) by the Distress Committee in the provision of work, or (2) by the Industrial Committee (described under Friendly Societies), when the men were in arrears, or had lost membership, in sick or trade clubs, or (3) by the Committees of Assistance already described. A case or two may indicate the kind of co-operation that has been established between the Distress Committee and other agencies :—

A young harness maker, who, owing to slackness in his trade, had taken to labouring work, and in that also had failed to find employment, applied to the Distress Committee for emigration to Winnipeg, where he had an offer of regular work from a saddler who had known him in this country. Owing to the fact that he had a wooden leg, however, the Central Unemployed Body was informed that he could not be passed for emigration. Fuller inquiry by our Kilburn Committee led to proof that his infirmity was due to an accident in childhood, and not to any inherent disease. This was reported to the chiefs of the Interior Department, with the result that his application was accepted. Fuller knowledge of the man, however, had also led to the

discovery that one cause of his distress had been an inclination to intemperance. A member of Committee induced him to become a member of the Sons of the Phoenix, and a former employer, also a member of a Temperance Society, threw himself warmly into the work of helping him to keep the pledge. Through this former employer we were able to arrange that the emigrant should be met by members of the Good Templars who were already working in the saddlery to which he was bound. Pending emigration, help was given to his wife and children through a visitor who became their real friend, and by the time the arrangements were complete the man had proved that so far he had conquered his intemperate habits. The family were able to enter upon their new life across the seas with every prospect of success.

All cases of families of more than four members were investigated, and emigrated through the agency of the C.O.S. At present, the Council of Social Welfare undertakes that the cases of men in acute distress but "listed" for relief work, shall be, in the meantime, dealt with by various local committees of assistance.

Much of the worklessness in modern cities is the result of the education of the children, so inadequate in many respects to the purposes it ought to fulfil. In local work, however, it is our business to administer to the best of our ability the law as it stands; and here again it is comforting to reflect how much can be done by voluntary societies if they will look to union as the source of strength. We felt that whilst we must look to other organisations to secure an alteration in the Education Acts, by extending the school age and adapting education to the needs of a workman's life, much might yet be done by co-operation and personal influence to save some of the boys and girls from forms of employment that led to nothing. We describe later our effort to promote the *morale* and *physique* of the children still at school. We have during the past year taken two steps to support the agencies that have most to do with the first start made in life by the boys and girls as they leave their school. 1. We were able to arrange last winter an exchange of representatives between the Employment Exchange Committee and the Apprenticeship and Skilled Employment Committee. 2. Again, on the 15th June, 1908, by the co-operation of the Managers of the Group I. Schools with the Apprenticeship Committee, a most interesting meeting was brought about at one of our poorest schools. All the boys and girls likely to leave within three months were brought together and addressed on the importance of their next step in life, the facilities afforded by the Apprenticeship Committee, and the desirability if their parents agreed, of another year of school. This meeting has been followed up by visits to the parents of the children—the Apprenticeship Committee taking up the children likely to follow skilled employments, the Care Committee of the Managers visiting those whose children enter the battle of life as errand boys and van boys in blind alley occupations that will in the course of a few years throw them upon the casual labour market as unemployed, underemployed, or unemployable. The visitor of the Care Committee is concentrating her attention upon causes, in the character or circumstances of the parent that have led them to sacrifice their children's future to the gain of a few shillings per week at the present time. For the number of boys entering unskilled occupations varies, roughly speaking, inversely with their age and proficiency at the time of leaving school.

X.—THE BOROUGH COUNCIL.

The Public Health and Under-employment.

Three of the Borough Council's committees are brought into direct contact with social workers:—(1) The Public Libraries Committee, (2) The Public Health Committee, (3) The Distress Committee. With the first, although it offers many opportunities for fruitful co-operation with other bodies, we have not yet dealt. The last is already dealt with (for reasons there stated) under Friendly Societies.

The Public Health Committee.

The Hampstead Borough Health Society (founded in 1902)—the first of many such societies now at work throughout London—has been the instrument by which a great variety of institutions have been brought into direct co-operation with the Public Health Department. It was in its turn, the direct result of the ideas that found expression in the (Voluntary) Notification of Diseases Act, and the International Congress on Tuberculosis (1901). A successful agitation was started by the C.O.S. in Hampstead for the adoption of the Act; and the Health Society was formed with the intention of securing that the Act should become effective in Hampstead, so far as its somewhat limited powers secured.

The society's objects were wider, of course, than the mere prevention of phthisis. It was formed to act as a rallying-point for public opinion in *all* matters relating to the public health of the Borough, and to bring into co-operation all who individually, or through their connection with some society, could contribute towards that object. Its method was not merely to stimulate vigilance, and (if necessary) lead criticism. It has stood for the principle that not only should the whole community be alive to the causes of its own suffering, but that all who conveniently can should be willing to play their part in an organised effort to remove these causes. In reporting upon certain insanitary areas, in its criticism of the system of dust collection, of the ventilation of public buildings, and of the measures taken for the prevention of expectoration, it has exercised a considerable influence on public opinion and municipal action. In the health lectures organised for visitors, mothers' meetings, and evening continuation schools, and by undertaking the distribution of leaflets on hygiene, temperance, infantile diseases, and phthisis, published by the Borough Council, it has carried its propaganda to the people themselves. By appointing a Nurse in the schools when medical inspection was still in its infancy, it indicated the line it has since taken in the formation of its Joint Phthisis Committee and its Infant's Health Committee. The former of these is so typical of the function of voluntary effort in supporting municipal action, that it is proposed to give a short account of its methods. When we began our work, voluntary notification still needed to be adopted by the Borough Council; the open-air principle had still to be adopted in the wards of the workhouse infirmary; and some system needed to be arranged by which the Poor Law, the Borough Council, the country sanatoria, the local hospitals, the local visiting and assisting societies, all dealing with phthisis, might be brought into co-operation. This has been effected simply and easily by means of representative control.

Practically all the churches and local societies have agreed to deal with their phthisis cases amongst the poor and ignorant through the Phthisis Committee. Both the local general hospital and the Mount Vernon Hospital for diseases of the chest have agreed to notify their phthisis cases (although this is still largely dependent, in practice, upon the feeling of each member of the staff); and on our Joint Phthisis Committee their representatives meet the medical officer of health, the lady sanitary inspector, the district medical officer, the medical officer of the infirmary (to whose efforts the open-air wards are chiefly due), the ladies visiting the open-air wards, the clergy or their deaconesses, the representative of the Invalid Children's Aid Association, and others. The decisions of this joint committee are carried out by a large body of voluntary health visitors, aided by the lady sanitary inspector. The result is, that in this borough, prevention and cure go hand in hand. Antecedent organisation has arranged that the services of each institution shall be set in motion automatically, and each performs its own part better for the co-operation of the rest. The medical staff at the Consumption Hospital are able indirectly to supervise the home treatment of their patients; the latter are aided in the gradual improvement of their surroundings by a trained visitor; foods are supplied as the doctors direct; as far as possible work is found for the restored consumptive under conditions altogether different from those under which he contracted the disease. The medical officer of health finds the way for disinfection of premises, and for the general prevention of the spread of disease, paved by the persistent persuasion of the health visitor. Influence is brought to bear upon destitute and hopeless sufferers to induce them to enter the open-air wards at the workhouse infirmary. In a hundred ways, but always by gentle personal means, the pressure of a widespread and educated public opinion, itself largely formed by our society's efforts, is brought to bear upon the sufferers from this most fatal but most preventible disease.*

One of the cases that led to our close co-operation with the hospitals in our neighbourhood was that of a young man who was an out-patient suffering from bronchitis and heart disease. The hospital doctor who gave him his medicine time after time was not aware that the lad slept in an attic with a hole in the roof, through which in wet weather the rain poured in immediately above his bed. What could advice and medicine do against such conditions?

Again, the mere knowledge that phthisis exists in a home may lead, without the intervention of any machinery, to important results. The first case to come under the notice of one of our visitors indicated this. An elderly woman living alone, was notified as suffering from advanced phthisis, and duly reported to the health visitor of the parish in question. Enquiry showed that the patient's daughter came in for several hours during the day to look after her mother. But she could not leave her own child, two years of age; so she brought it with her and *laid it to sleep in its grandmother's bed*. This patient and her daughter were quite unaware of the danger to which they were exposing the child; but as soon as they realised it, they made a different arrangement; the child was excluded from the room; and its life was probably saved.

* See Charities Appendix.

But perhaps our confidence in friendly influences is in no other part of the work so necessary as where a family, or a member of it, has to be induced to give up hurtful habits and modes of life that have become second nature. There is no strict line of demarcation between physical and moral habit. There is no machinery to our hand at present for its guidance but the vigilance and alertness, the care and patient skill, of the friendly visitor and lady inspector. And yet these preventive methods need, in the more difficult cases, to be supported by instruments of social amelioration, which in other boroughs are found only in scattered groups amongst the municipal, voluntary, and mutual agencies. These need to be combined by antecedent organisation before the friendly visitor can use them to the best advantage. If there is no combination before her work begins, she has to effect it piecemeal upon every case with a maximum of friction and other waste. But if the antecedent organisation is ready, the help flows in along its accustomed channels.

There was referred to us by the medical officer of health the case of a builder's labourer. The man drank and was constantly out of work. The wife was emaciated and terror-stricken. Her little girl of eleven was suffering from tubercular glands and was spitting blood. Her boy of five years was half paralysed. Her baby of two years was a hopeless idiot. The home was wretchedly poor and neglected. A friendly visitor was appointed and the committee set itself to support her efforts.

The eldest child was sent away for several months to the seaside, returned completely set up, and was kept under observation at home and at the out-patients' department, and aided with milk when she showed signs of flagging. Arrangements were made with the medical inspector of the L.C.C. for a suitable school and conveyance for the paralysed boy. To the dismay of the committee it was announced that another child was shortly to be added to this unhappy family, whose members showed successively so awful a decline. But the visitor stuck to her guns. Daily milk and eggs were supplied to the wife for four months before her confinement and for seven or eight months afterwards. A beautiful baby was born, quite normal, and at the close of its first year is still thoroughly healthy.

But something more powerful than milk and eggs has gone to the salvage of this wrecked family. The representative on our committee from a neighbouring P.S.A. set his mates to work with the man. They closed in on him and gave him no peace until he had given up the drink. He has become a reformed character. His debts, which were many, he has paid up. His wife is well and happy. His home is such a home as it never was before. The last report—two years afterwards—tells us that not only has the man maintained his own position, but is becoming an influence for good in his neighbourhood, especially in the Temperance cause.

In such a case as this we cannot but see how closely positive personal influence of a general character, and curative relief in several forms, may intersect the preventive work of the Public Health Department. As public health busies itself more and more with personal hygiene, the need for something more than a scientific and administrative interest in this department of its work is felt by its officers. At the same time the opportunity for scientific administration in the work of personal assistance forces itself upon the voluntary worker. The solution of this two-fold need lies in the close co-operation of the two parties concerned, in a closer understanding of their common object—not the health only, but the *wholeness* of the community. Here is a case. Is the disease arrested, and its spread prevented, and another life saved from the death-rate for the community? Here, too, is a *man*. Has he been strengthened in weakness, re-established in industry, restored to the life of the family, worth to his community what has been spent upon him in money, time and loving service?

Mrs. Nunn, the organiser of this Committee, owes much to Dr. McCleary. His great knowledge of all that relates to the public health has been placed unreservedly at the disposal of our workers, whose teaching, on the medical side, he has largely undertaken. The presence of the medical officer of the infirmary (as chairman) and of the district medical officer has also been of the greatest service.

The Hampstead Health Society was the first Borough Health Society formed in London. During the past six years it has witnessed and aided the formation of many similar societies throughout London. It has lately been instrumental in forming a representative council of those whose object is to influence public opinion and co-operate with the sanitary authorities and medical agencies throughout London.

XI.—THE ELEMENTARY SCHOOLS.

All other social problems, from the preventive point of view, are of secondary importance compared with that of the education of the young. Those of us who are managers felt some years ago, that, greatly as legislation was needed, we would not wait for legislation before attacking, as thoroughly as we could, the social and physical side of the child's

development. The "Social Side Committee" at the poorest council school in Hampstead was intended as a definite expression of this view, and as a rallying point for the various agencies, municipal, mutual and social, concerned with the child's development. Since then the County Council has formed the Care Committees with similar duties, and we have adopted that new and excellent name. Although our programme was considerably wider than that as yet reached by the Council for its Care Committees, we are glad to see that these committees are rapidly developing in the same direction. Our work was to provide for the managers an organ for supervising, recording, and assisting in the development of the social side of the child's life as distinguished from the work in the class-room—its home ties, its physical and moral welfare, the occupation of its leisure, its need of play and of country holidays, its future industrial career, its provision for mutual help in sickness, its protection from hurtful influences at home and abroad. Accordingly, the committee is representative of the managers, the teaching staff, the school visitors, the local committees of assistance, the Children's Country Holiday Fund, the Invalid Children's Aid Association, the Apprenticeship and Skilled Employment Committee, and the Play Guild. In response to the County Council's request, too, it has organised the dinner arrangements for children whose circumstances render a midday dinner at home difficult to arrange, and whose parents are willing to pay the twopence the dinner costs. Where the parents appear to be unable to provide the child with dinner, the case is regarded as one requiring careful inquiry and adequate assistance, and is taken up by one of our local committees of assistance. It is felt that if the children actually lack food, that is a serious symptom of some defect in the family life. To attempt to alleviate the symptom, without attempting to remove the real cause of the difficulty, would be to play with misery, and neglect the child's best interests. The cases of children needing country holidays, of children employed industrially out of school hours, of children needing spectacles, and of children leaving school, have all in turn been investigated by the committee, and appropriate action has been taken in each case. The advent of three new members who had undertaken the Play Guild at the school, suggested the possibility of forming a juvenile branch of the Foresters in this school as we had done at St. Mary's, Primrose Hill, New End, and St. Paul's, Winchester Road. And this step seemed even more desirable in view of the medical inspection of school children in accordance with the Act of 1907. It was felt, however, that the full development of our plans in regard to the children would be more conveniently considered in conferences with additional agencies not represented on the Care Committee. The matter was accordingly referred to the Council of Social Welfare as forming part of the more general problem of medical aid; and it will be dealt with under that head.

XII.—THE GUARDIANS OF THE POOR.

As the progress of any local reforms in the Poor Law has been more or less arrested by the larger possibilities opened up by the appointment of a Royal Commission, this brief historical sketch, so far as the Poor Law is concerned, may be said to break off somewhat suddenly some two or three years ago. It seems desirable, therefore, after premising a few facts about the Hampstead Board, to concentrate attention upon a set of facts bearing most closely upon one problem, which will probably survive even the Report of the Commission. This problem relates to the nature of the arrangement that should subsist between the local body that administers public assistance, and those who are engaged in the voluntary visitation and assistance of the poor.

The Hampstead Board, then, consists of eighteen elected (no co-opted) members. Of these, six are women. It meets weekly, in the morning, and in a population of 80,000 persons has one superintendent, and two district, relieving officers, and two district medical officers. Its clerk is a part-time officer, with an assistant clerk. The case-paper system has been in use for about three years. Relief, indoor and outdoor, is granted only for a stated period, at the close of which the case comes up automatically for revision. No out-relief is given to the able-bodied, and therefore there is no labour yard. There are no schools belonging to the Union. The children are dealt with (1) in their own homes by poor law relief given to their own mothers, or by the services of friendly visitors and relief from the voluntary committees of assistance; or (2) institutionally at the grouped homes of other Unions; or (3) in the allowed cases, and in as many of them as possible, by boarding-out in the country. There is no boarding-out within the Union.

The Associated Voluntary Agencies have, for some time, been very largely represented on the Board, and hardly a week passes without a case being referred to them for assistance. During the time, some two or three years ago, when there was a positive majority of the representatives of voluntary agencies on the Board, the amount spent in out-relief went down; the amount spent in charitable relief went up; there was a marked increase in the membership of the Friendly Societies in the Union; and a marked increase in the numbers and interest of those who served the poor. These are all facts which are to be found in the books and publications of the various Associated Agencies. What did they mean? Those of us who led the movement interpreted them in this way. We saw that Poor Law Relief and Voluntary Aid were two forces whose interaction was inevitable, and that unless the closest co-ordination could be effected between them they must thwart one another at every turn. The temptation to a Board of Guardians to play the part of charity is as irresistible as it is dangerous, and is illustrated up and down the country in Union after Union; and the only solution of this difficulty seemed to be, so to man the Board with voluntary workers and voluntary associations with Guardians, as to ensure an enlightened policy on the part of both. At any rate the Hampstead Board, after having been dominated by a chairman to whom the Poor Rate was a constant temptation to lavish out-relief, became a Board of social workers, who realised that the legal limitations of a destitution authority practically precluded any serious form of charitable enterprise. "A charity-rigged Board" it will be said. Is there, then, any better qualification for a Guardian of the Poor than that he cares for the Poor and has devoted time and thought to their welfare? This is indeed just the Guardian we need; not the man who needs the position as a stepping-stone to higher municipal or political bodies, nor the man who wants to handle money, or to exercise patronage, or just to fill up his time. Quite the best Board would be one composed of men and women whose social insight, administrative ability, and personal influence had secured for them the suffrages of their fellow workers in Friendly Societies and Benevolent and Municipal Institutions. At least this arrangement secured the recognition by the Guardians of the principle that their action should leave the fullest scope for the personal influences of wisely directed voluntary effort.

Although there is much in Lord Goschen's Circular of 1869 which is now inapplicable to the relation between Poor Law and Charity, there is one provision that is still of the greatest importance—the liberty given to Relieving Officers in cases not actually destitute at the moment, to refer suitable applicants to recognised Charitable Institutions. This provision has led, in Hampstead as elsewhere, to the reference of a large number of cases annually to our Committee. The inquiry instituted by the Relieving Officer is merely intended to ascertain whether the resources of the applicant, or of his relatives who are legally liable for his maintenance, are sufficient for his support and that of his dependants. The inquiry of the Charity Organisation Society goes much further and effects much more. It aims at ascertaining what are the causes of the family's distress, as revealed by careful and sympathetic inquiry into character and circumstances. This inquiry is intended to indicate the treatment by which these causes of distress may be removed, or, at least, alleviated. This difference in the motive and the method of inquiry corresponds with differences equally great in the actual treatment of each case. As the inquiry goes further back and deeper down, so the treatment carries the family further forward, and aims at uplifting circumstances and character alike. This aim of charity—to give, not merely adequate relief but permanent benefit, is reflected in one practice of our Committee which needs a little elucidation. In the Appendix* will be found, extracted from the Annual Report of the Clerk to the Guardians (1903) a statement of the cases referred to and assisted by the C.O.S. Since that year the number of cases referred has increased by about 75 per cent., and the practice of printing a statement of them has had to be abandoned. In those of the cases which have been decided over three months there appears an entry, "Revised on such and such a date." This refers to the fact that when all has been done that appears immediately possible to remove the causes of distress in a family, a statement of causes, treatment and *immediate* results is drawn up and presented to the Committee. The family is then left, for three months, in the hands of the friendly visitor, who, at the expiration of that time, reports whether the assistance has proved *permanently* beneficial. If it has not, the case is attacked again with the help of the visitor's experience. This arrangement, which is aimed primarily at producing thoroughness of treatment, is, it need hardly be said, of considerable educational value to the Committee—indicating as it does the comparative value of its

* Charities Appendix.

diagnosis and treatment. The inquiries made by voluntary aid contrast sharply with those made by the Relieving Officer in another important respect. They are used to indicate not merely the causes of distress but also the sources from which the help required may be forthcoming. This is one of the real triumphs of the London C.O.S., for which the influence and pressure of the Central Council's Committees should have the highest credit. Of the forty or fifty thousand pounds per annum, not all of it actually passing through the Society's books, but expended on C.O.S. cases, a mere fraction is drawn from any Relief Funds. It has been secured from relatives, friends, old employers, special societies, the Churches, the Benefit Societies, and Trades Unions, and from other persons previously, or as a result of the appeal of the C.O.S., interested in the case. At what a cost to more important work this has been done—for it is painful to reflect how many of these appeals are quite fruitless—we have already told in an early section. The following case illustrates not only the kind of inquiry and the kind of treatment received by those referred to us by the Relieving Officer, but also the principles on which such treatment is based.

An old carpenter, past work, was advised by employers to apply for outdoor relief. A few minutes conversation with the man convinced the relieving officer that more suitable aid than that of the Poor Law would be at once forthcoming from charitable sources; and the old man, whilst his application still stood for report to the Guardians, was advised to apply to the Charity Organisation Society. Here his circumstances were more fully entered into. He was country born and bred, had served his apprenticeship as a carpenter, had married at twenty-three, and, with his wife, had come to London to seek his fortune. For sixty years he had worked for her and to bring up a family, all of whom, except one daughter, had died. He "had worked for sixty years and his wife had never had to earn a penny." Line by line the story of his life came out, not in one interview at our office, but in the course of several visits to the old people's home, where the remains of their once comfortable surroundings were stored in one kitchen-bedroom, always kept beautifully clean and bright and orderly by the dutiful affection of their only remaining daughter, who yet lived a mile away, and had her own family and her own troubles. As the inquiry into the case deepened, the respect and affection of the old man's new friend deepened still more. It was found that the old couple had faced many misfortunes together. Amongst these were the loss of six children, after prolonged illness; the temporary failure of their sick club (now one of the best and safest in the kingdom); the loss through want of business knowledge of the house they had acquired in a building society; the failure at last of their little hoard of cash, and the prospect of the pauper's lot at the end of a long and strenuous struggle for independence. As these facts were verified by inquiry, the man's character and his wife's were revealed in the most honourable light. With the help of relatives, not legally liable, and old employers, to whom such an alternative to outdoor relief had not occurred, an adequate pension has been raised which will keep the old couple in peace and comfort for the rest of their days. Instead of the small dole and tickets handed to them across the pay-table of the relieving officer, a fuller allowance is taken week by week by one who will be glad of the old people's friendship, and bring to them not merely an allowance, but many of those refinements of life which a friend may place at their disposal—in their window garden, in their little library (for the old man is a steady reader), and in other domestic comforts necessary to the period of old age.

This case is merely typical of some seventy-seven pensioners on our books, and of some 1,700 on the books of our Society throughout London. We cite it in order that the system of co-operation between the Associated Agencies of the Borough and the Board of Guardians may be fully understood. Had Outdoor Relief been given in this and similar cases—

- (1) Some of the well-disposed ratepayers would have lost sight of their poorer brethren, and would have lost the opportunity of personally knowing them and serving them in their time of need.
- (2) The assistance of the remoter relatives would not have been forthcoming, and their duty would have been neglected.
- (3) Old employers would not even have been asked to contribute.
- (4) Workmen making sacrifices to strengthen their provident associations by mutual aid would have been discouraged and hampered, by the conviction that the Poor Law rate is the best poor man's club; and as this tendency worked itself out a general slackening in the administration of outdoor relief would ensue.
- (5) Provident workmen, keeping themselves above the line of pauperism by their own exertions, would be made to pay rates, contrary to their strongest convictions, for the comfortable support of the improvident; and these payments would tend to drag them down to the same level.

The case of the widow has always seemed to us most unsuitable for Poor Law Relief, and one in which the intervention of a Friendly Visitor is most opportune. Here no weekly payment, in cash or kind, can be supposed to fill the gap in the family life. Brothers and sisters and other relatives, the club members, and similar resources are

looked to, and do their best, often in most unstinted fashion, often with real self-sacrifice. But amongst the poorest, amongst the friendless, the paramount need is the need of one wise friend who understands the life of those she is dealing with, is willing to devote herself to their service, and is backed by such a combination of the sources of help to be rendered by the community as our friendly visitors have at their command. The resources of the family and friends, the personal resources of the widow herself, and of her older children, the provision for immediate needs, a plan for the whole family in the future, the need for change of rooms, the supervision of the older boys—these are but a few of the points upon which the sympathy, counsel, and personal support of the Friendly Visitor are found to be most acceptable. Even where many offers of help are forthcoming from friends and neighbours, these are not always the wisest offers; and to discriminate between them and use them to the best advantage will be no slight tax upon the worker on whom the responsibility falls.

A very respectable widow, with three young daughters, was referred to us by the Guardians in order that something better than a mere allowance might be secured for her. Inquiry showed that the husband had lost his life in an accident, which was due, so far as we could see, to his employer's mismanagement. The woman, who had received much help from the employer, was destitute when this ceased. We raised from various sources 6s. per week for boarding out two of the children with their grandmother in the country, leaving the widow with one child to support by charring. With the kind help of one of our subscribers, a solicitor, we fought the employer and recovered £100 compensation, entrusted to us for the maintenance of the children, who, owing to necessary changes in the grandmother's household, have been transferred to a small orphanage, where they are doing well.

A young widow, with seven dependent children, was referred to our Committee for help and advice. She had received 9s. 6d. outdoor relief during the illness of her husband, who had been a lazy good-for-nothing man, but now she needed some well-thought-out plan for her future; she had thoroughly lost heart and her home and children had suffered from neglect. Though her own parents were poor, her father-in-law was found to be a cabinet-maker in a fairly good position, and when he found she was no longer to be helped by the rates, he willingly promised to allow her 10s. a week. Her eldest son, who was thoroughly out of hand, was by the Committee's influence got on to a training ship, and another boy sent to a Home of the Waifs and Strays at Margate, whilst the widow herself, now freed from the worst of her anxieties, set to work with a will, and managed to support her family by taking in washing, with the help from her father-in-law and a little assistance from her elder daughter. After some months, however, the grandfather died, and his widow and sons were only able to continue 7s. for two or three weeks longer. By this time one other daughter was able to go into service, and at the Committee's advice two more children were taken by the Guardians (one to Dr. Barnardo's and one to Banstead Schools). The widow and her three remaining children moved into one large room, and a grant of £1 tiding her over the first few weeks, she became entirely self-supporting. Since then she has again fallen into temporary difficulties, owing to the removal of her chief employers. But again her relatives have been persuaded to come forward. They have now taken the youngest child for a prolonged visit; another boy is being taken by the Guardians, and she is working up a new connection, with only one child to support, but hoping soon to be able to have her little boy at home again. She is now a bright, clean, energetic little woman, very proud of all her children, and especially of the once troublesome son, now a well-set-up sailor-boy.

Very often the case of an able-bodied man is referred, and often these cases are dealt with partly by a "voluntary" adaptation of the modified workhouse test—the Guardians sending to Lingfield Farm Colony (a voluntary institution) a husband who needs the discipline and personal influence that are such a satisfactory feature of Lingfield, whilst one of our Committees of Assistance helps the wife. The following is a case referred to us by the Guardians, but sent, not to Lingfield, but to the Distress Works at Hitchin:—

A young couple were referred to us by the Board of Guardians, to whom the wife had applied for work for her husband. She was in an emaciated condition, looking wretchedly ill, nervous, and depressed. Inquiries showed that both man and wife came of respectable families, but had wrecked their prospects by an improvident marriage which had caused the young man, or rather boy, to lose his work as under-gardener—his employer being unwilling to keep married servants. Since their marriage they had roamed about from place to place, living partly with relatives, the man doing casual work, but always earning a good character. There were indications, however, that his desultory life was undermining his capacity for steady work, whilst his wife was breaking down in her efforts to keep the home together by her earnings. Interim relief was obtained from the clergy, and the man dispatched to the Distress Committee, who set him to work at the Garden City at Hitchin. The wife was sent for treatment to the Hampstead Hospital, helped by the Nursing Association, and then sent with her baby to Hove for three weeks. On her return an arrangement was made for her to live with her mother until her husband's return. But her husband did not return. Work at a pound a week and a cottage were found for him at Hitchin, and within eight months of his despairing application to the Guardians he was joined by his wife and children in their country home.

But there was a far more sad and difficult class dealt with by the Poor Law that made a powerful appeal for our help—the young unmarried women, the merest girls, very often, applying, in the first instance, for Maternity Relief. We felt that in their cases if in any, charity should exercise its prior claim, step in before the Poor Law, and rescue those who in so many instances had been mere victims, from some of the

results of their fall. The interview with the Relieving Officer, the appearance before a mixed Board with all the possibilities of cross-examination—the life in the able-bodied wards before confinement, in which all maternal instincts would suffer desecration and suppression, the early separation from the child necessitated by the need of merest breadwinning—these seemed a series of misfortunes from whose hardening effect charity might save those who were willing to be saved. After considerable controversy* it was agreed, between the Guardians and our Executive, that, in accordance with the principles of Mr. Goschen's Circular, these young women should, in every first case, at the outset, be offered the alternative of being dealt with by a woman worker—one of the members of our Rescue and Maternity Committee. By these, the young women, who almost invariably accept the alternative thus offered, are sent first to a Maternity Home and then to a Maternity Hospital, often the same institution. For the first three, six, or sometimes twelve months of the baby's life, the mother is enabled to earn her livelihood in the Maternity Home without separation from the life of her child. A glance at the Appendix† will indicate what measure of success has attended this difficult work. Of the influence on character—the most important thing—a schedule can only speak most vaguely. But it speaks definitely on two tendencies; firstly, the prevention of application to the Relieving Officer, and, secondly, the steady increase in the number of cases in which the man has been successfully prosecuted. Under the Poor Law the cases in which a prosecution of the man was successful, were exceedingly rare. It has only been by enlisting the systematic co-operation of many societies and institutions that this piece of work has been so completely established by Miss Topham, the hon. secretary of the Committee. The Appendix† shows how the efforts made within the borough have also been brought into line.‡

A girl of seventeen in service, who came of a thoroughly respectable family, found it necessary to seek Maternity Relief. Her own mistress did not trouble where she was going; but her sister's mistress advised application to the Relieving Officer. This lady's medical attendant, however, who was consulted, knew the work our Committee was doing, and the girl was sent direct to Miss Topham. To this lady the girl confessed everything, including the name of the man who had wronged her. The man was seen by a member of the Committee, was made to realise the gravity of his offence, and was made to pay regularly towards the maintenance of his child as long as it lived. The girl's family gratefully contributed towards the cost of her treatment. The girl herself, who was very weak and wayward, just the sort whom Poor Law treatment could not have saved, was first sent to a Maternity Home, and has since gone for two year's discipline at a Home in the country. Here she is reported to be improving. The man has been reconciled to his wife. All that charity, at once compassionate and stern, could devise, has been tried; and so far it has not failed.

PART IV.—A COUNCIL OF SOCIAL WELFARE.

XIII.—CO-OPERATIVE MEDICAL AID.

In dealing with certain departments of our work we have once or twice referred to matters of great importance, to many interests, neither purely local, nor purely generic—in which further progress could hardly be made without a far more general consent than our Local or Special Committees could give. These matters are the peculiar province, and the chief justification of a Council of Social Welfare. One of these matters of general interest is the possibility of a large combination between the medical profession, the hospital and dispensary authorities, the friendly societies, and ultimately, perhaps, even the municipal authorities in the reorganisation of medical aid throughout the borough on a provident basis.

Our first step in this direction was to lay the matter before the Council, whence it was referred after a preliminary discussion to the general Executive to ventilate the subject and to forward co-operation; our second step was to invite the secretary of the British Medical Association in Hampstead to read a paper at the Council, describing the attitude and relation of the hospitals to mutual provident aid. Immediately the question was taken up by the Industrial and Provident Committee, and four public conferences were held.

Reports from this Committee and the Care Committee of the Managers of the Kilburn Group of Schools were then considered by the Executive, and it was resolved

* For a Circular to Guardians and the C.O.S. on this subject, and for a Schedule of cases dealt with during three years, see Charities Appendix.

† Charities Appendix.

‡ For Memorandum by Rural Dean and the Hon. Sec. of the Council of Social Welfare, see Charities Appendix.

to approach the various bodies concerned seriatim, beginning with the British Medical Association. It seemed possible at the present juncture to initiate a widespread reform. There were several facts that seemed to indicate that such a change as we suggested might be carried out in the immediate future. First, with regard to the Elementary Schools :—

(1) During the past five or six years we had been instrumental in bringing about, between the clergy, the managers of elementary schools, and one of the great Friendly Societies, a great development in the Juvenile Forestry movement. During these six years over six hundred children had entered the ranks, either as members of Sunday schools, or as attending the elementary schools. This forms but a very small minority of the children receiving elementary education within the borough. Lately, however, by the provisions of the Education Act of 1907, a beginning has been made by the County Council to organise medical inspection of all elementary school children. In this borough the medical inspector has already inspected the children at the poorest of our schools, and the inspection has yielded a total of eighty-one cases in which he indicates that medical and sometimes surgical treatment are required. If anything like similar figures are yielded in the other schools in the borough, a very large amount of work must necessarily be thrown, either upon medical practitioners in their private capacity, or upon the doctors at dispensaries, or at the out-patient departments of the nearest hospitals. All these cases have been warned by the teachers and visited on behalf of the Care Committee; and we regret to say that in twenty-nine cases of disease the parents had taken no action; in those that had, thirty had been taken to hospitals and fourteen to private practitioners. Only one had been treated at a Provident Dispensary, and none by a Friendly Society's doctor.

This led us to consider a second fact: the use of the Out-Patient Departments in our hospitals.

(2) Both the out-patient departments that were formerly used by the poor of this borough have now been removed. The inspected children, therefore, found to be suffering from illness or defect that would probably have been treated at these hospitals, will have to go outside the borough for their treatment. A great many of these cases, being chronic, and not of an exceptional character, should be treated by a family doctor, and not go to swell the numbers of those who make use of the out-patient departments in our hospitals. For a long time we had felt, in connection with cases of illness where the home conditions were well-known to us, that the medical treatment at the hospital was largely, if not altogether, nullified by ignorance of the actual possibilities of treatment that the home afforded; and that the family medical man on the spot was the only person who could deal with them adequately. Recognising that the out-patient departments should be made consultative in their character, and used chiefly for that, and for casualties, and for cases in which expensive or highly specialised equipment is necessary, we could not regret, on the whole, the disappearance of the *ordinary* out-patient department's work in our district, especially if their removal could be used for the greater development of provident dispensaries and friendly societies.

This brought us to a third point—our Local Dispensaries:

(3) For the people of Hampstead, there are, happily near to the five elementary schools in the borough, four provident dispensaries. But it is unhappily true of two or three of these, as of many other dispensaries: (1) that the membership fluctuates very greatly, and (2) that the equipment, and in one or two cases, possibly the dispensing department, are below the standard which the medical staff would like to secure.

This led us to a fourth point: the possibility of a Public Medical Service for Hampstead.

(4) In connection with one, the Kilburn, Provident Institute there were two facts to be observed: one was that the Institute was served, not by a chosen staff, but by what may almost be called a public medical service, open to all practitioners in that part of the borough, and giving the members a wider choice of a medical man than the staff system allows; another was that one or two benefit societies had already been induced to use this Institute for their medical attendance and drugs.*

* See Charities Appendix.

Taking these four facts together, it appeared that the time had come when the whole of the provident medical aid in Hampstead might be systematised.

Our suggestions were,—

(1) Might not the whole medical profession in the borough become, for the purposes of provident dispensaries at least a public medical service?

(2) As the doctors belonging to the benefit societies would be included (we hope without exception) in this service, might not these societies be asked to do what is now being done on a smaller scale at the Institute above mentioned—use the dispensary for their medical attendance and drugs?

(3) Might not the movement for extending the provision against sickness be established in our schools by the formation in all of them where they do not at present exist, of Juvenile Courts of the Foresters and Juvenile Lodges of the Oddfellows? So much success had attended our efforts in this direction, that we thought that in time nearly all those who would not under present circumstances be more suitably dealt with by the poor law, might be induced to join. We regard these juvenile societies as valuable in training the children to become members of the great friendly societies later on in life; but they are of even greater value educationally in training the children in habits of mutual helpfulness, order, and solidarity.

It is well known that the system here advocated has already been adopted, and carried out with some degree of success, in many of our provincial towns. But in most cases it has been done without the co-operation of a public medical service, and we regretted to find in some of them that the medical appointment has been made a mere commercial arrangement between the societies and the medical officers. Medical men have been found who were willing to act as resident medical officers the combined dispensaries at a salary which has in some cases been considered too low by their medical brethren in the town in question. Knowing, as we did, the liberal custom of the medical profession in graduating their fees according to the income of their patients, as roughly estimated by the rent of the house they occupy, we were anxious that this point of view should be carefully considered in any proposals we had to make, in order that our constituents amongst the leading benefit societies might reconsider in the light of the practice to which we have just alluded, the desirability of instituting—not of course for ordinary insurance for sick benefit, nor for the purchase of drugs at co-operative prices through the dispensaries—but for medical attendance only, a scale of fees, rising approximately, according to the house-rent paid by, or the wages earned by, the member.

There remained the question of expense: (1) In the possibility of a fifth central Dispensary being required, This might merely mean leasing a house and adapting it to the new requirements, or if any rich local endowment, or rich residents, could be brought to our help, it might mean not merely a central dispensary, but the long-coveted Societies' Hall, for the meetings of Friendly Societies and the establishment of the offices of the various voluntary societies under one roof. (2) In the equipment or improvement of the present dispensaries, especially with a view to the treatment of children's cases, the Friendly Societies themselves might contribute. And the Dispensaries' incomes might be supplemented by grants made in accordance with Section 13 (1) of the Education Act of 1907.

We have set forth this scheme at somewhat wearisome length, although it is still under consideration, in order to indicate the function of such a representative Council as we have set up in Hampstead. On that Council, the local division of the British Medical Association is represented by two members, the Trades Council by four members, the Oddfellows and Foresters by two members respectively, the Hearts of Oak by one member, the Dispensaries by two members, the Hospitals by four members. But the three local departments of municipal government are all more or less closely concerned in such a scheme. The Guardians, who possess perhaps the best equipped dispensary in the borough, are represented by two members; the Borough Council, the co-operation of whose health department is helpful to the movement, has four members;* and the Managers of the County Schools, whose consent must be secured, have three members.

* Also the Mayor and Deputy-Mayor are President and Vice-President.

If one reflects how often good schemes are wrecked for want of some common ground whence a scheme, well considered from all points of view, may be worked out, the advantages of our union of all agencies becomes apparent.

XIV.—A BODY OF SOCIAL DOCTRINE.

This was a phrase by which Arnold Toynbee designated one of the ideals to which he gave, and for which he gave up, his life. If our action is to be effective, it must be based upon principle; and since principles vary with men's minds, some reconciliation or unification, some *body* of doctrine must be reached, before workers can hope to influence for good the lives and conditions of the people. Here again we have trusted to representative control; and representative control has not failed us. Our Board of Social Study was composed of the chairmen of the local Committees of Assistance, reinforced by a few economists and social experts. It was successful in the formation of many Social Study Circles in congregations and local societies; but as we said on page 10, it always looked forward to the establishment of a general course of study that should at once harmonise and inform the action of all the workers in the borough. Accordingly the Representative Council of Social Welfare, appointed a special committee on Domiciliary Visiting, consisting of the Rural Dean and other leading clergy of the Established and Free Churches with a few representative women and laymen, including Miss F. K. Urwick, an experienced District Visitor, who acted as hon. secretary. We shall deal later on with their reference, as it related to the main subject they were asked to consider; but an interim report was sent in by this special committee recommending, as the first essential in any systematisation of visiting, a common training at once theoretical and practical for the visitors. In accordance with this recommendation, a sessional course of the character suggested has been inaugurated and is being attended steadily by an average audience of over seventy students—chiefly district, and other, visitors amongst the poor. We believe that this piece of work alone would justify the Council's existence, for it must exercise far-reaching results in one of the most important departments of social work—friendly visiting and its influence upon family life.

XV.—ELBERFELD IN LONDON.

The special committee on Domiciliary Visiting could, therefore, look back with some satisfaction upon certain achievements of our system of co-operative control; although they were fully aware how much had yet to be done.

(1) Virtually complete intercommunication between all assisting agencies had been secured by our system of registration; whilst the permanent allocation of certain families (composite as to their relations with several churches) to certain churches and societies, or to the Guardians, had minimised the possibilities of overlapping.

(2) The release of the district visitor in several parishes from almsgiving, and the administration of assistance by weekly or fortnightly committees representative of the churches, had purified the friendly influence of the visitor, and the spiritual influence of every church.

(3) The Social Study Circles, by rendering continuous social study easy, attractive, and practical, had paved the way for the Continuous Course, now running, which aims at providing such a general equipment as to eliminate the necessity, in all but exceptional cases, of employing a fresh visitor to meet fresh needs unstudied by the visitor already at work.

But the committee had to consider not merely the areas where the whole system, so far as it went, was already in force, but others where it was as yet incomplete. The committee asked itself: What is the problem taken at its worst? A new family enters a district—a poor family in a poor neighbourhood. Supposing two denominations, seeking souls to be saved, in all good faith, but without intercommunication, invite their attention at church, or mission, or chapel. This in itself is a kind of confusion that might be eliminated, especially in very poor quarters, for it is bad enough. But it may be worse. Suppose the newcomers are in actual want, and suppose one or both of the denominations, ignorant of each other's action, begin to give relief? How will the lowest class we are thinking of escape something worse than confusion, something more like corruption—not from the motives that prompt, but in the results

which may follow, these negligent gifts? Yes, negligent, not in their kindness and care for the poor; but careless and unkind in their neglect of what others, equally earnest may be striving, at the same time, and in the same home, to effect.

But we have not yet ended our account of the invasions and confusions to which the poor are subject. The visitors of the churches are not the only visitors. Apart from rent collectors, insurance collectors, and others, there are the school visitors, the care committee visitors of the school managers, the health visitors, the separate visitors of all the children's societies—Apprenticeship and Skilled Employment, Invalid Children's Aid, Prevention of Cruelty to Children, Children's Country Holidays. We need not labour the list of these. Their sum is great. But if the purposes for which the visits are made were catalogued, the confusion of counsel would be still more apparent.

There is a host of visitors, in every London Borough at least, representative of the municipal bodies and lay societies. The seriousness with which these visitors conceive their duties will determine the earnestness and persistence of their advice, their persuasion and their practical schemes for each family visited. One visitor may be bringing port wine or brandy to the man pledged by another visitor to total abstinence. The child destined by a phthisis visitor for the isolation and special treatment of a Sanatorium, may be sent by another to regain its strength amongst a crowd of little cousins in a country cottage. The young and ignorant mother, who is being carefully guided by a lady Sanitary Inspector in the nurture of her infant, may be presented by some other visitor whose authority the mother deems to be greater, with a deleterious patent food. After much of the best kind of persuasion a father has consented to apprentice a bright lad to a trade. Another visitor nips this in the bud with a pecuniarily seductive offer of a situation that will lead to nothing but a place in an unskilled labour market already overstocked.

Let it be granted that nothing is due to our self-respect, our consideration for others, or our sense of humour. But let this be answered: Is it just to the poor that these multiplied invasions of their homes, these divided counsels, involving life and death, good and evil, should stand in the way of trained thought and orderly service? The Report of the Special Committee which follows, indicates two simple methods of minimising the evil:—(1) The co-operation of interparochial committees of assistance, representative of all bodies of visitors; (2) The ascertainment by every visitor, as one of her most important duties, of the relations of the various members of each family to other organisations and visitors.

REPORT OF THE SPECIAL COMMITTEE.

The Special Committee has already presented its first or interim Report dealing with what its members regarded as their first duty under the circumstances, viz., to recommend that such visitors as feel the need of it should be offered a training that will enable them to deal with all ordinary cases of distress, without the frequent intervention of a special visitor. This Interim Report met with the approval of the General Executive and of the Council; and, accordingly, in co-operation with the Board of Social Studies, we have arranged a series of twenty-one addresses on practical subjects. A preliminary course of four addresses has been attended on the Tuesday mornings of November by an average of over seventy ladies. By the kind permission of the Vicar of Trinity Church, these addresses have been given in Trinity Church Hall. These are to be followed after Christmas by ten lectures on Methods of Public Assistance. After Easter visits to Institutions will be arranged. A Reading Party has also been formed this term amongst a few of those attending the lectures.

2. The Special Committee next held a meeting in conjunction with the Upper Hampstead Committees of Assistance with a view to ascertaining what were the views of the heads of Religious Bodies and other Societies in Upper Hampstead, as to the possibility of ensuring a friendly visitor for every family likely to need a visitor's help. The possibility of

introducing some modification of the Elberfeld System was considered, and Dr. Horton and Dr. Newton Marshall were in favour of an attempt being made in that direction. Another speaker suggested that one of the chief difficulties of the German system lay in the want of proper communication between the visitors under that system, and those who are visiting on behalf of religious and other voluntary Associations, over the same areas. It was accordingly resolved, with the cordial concurrence of Dr. Horton and Dr. Newton Marshall, that an attempt should be made, in the two parishes covered by the operations of the Upper Hampstead Committee of Assistance, to ascertain as exactly as possible what visiting was already systematised, who the visitors were, and what families they visited.

3. Returns have been received from all the Churches and Societies at work within these two parishes, except from the Salvation Army, viz., the Parish Church and Christ Church, St. Mary's, Holly Hill (Roman Catholic), Lyndhurst Road Congregational Church, Heath Street Baptist Chapel, Prince Arthur Road Wesleyan Chapel, Rosslyn Hill Unitarian Chapel, the Invalid Children's Aid Association, the Care Committee of New End School, the Guardians, the Upper Hampstead Committee of the Council of Social Welfare.

Although it is true that overlapping in material gifts has been reduced to a minimum by our system of Registration, and conference, and by the permanent allotment, for the purposes of relief, of the various composite families—families whose members are connected with more than one religious organisation—yet we regretted to find that whilst a very few very poor families were apparently not being visited at all, certain families were being visited by more religious bodies than one.

4. We think that both these difficulties may be met by means of our established machinery. In the district selected for our enquiry we have a Committee, representative of every religious and other body, engaged in the work of Assistance. Small Conferences consisting only of the workers actually concerned can therefore adjust the visiting of such families as are connected with more than one body. Nor will it be difficult to secure fresh visitors for those at present unvisited, as soon as the Committee is advised which families these are. But in order to carry out these arrangements it will be necessary to know, further than we already know, precisely how this institutional overlapping occurs in each family. We would therefore earnestly recommend that every regular visitor of a family ascertain, gradually of course and not as the subject of a special enquiry, to what religious and social organisations each member of a family belongs. Some "overlapping" in the sense of visiting by more than one religious body is, we fear, inevitable so long as various members of the same family, living under the same roof, have attached themselves to different religious bodies; but we hope and believe that the use of such opportunities by the Visitor, in order to influence the convictions of the other members of the family, is becoming in Hampstead more and more rare, owing to the good feeling and more intimate association existing between the representatives of the various religious organisations: an association which is at least in part due to opportunities for common work afforded by the Council of Social Welfare. The Vicar of the Parish and the Vicar of Christchurch have both recorded their opinion that the steps taken to prevent overlapping of Relief have resulted in a distinct improvement in the tone of those neighbourhoods where that reform has been effected; and we hope for still further gain as a result of the fresh efforts we now ask all visitors to make.

5. But it is not from religious bodies alone, by any means, that the difficulty arises. There are several lay societies, doing excellent work,

but yet, unfortunately, traversing the visits of the Churches Visitors', viz., the Phthisis and Infants' Health Committees, other visitors of the Standing Committees of the Executive of the Council of Social Welfare, the visitors of the Care Committees, the visitors of the Children's Country Holiday Fund, the Invalid Children's Aid Associations, and of other excellent organisations. These in their aggregate actually outnumbered the visitors of the Established Church. The Phthisis visitors alone visit nearly 150 families.

We have already made a beginning of reform here by invitations, most willingly accepted, to the hon. secretary of the Infants Health Committee, the Medical Officer of Health for Hampstead, and the lady Sanitary Inspector, to address and advise three meetings of District Visitors as to the treatment of families under the system known as Health Visiting. And the Vicars of the Parish and Christ Church have since arranged with the Phthisis Committee for a beginning to be made in the clearance of overlapping with that Committee by the use of the services of the District Visitors for Phthisis Visiting.

It will be seen that progress must be slow, if, instead of adopting a system which ignores the work of others, and gives an appearance of order which only covers confusion, we take into account, and endeavour to adjust, the diverse efforts of all workers; and to train for their work all who have set themselves to serve the poor.

None who have the least acquaintance with the missionary methods that obtain in the poorest quarters of our greater cities will deny the difficulties we have met. But only a few both know them and realise their danger. The majority of those whose attention is drawn to them will simply adopt the attitude that it is impossible to introduce system into a complication of so many discordant elements. And yet in other walks of life far more complicated matters have to be disentangled and settled. Those who are familiar with Mr. and Mrs. Webb's "Industrial Democracy," for instance, may remember the striking passage in which the extreme complications that attend the collective bargaining of the cotton-weavers are described. The factors that enter into the piecework rates of the Lancashire cotton operatives are so complicated that both the employers and the workpeople have found it necessary to employ permanent professional experts devoting their whole time to the interests of the employers' association and the trades union respectively. The agreed wage depends on many factors involved in the machinery, the materials, their quality and wear and tear, and the arithmetical calculations needed for countless differing cases. Yet the two experts under the representative control of the employers' and workmen's associations solve the problems in the end to the satisfaction of all parties. The Captains and the rank and file of Industry seek for their justice through a host of bewildering facts and most difficult calculations based upon them, although the end may be but the rise or fall of wages by a penny or twopence. Shall not we who have the lives of the unhappiest at stake "venture as warily, use the same skill?"

At any rate, in Hampstead, experience shows us that all these difficulties due to isolated and impulsive action yield to treatment—yield, that is, to experience, forethought, and representative control.

XVI.—CONCLUSION.

Our history, therefore, has been a history, firstly, of co-operation; secondly, of co-operation; and, thirdly, of co-operation—co-operation between the bodies that deal with the unemployed; between the bodies that administer Poor Law Medical Relief and those that administer through the Borough Council the Public Health Acts; between the Guardians of the Poor and the neighbours of the poor as to the respective spheres of Public Relief and private charity; between those who formerly undertook Relief work as District Visitors and the other agencies working over the same area; between the National Church and one of the great national movements of workmen for mutual help.

The crying need for co-operation and unity in social work to-day results from the great and irregular growth of our Voluntary and Municipal Institutions. Their numbers and great variety have indicated how much there is to be done, and how many there are to do it. But we found the army of Social Reform still an army of irregular bands. If its units and groups were to turn out decent work, their efforts must be consolidated. Each group must learn to trust other groups, to share in some of the work, to specialise in some, and to give up some altogether. Unless this spirit of mutual help and mutual concession is evolved, social work cannot be disentangled from the muddle it now almost everywhere presents. The question arises: How, by whom, and at whose expense, is this disentanglement to be performed, so that the personal and financial resources of the community may be sustained in co-ordination? It might be attempted in one of three ways. The State or the Municipality might attempt it, but at present neither shows any sign even that it appreciates the need. Or, one society out of the many societies might attempt it. One society has attempted it, and, so far, has failed. It has failed because it has not learnt the simple lesson that except in the most rudimentary organisms growth takes place from within; or because, knowing that, it has not troubled to apply its knowledge to the social facts with which it was concerned. Or, finally, all the societies might attempt it together.

In Hampstead the attempt to "organise" "charities" from without had long been abandoned as a delusive enterprise. Patiently and attentively, and for many years, members of the now Associated Agencies who believed in unity and co-operation had studied the Agencies with which they were already connected, or working with other Agencies, had endeavoured to learn their aims and point of view. A very few persons in a Borough who concentrate their time and strength in this way can do a good deal; and the Hampstead Associated Agencies have certainly become what they are in unity and co-operation because their representatives were willing to learn other Agencies' methods of work, to admit that other people's point of view demanded serious and sympathetic attention, to work hard at other people's jobs, and to take as their wages—unity and co-operation.

Now, as soon as the case for association had been fairly made out, as it had been in Hampstead; as soon as enough progress in co-operation had been made as to justify it to the mass of reasonable persons; the time had arrived when the regulation of the new relations should be placed in the hands of some recognised, responsible body. The linking of personal effort through the local committees, and through the local conferences for the prevention of overlapping; the linking of various forms of public medical assistance through the Health Society; the linking of various Provident Societies through the Industrial Committee, and of various Rescue Agencies through our Rescue and Maternity Committee; the powerful influence that is wielded, and might be abused, by a Board of Social Study—these made up an organisation at once too delicate and too extensive to be left without some such central support as a representative Council supplies. It was because those of us who had been responsible for establishing these delicate and yet necessary connections between many institutions (municipal, endowed, and voluntary) felt the weight of our responsibility, that we laid before these various agencies a definite scheme for a representative Council. We believed that co-operation had gone as far as it could go without being the outcome of direct personal control.

Nine years of steady growth had been marked by the appointment of a General Executive Committee, and by the development at the hands of the new body of some dozen young and vigorous Committees which were applying the old principles in new ways. The one comparatively simple response to the application made by the poor *after* distress had overtaken them, had been superseded by an entirely New Organisation—sympathetic and comprehensive in its relation to other agencies, aggressive and varied in its attack upon social evils, preventive first and curative afterwards, constructive of a new system in which the Churches, the great Friendly Societies, and the three main branches of Municipal Administration co-operate for the improvement in the condition of the people.

We had lost the simplicity and possibly some of the precision of an army made up of one Arm. We had gained the complexity, interdependence, and spontaneity needed for modern warfare. In fact, we had become a fighting force, a Movement with a purpose. And it has been given us to see some of the fruits of our labours in

a decreased pauperism, bettered conditions for the working classes, and a new interest at once humane and scientific, in the social problem. But we are thankful to think that more than this has flowed from common efforts for which our Society in Hampstead has been a rallying ground. A better understanding between men and women of different classes, sects, and parties has resulted in a complete revolution in the administration of voluntary and municipal assistance, and an extraordinary development of the Friendly Societies' movement.

CONSTITUTION OF THE HAMPSTEAD COUNCIL OF SOCIAL WELFARE.

I.—The name of the Council shall be The Hampstead Council of Social Welfare. (The number of representatives that may be appointed by each agency are given in the second column below.)

II.—The Council shall consist of—

(1) Representatives of such of the following Agencies as are willing to co-operate. (2) All the members of the Executive, and three representatives of each of the Committees and Conferences of the C.O.S., and of its Associated Agencies.

(1) Co-operating Agencies.

Total C.O.S. and Associated Agencies - - - 58

III.—The representatives of the Agencies shall be appointed by the Agencies scheduled on the request of the Executive Committee of the Council triennially in the May succeeding the Borough Council's and Guardian's elections.

IV.—If any Agencies fail to appoint their representatives within three months of the official request for the same, the Council may itself proceed to select representatives.

V.—The Council shall elect its own President and Vice-Presidents annually. All other officers shall be appointed by the General Executive Committee. Twenty-five per cent. of its actual members shall form a quorum.

VI.—The Council shall meet quarterly for the discussion of matters of common interest, to receive reports and suggestions from the General Executive, and to make reports and suggestions to the General Executive. Special meetings shall be summoned whenever the General Executive Committee desires to consult the Council, or upon requisition from 10 per cent. of the Council's actual members.

VII.—The Council shall elect triennially in the May succeeding the Borough Council's and Guardians' elections, a General Executive Committee, which shall be the District Committee of the London Charity Organisation Society.

VIII.—The Council shall perform all executive functions through the General Executive, which shall consist of twenty persons, ten of whom at least shall have served upon the General Executive, or upon any of its Standing Committees during the previous year. The General Executive Committee shall have power to co-opt five additional members and to fill all vacancies caused by death, or resignation, or otherwise. Six of its actual members shall form a quorum.

IX.—Alterations of the rules must receive the assent both of a majority at the Council and of a majority at the General Executive. Any resolution for the alteration of the Rules must be received by the Hon. Secretary to the Council at least fifteen days before the meeting at which it is to be brought forward. A clear week's notice must be given to members of the Council of any such proposed alteration.

+ The only Conference not converted into a Committee.—T.H.N.

MEMORANDUM BY MR. T. HANCOCK NUNN IN REGARD TO UNEMPLOYMENT.

I. THE WORK OF THE CENTRAL UNEMPLOYED BODY.

Some of the chief difficulties under which the Central Unemployed Body has laboured, have been caused by the Unemployed Workmen Act of 1905, and the Regulations of the Local Government Board under that Act. In London, owing to the machinery of the Act all the Distress Committees in the various boroughs were brought into existence, and many began to act, before the Central Unemployed Body met. This produced a variety of method and principle in dealing with cases of distress, which it took the Classification Committee a couple of years to reduce to any degree of uniformity.

With regard to the classes of cases with which the Central Unemployed Body was called upon to deal, the regulations placed the body in an initial difficulty. Preference was to be given to men who had shown thrift and had been in regular employment. But in spite of the appeals of the Classification Committee of the Central Unemployed Body, the Local Government Board declined to allow a place in their record paper for any record as to the Applicant's membership of a Friendly Society, and further declined to afford any facilities in the record paper for enquiries into employment extending further back than one year. These two facts combined to make any classification on the lines laid down by the Local Government Board extremely difficult. The two readiest means of ascertaining thrift and previous regularity of employment were withheld. And the impression was given that the Central Authority did not really care for classification on these lines. It is also the fact that the circumstances of the time stimulated an overwhelming proportion of applications from labourers whose employment had been more or less casual in the past. In dealing with these applications the Central Unemployed Body was successful at least in one particular. It set up a standard of work and wages for men employed in relief work, which to the utmost of its ability it enforced. The men employed under the Act, whether directly by the Body or indirectly through the Municipal Bodies worked under careful supervision, worked five days a week continuously for several weeks, were paid at a rate per hour equal to the Market rate, but at a weekly rate which was below the ordinary Market rate for labourers in London. To have established this principle and carried it out through three years, was a performance for which the Local Government Board and the Central Unemployed Body should have full credit.

Then with regard to Hollesley Bay, "The Body" was placed in a fresh difficulty. Its predecessor, "The Fund" of Mr. Long's organization, had secured the Hollesley Bay estate and started the work there with the intention of using it for training purposes. It was realised that any work for the Unemployed must contain as far as possible this element, and that no permanent good would be effected unless the work given resulted in an improvement of industrial conditions and industrial character. But the President of the Local Government Board declined either to support with money, or countenance in any way the use of a colony secured under the Act, for any purposes but those of giving employment to the Unemployed.* Schemes therefore which had for their object the training of men for agricultural life, either fell to the ground, or were left to private enterprise. In spite of these facts, however, it is true that a small proportion of the men employed there have entered or re-entered upon agricultural life, and that a very much larger number have been transferred either to agricultural or other kinds of industrial life through emigration to Canada. It was as an introduction, we can hardly say as a training, for Canadian life, that the value of

* The Act was "An Act to establish organization with a view to the provision of *Employment or Assistance* for Unemployed Workmen in proper cases, and in the Local Government Board's Circular, 10th October, 1905, the Central Unemployed Body was described as empowered to assist by providing or contributing towards the provision of temporary work in such manner as they think best calculated to put him in a position to obtain regular work or other means of supporting himself."

the Colony was most conspicuous. A considerable proportion of the Body's emigrants were set up bodily, mentally and morally, before they emigrated, by a continuous stay at the Farm Colony.

The Emigration work of the Central Unemployed Body must also be described as successful. At a time when Canada required more workmen, and a certain class of workmen required a fresh industrial outlet, the Body dealt with real success with this department of its work. There is no doubt that the very careful enquiries instituted into the cases of these men before they were passed for emigration, enquiries in which the services of the Charity Organisation Society and of the East End Emigration Fund were very largely utilised, resulted in the selection of a class of men whose services were appreciated in Canada; and the Body was able in its "Experience, 1908" to quote a gratifying letter received from Mr. J. Obed Smith, the Assistant Superintendent of Emigration to the Canadian Government, in which he spoke in the following terms:—

"We say, Give us more of such men. Our experience has been that the men sent out by the Unemployed Body have proved first class settlers."

That was because they had been carefully selected and many of them, before emigrating, "hardened out" on the land at Hollesley Bay. Unfortunately the tide of emigration was checked during the past winter by economic causes over which the Central Unemployed Body could exercise absolutely no control. But during the two years in which their operations were in full swing, there is no doubt that a large number of men were selected and placed in Canada who were much better calculated for the industrial life of the Colony than for industrial life in England. Very few applications were received from the skilled workmen, needed in England, and on the whole well able to find employment here; whilst the wastrel whose services are useless either here or elsewhere was weeded out by strict enquiry. But a large number of labourers, many of whom had drifted to London from the country, who were not first-class labourers in the sense of being able to hold their own in the competition of the London Market, received a fresh start under new and less exacting conditions that accorded with their capacity for work.

The Central Unemployed Body, therefore, secured relief-employment for a large number of men in and around London, under conditions which nearly all experts in the subject then approved. It gave a fresh start in the Colonies to many for whom there appeared to be no opening in the Mother Country. But more constructive work than the employment or rehabilitation of individual cases of distress was undertaken and performed. Mr. Chamberlain's attempt, as President of the Local Government Board in 1836, to co-ordinate in times of distress the work of the Vestries and the Boards of Guardians, was the precursor of the Labour Bureau Act of 1902. But there were left very serious traces which it has taken years to eradicate. The registers modelled on the 1886 arrangements were registers which aimed at procuring employment-relief. All their forms assumed that employment was to be given, not to the most efficient but to the most needy workmen, and long after the Labour Bureau had been established under the Act of 1902, there lingered amongst these forms all kinds of traces of this, in the request for information from applicants as to their rent, the number of their family, the earnings of the adult children and so on. When the Unemployed Workmen Act of 1905 gave to the Central Unemployed Body of London the duty of organizing the metropolitan employment exchanges, Mr. Long's "Fund" had already eliminated most of these traces of the Order of 1886, (1) by making it clear that the candidate for work had no need to state any of his resources or want of resources, but merely to explain his industrial character: (2) by absolutely separating the Exchanges, in their Officers, in their Offices, and in the whole spirit of the work, from the operations of the Distress Committees. It had gone further than this, for it had not only strengthened the old exchanges and started fresh ones, it had linked and co-ordinated them all by means of the Central Employment Exchange, pooling all information and rendering each local exchange effective over the whole metropolis. Here again, however, the actual operation of the Act stopped short and failed to allow for full development. It was

† 2 (1), (2) and (3) imposes upon the Local Government Board, and in their default upon County Councils and County Borough Councils, duties which would have nationalised the federation of Labour Exchanges, had they been performed.

recognised from the beginning that no area less than national would meet the need Employment Exchanges had to meet; but the Regulations had laid down a system of labour-tight compartments co-terminous with the Central Unemployed Body's area. This precluded the possibility of any back-thrust to rural immigration, and although the Act of 1905 had allowed for the payment of migration expenses for workmen, who could show that they had found work in the country, the Local Government Board in reply to an application from the Central Employment Exchange for leave to deal with the fares of men for whom work was actually found in the country, replied that all such cases must be dealt with not by the Employment Exchange itself, but by the Distress Committees. As this involved an amount of time which could not be allowed in taking up a situation that was offered, the migratory clause of the Act practically became a dead letter.

I have ventured upon these considerations because it appears that the Central Unemployed Body for London was seriously hampered in every direction, both by the Act and by the Regulations of the Local Government Board; but that it triumphed over a great many difficulties, standardized the conditions of employment—relief, re-established some men in the colonies, and laid the basis for important constructive work in its organisation of employment exchanges. Much solid work has, however, been done independently of the Act. Gradually the Trades Unionist feeling against the Exchanges is being met and satisfied. The Local Exchange rooms have been placed at the disposal of Workmen's and Employers' Associations for meetings; some Trade Unions have even come to use the Exchanges as their own place of call. The last link with 1886 was severed when the Borough and Union area was abandoned last summer in recognition of the fact that an Employment Exchange has no direct relation to the Public Services of the Borough Council, and still less to the Public Relief of the Union, but must concentrate its efforts upon the ganglia of industry where labour most needs to be mobilised.

II.—THE PREVENTIVE AND CURATIVE TREATMENT OF UNDEREMPLOYMENT.

The fundamental principles of the English Poor Law of 1834 in regard to the treatment of the able-bodied were briefly (1) that all destitute applicants for relief should be relieved; (2) that, in order to prevent the subsidence of a dependent class, this universal offer should be safeguarded by rendering the lot of the pauper less eligible than that of the independent labourer. This element of ineligibility in the pauper's lot is secured by the Workhouse and other tests which involve loss of Personal Reputation, loss of Personal Freedom, and Disenfranchisement.

The Victorian Poor Law relating to the able-bodied may be said to have failed, so far as it did fail, by the failure of the principle of Deterrence. It should, and it does deter the independent labourer, because, unlike the ante 1834 Poor Law, it makes the pauper's lot less eligible than his. It was not foreseen then, perhaps it could not then have been foreseen, that it was the interest of the community, whilst safeguarding the independent labourer so far from himself, to go one step further and safeguard him, and at the same time safeguard the community, by withdrawing from competition in the open market the ineligible labourer, whether his ineligibility was economic or personal. Such a safeguard for the independence of labour if it be not secured by the compulsory withdrawal of the ineligible labourer must be found in offering a condition which, whilst it is less eligible than the lot of the independent labourer is more eligible than the lot of the dependent, unemployed and unprovided for labourer.

It is to the disregard of this important distinction that many of our "Unemployed" difficulties are due. Few enactments in the history of legislation have been more strikingly successful than the re-creation of the independent labourer by the offer of Ineligible Employment Relief. But it succeeded, because it threw the labourer back upon his own resources, personal or economic; and it failed, and it continues to fail, where the labourer lacks these resources.

Surely the treatment of the problem this ineligible labourer presents must be twofold. The first and important question is: How can we in the future endow him, or help him to endow himself, with the necessary equipment, personal and

economic, of independence. The answer is : By Education, Training, and Mobility. The second question is :—If in the past we have failed to deal with the unemployables (as we have failed so far, being confronted with a class living parasitically, and lowering moral, hygienic and economic standards all round them), how are we to deal with them now ? The answer to this question is more difficult. The earlier Victorian Poor Law frankly leaves them alone. The State has made its offer of relief. The offer is declined. The State's responsibility ends. Not so that of the growing conscience of the community. The later history of Victorian Poor Law shows the philanthropist on the one hand, and the philanthropic guardian on the other, reducing the old test to insignificance. This reaction on two fronts has vitiated, although it could not wholly destroy, the personal care of the community that was to have been safeguarded by the Poor Law.* and the Mutual Provident movement which only asked that the State should neither interfere, nor compete, with its efforts.

III. THE PREVENTIVE TREATMENT BY EDUCATION AND TRAINING.

The "unemployable" looms largest in the Urban Centres. The largest industry is still agriculture. The figures submitted to us by the Board of Trade, coupled with the statistics of Distress Committees, at last prove conclusively the conjecture of common experience, that the city dweller is under a constant process of being ousted by the countrymen from the regular work of the city and sinking into the ranks of the casuals, of whom he constitutes a large majority.

Now, there are two ways in which the State and the community may co-operate, are co-operating, to re-adjust the balance between town and country labour. The enormous strides made by Continental countries in agricultural organization and the steps being taken in this country in educating farmers and peasantry, re-populating and enriching barren districts, promoting co-operative industry and reviving the social interests and attractions of the country-side, are well-known to those who follow the movement.†

By what means is it possible for the Government to supplement the help already given to the movement by the Board of Agriculture, the County Councils and other Bodies throughout the Country ? The line of action has been sufficiently indicated by many expert witnesses, but the precise significance of their testimony, its relation to the problem presented by the urbanization of the countryman, has not been brought out.

If the school age were raised to 16, and no industrial employment of children under that age allowed, the State might take up the responsibility, not of conducting children through a certain process up to an uncertain age, but of turning out a clearly defined product at the age of 16. If the State borrowed the hint suggested by the Scotch Leaving Certificate, and by the practice of some Continental countries, in retaining control to a later age of lads and girls who had not reached a certain stage of development ; if education might be made more individual, by the reduction of the present classes, and by the hygienic adaptation of the class-rooms in our elementary schools to about half their present accommodation, we might begin to turn out citizens prepared in some degree for the conduct of life. How should the longer period and the more intensive culture be turned to account ?

1. What has already been dealt with by many witnesses—the training of the eye and hand manual dexterity, drawing, the manipulation of materials, some acquaintance with machinery, some direction on the path of general or special culture, sketching, singing, country tastes, etc.
2. The later years of school life should become increasingly *purposive*. The parents should be invited to consider their child's future occupation ; the Labour Gazette (of the future) and the Employment Exchange Superintendent (of the future) should be consulted ; and the earlier stages of technical or specific training should be entered upon.

* Some of the Tudor Statutes are very clear on this point. The State provision for all who really needs it is to enable the charitable to select. Again, not begging only, but giving to beggars is made a punishable offence.

† "Agricultural Organisation," by Pratt, and the serial and other publications of the Agricultural Organisation Society.

3. But apart from technical training for boys, if we recognise that labourers will still be needed and labourers of increasing intelligence, one great use of the extension of school life would lie in the production, by gymnastics and other methods, of young men of increased physical power, combined with manual dexterity and mental alertness.
4. Medical Inspection might in the later years of school life be supplemented by greatly needed instruction upon *practical* human physiology—food, air, exercise, alcohol, the sexual relations, citizenship.
5. Definite and much needed teaching on such subjects as the principles of Trades Unionism, Co-operation, Friendly Societies. These, especially the last, might be taught practically.* The Inspection of school children under the Education Act, 1907, and the action of the Health Societies, are tending to a care of the health of the children which must produce a marked influence on the next generation.
6. For the girls, practical housewifery, care of infants, nursing, athletics, etc.
7. For the lads, home arts, athletics, cadet corps, etc.
8. But one of the great uses of the increased years of Education would lie in the back-thrust it would enable us to give to the urban aspect of the Rural Exodus. Surely it is more economical, wise and kind to send boys (and girls for bee-keeping, poultry farming, gardening, &c.) to learn country life and work, whilst it has attractions for them,† instead of sending them to Farm Colonies ten or twenty years later, when city life has become habitual and their industrial opportunities have been lost. The same remark applies with less force, owing to parental objections, to emigration, but with equal force to the rural education of children, who, having lost their parents, are being brought up by the State.

What would be some of the results, as bearing upon our problem, of such an extension of compulsory Education?

- (i) It would provide agricultural employment in the new and more highly productive system now coming into force.
- (ii) It would relieve the labour market to the extent of the School detention effected, giving an opportunity for portorage and messages to the older men now needing employment. More would have to be paid for older labour; but the cost to the community would be less than the cost of the present destruction of youth; and thus might not prove to be less, but more efficient.
- (iii) The boys' and girls' high wages, which now render them independent of family ties and wasteful in their expenditure, would be reserved for later and wiser years. (By arranging a continuous succession of opportunities in occupations, a considerable number of lads now stranded after a few years' service might still be economically retained as messengers, always provided that special opportunities of continued education and employment were afforded them.)
- (iv) We should enable the urban youth to compete on more equal terms with the youth from the country.

Education costs a great deal already. It is going to cost more. But it will never cost so much as the neglect of it would cost. No change in the Poor Law will have the same *direct* results in preventing distress as will a modification, in the direction here indicated, of the Education Acts. In a word—the problem of preventing under-employment is fundamentally an educational problem, and as such it must be treated.

* In Hampstead during the past five years, over 600 school children have joined the Foresters.

† The evidence of the Industrial Schools put in by London County Council.

IV.—THE CURATIVE TREATMENT BY A NATIONAL INDUSTRIAL INTELLIGENCE DEPARTMENT AND LABOUR EXCHANGES.

So much has been said in comment upon the mass of evidence we have considered that I shall confine my note of dissent from the Majority Report to the fewest possible words.

A NATIONAL INDUSTRIAL INTELLIGENCE DEPARTMENT.

The Report assumes rather than describes the important changes that must take place in the central arrangements of the Board of Trade if the suggested local arrangements are to be successful in the decasualisation of the now unskilled labourers. As the National Intelligence Department with world-wide sources of information, it should be the final arbitrator as to the degree of distress at any given moment. It should decide this important question of fact from purely scientific data, and until it has declared exceptional distress in any group or groups of industry or in any given locality, no exceptional steps to absorb surplus labour should be taken. But when it has done so, another department of the Board of Trade should be ready to recommend, from data constantly accumulating, largely through the same channels—the exchange system—but of course from administrative sources—what local works of real and special utility, which would not otherwise have been undertaken, may be undertaken as a means of absorbing surplus labour. At all times, whether of exceptional distress or of exceptional prosperity, the “play” between these two intelligence departments would determine Governmental action in supporting local schemes, or in pushing forward or retarding works of national or local importance, always on purely commercial lines, and where local authorities carried out the work, by contract. I attach the greatest importance to the work of the first of these two departments, whose freedom from any Executive interference or popular pressure should be as strictly preserved as are judicial sentences or the Reports of the Meteorological Office.

But I have so much belief in the possibility of husbanding national and local necessary work, and in the new provisions we are proposing for the better education of the young, the increased mobility of labour, the substitution of Training for Deterrence, and the substitution of Detention for Vagabondage, that I believe this “South cone” will seldom be hoisted. Still I cannot regard as “transitory” the possibility of such exceptional Distress as would necessitate exceptional measures. Against such a possibility the maintenance of these two departments would be a cheap Insurance; whilst from a statistical point of view it would be priceless.

V.—DECASUALISATION.

There are three special measures of Decasualisation to which I should like to profess my adherence.

1. Although I consider Mr. Webb's proposal to compel employers to use the Exchange for taking on all casual labour (engagements of less than a month) as impracticable, I believe that a beginning might be made with dock-labour; that Exchanges should be established in all docks and their use by employers and employed made compulsory.

So many efforts have been made from all sides to tackle the problem of the casual docker; they have been so unsuccessful; the condition of the labourers is so miserable; that State intervention of a compulsory character seems to me amply justified. The regularisation of the wages of the dockers might be aided by their training as a regular staff to perform much of the necessary work about the docks which would under present circumstances be given to other trades.

2. The evidence submitted annually to the House of Commons, and the experience of all who are connected with the administration of the Act of 1905, shows how large a share of the responsibility for casual labour—with its consequent demoralisation and stagnation—is borne by the Borough Councils and County Borough Councils. It was this assumption by Borough

Councils of the work of Public Assistance by doles of work that led to Mr. Long's action in 1904. The evil has not yet been cured; and as the present attitude of the Councils will, if it is persisted in, undo to an unknown extent the effect of the recommendations in this Report in favour of better methods carefully thought out, I would recommend that a special enquiry be held as to the best methods of checking this kind of expenditure. Perhaps nothing short of the pressure of an informed public opinion can really check the evil; but I confess that the analogy of the work of a County Council's District Surveyor suggests one possibility to me. The District Surveyor is appointed in each Borough by the London County Council under the provisions of the London Building Acts, 1894 to 1905. Notice of all building operations in his district must be sent to him, in order that no structures dangerous to the public may be erected. The inquiry I have suggested would elucidate the desirability and possibility of framing Regulations and appointing officials, under an Act of Parliament, with a view to supervising the employment of casual labour by local authorities, in order to prevent their administration of employment relief.

3. The evidence submitted to the Vagrancy Committee, and our own observations, have clearly indicated to me that vagrants should be left exclusively to the Police. The advent of the Employment Exchange with powers of assisted migration renders it absolutely unnecessary for any department of Public Assistance to deal with the Vagrant. The *bona fide* seeker for work will seek it at the Employment Exchange, and to that work, if he be necessitous, he will be sent as soon as it is found. It is to be hoped that the more humane arrangements now recommended for the Unemployed by means of graduated labour colonies and daily institutional work, will gradually oust the night shelter and soup kitchen from the favour of the subscribing public. The encouragement in our midst of a nomad and penniless population is a constant terror to women and children in country districts, and altogether incompatible with a settled civilization. On the other hand the equally humane but sterner methods of the penal colonies we have recommended offer the best chance of restoration for the vagabond, and a certainty of protection for the public.

(Signed) THOMAS HANCOCK NUNN.

SEPARATE REPORT

INTRODUCTION.

We find ourselves unable to agree with the Report of the majority of our colleagues. Our reasons will be plain when we have stated the facts as they have been revealed to us by the investigations, and set forth the reforms which, in our opinion, these facts irresistibly demand.

PART I.

THE DESTITUTION OF THE NON-ABLE-BODIED.

The Poor Law is at the present time only to a small extent concerned with the man who is able-bodied. The various sections of the non-able-bodied—the children, the sick, the mentally defective, and the aged and infirm—make up to-day nine-tenths of the persons relieved by the Destitution Authorities. In Scotland indeed, no other persons can lawfully receive Poor Law relief. In England and Wales, though persons in distress from want of employment may be relieved under the Poor Law, and have, at times, loomed large in Poor Law statistics, this section now forms only a small fraction of the pauper population. In Ireland the position is essentially the same as in England.

CHAPTER I.

THE GENERAL MIXED WORKHOUSE OF TO-DAY.

The Poor Law Report of 1834 was concerned, almost exclusively, with the problem of Able-bodied Destitution; that is to say, with the case of the labouring man unable, through unemployment or under-payment, to maintain himself and his family. The one positive recommendation with regard to the children and the aged that can be extracted from the Report is the repeated demand that, where these classes are provided for in institutions, they must be, not in a single "mixed" institution, however perfect might be the nominal classification, but in entirely separate buildings, with distinct rules and arrangements, and under quite independent management. Nothing can be stronger than the condemnation in the Report of the General Mixed Workhouse, whether large or small, old or newly designed for its purpose. The Assistant Commissioners had found, in the great majority of parishes, the Workhouse "occupied by sixty or eighty paupers, made up of a dozen or more neglected children (under the care, perhaps, of a pauper), about twenty or thirty able-bodied adult paupers of both sexes, and probably an equal number of aged and impotent persons, proper objects of relief. Amidst these the mother of bastard children and prostitutes live without shame. . . . To these may often be added a solitary blind person, one or two idiots, and not infrequently are heard, from among the rest, the incessant ravings of some neglected lunatic. In such receptacles the sick poor are often immured." On account of the inevitable association of the different classes, even the largest and best designed General Mixed Workhouses were equally condemned. "Even in the larger Workhouses," continues the Report, "internal sub-divisions do not afford the means of classification, where the inmates dine in the same rooms, or meet or see each other in the ordinary business of the place. In the largest houses, containing from 800 to 1,000 inmates, where there is comparatively good order, and in many respects, superior management, it is almost impossible to prevent the formation and extension of vicious connections. Inmates who see each other, though prevented from communicating in the house, often become associates when they meet out of it. It is found almost impracticable to subject all the various classes within the same house to an appropriate treatment. One part of a class of adults often so closely resembles a part of another class, as to make any distinction in treatment appear arbitrary and capricious to those who are placed in the inferior class, and to create discontents, which the existing authority is too feeble to suppress, and so much complexity as to render the object attainable only by great additional expense and remarkable skill." Hence, stated the Report, "at least four classes are necessary, the aged and really impotent, the children, the able-bodied females, the able-bodied males," for each of which distinct institutions were to be provided. "Each class," continues the Report, "might thus receive an appropriate treatment; the old might enjoy their indulgences without torment from the boisterous; the children be educated; and the able-bodied subjected to such courses of labour and discipline as will repel the indolent and vicious."*

We regret to have to report that, notwithstanding the distinct and emphatic recommendations of the Report of 1834, to which it is commonly assumed that Parliament gave a general endorsement by the Poor Law Amendment Act of 1834, the General Mixed Workhouse has not been abolished. In the course of the past half-century, a certain

* Report of Poor Law Commission of 1834, pp. 303, 306, 307 of the 1905 Edition.

number of specialised institutions, such as Poor Law Schools and Poor Law Infirmaries, to be hereafter described, have been established for the children and the sick of certain districts. But every one of the Unions of England, Wales and Ireland, and now a large number of parishes or combinations of parishes of Scotland, has its General Mixed Workhouse; and the great majority of the non-able-bodied poor for whom institutional treatment is provided are still to be found intermingled with the able-bodied men and women in these institutions. Of the 50,000 children who are in Poor Law Institutions in England and Wales, there are still 15,000 living actually inside General Mixed Workhouses.* We found that in Scotland, where it is commonly assumed that the Poor Law children are either boarded-out or maintained upon Outdoor Relief, there were 1845 children in the General Mixed Workhouses, or not far short of as many in proportion to population as in England itself.† In Ireland, out of 9,000 children maintained in Poor Law Institutions, no fewer than 8,000 are in the General Mixed Workhouses, where their condition is the worse in that they do not even go out to the public elementary day school, but are taught on the Workhouse premises. Nor is it otherwise with the sick and the aged. Of the uncounted host of inmates of Poor Law Institutions who are so sick or infirm as to need nursing or medical attendance—estimated to number in the United Kingdom at least 130,000—more than two-thirds are in General Mixed Workhouses. Of the 140,000 persons over sixty in Poor Law Institutions, only a thousand or two in England and Scotland, and none at all in Ireland, are in the separate establishments recommended by the Report of 1834, where “the old might enjoy their indulgences without torment from the boisterous.” Commingled with this mass of non-able-bodied or dependent poor there may be found, in all the Workhouses of England, Wales and Ireland, and in the Poorhouses of Scotland, a number of men and women in health and in the prime of life—termed “able-bodied” in England, Wales and Ireland, and “tests” or “turn-outs” in Scotland ‡—who are scarcely capable, from physical or mental defects, of earning a continuous livelihood. In the mammoth establishments of London, Glasgow, Liverpool, Dublin, and Belfast we found even a considerable number of really able-bodied and mentally competent men and women, who are “work-shy” or merely unemployed through misfortune—some of them being chronic “Ins and outs,” or, as the Scotch say, “week-enders,” who, whilst they add comparatively little to the official statistics of indoor pauperism, are a perpetual cause of demoralisation of the other inmates. In fact, the General Mixed Workhouse, including all classes of destitute persons, far from having been abolished, forms to-day the basis of the whole system of Poor Relief in England and Wales; it has, within the last century, spread over all Ireland; and we even see it, during the past decade, growing up in its worst forms in Scotland, which had formerly been free from its baneful influence.

(A) THE PROMISCUITY OF THE GENERAL MIXED WORKHOUSE.

We see no reason to differ from our predecessors, the Royal Commissioners of 1834, in their decisive condemnation of the General Mixed Workhouse. We do not wish to suggest or imply that the workhouses of to-day are places of cruelty; or that their 250,000 inmates are subjected to any deliberate ill-treatment. These institutions are, in nearly all cases, clean and sanitary; and the food, clothing and warmth are sufficient—sometimes more than sufficient—to maintain the inmates in physiological health. In some cases, indeed, the buildings recently erected in the Metropolis and elsewhere, have been

* Our Children's Investigator reports that the children living “in Workhouses are not diminishing in number, having remained between 21,000 and 22,000 for some years. Of these, 565 children of school age are still being taught in schools within the Workhouses, the remainder (of school age) being sent to Public Elementary Schools” (Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, p. 2). A certain proportion of these children are in separate Poor Law infirmaries, which are officially classed as Workhouses. The exact figures, as revealed by the Commission's Census of Paupers on March 31st, 1906, were, for children under sixteen, in the ordinary wards of Workhouses, 14,439; in the sick wards, 4,119; in Poor Law infirmaries, 3,149.

† The Census of Paupers taken by the Commission showed that on March 31st, 1906, there were, in Scotland, 1,845 children under sixteen, simultaneously in the Poorhouses, and in Ireland, 9,148 on Indoor Relief (not yet in volume form). See also House of Commons Return No. 284 of 1907.

‡ It must be remembered that, in the official terminology of English and Irish Workhouses, the term “able-bodied” is applied practically to all men and women under sixty years of age who are not in the sick wards, or on special diet. The halt, the lame and the blind, the man with only one arm or only one leg, the sane epileptic and the feeble-minded may be all included as “able-bodied.” In the Poorhouses of Scotland, where it is against the law to relieve any able-bodied man, the corresponding class includes, as we have ascertained by special medical inspection, exactly the same kind of persons as those who in English Workhouses are termed “able-bodied” (Report on the Physical Condition of the Able-bodied Male Inmates of Certain Scotch Poorhouses and English Workhouses and Labour Yards, by Dr. C. T. Parsons, p. 14).

not incorrectly described, alike for the elaborateness of the architecture and the sumptuousness of the internal fittings, as "palaces" for paupers. In many other places, on the other hand, the old and straggling premises still in use, even in some of the largest Unions, are hideous in their bareness and squalor. But whether new or old, urban or rural, large or small, sumptuous or squalid, these establishments exhibit the same inherent defects. We do not ignore the zeal and devotion by means of which an exceptionally good Master and Matron, under an exceptionally enlightened committee, here and there, for a brief period, succeed in mitigating, or even in counteracting, the evil tendencies of a general mixed institution. But these evil tendencies, exactly as they were noted by the Commissioners of 1834, are always at work; and sooner or later they have prevailed, in every Union of which we have investigated the history. After visiting personally Workhouses of all types, new and old, large and small, in town and country, in England and Wales, in Scotland and Ireland, we find that the descriptions of the Workhouses of 1834, so far as we have quoted them above, might be applied, word for word, to many of the Workhouses of to-day. The dominant note of these institutions of to-day, as it was of those of 1834, is their promiscuity. We have ourselves seen, in the larger Workhouses, the male and female inmates, not only habitually dining in the same room in each other's presence, but even working individually, men and women together, in laundries and kitchens; and enjoying in the open yards and long corridors * innumerable opportunities to make each other's acquaintance. It is, we find, in these large establishments, a common occurrence for assignations to be made by the inmates of different sexes, as to spending together the "day out," or as to simultaneously taking their temporary discharge as "Ins and Outs." It has not surprised us to be informed that female inmates of these great establishments have been known to bear offspring to male inmates and thus increase the burden on the Poor Rate. No less distressing has it been to discover a continuous intercourse, which we think must be injurious, between young and old, innocent and hardened. In the female dormitories and day-rooms women of all ages, and of the most varied characters and conditions, necessarily associate together, without any kind of constraint on their mutual intercourse. There are no separate bedrooms; there are not even separate cubicles. The young servant out of place, the prostitute recovering from disease, the feeble-minded woman of any age, the girl with her first baby, the unmarried mother coming in to be confined of her third or fourth bastard, the senile, the paralytic, the epileptic, the respectable deserted wife, the widow to whom Outdoor Relief has been refused, are all herded indiscriminately together.† We have found respectable old women annoyed, by day and by night, by the presence of noisy and dirty imbeciles.‡

* In the large General Mixed Workhouse of a leading provincial town, one of our Committees noted that "Until quite recently, the pauper women scrubbed and cleaned all the men's quarters; now the latter clean one floor. The feeble-minded women do much of this cleaning and scrubbing, and consequently are more in contact with the men than is advisable." (Reports of Visits by Commissioners, No. 22 E., p. 53.)

† In a Union celebrated for its good administration, one of our Committees found the Workhouse, though clean and otherwise well-managed, more than usually "mixed." "There is very little attempt at classification in the Workhouse. The imbeciles and epileptics are scattered about amongst the other inmates, and there seemed to be no classification according to character. . . . Two features particularly struck us; first, the number of children in the house, eighteen girls and twenty-nine boys; and second, the fact that cases of infectious disease are treated inside, and are not removed outside the house to any isolation hospital. . . . The number of confinement cases has lately been unusually large" (*Ibid.*, No. 64, p. 132). In another Workhouse of a large provincial town in 1907, "we saw," notes another of our Committees, "the able-bodied women coming from dinner; there are a large number of them, and imbecile sane, epileptics are all together" (*Ibid.*, No. 24 D., p. 65). In one Union, reports our Children's Investigator, "the sleeping accommodation consists of a dormitory furnished with beds and cots; this is used for all the girls, the boys under eight, and the nursing mothers. Thus girls up to sixteen share a room with the mothers of illegitimate babies. This is, I consider, a very serious matter." (Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, p. 107.) This is no exceptional case. Of another Union, the same lady reports that: "A large dormitory contains sixteen beds and some cots. Here sleep all the younger children, including babies. Nursing mothers also sleep here in beds beside the babies' cots. . . . Thus, little boys and girls share a room with the mothers of illegitimate children, an undesirable condition enough. . . . There is also a small dormitory containing eight beds for the older girls. These two are separated from each other by a passage." (*Ibid.*, p. 107.)

‡ In one South Country Workhouse, the 394 inmates included, at the date of our Committee's visit, 32 able-bodied men, 47 able-bodied women, 163 non-able-bodied men, 120 non-able-bodied women, 14 boys and girls, and 18 infants, among them all being no fewer than 47 certified lunatics, 6 certified epileptics, 7 sane epileptics, and 10 "observation cases." "The certified and uncertified female imbeciles are in the same ward with a few old troublesome women. There are four sane epileptics in the same ward. There is no special sick ward for these persons, and they are taken to the infirmary when they fall ill. . . . During the day the mothers visit the infants every two hours. . . . A number of able-bodied men were wandering aimlessly about the airing yard, no work of any sort being provided for them." (Reports of Visits by Commissioners, No. 54, pp. 107-8.)

“Idiots who are physically offensive or mischievous, or so noisy as to create a disturbance by day and by night with their howls, are often found in Workhouses mixing with others both in the sick wards and in the body of the house.” * We have ourselves seen, in one large Workhouse, pregnant women who have come in to be confined, compelled to associate day and night, and to work side by side with half-witted imbeciles and women so physically deformed as to be positively repulsive to look upon. In the smaller country Workhouses, though the promiscuity is numerically less extensive, and, in some respects, of less repulsive character, the very smallness of the numbers makes any segregation of classes even more impracticable than in the larger establishments. A large proportion of these Workhouses have, for instance, no separate sick ward for children,† and, in spite of the ravages of measles, etc., not even a quarantine ward for the constant stream of newcomers.‡ Accordingly, in the sick wards of the smaller Workhouses, with no constraint on mutual intercourse, we have more than once seen young children in bed with minor ailments, next to women of bad character under treatment for contagious disease, whilst other women, in the same ward, were in advanced stages of cancer and senile decay.§ Our Children’s Investigator reports, after visiting many Workhouses in town and country, “that children when detained in the Workhouse always come into contact with the ordinary inmates. Certainly, in a country Workhouse this seems impossible to avoid. Paupers are always employed to help with the rough scrubbing and cleaning, and though Matrons invariably try to send the more respectable women into the children’s quarters, often the only women available are the mothers of illegitimate babies.” || In many Workhouses we have ourselves found the children having their meals in the same room and at the same times as the adult inmates of both sexes, of all ages, and of the most different conditions and characters. Even the imbeciles and the feeble-minded are to be found in the same dining-halls as the children.¶ In some Workhouses, at any rate, the boys over eight years of age have actually to spend the long hours of the night in the same dormitories as the adult men.** In all the small Workhouses and in many of the larger ones, the infants are wholly attended to by, and are actually in charge of, aged, and often mentally defective, paupers; the able-bodied mothers having, during the first year, daily access to their own babies for nursing, and, subsequently, such opportunities for visiting the common nursery as the Master may decide. In the better managed, and in the largest establishments the nursery is, it is true, in charge of a salaried nurse, but even here, the handling of the babies is mostly left to pauper inmates. However desirable may be the intercourse between an infant and its own degraded mother, it is not to the advantage of the scores of infants in the nursery to be perpetually in close companionship for the first three or four or five years of their lives, with a stream of mothers of various types that we have mentioned. Such a nursery imbedded in the midst of an institution containing, not merely hundreds, but thousands of paupers of the most diverse classes is impregnated through and through with the atmosphere of pauperism.

* Evidence before the Commission, Appendix No. VIII. (A) Par to 43 Vol. I.,

† We have been unable to ascertain how many Workhouses have separate sick wards for children, as the statistics have not been obtained. But of the three rural Unions visited by our Children’s Investigator, two had no separate sick wards for children; out of five urban Unions, one had no separate sick ward, and another had some children in the adult female wards. (Report . . . on the Condition of the Children, by Miss E. Williams, 1908, p. 7.)

‡ “I have been struck,” says our Children’s Investigator, “by the absence in every Workhouse visited of any arrangement for quarantine for children under three. Considering how fatal the acute specifics are at these ages there should be some arrangement to prevent their introduction into the nurseries.” (*Ibid.*, p. 112.)

§ “At . . . several older girls suffering from chronic diseases had spent months, and one or two years in the women’s sick wards. . . . The cases of chronic disease in children, mostly tubercle, which one finds so often scattered about the adult women’s wards in Workhouses, would . . . do very much better in a children’s convalescent home, and would be saved from much undesirable company.” (*Ibid.*, p. 113.)

|| *Ibid.*, p. 109.

¶ “The quarters for the children . . . are very incompletely separated from the rest of the house and its inmates. Except for separate dormitories for boys and girls, the children have no separate apartments, and take their meals in the dining hall. . . . The babies are with their mothers and have no separate nursery or attendant.” (*Ibid.*, p. 109.)

** “Boys over eight in men’s dormitories. . . . The older boys sleep in the dormitory for old men. . . . For boys too old to put with the girls and infants there are no quarters at all, and any boy over eight has to be put amongst men.” (*Ibid.*, pp. 7, 107.) “The boys’ dormitory is at the top of the house among the men’s rooms. No room is specially appropriated to the boys, but they are given one or another of the rooms on this floor, according to their numbers. At the time of the visit, they had a fairly large room, but three male paupers were sleeping with them.” (*Ibid.*, p. 107.)

(B) THE UNSPECIALISED MANAGEMENT OF THE GENERAL MIXED WORKHOUSE.

Apart from this promiscuity—which, be it noted, increases with the size of the establishment—it is an inherent defect of the General Mixed Workhouse that it makes impossible the proper treatment of any one of the various classes of paupers agglomerated within its walls. It is, indeed, largely on the ground that it actually prevented the subjecting of each class to its “appropriate treatment” that the General Mixed Workhouse was condemned by the Royal Commissioners of 1834. We have satisfied ourselves that this condemnation is still entirely justified. The very uniformity of regimen to which all the inmates are subjected makes it impracticable to deal properly with any one class.*

But a more insidious, and, as we think, equally disastrous incident of the mixed institution is what we venture to call the “mixed official.” To place under the management of one man and his wife, an institution which, whether large or small, combines the functions of rearing children from infancy to adolescence; treating sickness in all its forms from phthisis to cancer, from maternity to senility; controlling the feeble-minded, the imbeciles, the epileptics and even the certified lunatics; reforming the mothers of illegitimate children; maintaining respectable deserted wives and widows, and setting to work the able-bodied of both sexes—not to mention the usual additional duty of harbouring vagrants—is to abandon all hope of getting expert training or specialised skill. To begin with, the mixture in a single institution, of both men and women—against which the Commissioners of 1834 expressly protested—has, for obvious reasons, involved placing the management in the hands of husband and wife. This leads constantly to an inferior or even an unfit Master being appointed or retained, because of the qualities of the Matron, his wife; or an inferior or even unfit Matron being put up with, because of the excellence of her husband the Master.† But over and above this elementary difficulty, the union of so many different classes in one establishment makes it impossible for any head to acquire the training that is needed for such manifold duties. Neither man nor woman can be simultaneously trained and technically expert in the rearing of children, the setting to work of adult labour, the superintendence of a hospital, the tasking of vagrants, the control of lunatics and the wardenship of an almshouse.‡ Boards of Guardians are often blamed for entrusting the management of institutions containing hundreds or even thousands of inmates—children, and sick, aged and imbeciles, sturdy rogues and dissolute women, respectable old men and widows—to a promoted porter or ex-labour master, and the wife whom he happens to have married. We do not see what other course they can take. If they promote the schoolmaster or the nurse these more refined natures may be unfitted to cope with the sturdy vagrant or the “in and out” prostitute. There

* To this important feature of the General Mixed Workhouse we shall recur in Chapters III., IV., V., VI. and VII. of this Part, dealing with the infants, the children, the sick, the mentally defective, and the aged; and in Part II., dealing with the able-bodied. The uniformity of regimen is sometimes carried to an extreme. “Three meals per day,” deposes one witness, “are served out to the inmates of — Workhouse, rice milk being one of the tabulated diets and served twice per week. On cooking this diet a large quantity of fat is mixed into it, and the consequences are that many of the aged inmates, both males and females, cannot eat it because it makes them ill. I have noted ten of these dinners served out to the poor old folks, who preferred to go without dinner sooner than be made ill with the fatty rice milk. The attention of Dr. Fuller (medical inspector) was drawn to this matter, and he advised an alternative diet for such persons as could not eat it, but his advice has been set at naught by the Master, Matron, and superintendent nurse. Before these aged persons can have an alternative diet they must declare themselves sick, and go into the hospital.” (Evidence before the Commission, Q. 41761, Par. 8.)

† “There is an unwritten law,” writes the Special Investigator of the *British Medical Journal*, “enforced by the Local Government Board, which requires that the Master and Matron be husband and wife, the reason alleged being that this ensures freedom of consultation in all official matters. This, however, is attained at great cost, for it favours collusion, and incompetence, and must restrict the range of selection. It does not follow that a competent Master is married to a woman of equal capacity, or *vice versa*. Freedom of action or independent criticism on the part of the Master or Matron is next to impossible, and the Guardians can with difficulty arrive at facts concerning the management of the House” (*British Medical Journal*, June 1st, 1895).

‡ The following are the separate classes in a typical urban Workhouse of medium size, all under the superintendence of a man and his wife: “On the first Saturday in this year, January 5th, 1907, we had in the establishment 891 persons, distributed as follows:—

- 164 Imbeciles.
- 235 Sick.
- 183 Aged and Infirm.
- 39 Children (generally too young for the Cottage Homes).
- 270 In main body of the house (men and women in health).

891

(Evidence before the Commission, Q. 42781, Par. 11.)

is no conceivable training that would fit one man (and his wife) for the task. And the very mixture of functions—the impossibility of attaining technical excellence or, indeed, achieving any recognisable success, in any one of them—has, we have repeatedly noticed, a subtle deteriorating effect on the persons appointed. This is hard on the large class of excellent men and women, for the most part quite poorly remunerated, whom the General Mixed Workhouse has enlisted in its service. Here and there we meet exceptionally gifted natures, whose faith and love and moral refinement enable them, to some extent, to withstand the deadening influence of the non-specialised institution, and to persist in regarding each inmate as an individual soul. But to the common run of men and women who gain appointments as Master and Matron, there comes to be, amid all the differences of sex or age or character, or health, or strength, or defectiveness, but one category of inmate—the pauper; the person who ought not to be there; the semi-delinquent who ought to be grateful for being, at the public expense, just kept alive; whose condition, far from being improved, is supposed always to be kept less eligible than that of the lowest grade of independent labourer. The effect of having always to superintend and organize—not a hospital or a school, a lunatic asylum or even a reformatory, in which there is some recognisable standard of technical success*—but a hopeless mass of undifferentiated pauperism, with which there is nothing to be done, necessarily develops in the ordinary man or woman, during the years of fruitless service, a particular type of character, manifesting itself in a certain trick of bearing, even a peculiar facial expression quickly recognisable by the experienced visitor. “We all know,” remarks a professional journal, “the common uneducated type of man to be found in this office in so many places; his mind stored, for the confounding of newly elected Guardians, with rules, by-laws and regulations, his heart hardened by long contact with a system under which deceit is the only means by which relaxation of rules can be obtained.”† As some of the best among these Workhouse Officers pathetically complained to us, the men and women whom we harness to the service of the General Mixed Workhouse almost invariably develop an all-embracing indifference—indifference to suffering which they cannot alleviate, to ignorance which they cannot enlighten, to virtue which they cannot encourage, to indolence which they cannot correct, to vice which they cannot punish. The one attribute common to all Workhouse inmates which can be, and is, appreciated by those in authority over them, is ready and unhesitating obedience, passing into servility.‡ The faculties which the Master and Matron find developed in themselves are the trick of securing a machine-like order, and a suppleness of seeming compliance with the fancies of Guardians who are as devoid of specialised training as they are themselves. In too many cases, as has been well said, “Guardians and Master are satisfied if the floors are washed, the steps pipeclayed, and the regiments of books of entry in order for the inspector.”§

(c) THE UNIVERSAL CONDEMNATION OF THE GENERAL MIXED WORKHOUSE.

So complete a condemnation of the General Mixed Workhouse will, to those who know that institution only by repute, or who have come to accept it as inevitable, appear exaggerated. Their first thought may be that we are expressing only a personal view, inspired by some unreasonable ideal, and based only on a few bad examples that we happen to have visited. This is not the case. We have to report that there exists in all parts of the Kingdom, among all classes, the greatest dislike and distrust of this typical Poor Law institution. The respectable poor, we are told, “have a horror of it,” and they

* The “mixed” Superintendent has naturally no appreciation of the value of specialised subordinate-service. Of one small Workhouse it was reported that the “Master was of opinion that the male nurse has not enough to do, and that his duties might include the care of the schoolboys out of school hours. . . . The proposed doubling of parts is the bane of Workhouse organisation, where the authorities, in country districts at least, have not yet learnt that subdivision and definite duties, and the filling of the posts so defined by specially trained persons, are the secret of efficient and economical working.” (*British Medical Journal*, February 9th, 1895, p. 327).

† *Ibid.*, July 7th, 1894, p. 30.

‡ To this influence must be added the subtly degrading effect of having always at command a limitless and costless host of household servants. One of the best Workhouse Masters confided to a Commissioner who was staying with him, his sense of the corrupting influence on himself, his wife, and his children of being, by this army of pauper servants, eager to help in the house and garden, relieved of every inducement to personal effort. The converse of this is the almost invariable appearance of the Master and Matron in broadcloth and silks, as obviously non-working costumes; seeming to the paupers to be doing nothing but look on. This is in marked contrast with the working dress and bearing of such specialised officers as the nurse, the schoolmaster and the farm bailiff.

§ *British Medical Journal*, October 13th, 1894, p. 845; see Evidence before the Royal Commission on the Aged Poor, 1895, Q. 773.

will not go "into the House at all unless they are compelled."* The whole institution, reports our Medical Investigator, "is abhorred. . . . The Workhouse and everything within its walls is anathema excepting to the very dregs of the population."† It is, said one of our witnesses, "the supreme dread of the poor."‡ "Life in the Workhouse," sum up our Investigators, "does not build character up. It breaks down what little independence or alertness of mind is left. . . . It is too good for the bad and too bad for the good."§

This "evil reputation" of the General Mixed Workhouse among the respectable poor is, reports our Medical Investigator, "partly traditional or historical, and partly due to the curious and objectionable agglomeration of purposes which it now serves. It is a home for imbeciles, an almshouse for the destitute poor, a refuge for deserted children, a lying-in hospital for dissolute women, a winter resort for the ill-behaved casual labourer or summer beggar, a lodging for tramps and vagrants as well as a hospital for the sick."† "Being gathered into one establishment," says the Vice-Chairman of the Manchester Board of Guardians, "all must be subject to the same regulations—framed to be deterrent to the lazily disposed, and to prevent preference of the workhouse to labour. The day rooms and dormitories are necessarily shared by good and bad, and close association is inevitable. The cost of separation into small groups in a Workhouse is prohibitive of attempts to place like-minded inmates together. This aggregation of inmates is not at all unpleasant or irksome to the loafer, to the vicious, to the drunkard seeking the safety and rest of the Workhouse after a debauch, and to the careless idler, who is ever preying upon the labour of others. Their chief objection to the Workhouse is the curtailment of liberty and the absence of opportunity of self-indulgence. But to the reputable clean-minded inmate this association with the depraved is the bitterest and most humiliating experience of life."|| It is to be noted that this condemnation applies alike to the five or six hundred smaller Workhouses or Poorhouses of rural districts of the United Kingdom, as well as to the two or three hundred larger establishments. These latter have terrors of their own. "The mere size of the Great House" may, indeed, as has been suggested, be in itself "a strong deterrent to the honest poor. Accustomed to live in a single room they are appalled at the size of the Workhouse, and as terrified to go into it as a child into the sea. It can seldom be possible . . . for any one man to grasp all the details of our largest Workhouses, and where he cannot do so there must be great danger of neglect and bad under-management."¶ But the smallest rural Workhouses exhibit, in some respects, the greatest mixture. "A small country Workhouse with fifty or sixty inmates," testifies a well-known and experienced county administrator in the North of England, "is a shame to our Christian civilisation. There may be found collected in it perhaps ten old men and ten old women, drunken, idle blackguards, the outcasts of society; and, compelled to live among them, perhaps five or six respectable old people who, through absolutely no fault of their own, having worked hard all their inoffensive lives, have come to poverty. There will probably be three or four imbeciles of each sex, sometimes harmless and amusing, very often vicious and annoying to the inmates; two or three single women waiting for their confinements—in many cases an annual visit; three or four loafing "ins and outs," able-bodied men; three or four feeble persons; and eight or ten illegitimate children, all practically living together, and too often under a master who is tyrannical in his treatment and careless of his duties. It is a life absolutely repugnant to the respectable poor. Surely the time has come when, for the sake of not only the aged poor, but of the sick, the imbeciles, and the children, a drastic reform should be made, which would, at all events, bring us to a level with

§ Memorandum on Certain Aspects of Poor Law Administration, by A. D. Steel-Maitland and R. E. Squire, p. 1. "The more respectable shrink, very naturally, from being herded together with the general ruck of undesirables found there" (Evidence before the Commission, Appendix No. LXXXVII., Par. 4, to Vol. VII.) "Some would rather starve than enter its portals." (*Ibid.*, Appendix No. LXXX., Par. 13, to Vol. V. "The Workhouse, as it exists at present," sums up the Vice-Regal Commission, "must be a place of torture for respectable married women with young children." (Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., p. 51.)

|| "Classification of Paupers and Poverty alongside Pauperism," by A. McDougall, J.P., Vice-Chairman of the Manchester Board of Guardians, p. 4. Nor is this confined to the large urban Workhouses. "There are in the ordinary country Workhouse," writes a clerk to a Board of Guardians in the South of England, "a few characters utterly bad, and these try to make the life of the others miserable. The Master and the officials are helpless; in other words, classification is impossible."

¶ "Our Workhouse System," by R. J. Pye-Smith, in *Sheffield Daily Telegraph*, September 7th, 1896.

Denmark and other European countries.”* It is in the wards of such small country Workhouses that the visitor may see—to use the words of an experienced lady Guardian of the Poor in a southern county—“all the inmates under lock and key, good characters and bad classed together, imbeciles and epileptics amongst them, all dressed in ill-fitting Workhouse clothes of old-fashioned clumsy make, all sitting on hard benches round the long tables or the walls of the ward, while the building with its bare stone floors, curtainless windows, and harshly clanging locks seemed more like a prison for criminals than a last home for aged men and women.”†

Nor is this condemnation of the General Mixed Workhouse any new-fangled complaint. From 1834 down to the present day there has been a stream of adverse comment on an institution which is, we believe, unknown to any other country. We need not quote again the opinion of the Royal Commissioners of 1834. In 1862 the principal author of their Report, Nassau Senior himself, recorded his protest against the perpetuation of the General Mixed Workhouse which they had done their best to rid the country from, and with which, nevertheless, Boards of Guardians, at the instance of the Poor Law Board, were covering both England and Ireland. “We recommended,” he said, “that in every Union there should be a separate school; we said that the children who went to the Workhouse were hardened if they were already vicious, and became contaminated if they were innocent. We recommended that in every Union there should be a building for the children and one for the able-bodied males, and another building for the able-bodied females; and another for the sick. We supposed the use of four buildings in every Union—four distinct institutions—except this, that they need not be Workhouses. You might easily hire a house [apiece] for four distinct institutions separate from one another. *We never contemplated having the children under the same roof with the adults.*”‡

The feelings of surprise and dismay with which Nassau Senior watched the perpetuation of the General Mixed Workhouse were widely shared. “During the last ten years,” said a learned lawyer in 1852, “I have visited many prisons and lunatic asylums not only in England, but in France and Germany. A single English Workhouse contains more that justly calls for condemnation in the principle on which it is established, than is found in the very worst prisons or public lunatic asylums that I have seen. The Workhouse as now organised is a reproach and disgrace peculiar to England, nothing corresponding to it is found throughout the whole Continent of Europe. In France, the medical patients of our Workhouses would be found in ‘*hopitaux*’; the infirm aged poor would be in ‘*hospices*’; and the blind, the idiot, the lunatic, the bastard child and the vagrant would similarly be placed in an appropriate but separate establishment. With us a common *malebolge* is provided for them all; and in some parts of the country, the confusion is worse confounded by the effect of prohibitory orders, which, enforcing the application of the notable Workhouse Test, drive into the same common sink of so many kinds of vice and misfortune the poor man whose only crime is his poverty and whose want of work alone makes him chargeable. . . . It is at once equally shocking to every principle of reason and every feeling of humanity that all these varied forms of wretchedness should be thus crowded together into one common abode; that no attempt should be made by law . . . to provide appropriate places for the relief of each.”§ Continental writers of authority, at one time admirers of our Poor Law, became equally condemnatory of the General Mixed Workhouse. “The English Workhouse system,” declared Rudolph von Gneist in 1871, “notwithstanding the elaborate Orders, remains undeniably at a stage of development which most Continental administrations have passed. The Workhouse purports at one and the same time to be: (i.) A place where able-bodied adults who cannot and will not find employment are set to work; (ii.) an asylum for the aged, the blind, the deaf and dumb or otherwise incapacitated for labour; (iii.) a hospital for the sick poor; (iv.) a school for orphans, foundlings and other poor children; (v.) a lying-in home for poor mothers; (vi.) an asylum for those of unsound mind not being actually

* Statement of Evidence of Mr. John Hutton, J.P., Member of the County Council for the North Riding of Yorkshire (Evidence before the Commission, Appendix No. LXVII. (Par. 44) to Vol. IX.). The reader will notice the close resemblance between this description of the small country Workhouse of to-day, and that already quoted of the small country Workhouse of 1834.

† “Poor Law Questions as affecting Women Guardians,” by Mrs. E. G. Fuller, in *Report of Poor Law Conferences, 1901-2*, p. 396.

‡ Evidence of Nassau Senior before Select Committee on Poor Relief, 1862. (House of Commons, No. 468 of 1862, p. 74.)

§ “Pauperism and Poor Laws,” by Robert Pashley, Q.C., late Fellow of Trinity College, Cambridge, author of “*Travels in Crete*,” etc., 1852, p. 364.

dangerous; (vii.) a resting-place for such vagabonds as it is not deemed possible or desirable to send to prison. The combination of such mutually inconsistent purposes renders the administration defective as regards each one of them; subjects to shame and indignity whole classes of persons who never ought to be brought into such companionship; and in particular makes the institution as a place for children absolutely ruinous.”* A quarter of a century later, a French critic made much the same complaint. “In the Workhouse as we have described it,” wrote Monsieur Emile Chevalier, “we see many faults. The requirement of work from inmates, justified if it contributed towards the cost of maintenance, becomes, when it is so ludicrously unproductive, nothing better than an unwarranted punishment. Yet the institution might possibly justify itself, if not to the economist, at any rate to the philanthropist, as capable of affording a temporary refuge for unmerited distress, but for the fact that in these establishments the very notion of relief gives way to that of penal treatment, whilst in the majority of cases they result in complete promiscuity between the idle and the worthy, between vice and misfortune.”† Nor have these weighty foreign condemnations of the very nature of the General Mixed Workhouse evoked any denial of the facts. The institution, admitted, in 1881, the Rev. T. W. Fowle, “contains those very classes whom one would least of all select to associate with each other; both sexes, extreme ages, different degrees of imbecility and disease, those who are much to be pitied and those who are much to be blamed. All these are under the same roof, and under the government of the same officials, who may be as fit to deal with one class of inmates as they are unfit to deal with another. Hence, there comes from this aggregation of classes something that may be described as the Workhouse essence; it is neither school, infirmary, penitentiary, prison, place of shelter or place of work, but something that comes of all these put together. Nor is it possible by any classification to prevent contact, and it may be, moral contagion; in the smaller houses classification is at all times difficult, and in no case does it hold good at meals, church and other occasions. And it may well be that the regular and peaceable (afflicted) inmates endure much preventible suffering from the operation of this cause.”‡

(D) WHY THE GENERAL MIXED WORKHOUSE HAS CONTINUED TO EXIST.

In face of so universal a condemnation of the General Mixed Workhouse—begun in the Report of 1834; continued decade by decade by all sorts of critics, English and foreign; admitted during a whole generation by the Local Government Board itself; and abundantly confirmed by our own investigations—the question naturally arises why was this institution re-established by the Poor Law Commissioners of 1834–47; why was it continued by the Poor Law Board of 1847–71; and why has it endured down to the present day, in spite of the almost incessant endeavours of the Local Government Board, by urging successively the withdrawal of vagrants, the children, the sick, the able-bodied and the aged from its demoralising influence, to break it up altogether? Our inquiries show that the explanation of the re-establishment of the General Mixed Workhouse by the Poor Law Commissioners of 1834–47, in flagrant defiance of the Report of 1834; and its persistence in spite of the constant efforts of the Local Government Board to supersede it by specialised institutions, are both to be traced to the nature of the Local Authority concerned. The Poor Law Commissioners do not seem, on assuming office, to have intended to set aside, on this point, the clear and emphatic recommendations of the 1834 Report. They had no wish to re-establish the General Mixed Workhouse. There is evidence that they began, in the first Unions that they created, by trying to get organised a series of four or more separate institutions, specialised for different classes of poor. But Parliament had placed the care of all these classes of poor in each Union under a single Local Authority, and had charged that Authority, not with the treatment of any one of these classes, not with the education of the children or the prevention and cure of sickness, but generally, with the relief of the destitution of all of them. The Poor Law Amendment Act of 1834 had substituted, in fact, by combining many parishes into one Union, a new Destitution Authority for the old Destitution Authority, with a somewhat larger district. The Assistant Commissioners quickly discovered that it was quite as much as the new Destitution Authority could do to govern one institution in or near

* “Das Self-Government,” etc., by R. von Gneist. Edition of 1871, p. 748.

† “La Loi des Pauvres,” by Emile Chevalier, 1895, p. 392.

‡ “The Poor Law,” by Rev. T. W. Fowle, 1881, p. 142. The evils of the General Mixed Workhouse are, indeed, officially recognised. “I have,” reports an Inspector, “on several occasions in former Reports commented on the evils of mixing up different classes of paupers in the same Workhouse; but I feel compelled to refer to the subject again, because of its great importance, of which I am convinced.” (Thirty-sixth Annual Report of the Local Government Board, 1906–7, p. 284; Mr. Lockwood’s Report.)

the market town around which, as a nucleus, the different parishes were grouped. The numbers of persons in the different classes, in the rural Unions of that date, were small. To the Boards of Guardians of 1835, as to their successors in many a subsequent decade, it seemed a wanton waste of money to maintain a series of separate small institutions, all having vacant places. Within a few months we see the attempts given up, and all the classes of poor huddled into a single building.* Presently we see the Assistant Commissioners themselves converted to the General Mixed Workhouse; converting their official superiors to it as the only course practicable with the Local Authorities through which they had to work; and propagating the idea to their Boards of Guardians with all the zeal of converts. "The very sight," argued the ablest of these Assistant Commissioners, "of a well-built efficient establishment would give confidence to the Board of Guardians, the sight and weekly assemblage of all servants of their Union would make them proud of their office; the appointment of a Chaplain would give dignity to the whole arrangement, while the pauper would feel it was utterly impossible to contend against it. In visiting such a series of Unions, the Assistant Commissioner could with great facility perform his duty, whereas if he had eight establishments to search for in each Union it would be almost impracticable to attend to them. I would, moreover, beg to observe that in one establishment there would always be a proper governor, ready to receive and govern any able-bodied applicants, whereas in separate establishments this most important arrangement (the Able-bodied House) during harvesting, etc., would constantly be empty, and consequently would become inefficient in moments of emergency."†

The same Assistant Commissioner, in writing a farewell letter to the Kentish Boards of Guardians at the end of 1835, urges them not only to stick to the dietary, but also to appoint a chaplain "to your central house, which will shortly be the sole establishment in your Union. . . . As soon as this important object has been gained—as soon as you find that the whole of your indoor poor are concentrated in one respectable establishment—under your own weekly superintendence—when you see yourselves surrounded by a band of resolute, sensible, well-educated men faithfully devoted to your service—you will then, I believe, fully appreciate the advantage which you, as well as your successors, will ever derive from possessing one strong, efficient building, instead of having from false economy, frittered away your resources among your old existing houses."‡

What is specially interesting at the present juncture is that it was the existence of a Destitution Authority, charged with the "relief" of all sorts and conditions of men, that has rendered nugatory, decade after decade, every attempt to undo the harm done in 1835. Once the General Mixed Workhouse is established, the ease and apparent economy of the arrangement becomes, in the hands of a Destitution Authority, an obstacle always defeating the efforts of the Central Authority to reverse its own action, and to go back to the policy of the 1834 Report. For the Poor Law Commissioners themselves very soon realised the false step that they had taken in merging all classes of paupers in the General Mixed Workhouse. Their first remedy was to try to exclude the vagrants, and to provide, in London, for their treatment in specialised "asylums for the homeless poor." To this end orders were issued, joint boards established and even sites purchased. But the attempt failed. Nothing would induce the separate Boards of Guardians to relinquish their care, troublesome though it was, of all the classes of the destitute. The Poor Law Board had then to fall back on the imperfectly specialised Casual Ward of the General Mixed Workhouse. But to get any really specialised treatment of the vagrants out of a "Destitution Authority"—even to get carried out the explicit directions of the Local

* This is well seen in the history of the "Model" Union of that time, that of Westhampnett in Sussex, which was presided over by the Duke of Richmond. Here, on the advice of the Poor Law Commissioners, it was originally decided to retain five of the old parish poorhouses, so that, in conformity with the recommendations of the 1834 Report: "Certain descriptions of paupers should be sent exclusively to each, intending to retain the large Workhouse at Westhampnett for the able-bodied alone. . . . The house at Yapton was at first intended solely for the aged, that at Aldingborne for the children, and that at Pagham for the aged and infirm; that at Sidlesham to remain unoccupied till the Board should see what claims were made for admission to a workhouse. . . . It was found that four Workhouses would be quite unnecessary; and after great consideration it was determined to appropriate the house at Yapton entirely to the children, and to make other additions to that at Westhampnett where all the other paupers were to be brought. . . . Some inconvenience, however, was found to result even from the existence of two separate establishments. There could not be the same diligent supervision of the management of the house, the same attention to the treatment of the inmates, nor the same regularity of accounts as there might be if the whole establishment were concentrated under one roof." (Report of Westhampnett Union, March 14th, 1836, p. 23; in House of Commons, No. 108 of 1838.)

† MS. correspondence of Sir Francis Head, 1835.

‡ *Ibid.*

Government Board to that end—has proved quite impossible. Half a century of failure has recently driven the very experienced members of the Departmental Committee on Vagrancy to recommend that this class of destitute persons should be wholly withdrawn from the supervision of the Local Authority dealing with the category of the destitute.

Even more disastrous in its results was the merging of the children in the General Mixed Workhouse. As early as 1841 the Poor Law Commissioners had realised their mistake, and had begun the attempt to transfer the children to district schools. Here again it was the very nature of the Local Authority that stood in their way. A Board of Guardians, elected to relieve the destitution of all the poor, refused to consent to cede the children to any other Authority, even to a joint Committee of Boards of Guardians. It needed a cholera epidemic among the Poor Law children at Tooting to enable the Poor Law Board to get even a dozen district schools established, and more than five hundred Unions persisted in keeping their children in their own Workhouses. Right down to the present day the Local Government Board, in spite of unwearied efforts, has failed to reduce the number of children actually living in General Mixed Workhouses below what is really the enormous number of 15,000. And there is no prospect of this number being lessened. There is indeed, in some cases a tendency to reversion. In a Welsh Union that we visited, which, at the instance of the Local Government Board, actually provided a separate building for its children, we found this empty and disused, the number of children having fallen to eight. It seemed more economical and more convenient to the Destitution Authority to take these eight children into the General Mixed Workhouse to live with the forty other inmates, who were mostly either semi-imbeciles and feeble-minded, or senile or paralytic old men and women, with half a dozen tramps, men, women and children, coming in every night.

It took thirty years to convince the Central Authority that it had made a mistake in merging the sick in the General Mixed Workhouse; but, once convinced, its action was, in London at least, decisive. From 1866 onward we see first the Poor Law Board and then the Local Government Board exercising the strongest and most persistent pressure on the Boards of Guardians to get them to provide entirely separate institutions for the sick poor. At first the attempt was to get neighbouring Unions to combine, in "Sick Asylum Districts," to maintain a joint infirmary. This has proved practically a failure. The Boards of Guardians, feeling that it was their function to look after all classes of the poor, and dominated by their one business, as they conceive it, of relieving destitution, flatly refused to remove their sick from the General Mixed Workhouse in order to place them in the infirmary of a joint committee. In the Metropolis the Local Government Board had to take the drastic step of taking the infectious sick and the imbeciles out of the hands of the Boards of Guardians, and entrusting them to a separate body, the Metropolitan Asylums Board, which has become virtually a Public Health Authority. Only in the Metropolis and in a score or so of large provincial towns has the persistent pressure of the Local Government Board now succeeded in inducing the Boards of Guardians to place the sick in separate Poor Law infirmaries; and that only imperfectly. In a majority of the Unions the local Destitution Authority, in the teeth of medical advice, insists on retaining all sections of the sick—the tuberculous, the cancerous, the venereal, the maternity cases, the children, the senile, and even sometimes the infectious—in the General Mixed Workhouse.

The next class which the Local Government Board strove to get out of the General Mixed Workhouse was that of the able-bodied. Again the Boards of Guardians resisted, seeing no advantage in paying for the establishment of specialised institutions, even as "Test Workhouses" for the able-bodied. Presently, at Poplar in 1871, and again at Kensington in 1882, the Local Government Board took the opportunity of there being vacant accommodation to persuade the Board of Guardians to set aside a special building for the able-bodied of their own and of adjacent Unions. Similar experiments were started at Birmingham and Manchester. We shall point out, when we come to deal in Part II. with the able-bodied, how all these experiments, though strikingly successful in their purpose of diminishing able-bodied pauperism, were one and all brought to untimely ends in consequence of being entrusted to a Destitution Authority unable to resist the constant temptation of using the vacant places for other classes of paupers. A similar tendency to reversion is seen in the various experiments that have been tried by individual Unions in segregating their own able-bodied for specialised treatment. Our study of their records shows that these experiments are always breaking down because the Destitution Authority cannot resist the temptation, when its other wards get full, of, first temporarily and then

permanently relegating to their so-called able-bodied block, detachments of such other classes of destitute persons as the men over sixty, the sane epileptics, and even the able-bodied of the other sex.

To complete the survey of the efforts of the Central Authority to break up the General Mixed Workhouse, we have to record its action on behalf of the only class not hitherto mentioned, by its successive circulars, from 1900 onward, urging Boards of Guardians to provide specialised accommodation for the worthy aged. These attempts have met with little result, as the great majority of Boards of Guardians have felt, and sometimes expressly reported, that the structural arrangements of the General Mixed Workhouse did not permit of any such separate accommodation as was suggested. In the whole of England and Wales fewer than a thousand old persons are as yet provided for in the separate Poor Law institutions on which the Report of 1834 insisted.

We need not recount the parallel histories of Scotland and Ireland, where the success of the Central Authorities in inducing the local Destitution Authorities to make specialised institutional provision for the separate classes has been, on the whole, even less successful than in England and Wales.*

We are anxious to make clear that it is not to any inferiority of calibre, or any lack of good intention, in the members of the Boards of Guardians in England, Wales and Ireland, and the Parish Councils of Scotland, that we ascribe their almost invariable failure to free themselves from the dominion of the General Mixed Workhouse. It is, we think, inherent in the nature of the Destitution Authority, having to deal with all classes of persons merely because they are destitute, to make this characteristic of destitution their dominant idea. In this connection, it is, we think, highly significant that, in the model Union of Bradford, in which—to use the words of its late Chairman—"the determination to break up the mass of pauperism into its component parts, and to deal separately with each of these parts," has "been the guiding principle of the Guardians in recent years,"† we see how hard is the way and how imperfect is the success of any Destitution Authority that aims at providing really separate institutions, under distinct management, for each of the heterogeneous series of classes committed to its care. The only class, even at Bradford, which has been completely separated off from the rest is that of the children, for whom admirable "Scattered Homes" are provided. Yet even here the Destitution Authority cannot refrain from sending in other destitute persons. "I was sorry," reports our Children's Investigator, in speaking of the St. George's Children's Home at Bradford, "to see a defective girl, aged seventeen, helping in the house work. These defectives are very often to be found in the Children's Homes. They are too old for the schools, they cannot be sent out to service, and are sent to help in the Children's Homes, pending a decision about their destination which the Guardians are very slow to make. They are very much out of place amongst young children. I feel very strongly that they should be sent to proper Homes for Defectives."‡ And it is the same with the other classes. Genuine philanthropic feeling has induced the Bradford Board of Guardians to build, a couple of miles away from the General Workhouse, a charming quadrangle of separate tenements for their most respectable aged. Yet, because it had presently to provide additional accommodation for destitute sane epileptics, and then a place for the destitute able-bodied men to be subjected to the Outdoor Labour Test, this Destitution Authority could not resist the temptation of housing its epileptics in the very quadrangle occupied by the old men and women; of setting the able-bodied men to work on the same site; and of placing all three classes—the most worthy aged, the sane epileptics and the Outdoor

* Though the system of Poor Relief in Scotland is assumed to be mainly one of Outdoor Relief, and though, in fact, four-fifths of the paupers are relieved in their own homes, it should be noted that the Poorhouse population is rapidly rising, having increased 50 per cent. in the last decade, and now amounts to 15,000. The seventy Poorhouses that have gradually covered the country, eight of which are great establishments (accommodating over 500 persons each), do not appear to us to differ essentially from the General Mixed Workhouses of England and Wales, which are, in proportion to population, not much more numerous. In Ireland, where only two-fifths of the paupers receive Outdoor Relief, the 159 General Mixed Workhouses seem to us to have all the characteristics of those of Great Britain, with even greater extremes of size and promiscuity. Many of them are quite small and primitive in their arrangements. On the other hand, seven have more than 500 inmates; and the South Dublin Workhouse, with an average of over 4,000 inmates of both sexes and of all ages, physical states and mental grades, within the Workhouse walls, appears to us, in more than one sense, the most monstrous aggregation of the United Kingdom.

† The History of Poor Law Administration in Bradford, 1838–1906, compiled from the MS. records, by Mrs. Spencer, B.A., D.Sc. (Econ.), p. 13.

‡ Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, p. 105.

Labour Test Men—under one and the same Superintendent. Meanwhile, within the walls of the old Workhouse, we find the blocks of the able-bodied and semi-able-bodied men and women closely hemmed in by new and elaborate hospital blocks for different groups of the sick, the whole within the same curtilage, entered by the same gate, and under the formal superintendence of the same Master and Matron.

(E) CONCLUSIONS.

We have therefore to report :—

(1) That the General Mixed Workhouses of England, Wales and Ireland, and the Poorhouses of Scotland, whether urban or rural, new or old, large or small, sumptuous or squalid, all exhibit the same inherent defects, of which the chief are promiscuity and unspecialised management.

(2) That these institutions have a depressing, degrading, and positively injurious effect on the character of all classes of their inmates, tending to unfit them for the life of respectable and independent citizenship.

(3) That the institution of a General Mixed Workhouse, whether large or small, was decisively condemned by the Poor Law Commissioners of 1834; that it has been repeatedly condemned since that date by a succession of competent critics; that this condemnation has been confirmed by the evidence given before us, by the reports of our own Investigators and by the individual inspections that we have been able personally to make in many different parts of the United Kingdom.

(4) That the institution is everywhere abhorred by the respectable poor, and that, in our judgment, the continued incarceration within its walls of the non-able-bodied or dependent poor, who are admittedly incapable of earning an independent livelihood, cannot be justified.

(5) That the continuance of the General Mixed Workhouse as the main method of institutional treatment, alike by the Boards of Guardians of England, Wales and Ireland, and by the Parish Councils of Scotland, in spite of such long continued and widespread condemnation, is to be attributed to the fact that these bodies are essentially Destitution Authorities, charged with the "relief" of persons of the most different ages, ailments and conditions, in respect only of their destitution.

CHAPTER II.

THE OUTDOOR RELIEF OF TO-DAY.

The common alternative to maintenance in the General Mixed Workhouse, in England and Wales, Scotland and Ireland alike, is, for all classes of the non-able-bodied, a small allowance, usually weekly, of money, food, and, less frequently, clothing.* This practice, which is as old as the Elizabethan Poor Laws, was not condemned, and was scarcely even criticised in the Report of 1834. In contrast with the emphatic condemnation of Outdoor Relief to the able-bodied, the authors of the Report of 1834, like the Poor Law Commissioners of 1835-47, seem, in fact, to have acquiesced, so far as the non-able-bodied classes were concerned, in a continuance of the then existing practice of staving off destitution by small money doles, which, in cases of permanent incapacity or old age, became weekly allowances almost mechanically continued during life. There were, however, two requirements made by the Report of 1834 in respect of the administration of relief to the non-able-bodied, as well as to the able-bodied. "Uniformity in the administration of relief," says the Report, "we deem essential, as a means, first of reducing the perpetual shifting from parish to parish, and fraudulent removals to parishes where profuse management prevails, from parishes where the management is less profuse; secondly, of preventing the discontents which arise among the paupers maintained in the less profuse management, from comparing it with the more profuse management of adjacent districts; and thirdly, of bringing the management, which consist in details, more closely within the public control."† And the uniformity of treatment on which the Report of 1834 laid so much stress was held to apply in a special degree to the administration of Outdoor Relief in respect of the character or past conduct of the applicants. "The natural tendency" of the relieving Authority, "to award to the deserving more than is necessary, or . . . to distinguish the deserving by extra allowances" was denounced in that Report as an evil. "The whole evidence," it was declared, "shows the danger of such an attempt. It appears that such endeavours to constitute the distributors of relief into a tribunal for the reward of merit, out of the property of others, have not only failed in effecting the benevolent intentions of their promoters, but have become sources of fraud on the part of the distributors, and of discontent and violence on the part of the claimants."‡

This system of granting doles and allowances to the non-able-bodied poor, accepted by the Royal Commission of 1834, has never been prohibited by the Local Government Board, and has accordingly continued, with its authority, down to the present day. The sum thus distributed is now very large, approaching, in the United Kingdom, no less than £4,000,000 sterling annually. It has, during the past fifteen years, greatly increased, and it is, at present, taking the whole United Kingdom, probably greater than at any time since 1834. More than two-thirds of the whole of the paupers are, in fact, in receipt of Outdoor Relief.

We were surprised to find that, as far as England and Wales are concerned, contrary to the usual impression, no Order has ever been issued regulating or controlling the very extensive provision thus made for the great mass of the non-able-bodied poor. So far as the orphans and deserted children, the aged and infirm, the sick and the mentally afflicted, and the widows with legitimate offspring, are concerned—and these make up nine-tenths of the pauper host—the Boards of Guardians all over England and Wales have been permitted to exercise unchecked their power of awarding doles and allowances, under such conditions as seemed to them fit.§

* In this chapter we describe more particularly the Outdoor Relief administration of England and Wales. That of Ireland appears to us to be in all respects essentially similar, and to have, in full measure, the same shortcomings and defects. The administration of Outdoor Relief in Scotland—there called *aliment*—differs somewhat in form, and we shall describe these differences later. But, in our judgment, the criticisms that we make of the administration of England and Wales applies, in the main, also to that of Scotland.

† Report of Poor Law Commission of 1834, pp. 279, 280.

‡ *Ibid.*, p. 47.

§ This absence of any rules as to Outdoor Relief to the non-able-bodied was noticed by the Royal Commission on the Aged Poor, 1895 (Vol. II., Qs. 2073, 2074, 2124-6, 2420, 3192, 3193), when it was urged that the Local Government Board ought to frame such rules.

(A) LOCAL BYLAWS AS TO OUTDOOR RELIEF.

Under these circumstances many of the Boards of Guardians have, for their own guidance, framed Bylaws or Standing Orders as to Outdoor Relief, which afford an interesting vision of their divergent ideals of administration. The most frequent clause in the couple of hundred * such Bylaws that we have seen is one which makes the grant of Outdoor Relief dependent on the character and conduct of the applicant. This is expressed sometimes as excluding those who are actually of "immoral habits,"† or "habitual drunkards and bad characters,"‡ or merely "known to be in the habit of frequenting public houses."§ Some Boards exclude "common beggars"|| or "persons known to be addicted to begging";¶ others disqualify anyone, whatever his present conduct, who "has wasted his substance in drinking or gambling, or has led an idle or disorderly life;"** or those who cannot satisfy the Relief Committee that their destitution has not been caused by "their own vicious habits"†† or their own improvidence or intemperance in the past. Occasionally a particular form of extravagance is specially penalised by the refusal of Outdoor Relief. In a large number of Unions we find a rule prohibiting the grant of Outdoor Relief to the widows of men who had been provident enough to insure for their funeral expenses, if, in the opinion of the Board of Guardians, such funeral money had been "lavishly or improperly expended."‡‡ The professed aim of these Boards of Guardians is to make the grant of Outdoor Relief not merely necessary relief, dependent exclusively upon the economic circumstances of the case, but (as some of them frankly avow) an indulgence "to persons of past and present good conduct, who require relief by reason of unmerited misfortune;"§§ who "can show a thrifty past,"||| or that "whilst in work they did all they could to make provision against time of sickness or want of employment";¶¶ or "whose destitution has arisen from no fault of their own."*** This conception of granting Outdoor Relief according to the past conduct of the applicant is most fully carried out by the Sheffield Board of Guardians, which deliberately aims in its Bylaws at a "classification of the recipients of relief with a view to the better treatment of those of good character." Thus, those whose past life (which must be combined, by the way, with twenty years' residence within the Sheffield Union) entitles them to the utmost indulgence (Class A), get 5s. per week per adult; those who, *though equally destitute* and presumably costing as much to keep, fall short of this high standard by one or two or three degrees (Classes B, C, and D) receive, to live upon, respectively, 4s., 3s., or only 2s. 6d. per week per adult.††† This determination to discriminate, in the actual amount of Outdoor Relief allowed, between the deserving and the undeserving—which we find everywhere influencing the stricter type of Guardian, and which one of the most strictly administered Unions thus explicitly avows—is, as we have seen, significantly at variance with the recommendations of the 1834 Report.

* In the course of an inquiry which one of our Committees directed to be undertaken into the policy pursued at different dates by the Boards of Guardians, a collection was made by one of our members of 234 local Bylaws now in force, regulating the administration of relief. About 350 Boards of Guardians stated that they had no such Bylaws, and the remaining sixty, mostly in small Unions, did not reply to the inquiry.

† Rules of Chorlton Board of Guardians; similarly at Salford, Prestwich, Bolton, Rochdale, Wakefield, Dudley, Ashton-under-Lyne, York, Newport, and many other Unions. The Monmouth Board of Guardians excludes also persons of "indolent habits."

††† Rules of the Sheffield Board of Guardians; Evidence before Commission, Qs. 40854–40868, 40113–40118. Similar rules have now been adopted elsewhere (*see*, for instance, those of the Worksop Board of Guardians). The only justification for this distinction that can be given appears to be the assumption that: "Very often the more indifferent classes are hiding something from us." (Evidence before the Commission, Q. 40115).

It is perhaps with regard to wives apart from their husbands, and widows, that the Bylaws relating to Outdoor Relief display the most extraordinary of their diversities. The Langport Board of Guardians professes to refuse all Outdoor Relief to healthy able-bodied widows under any circumstances, however large may be their dependent families.* Most Unions which have rules prohibit Outdoor Relief to widows, whatever their legitimate family, who have had an illegitimate child; indeed, "any person who may have given birth to an illegitimate child" is commonly excluded.† Widows who have only "a small family,"‡ or, if an able-bodied widow "of the working class," not more than two children,§ are made ineligible in some Unions. Far more usual is it to require the widow with only one child to keep herself and child without relief at all, ||after the first six months—some say after the first three months,¶ after the first two months,** or even the first month††—of her widowhood; at least, say some Boards, if the child is a year old,‡‡ eighteen months old,§§ two years old,||| or of school age.¶¶ Many Unions express the same idea by providing that children in excess of one or two should, in preference to any grant of Outdoor Relief—and in face of the present strong objection of the Local Government Board to the presence of children in this institution—be taken into the Workhouse,*** the General Mixed Workhouse that we have described. On the other hand, some Unions expressly provide for Outdoor Relief to a widow with only one child; ††† or without any dependent child at all, ††† and even, subject to being considered by the whole Board, to widows with illegitimate children born since their widowhood.§§§ No less diverse are the fates in different Unions of wives deserted by their husbands. Most Boards of Guardians profess to refuse Outdoor Relief to all such cases, owing to the difficulty of preventing collusive desertions. Others withhold it only for six months,||| or for a year,¶¶¶ or for three years,**** or even for five.†††† On the other hand, some Unions explicitly provide that deserted wives shall be treated as if they were widows.†††† One island Union does the same if the husband is "beyond the seas,"§§§§ whilst others give relief, notwithstanding their fear of collusive desertions, if there are several children.||||| There are several Unions which, apparently without consideration of the effect on the children, make the Outdoor Relief to deserted wives conditional on the women and children first going into the Workhouse—the General Mixed Workhouse that we have described—for such time as the Guardians think fit.¶¶¶¶ If there is any validity in the assumptions of the

§§§§ Rules of Anglesey Board of Guardians.

||||| Rules of Wakefield, Worksop, Leeds, Burnley and Alnwick Boards of Guardians.

¶¶¶¶ Rules of Crediton and Tiverton Boards of Guardians. The provision for the wives and families of absentee soldiers, marines, sailors, militiamen and Army Reserve men called up for service is equally diverse. In many Unions, the Bylaws forbid Outdoor Relief to any such cases; in others (*e.g.*, Docking and Medway), the Bylaws provide for it to be given at discretion; at Rugby, and Bristol, it can be given by the whole Board; at Wakefield and King's Norton, only if there is more than one child; whilst at Croydon the scale explicitly allows so much for each child. When in 1877 the Local Government Board was urged to prohibit Outdoor Relief to this class, it refused to do so.

Report of 1834 that an absence of uniformity in Poor Law administration, produces discontent amongst paupers and a perpetual shifting from place to place in order to take advantage of the Guardians' laxity, the divergencies in policy in the cases of widows with children, or widows who have had an illegitimate child, or deserted wives or unmarried mothers, would appear to be just those in which these assumptions would be most likely to apply.

Some Boards push their test of conduct beyond the applicant himself; and deny Outdoor Relief to applicants "residing with relatives of immoral, intemperate, or improvident character, or of uncleanly habits."* There are even Bylaws in many Unions—in spite of an express statutory provision that such women should be treated as widows—forbidding the grant of Outdoor Relief to "married women (with or without families) whose husbands, having been convicted of crime, are undergoing a term of imprisonment";† a common rule sometimes loosely expressed so as to apply to the dependents of all persons detained in prison, even if merely awaiting trial.‡

But Boards of Guardians frequently have further By-Laws or Standing Orders as to Outdoor Relief, which are based on other considerations than the character or conduct of the applicant. More than a dozen South-country Unions, of which we have seen the rules, choose arbitrarily to limit the grant of Outdoor Relief, without reference to the character or conduct of the applicant, to such persons as have completed two years' residence within the Union.§ In Worksop the deserted wife having one or more children, if of good character, and if, in the judgment of the Guardians, her desertion is from no fault of her own, will, if she has resided within the Union for ten years, be granted 4s. a week, and 1s. 6d. for each child. If, however, she has resided there for any shorter period than ten years, she will only get 3s. a week, and 1s. 6d. for each child.|| Many other Boards of Guardians profess the enlightened policy of insisting on a sanitary home; refusing Outdoor Relief to anyone, whatever his or her character or conduct, who is living in a cottage or a room "kept in a dirty or slovenly condition";¶ or "in premises reported by the Medical Officer of Health to be unfit for occupation, either from overcrowding or from being kept in a filthy condition";** or "reported by the Sanitary Officer as injurious to health";†† or "in the opinion of the Relief Committee detrimental to the moral or physical welfare of the inmates";‡‡ or merely "premises in which it is undesirable, on account of its sanitation, condition or locality, that they should reside."§§ This restriction on the home is sometimes widened in scope and sometimes particularised. Thus, Outdoor Relief may be refused to an applicant, however deserving, who has the misfortune to live, as so many of the poor do live, "amid insanitary or immoral surroundings."||| Applicants must not live in common lodging-houses; ¶¶ nor lodge on premises licensed

* Bylaws of Alnwick Board of Guardians.

† Regulations of West Derby Board of Guardians, and many others.

‡ Rules of Blandford Board of Guardians, and many others. But the Docking Board explicitly allows Outdoor Relief to the wives and children awaiting trial. On the other hand, the Prestwich Board expressly allows Outdoor Relief to prisoners' wives at discretion; the Chelmsford Board, if there is even one dependent child; other Boards, if there are two or more children; whilst only a few comply with the law (7 and 8 Vict. c. 101, s. 25; Art. 4 of Outdoor Relief Prohibitory Order, 1844), and expressly treat them as if they were widows. At Merthyr Tydvil they get Outdoor Relief for the first six months only; whilst at Crediton and Tiverton the reverse course is followed, no Outdoor Relief being given until the wife and children have entered the Workhouse for a time. At Stafford only the wives of men who are hardened offenders, having, at any rate, been more than once convicted of crime, are denied Outdoor Relief. The Haverfordwest Board, on the other hand, denies it only to the dependents of men whose offences have been comparatively venial—that is to say, only if the husband has been given a sentence not exceeding six months; whilst the Holborn Board makes a special exception in favour of wives whose husbands are in gaol for assaulting them.

§ Rules of Newton Abbott, Okehampton, East Stonehouse, South Molton, Wells, Taunton, Blandford, Wellington, Marlborough, Wimborne, Wincanton, Shepton Mallet, Yeovil, Chichester and Medway Boards of Guardians.

¶ Rules of the Godstone Board of Guardians.

** Regulations of the Cardiff Board of Guardians; also at Carmarthen.

†† Rules of the Kingsclere Board of Guardians; also at Bridport, Trowbridge, etc.

‡‡ Rules of the Newport Board of Guardians; similarly at North Bierley, Lichfield.

§§ Regulations of the Darlington Board of Guardians.

||| Rules of the Leigh Board of Guardians.

¶¶ Rules of the Stafford, Newport, Willesden, Lichfield, Dudley, Leigh, Rochdale, North Bierley, Ashton-under-Lyne, Skipton, and Halifax Boards of Guardians.

for the sale of drink; * nor even live in "furnished lodgings," † nor rent "furnished rooms"; ‡ at any rate, if these are such as the Guardians deem "unsuitable." § On the other hand, too good a home is as fatal a disqualification in some Unions as too bad a home is in others. Outdoor Relief is, in some places, refused to persons, whatever their character and conduct, who live "in cottages rented above the average rent of the neighbourhood"; || or in a dwelling of "a higher rent than £3 (per annum ?) in a town or £2 in a rural district"; ¶ or "£5 rent rural and £6 urban"; ** or "£6 rent rural and £7 urban"; †† or "at the gross estimated rental of £10 or upwards"; ‡‡ or who occupy "a cottage and land (small holding)" of any kind; §§ or more than half an acre of land; ||| or any tenement "the rent of which is in the opinion of the Board unreasonably high." ¶¶

But the applicant for Outdoor Relief will, according to the particular part of England in which he or she lives, have also to fulfil other requirements. He or she must not be "living alone in a house; **** or, as it is more usually specified, must be "competent to take care of himself or herself," or be "residing with some person competent and willing to take charge of him or her; ††† or have "friends or relatives to attend to them." ††† But such relative or friend must not be a daughter, for Outdoor Relief will be refused to "any parent having a girl at home over thirteen years of age capable of earning her living; "§§§ or "over fourteen years," or "above fifteen years." ||||| At the same time, applicants for Outdoor Relief must not live together or share houses with each other, for Outdoor Relief "shall not be granted to more than one family in the same house; " ¶¶¶ nor must they even let off part of a house in lodgings without great discrimination; as "no Outdoor Relief" will be given "to persons who let lodgings or rooms to more than a married couple with children or to more than one lodger; " **** whilst "no woman on Outdoor Relief" is "allowed to take in a male lodger except by permission of the Relief Committee"; †††† nor may she have resident with her "any woman with an illegitimate child or children." ***** We may add that in some Unions no Outdoor Relief is allowed to any person having a dog in his possession, or "keeping a dog or gun, or holding a licence for either; " †††† or having an allotment ("except by way of loan "); §§§§ or, in one case, "keeping dogs, horses, donkeys, cows or poultry." |||||

The question of thrift seems to be a puzzling one to Boards of Guardians. As we have mentioned, many Unions require the applicant for Outdoor Relief to "have shown signs of thrift." ¶¶¶¶ Yet, as we have seen, the occupation of a small holding, the holding of an allotment, the keeping of a cow or a donkey, or the possession of poultry is, in some Unions, actually a cause of disqualification. ***** So is the possession of a cottage, a Post Office annuity, or a tiny investment of any sort, for "no Outdoor Relief" except as a loan, will be given to persons in receipt of money derived from property"; ††††† or except

***** "Another practice which I regard as objectionable is that of refusing relief because the applicant may keep a pig or fowls, both of which certainly mean food, and perhaps bring in a little money." (Evidence before the Commission, Q. 72681, Par. 23.)

††††† Bylaws of the Alnwick Board of Guardians.

"to the actually destitute."* The only form of saving which Boards of Guardians seem willing to recognise and encourage in the concrete, and not merely by abstract advice, is that of subscription to a friendly society. In one Union, according to its Rules, "no Outdoor Relief" will be given "to any applicant under forty-five" unless he is actually "drawing sick pay from a friendly society."† Apart from the recent statutory direction that allowances from such a society not exceeding 5s. a week are to be altogether excluded from the Guardians' consideration, various Unions arrange for subscribers to "Benefit Societies to receive special consideration."‡ "A person who has been a member of a friendly society for at least ten years and has ceased to be a member through no fault of his own"—or the widow of such person—may even receive 6d. a week above the ordinary scale of Outdoor Relief.§ But even in this matter many Boards of Guardians limit their encouragement in various ways. Only one seems willing to exclude all "club pay . . . in fixing the amount of relief."|| Others will not take into account "any sum exceeding 10s. per week received from a Benefit Society," ¶ or even anything in excess of the bare statutory sum of 5s. a week; ** or only half of any such excessive savings.†† Various other Unions so far limit their Outdoor Relief to those who have provided themselves with sick pay, as to insist that the sick pay, together with the Outdoor Relief, must never exceed "the usual rate of wages."‡‡ There are even Unions which profess by their By-laws to ignore the recent statute; thus one will only leave wholly out of consideration such pay not exceeding 2s. 6d. a week, and will treat any greater provident insurance up to 5s. a week as if it were 2s. 6d., unless the applicant has a wife and family dependent on him.§§ Some other Unions still retain Bylaws providing merely for the supplementing of the sick pay by such Outdoor Relief as may be needed for support.|||| And the Runcorn Board of Guardians still defiantly print, in their Yearbook for 1906-7, the old-fashioned rule that "sick money received from a club by an applicant for relief shall be taken at the full value."¶¶

Even more inconsistent one with another are the local Bylaws relating to the earning of wages. Some Boards of Guardians profess to prohibit it altogether, ordaining that "no person in receipt of permanent Outdoor Relief shall be permitted to work for wages,"*** except, say some Boards of Guardians, widows to whom Outdoor Relief has been granted, who are expressly permitted to "work for wages."††† The prohibition is put in another form by Boards of Guardians which forbid Outdoor Relief "in aid of wages or other earnings."‡‡‡ Sometimes it is only earning more than a specified maximum that is made a disqualification for Outdoor Relief—more than 2s. per head per week, at Barton-upon-Irwell; more than 4s. per head per week at York and Halifax; or more than half a crown per head per week after paying the rent, at King's Norton and Bolton.§§§ The Worksop Board of Guardians makes an express exception for widows and deserted wives, who are thus permitted to earn money.||||| On the other hand, not only is a woman allowed to earn money to supplement her Outdoor Relief, as at Hitchin and Worksop; but various Boards of Guardians so far recognise the earning capacity of their recipients of Outdoor Relief as to lay down regular scales of relief diminishing in proportion to earnings. Thus the Prestwich Board of Guardians explicitly provides that "in case of relief given in aid of earnings . . . where the earnings amount to at least one-third of the sum named in the scale . . . the maximum amount of relief, including such earnings, shall not exceed the amount named in the following scale, viz., two persons, 6s. . . six persons,

14s. per week.”* Another way of effecting the same result is to say that “the relief granted shall be on such a scale that, with the income coming into the house from other sources the amount shall not exceed 3s. per head.”† On the other hand the Leigh Board of Guardians ignores any income or other resources not exceeding one-third of the scale of Outdoor Relief.‡ The earnings from letting lodgings are sometimes systematically computed and deducted from the amount of Outdoor Relief according to the scale in force; thus at Cheltenham, a male lodger boarding in the house is reckoned as equivalent to 2s. a week profit, and a female lodger at 1s. 6d. a week;§ whilst in the neighbouring town of Warwick a male lodger is regarded as worth 3s. per week.|| Where the applicant lives with relatives, it is provided in the Bylaws of some Boards of Guardians that the aggregate earnings and income from all sources of the whole family group shall be taken into account, whether or not the members are legally liable to maintain the applicant.¶ Sometimes this is put in the form that Outdoor Relief will be refused to a widow “able to do all the usual household duties” who has an unmarried son at home “earning full weekly wages.”** The climax is perhaps reached in those Unions in which Outdoor Relief, far from being restricted to the destitute, is explicitly confined, in the case of widows with children, to those who can prove that they are earning not less than three shillings a week.††

This analysis of local Bylaws reveals, we think, a hopeless confusion of policy on the crucial question of how far Outdoor Relief should be restricted to those who have been thrifty in the past, or who are still exerting themselves to earn a partial livelihood. Some Boards of Guardians profess to abide by an entirely contrary interpretation of the Poor Law, and to confine Outdoor Relief to the actually destitute. “It is the duty of a Board of Guardians,” says one Board, “to relieve actual destitution, that is to say to relieve the poor who are unable, without support from the rates, to provide themselves with the absolute necessities of life,‡‡ and who have no relations who can be required by law to maintain them; but not to administer charity in the sense of alleviating the lot of those who are poor, but not actually destitute.”§§ “Under the Poor Law,” says another Board, “destitution, not poverty, gives the only claim to relief from the Poor Rates.”||| “Society,” says another Board, “owes relief to those only who, by force of circumstances, are rendered unable to provide for the necessities of life; to distribute relief in any other case is to create mendicancy, to encourage idleness, and to produce vice. The function of the Guardians is to relieve destitution actually existing, and not to expend the money of the ratepayers in preventing a person from becoming destitute. Public relief is designed to meet destitution irrespective of the particular person, or of his good or bad character.”¶¶

But whatever may be otherwise prescribed, an examination of the scales of Outdoor Relief embodied in these Bylaws makes it clear that these doles and allowances are practically always professedly fixed on the understanding that the applicants have earnings, or other sources of income, without which they must inevitably starve. Indeed, there are only two or three Unions in England in which we have found the case of persons having absolutely no means expressly differentiated in the Bylaws from that of persons

* Rules of the Prestwich Board of Guardians. Other Boards direct that: “Any earnings of the family shall be taken into consideration in computing the amount of relief”—e.g., Standing Orders of Ashton-under-Lyne, and Skipton Boards of Guardians.

¶¶ Rules of Preston Board of Guardians.

working for wages or having other sources of income.* The lowest scale that we have come across is that of Hertford, which grants for each adult only 1s. a week and 5 lbs. of flour, or its equivalent in bread.† More usual is it to find the scale allowing 2s. 6d. per week for an adult (as at Bedminster, Prestwich, Nantwich, Epping, etc.); or 3s. (as at Cheltenham, North Bierley, Hardingstone, etc.); or 3s. 6d. (as at Warwick); though in a very few Unions it is put at as much as 4s. (as at Newport), and even 5s. (as at Loughborough and Bradford). For each child residing at home one Union still gives only 6d. and 5 lbs. of flour,‡ others 1s. and a loaf,§ occasionally 1s. and two loaves,|| and in some cases 1s. 6d.,¶ or 2s.**—in most Unions, we understand, without anything additional being allowed for the mother, if she is an able-bodied widow—as compared with the 2s. per week for each child which the guardians of Bradford and Sheffield think necessary in addition to a sum for the mother herself. The scale is put in more complicated form at Derby beginning with man, wife and one child at 5s., and rising to man, wife and ten children at 12s. 6d. or widow and ten children, 13s. 8d.†† being about half what would be allowed at Bradford. One Union has a “summer scale” and a “winter scale,” both very low, allowing a married couple with one child 5s. a week in summer and 7s. a week in winter; with 1s. additional for each further child.‡‡ It will be evident that, even allowing for differences in the cost of living, the lowest of these widely divergent scales of relief, can be described only—to quote the words of the Clerk of one of the most important Unions—as “starvation out-relief.” §§

(B) THE PRACTICE AS TO OUTDOOR RELIEF.

The “Babel of principles” as to Outdoor Relief to the non-able-bodied, revealed in the foregoing analysis of the Bylaws formulated by the different Boards of Guardians, is in flagrant disregard of the policy of National Uniformity recommended in the Report of 1834. Moreover, we cannot take even these Bylaws as measuring the diversity that prevails. So far as we have been able to ascertain, only two-fifths of the Unions have any rules at all, the remainder professing to deal with each case “on its merits.” Even where Bylaws or Standing Orders as to relief still appear in print, they have in many cases become obsolete, or are in practice more frequently transgressed than adhered to.|||| Our special Investigators into Outdoor Relief report that “Many Boards have drawn up scales of relief for their own guidance. These are printed, hung up, and often disregarded! ‘Each case on its merits’ is the formula used to conceal much caprice, prejudice and favouritism. The result is injustice. There is neither the superficial equality of treatment which adherence to a rigid scale gives, nor the deeper equality of treatment according to ascertained need. There is little or no attempt at discovering the whole position of a case and meeting it in a thoughtful fashion. Guardians prefer to give small sums to many persons to thoroughly helping a few. For the last fifty years the deterrent and repressive aspects of the Poor Law have been urged upon them. They have disagreed and rebelled, but instead of attempting a thorough-going remedial policy, they have halted halfway, and settled down to slipshod inquiry and the soothing dole. They are not relieving destitution, but supplementing small and precarious incomes.”¶¶ It was in

* “At Bradford, widows with dependent children who are unable to go out to work in consequence of their whole time being required in properly attending to their children; who have no adult male lodgers; whose children do not sell or beg in the streets; who attend to their children’s health and cleanliness; and whose habits in every way are satisfactory to the Guardians or their visiting inspector,” get 5s. a week for the mother, 4s. for the first child, 3s. for the second child, and 2s. for each of the other children, an exceptionally liberal scale. In other cases, the earnings of each child worker in excess of 1s. are deducted from the scale”—(Standing Orders of Bradford Board of Guardians).

§§ Evidence before the Commission, Q. 36025. In Kensington, the Board of Guardians directed it to “be assumed that in this parish a single person can live on 3s. 6d. per week *besides rent*, and a man and wife on 6s. 6d.” (Regulations of Kensington Board of Guardians).

|||| “They are continually evaded.” (Evidence before the Commission, Appendix No. CI. (par. 15) of Vol. V.). “Refusals are seldom based upon the rules,” reports an inspector, “even in Unions where such profess to be in force.” “In practice,” reports another inspector, “there is little difference between the Boards which have adopted regulations, and those which have not.”

¶¶ Interim Report of Inquiry into the Effect of Outdoor Relief . . . in the Counties of Suffolk and Cambridge, by Mr. Thomas Jones, p. 17.

view of these facts that we paid special attention to the actual practice in different parts of the Kingdom, with regard to the grant of Outdoor Relief; alike in our oral examination of witnesses, in our personal visits to see Boards of Guardians and Relief Committees at their work, and in the appointment of special Investigators.

We find certain characteristics almost universal, alike in those Boards of Guardians which have formal scales of relief, and those which "treat each case on its merits." The dole given is practically never adequate to the requirements of healthy subsistence. The sums awarded are almost mechanically doled out, according as the Relieving Officer reports the applicant to come into one or other wide category, as widow, sick husband, aged person, etc., without any real consideration of the sum that it would require properly to maintain each household; and without any accurate ascertainment of the other resources. "They do not confess that they have a scale," says one of the Inspectors;* "but the frequency with which 1s. or 1s. 6d. per week will be given for each dependent child, and 3s. for each adult, makes the so-called "treating the case on its merits," really amount to the same thing." The Guardians, reports an experienced Clerk, "get into their heads that 2s. 6d. or 3s. a week is the proper sum, and they give it to a great number."† What weighs with them is that, if they give some such dole, "they have got rid of the case."‡ "As a matter of fact," reports one Local Government Board Inspector, "these half-crowns, eighteenpences and shillings are given because the facts are not ascertained."§ What we have ourselves seen of the practice of Boards of Guardians in different parts of the country completely confirms this testimony. "There are," noticed one of our Committees, "no relief rules or fixed scales, yet all the evils of rules and scales of relief are in existence. It is a rule to give 2s. 6d. to an aged person; sometimes 6d. less, but rarely ever more than 2s. 6d. One case was that of a widow, sixty-seven years of age, living alone; the rent was 2s. 6d. (a week); they granted only 2s. (a week); there was no other known income."|| Many specific cases of wholly inadequate relief came before the notice of our Investigators. "This inadequacy," they report, "strikes us as being particularly injurious in the case of widows who have young children dependent upon them;"¶ to whom, as we have mentioned, only 1s. or 1s. 6d. a week is usually allowed for the entire maintenance of each dependent child. So important did this allegation appear to us—affecting, as it did, the conditions of life of no fewer than 170,000 children in England and Wales whom the State is maintaining on Outdoor Relief—that we appointed special Investigators to enquire into the conditions under which these children were living. The result of this Inquiry was to prove conclusively that, "in the vast majority of cases," the amount allowed by the Guardians is not adequate. "The children," sums up our principal Children's Investigator, "are undernourished, many of them poorly dressed, and many barefooted. . . . The decent mother's one desire is to keep herself and her children out of the workhouse. She will, if allowed, try to do this on an impossibly inadequate sum, until both she and her children become mentally and physically deteriorated. . . . It must be remembered," adds this medical expert, "that semi-starvation is not a painful process, and its victims do not recognise what is happening. . . . We give relief without knowing whether the recipients can manage on it; we go on giving it without knowing how they are managing on it."**

Along with this fact that the Outdoor Relief given is practically never adequate for healthy subsistence, goes the other fact, which we find almost invariable, namely, that Outdoor Relief is professedly not intended by the Guardians for those who are really destitute but for those who can, in some way or another, see their way to a few shillings a week.†† There has grown up, we are informed, a regular practice of giving Outdoor Relief in order to supplement the assumed other sources of income, whether petty earnings,

* Evidence before the Commission, Q. 5092.

† *Ibid.*, Q. 35975.

‡ *Ibid.*, Q. 35937. The result is, as one witness informed us, that: "Either the spirit of cadging is fostered, and concealment encouraged, or else the people are left in a state of misery, children ill-nourished and ill-clad, old people half-starved on bread and tea." (*Ibid.*, Q. 32267, Par. 11.)

§ *Ibid.*, Q. 8870.

|| Reports of Visits by Commissioners, No. 33 B, p. 82.

¶ Memorandum by Mr. A. D. Steel-Maitland and Miss R. E. Squire, p. 1.

** Report . . . on the Condition of the Children, by Dr. Ethel Williams, 1908, p. 88.

†† Generally, in cases of Outdoor Relief, says one witness, "The applicants are not, as you might say, really destitute, and they are not actually starving; but their income is such as to necessitate some . . . addition." (Evidence before the Commission, Q. 22863.)

charitable gifts * or contributions from relations—to such an extent, indeed, that applicants often fictitiously magnify these resources in order to induce the Guardians to grant the dole of Outdoor Relief; and Guardians will even refuse to grant Outdoor Relief, where the applicant, however worthy, really has no other means of livelihood at all.† We have already seen to what an extent the Bylaws of the different Unions recognise the receipt of sick pay from a friendly society, and even sometimes require it as a qualification for Outdoor Relief. The occasional allusions in the Bylaws to such sources of income as letting lodgings, cultivating gardens or allotments, or keeping a dog “for the purposes of his business,” and even working for wages, thus become intelligible. So plain did it become to us that women, in particular, were habitually granted Outdoor Relief in aid of their wages or other earnings that we thought it necessary to appoint special Investigators into this practice all over England and Scotland.‡ These Investigators found many thousands of women who were regularly in receipt of Outdoor Relief, working as charwomen, laundrywomen, and domestic servants (outdoor); in dressmaking, tailoring and all the “needle” trades; in shoe-making and weaving, confectionery and box-making; in factories and workshops as well as in their own homes; holding permanent situations as well as temporary engagements; for weekly, daily and hourly wages as well as at piecework rates. Even the aged persons who are granted Outdoor Relief are habitually assumed to have some other means of support. Those who have absolutely no resources must, nearly everywhere, go to the Workhouse—to the General Mixed Workhouse that we have described. It is, indeed, clear that of the three to four million pounds a year annually given in Outdoor Relief, the greater part is given, not in relief of destitution, strictly defined, but in aid of poverty.§

We do not at this point discuss the debatable question of whether or not this almost universal system of granting Outdoor Relief in supplement of earnings, charitable gifts or the contributions of relations has injurious results upon either the market rate of wages or the flow of charity. We thought it important, however, to ascertain what steps were taken by the Boards of Guardians to satisfy themselves, before granting their manifestly inadequate doles of Outdoor Relief, as to the actual existence of the other resources which they tacitly assumed to exist, and as to whether the amount of such resources, joined with the Outdoor Relief, was sufficient, and no more than sufficient, for the proper maintenance of the household. We regret to say that, excluding a very few exceptionally administered Unions, we found nothing worthy of the name of an ascertainment of even the existence, let alone the amount, of any such resources. “In a great many instances,” testifies the Clerk of a great urban Union, “Guardians guess at the amount that is coming in, and think that because there are charities in the neighbourhood these people must be getting some of it, whereas in some cases I fancy they do not get quite as much as the Guardians imagine they do.”|| The Guardians, in fact, as an Inspector assured us, “leave a good deal to the imagination in cases of that sort.”¶ The Guardians, said another witness, give such inadequate relief “in the hope that there are (other resources); I do not think they give it from definite information at all.”** This testimony is borne out by what we have ourselves seen of the way in which Boards of Guardians deal with the cases. “There was hardly any evidence,” notes one of our committees, “that anything more than the statements of the applicants was used in deciding their cases. Very little verification except a visit to the home.”†† “Enquiries as to resources,” notes another

* “One reason,” said a Guardian, “of the slackness in properly relieving is the knowledge that there is so much charity money. The statement is made that friends will help, which means that the people beg to increase their miserable income.” (Report . . . on Endowed and Voluntary Charities in certain places, and the administrative relations of Charity and the Poor Law, by A. C. Kay, and H. V. Toynbee, pp. 62, 110.)

† Evidence before the Commission, Q. 19975–19980.

‡ See the several Reports on the Effect of Outdoor Relief on Wages and other Conditions of Employment, by Miss Constance Williams and Mr. Thomas Jones; in London, in England generally, in Shropshire, in Suffolk and Cambridge, in Scotland, respectively; together with the “Final Report,” by Thomas Jones.

§ “The Poor Law,” sum up our Investigators, “was once supposed to deal with destitution rather than with poverty. To-day, however, the persons helped have few resources rather than absolutely none. . . . The policy of Out-relief throughout the country is one of granting small weekly doles to the aged and infirm, and small allowances per child to the widow with dependents. . . . Some Guardians encourage applicants to earn all they can, and do not reduce the relief. It is unusual to cut down relief when wages rise, except in the case of children beginning to earn.” (Final Report of Inquiry into the Effect of Outdoor Relief on Wages and the Conditions of Employment, by Mr. Thomas Jones, p. 10.)

|| Evidence before the Commission, Q. 35936.

†† Reports of Visits by Commissioners, No. 13, p. 26.

committee, "are practically not made at all. . . . Widows with children receive varying amounts ; it seems quite a matter of chance how much."*

The lack of an ascertainment of resources does not always result in too little being given. We are convinced, not only by the testimony of competent witnesses, but also from our own observation, that Outdoor Relief is sometimes granted in cases in which the home could be quite well maintained without it. "It is far from infrequent," one official witness assured us, "to find that the Outdoor Relief paupers are in possession of considerable sums of money, or have other means, which they had not divulged to the Relieving Officer."† Owing to the persistent refusal of the Guardians to allow proper investigation, says the Superintendent Relieving Officer of a large London Union, "we are done every day we rise."‡ "Altogether seventeen cases were heard," notes one of our committees, "and the applicants seen. The majority of these cases were widows and children, the relief being on an unusually adequate scale. Thus, a widow with three children dependent, and earning 14s. a week and some food, was given 7s. a week relief, bringing her total weekly income up to 21s. and food. In another case a widow with four dependent children, and one boy earning 15s. a week, with a total income to the family of 25s., received 7s. a week, bringing their total income up to 32s. a week for six persons."§ We may cite in confirmation some recorded cases. "A widow living with her single daughter . . . aged thirty-nine, who was working at the ——— shoeworks and earning an average weekly wage of 18s. 3d. Two sons gave their mother 1s. each weekly, which made the income 20s. 3d. weekly for two persons. Guardians granted 3s. 6d. and 6d. grocery in addition. The Relieving Officer . . . reported each time the case came before the committee that 'it was not a case of destitution.'"|| A Local Government Board Inspector "stated that on the morning he was present relief was granted where the united earnings of the family amounted to 34s. per week."¶ Two glaring cases were brought to our notice in which Outdoor Relief, to the extent of 3s. and 5s. a week respectively, was granted to two families, of which the total earnings were, in the one case 40s. 9d., and in the other 51s. 6d. per week.**

It is possibly connected with this general lack of ascertainment of the applicant's resources, combined with the absence of any guiding principle, that we find an amazing diversity in the treatment of similar cases, not only between Union and Union, but even within the same Union. We have ourselves noticed this divergence between committee and committee of one and the same Board of Guardians, uncontrolled by any superior authority.†† Nor is this by any means exceptional. "I have found," sums up one of the Local Government Board Inspectors, "different committees of the same Board dealing quite differently with similar classes of cases, which is obviously wrong." In a town where this habitually takes place, "it is known," testifies a competent witness, "that paupers shift from other districts of the town, where the maximum is not always given, to the more favoured locality and get the maximum."‡‡ Indeed, apart from divergence of practice between different Relief Committees of the same Union, we have ourselves noticed—what is in fact notorious—that the same Relief Committee of the same Board of Guardians will deal differently with similar cases (and even with the same case) at successive meetings, according to the accident of which of the Guardians happen to be present. "It is often a matter," say our Investigators, "of persuading a Guardian to take up the case. If the appeal succeeds, at the next meeting of the Relief Committee, the Guardian will present the claims of 'My Mrs. Smith' much as an outside charity worker will. When such personal relations are established there may

†† After seeing the relief work in a certain Union, one of our Committees reported : "There are three Committees which grant relief, but no uniformity is aimed at between them. There are no rules laid down for their guidance, and there is no commonly accepted guiding principle in the minds of the respective Committees." (Reports of Visits by Commissioners, No. 96, p. 112.)

‡‡ Evidence before the Commission, Q. 52742. "I have known cases," deposed a Relieving Officer, "where outdoor relief has been refused in one district, but granted readily upon the applicant removing to and applying in another district" (*Ibid.*, Appendix No. LXXXVIII. (Par. 26) to Vol. V. "There is not a fixed policy . . . each Committee varies . . . it depends who is sitting on the Committee." (*Ibid.*, Q. 50680.)

be as much or as little fraud in the one case as in the other, for in neither is inquiry always thorough.”* “It was evident,” noticed one of the committees, “that the amount actually given in each case varied according to whether such applicant had or had not a personal advocate among the Guardians. Thus, in one case personally advocated by a Guardian, an old man and his wife, living with their married daughter, and paying no rent, received 6s. a week. In another case, not vouched for by any Guardian, a woman aged fifty-eight, and disabled by debility, paid rent 1s. 9d. a week, and had no relatives able to assist her, yet she only received 3s. 6d., leaving her 1s. 9d. a week to live on after paying her rent.”† Such cases of inequality of treatment, owing to the accidental or deliberate absence or presence of particular members of the committee are, we are informed, frequent;‡ and can, we are assured, with an Authority constituted as at present, scarcely be avoided.

We now come to what appears to us the worst feature of the Outdoor Relief of to-day. With insignificant exceptions, Boards of Guardians give these doles and allowances without requiring in return for them even the most elementary conditions. § They are bound by statute to require that the children of school age should be in attendance at school, and this alone is what the average Relieving Officer sees to. || As we have mentioned, many of the Bylaws require the recipients of Outdoor Relief to live in houses that are maintained in a sanitary state, and in homes kept reasonably clean. But whether or not the Union has Bylaws to this effect, it is plain that, in the vast majority of cases, no such condition is enforced. ¶ We draw here a distinction between the completely rural Union and that of the great town or urban district. In the former, though the conditions are not ideal, the lowest depths are rarely sounded. So far as the towns are concerned we have ourselves visited the homes of recipients of Outdoor Relief in Union after Union, only to find their condition, in the majority of cases, distinctly unsatisfactory, and in many instances, simply deplorable. We have found innumerable cases of gross insanitation and overcrowding, and not a few of indecent occupation. We have seen homes thus maintained out of the public funds in a state of indescribable filth and neglect; the abodes of habitual intemperance and disorderly living; and this—as it grieves us above all to say—even in families in which the Boards of Guardians are giving Outdoor Relief to enable children to be reared. One of our Committees, after visiting the homes

* Report . . . on the Effect of Outdoor Relief . . . in London, by Miss C. Williams and Mr. Thos. Jones, p. 55.

† Report of Visits by Commissioners, No. 43 A, p. 94.

‡ Evidence before the Commission. Q. 36263, Par. 2. The Rochdale Board of Guardians appointed a special Committee in 1904 to consider why Outdoor Relief was mounting up. “The chief fact impressed upon us by our investigators,” reported this Committee after detailed inquiry, “has been the inequalities of the Orders made, inequalities not only between the Orders of Committee and Committee, but between the Orders of the same Committee. By inequalities we mean variations in the relief allowance to cases of the same class in which circumstances are practically identical. . . . The Relieving Officers when asked what explanations they could give in the matter,” alleged “that meetings of the same Committee are not always attended by the same members, and that views on cases, and the resultant Orders, vary with the varying composition of the meetings.” The cases adduced indicate that one Committee differed from another in the amount of relief given to apparently similar cases by as much as the difference between 2s. 6d. and 4s.; whilst the same Committee would give, now 3s., now 5s., to seemingly identical cases. (Report of Special Committee appointed to consider the Question of Outdoor Relief, Rochdale Union, 1905.)

§ This has been pointed out to us by the Secretary of a Charity Organisation Society. “I consider,” says this witness, “that from the first it should be clearly explained to the recipients that this supervision is a necessary condition of Out-relief. . . . I believe such increased supervision in the home would tend to diminish the desirability of Out-relief and act as a deterrent. . . . It would also ensure a much better result from the expenditure in Out-relief, and tend to diminish pauperism in some degree.” (Evidence before the Commission, Appendix No. LXII. (Par. 16) to Vol. VII. “Out-relief,” say our Investigators, “when given under the supervision of an Officer or Guardian with a turn for constructive helpfulness, may improve an applicant’s character or industrial position or domicile. Thus pressure from the Ipswich Board forced a woman from irregular sack-sewing at home, to cleaner and more permanent work at the stay factory. But this conception of a constructive function attaching to the granting of Out-relief is very rare, and is only met with in an individual here and there.” (Report . . . on the Effect of Outdoor Relief in England, by Miss Williams and Mr. Thos. Jones, p. 8.)

|| The Metropolitan Relieving Officers’ Association actually suggested to us that even this minimum of supervision of the household on Outdoor Relief should be dispensed with. “Seeing that school fees are abolished, it is unnecessary that Guardians or their Officers should be compelled to obtain evidence of children attending school.” (Evidence before the Commission, Qs. 22535 (Par. 7), 22791, 22792, 22793.)

¶ There is even a contrary tendency. As we have already seen in the by-laws, some Boards of Guardians discourage the habitation, by persons on Outdoor Relief, of rooms or cottages of too high a rental. “If,” sum up our Investigators, “Guardians think a woman is paying too much rent, she is told to move to cheaper rooms. Sometimes this hastens deterioration by withdrawing the support of a respectable street and placing the woman and children in an unfavourable environment.” (Report . . . on the Effect of Outdoor Relief . . . in London, by Miss C. Williams and Mr. Thos. Jones, p. 63.)

of the Outdoor paupers in a large urban Union, reported "that the Guardians in distributing Out-relief pay no attention to the sanitary conditions in which the applicants live; that bedridden cases are not properly looked after; that there seems to be serious overcrowding; and that Out-relief administered on these lines . . . must not only lower the standard of public health and hinder the work of the Sanitary Authorities, but must also be really injurious to the recipients."* Another Committee "visited some thirty to forty Out-relief cases. For the most part they are living in houses which reflect most serious discredit on the Sanitary Authority, and on the great companies which have attracted to the district a large population. The overcrowding is of such a kind that ordinary decency is impossible; both sanitary accommodation and water supply are most inadequate."† A third Committee, visiting the Outdoor Relief cases in one of the principal cities of England, "went on to a wretched street; many of the houses stood forsaken with broken windows and doors, dirty, forlorn, and tumbling to pieces. We knocked at one which was inhabited. The door was opened by a big, hulking man, the son-in-law of the recipient of Outdoor Relief. She was blind, and lay on a dirty bed in the front parlour; she looked neglected, and the room was very dirty, the walls dilapidated. Almost the entire space was occupied by the blind woman's bed, and that of her daughter, who lay, I thought, not sober, certainly very dishevelled, though it was mid-day. I wondered how much of the Out-relief went to the blind bedridden mother, and how much to the daughter and her big husband."‡ Another Committee, attending the meeting of the Relief Committee in a great town, reports that "Drunkenness seemed to be considered a venial fault. In one case a widow with children had been receiving relief for two years, although the Guardians had several times been informed that she was drinking. She subsequently became a prostitute, neglected her children, was prosecuted and imprisoned at the instance of the N.S.P.C.C. Her children were taken charge of by the Guardians, and it was on her release from gaol that the case came up . . . as to what should be done with the children. We could not help feeling that the lax grant of Out-relief probably contributed to the moral ruin of this woman's life."§ So much were we impressed by what we had ourselves seen that we requested the Local Government Board to ask their Inspectors for general reports upon the character of the homes in their districts into which Outdoor Relief was being given.|| These reports unfortunately bear out our own impressions. "The outdoor poor relieved in all large cities," reports one of these Inspectors, "may be broadly classified in three divisions: first, a minority of really respectable and decent folk" whose homes "are generally kept clean and often comfortable"; next, "the bulk of the recipients of out-relief who have sunk into pauperism from various causes or combination of causes, some self-created, such as drink, vice and thriftlessness. Old age, sickness, general inefficiency and lack of industrial training account for many cases. The homes of this class vary considerably according to individual character and circumstances. . . . Taken as a whole, their condition is not very much worse than their neighbours who are not chargeable, and sometimes it is better." But there is, as he adds, a third class to whom Boards of Guardians persist in giving Outdoor Relief without

* Reports of Visits of Commissioners, No. 43 B, p. 95.

† *Ibid.*, No. 44 B, p. 97.

‡ *Ibid.*, No. 45 C, p. 102.

§ *Ibid.*, No. 19, p. 44. "There is no supervision," the Clerk of one of the most important Unions informs us, "as to how the Out-relief is expended. Many instances have come to the Guardians' notice where it has been ridiculously misapplied." (Evidence before the Commission, Q. 39776.) Of one Yorkshire Union we are told that:—"Cases struck off the roll for misconduct are very infrequent, not one per annum. . . . When relief is stopped for immorality, the offenders appeal again to the Guardians and are reinstated." (Report . . . on the Effect of Out-relief in England, by Miss C. Williams and Mr. Thos. Jones, p. 83.) In one large town, "the Relieving Officers could recall but one case reported for bad conduct during the last three years." (*Ibid.* p. 63.)

|| Summary of Reports on the Conditions of the Outdoor Poor by certain of the General Inspectors of the Local Government Board. The reports themselves were supplied to the Commission, but it was thought better to print only a summary of them, and to omit references to particular Unions. We therefore omit all names of persons or places. We append a few further quotations from these authoritative Reports. "There is no doubt whatever," says one Inspector, "that a large number of the Outdoor paupers are living in an environment of filth and immorality, and in many cases I fear they are participants in, and abettors of, these foul, insanitary and degrading conditions." Another says, "The conditions are very often bad indeed, and are quite incompatible with decent living for the adults or with a respectable and healthful upbringing of the children where they exist. . . . In the same street the Relieving Officer stated he had four other cases all living in single cellar rooms."

requiring any improvement.* “Too frequently they represent the most demoralised and diseased of the population. They include sane epileptics, imbeciles and cripples of the lowest class. Their homes are nearly always to be found in the poorest quarters where population is densest. Cleanliness and ventilation are not considered of any account. The furniture is always of the most dilapidated kind. The beds generally consist of dirty palliasses or mattresses with very scanty covering. The atmosphere is offensive, even fetid, and the clothing of the individuals, old and young, is ragged and filthy. Bankrupt in pocket and character, this class look to the rates to support them, and are never backward in making application. The children are neglected, furnish the complaints of the N.S.P.C.C. inspectors, and fill the homes of the Guardians. The men are drunkards, gamblers, workshy boys and often criminals. The women are too often immoral as well as unclean and neglectful. *Souteneurs* may be included in this class. . . . It is impossible with the present powers to deal satisfactorily with the various sub-sections of (this class). . . . The Guardians feel forced to give relief to bad cases because of the children, or for fear of some allegation of want of consideration to destitute ruffians or drunkards.” We wish carefully to guard against it being supposed that this description applies to the bulk, or even to the majority, of the cases on Outdoor Relief. There are among them, even in the large towns, numbers of worthy and decent people of sober and respectable lives. But it is necessary to realise that, under the present administration of Outdoor Relief, there are many recipients who are of the kind described in the foregoing graphic report. And this report, authoritative in itself, is confirmed by those of the other Inspectors. “I found,” writes one of them after visiting the Outdoor Relief cases, “far too much intemperance, and sometimes even drunkenness, in cases to which relief was being granted. It was most observable in the overcrowded quarters and slums. Closely allied to it, and as a rule the fruits of it, were filth, both of person and surroundings; and sadder even was the neglect and resultant cruelty to children who were ill-fed and ill-clad. . . . Though the living-room might be fairly clean, the rest of the house was a mass of filth, the bedding dirty, a heap of ill-smelling rags for bed clothes, and the atmosphere vile and vicious. In some instances even the living-room was a disgrace to humanity.” We must add that another Inspector reports that “a not inconsiderable proportion of Guardians” take the view, first, that the disposal “of the relief granted by them is a matter for which not they, but the recipients, are responsible; and, secondly, that, however small the relief given to a person with little or no other apparent means of subsistence, it is no one’s business to inquire further if the applicant is satisfied.” “The first of these views,” continues the Inspector, “which I have heard expressed even by a Chairman of a Board of Guardians, is almost an incitement to a careless parent to waste on drink money which should be devoted to the nourishment and clothing of the children; while the second may mean a bargain between a parsimonious Board of Guardians and liberty- or license-loving paupers for the lowest terms on which they will keep out of the workhouse.” The same testimony is given, with a special emphasis derived from his professional experience, by our Medical Investigator. “The worst kind of public policy,” sums up Dr. McVail, “is that under which an Authority representing a community confers personal benefits without any accompanying requirement of good order or obedience. I heard of a Relieving Officer in an urban Union who, reporting on an application, recommended that relief be refused because the applicant was a lazy loafer, continually to be found at public-house corners, and any money he received would be spent in drink. A Guardian listening to this report indignantly demanded to be told: What right has anyone to interfere with how a man spends his money? The wrong policy is crystallised in the Guardian’s query. It is surely obvious that if individuals or their dependants are to be selected for maintenance in whole or in part by local rates or Imperial taxes,

* We give one case as it was reported by our Committee which heard it dealt with. “Widow, 53, two married sons and one son single at work, younger son, and one son, invalid, suffering from early phthisis, and two girls 12 and 9. The widow was a drinker threatened with paralysis. The single sons, the mother, and the two daughters lived together. The single son at work gave all his wages, 16s., to the mother. Half the rent of 5s. 6d. was paid by one of the married sons. The Guardians decided to give 4s. in kind weekly to the widow, and urged by the Chairman she agreed to ‘put no obstacle’ in the way of the phthisical son being sent by the Guardians to a sanatorium. As the mother was a drunkard, it seemed hardly well to give Outdoor Relief. If the House had been offered, the mother would have been kept from drink, the phthisical son sent to a sanatorium, and the girls cared for at the Cottage Homes. Now one fears the Outdoor Relief will promote the drinking and not stop the infection, from which one of the members of the family had already suffered and died.” (Reports of Visits by Commissioners, No. 25 A, p. 66.) Our Medical Investigator adduces the following case:—“A woman with three children, all suffering from itch, refused to go into the workhouse, and received Out-relief without any restriction on their movements. . . . The whole family lived unrestrainedly in the poor part of a town, mingled with others of their class, and had every opportunity to spread the disease.” (Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. C. McVail, 1907, p. 60.)

they should in their maintenance be duly controlled by the authority which supports them. The principle is so elementary as hardly to require setting forth, but under the Poor Law it is abrogated every day of the year and every hour of the day. . . . Persons suffering from the most serious transmissible maladies are afforded relief without prevention of opportunities to inoculate the healthy or contaminate the next generation. . . . Phthisis cases are maintained in crowded unventilated houses where there is unrestrained facility to convey the disease to their own offspring. Diabetes cases live on the rates and eat what they please. Infirm men and women supported by the Poor Law are allowed to dwell in conditions of the utmost personal and domestic uncleanness. Widows get money for the upkeep of their family without any advice or requirement as to the spending of it, or as to the healthy rearing of their children. . . . It is not worth while entering on any reform of the Poor Law unless this policy is changed. Beneficiaries must be compelled to obedience alike in their own and in the public interest." *

The gravest part of this indictment appeared to us to be the allegation that thousands of children, whose maintenance was being paid for out of public funds, were being brought up in homes such as have been described. We therefore specially directed the attention of the Investigators, whom we appointed to report on the conditions in which the children on Outdoor Relief were being brought up, to the moral environment in which they found these children to be living. The result was a complete confirmation of the testimony already adduced. The report† of our Investigators, with great wealth of statistical detail, divides the mothers of the 170,000 Outdoor Relief children into four classes: the first good, the second mediocre, the third including "the slovenly and slipshod, women of weak intentions and often of weak health, not able to make the most of their resources;" and the fourth "the really bad mothers; people guilty of wilful neglect; sometimes drunkards or people of immoral character . . . unfit to have charge of children." The percentages of the different classes were found to vary greatly. In the rural districts, whilst the third or unsatisfactory class is large (19 per cent.), the fourth or unfit is small (6 per cent.). In the towns, conditions are, as a rule, much worse. We may honourably except Bradford, where Outdoor Relief is administered with great discrimination, but even here a few mothers of the fourth class were found in receipt of relief. In other towns the results of the investigation were simply appalling. In one great urban Union, in which every Outdoor Relief child was actually seen and inquired into—to say nothing of those living with "unsatisfactory" mothers—the number living with "really bad mothers—people guilty of wilful neglect; sometimes drunkards or people of immoral character"; all "unfit to have charge of children"—amounted to 18 per cent. of the whole number of children on Outdoor Relief. In another great Union, similarly completely investigated, this terrible percentage rose to as much as 22.‡ To sum up, our Investigators estimate that the number of Poor Law children on January 1st, 1908, in the very unsatisfactory homes of the third class, in England and Wales, is more than 30,000. The number of those in the fourth class where the home is demonstrably wholly unfit for children, is no fewer than 20,000.§ We can add nothing to the force of these terrible figures.

* *Ibid.*, pp. 148, 149.

† Report . . . on the Condition of the Children, by Dr. E. Williams, 1908.

‡ It is, of course, only one result of such a way of bringing up the citizens of the future that (as was confidently asserted by the Clerk of an important Union) "there is no doubt that the children of Out-relief cases frequently become paupers themselves" (Evidence before the Commission, Q. 39776, Par. 26).

§ Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, pp. 61–63. It must, moreover, be remembered that all these figures present only the numbers of each class simultaneously in receipt of Outdoor Relief on one day. In 1892 it was found that the number of separate children relieved during the year was nearly two and a half times the total for one day (Evidence before the Commission, Appendix to Vol. I., p. 22); and this proportion was approximately confirmed by the result of the "year's count" that we had made. Thus, the total number of children relieved by the Poor Law during the year, but exposed to improper conditions, must exceed 100,000.

With regard to the 30,820 children under 16 on Outdoor Relief in Scotland (apart from children "boarded out") we have no statistical evidence. But, at any rate so far as the large towns are concerned, we have ascertained that, in many cases, the home conditions are deplorable. One of our colleagues, after watching the administration of relief in a large Scotch town, notes as follows:—

"What struck me—apart from the procedure—was the complete ignoring of the probable consequences of the decisions upon the children of the applicants. In phthisical cases, persons were put on the roll for aliment, or struck off as fit for work, by the decision of the assistant inspector, without any regard for the probable infection of the rest of the family. When I suggested that a phthisical patient from whose family aliment had been withdrawn, on his discharge from the hospital as fit for work, would infect his nine children, the assistant inspector merely remarked that they were probably already infected. I then discovered that the eldest daughter, marked on the case-paper as phthisical, had died in the interval of phthisis—a fact which, whilst bearing out the inference, hardly improved the case." (Reports of Visits of Commissioners, Scotland, not yet in volume form.)

With regard to the 18,000 children on Outdoor Relief in Ireland (apart from children "boarded out") we have practically no information.

(C) THE CAUSE OF THE FAILURE OF THE PRESENT ADMINISTRATION OF
OUTDOOR RELIEF.

It becomes now our duty to state what, in our opinion, is the cause of the disastrous social failure of the present administration of Outdoor Relief. In order that any policy of domiciliary treatment of persons in need of support may be pursued without the gravest social and economic peril, the authority charged with its administration must be so constituted as to ensure the fulfilment of three fundamental conditions. There must be, in each case dealt with, an accurate ascertainment, first, of the particular needs of the applicant; and second, of the economic, sanitary and other circumstances of the household. There must be, further, in each case, an impartial judgment, upon uniform principles, whether, on the ascertained facts, relief or treatment in the home is necessary and desirable, and if so, to what extent. Finally, if the relief is not to become, in many cases, demoralising to the recipient, and injurious to the community as a whole, there must be imposed and enforced conditions as to the manner in which the publicly subsidised household shall be maintained, appropriate to the needs of each case. In our opinion, the Local Authority to which this important duty has been confided in the case of the Poor Law, namely the Board of Guardians in England, Wales and Ireland, and the Parish Council in Scotland, with its staff of Relieving Officers, is, by its very nature, inherently incompetent to fulfil the requirements that we have postulated.

(i.) *The Destitution Officer.*

We must begin with the Relieving Officer, who has to deal with all applicants for relief, whether men or women, children or aged, sick or well, in respect of the one characteristic of destitution. This "Destitution Officer," as he may be called, is, we are told, "very largely the pivot on which the Poor Law works."* And this is specially so in respect of Outdoor Relief. With regard to institutional relief, the Relieving Officer is but the portal; once the pauper has entered any Poor Law institution, the Relieving Officer has no further concern with the case. With regard to Outdoor Relief, on the other hand, this officer is, from first to last, all-important. It is to him that all applications have to be made.† It is he who has to decide, in the first instance, whether the applicant is eligible for relief at all; and in many cases his refusal is conclusive. He alone decides whether the applicant stands in need of immediate succour, and he administers what he judges to be necessary. It is he who visits the applicant's home, in order to form a judgment as to all the circumstances of the case. If there is ill-health, real or simulated, it is the Relieving Officer who decides whether or not to give the applicant access to the Poor Law Medical Officer; and indeed, whether the case is sufficiently grave to send into the Workhouse, or whether it should be treated at home.‡ It is he who decides, on his own responsibility, whether a poor person is sufficiently obviously of unsound mind to be forcibly conveyed, pending judicial determination, to the Workhouse or infirmary; and when, as some guide for this purpose, the "family history" is inquired into, it is upon the same officer that this difficult and delicate duty falls.§ It is on his report that all cases come before the Guardians. It is, in the vast majority of instances, his information alone beyond the applicant's own statement, that is supplied to the Guardians; whether that information relates to the earnings or other resources of the applicant, to the ability of his relatives to assist him, to his past character and present conduct, to the sanitary state of the house and street, to the cleanliness and decency of the home, to the number and conditions of the family, to the state of health and ability to work of the applicant, and even to the infectious or contagious nature of a disease such as phthisis, from which the applicant or some member of his family may be suffering, and to the likelihood of recovery under the conditions of the home.|| It

* Evidence before the Commission, Q. 22652.

† *Ibid.*, Q. 232.

‡ "I use," testifies a Relieving Officer of twenty years' standing, "an equal amount of care and discretion in deciding what is a genuine and proper case for medical relief, as I do in any kind of case for relief other than medical." (*Ibid.*, Appendix No. CXXVII. (Par. 1 (b)) to Vol. IV.) This is complained of by Mr. Sydney Holland, the Chairman of the London Hospital, and by other witnesses of medical experience. "I question," says Mr. Holland, "whether a Relieving Officer is the person to deal with it at all." (*Ibid.*, Q. 32866.)

§ "The Relieving Officer," deposes a representative Poor Law medical officer, "either upon his own authority in obvious cases . . . or upon the direction of a Justice of the Peace after medical examination in less apparent cases, conveys the alleged lunatic to the Workhouse or infirmary for detention until the Justice decides whether the case is fit to be discharged or to be transferred to the county asylum. . . . The family history is always gone into, but that is gone into by the Relieving Officers." (*Ibid.*, Qs. 26172 (Par. 1), 26199.)

|| "In this district," reports a Local Government Board Inspector, "there are twenty cases of phthisis receiving Outdoor Relief."

is on the report of this Destitution Officer that the Guardians have to rely in such momentous issues of fact as to whether the character of a particular mother is or is not such as to warrant her being entrusted with the rearing of her children; or whether a particular tradesman is or is not a suitable person to whom to bind a boy apprentice. The Relieving Officer is even required to discover and state what is the cause of the destitution into which the applicant has fallen.

But all this array of duties, varied as it is, amounts only to the ascertainment of different classes of facts. When the case comes before the Board of Guardians, the Destitution Officer has to decide on a policy—has, that is to say, to give to the Guardians his responsible and authoritative advice as to the kind of relief, the amount of relief and the conditions of the relief that, according to the law of the land, the directions of the Local Government Board, and the best economic doctrine, the case ought to receive.* We have been puzzled, indeed, to discover what exactly is assumed to be the right relation in this respect between the Relieving Officer and the Guardians before whom he brings his cases. From the authoritative evidence of the Inspectors of the Local Government Board, experienced Clerks to Boards of Guardians and Poor Law experts, it appears that Relief Committees ought to be guided by specific recommendations from the Relieving Officer in each case, and that contrary action on the part of the Guardians calls, as a rule, for official criticism, if not for censure. “The Guardians,” complains an Inspector with regard to some of his Unions, “will over-ride the plain facts of a Relieving Officer’s statement, and deal with a case contrary to his advice.”† “I rather fear,” regretfully admits the Clerk of a great Midland Union, “that . . . the reports of our Relieving Officers are not always acted upon.”‡ It is “where the administration is bad” that “the Relieving Officer is set aside,” suggests Mr. C. S. Loch, to which an Inspector replies “that is so.”§ This being the view taken by their official superiors, it is not surprising to find that the Destitution Officers themselves place a high estimate on their right to pass judgment on the cases,|| as well as to ascertain the facts. “Relieving Officers,” asserts one of them, “should be held responsible for the strict and proper administration (of the Poor Law), and should not be interfered with in any shape or form, and if possible, should be given greater powers. From the time of application the Relieving Officer should see

* How completely the Destitution Officer may himself adjudicate on his own cases may be gathered from the following description, by one of our Committees, of the procedure of the Relief Committee of a great urban Union. “The Committee sat on one side of a counter, the Relieving Officer on the other, with a pile of money beside him. He took names in order from the Application and Report Book (which seemed to be very fairly kept), summoned the applicant, stated the facts of the case, allotted the relief, and handed it to the applicant, at the same time giving a card to the Chairman of the Committee for endorsement. By this method, thirteen cases were decided in one Committee in four minutes.” (Reports of visits by Commissioners, No. 5A. p. 18.)

† Evidence before the Commission, Q. 7599. “Sometimes,” says another Inspector, “a Relieving Officer makes a recommendation, and the recommendation is not accepted. . . . Sometimes the people have friends at Court, and the Relieving Officer may be over-ruled.” (*Ibid.*, Qs. 5613–4.) “Fortunately,” observes another Inspector, “the Relieving Officers as a rule have a sufficient sense of their own responsibility to make them withstand an extreme adoption of this policy, and even on the laxest Board of Guardians a sprinkling is generally to be found, to whom the officer can look for support.” With regard to one important Union we have been supplied with a list “of case after case which has been reported by the Relieving Officer as unfit for Outdoor Relief, where the Committees have granted Outdoor Relief in opposition to the wishes of the officers.” (*Ibid.*, Qs. 46893–6, and Appendix No. XX. (A) to Vol. IV.

‡ *Ibid.*, Appendix No. CXXVIII. (Par. 24) to Vol. IV.

§ *Ibid.*, Q. 8523. “A Relieving Officer,” complains Sir William Chance, “may be thwarted and discouraged in every way by individual Guardians until he gives up his efforts in despair.” (*Ibid.*, Q. 27061, Par. 41.) “The Relieving Officers,” remarked an experienced Chairman of a Board of Guardians, “struck me as being very good men, who would administer the relief with greater discrimination if the local Guardians exercised a little less control over them.” (Reports of Visits by Commissioners, No. 102, p. 169.)

|| The poor themselves often regard the Relieving Officer, not the Board of Guardians, as their judge. When a new and reforming Relieving Officer came to a great Northern town, he presently found himself persecuted as the oppressor of the poor. “First of all,” he relates, “I had my house broken into three times in three months. . . . I prosecuted two men, and one of them got a long term of imprisonment. It culminated in my family being attacked. My daughter was assaulted in the streets; my wife was followed about from the tramcar up to my house, and in the streets she was abused, and life became perfectly intolerable. An attack was made upon my daughter; she was almost stripped in the streets. A crowd of between 200 and 300 persons assembled outside my house, and I had to seek police protection. I came on the scene, and I recognised the ringleaders, who were three women. One was a woman whose husband had been prosecuted for desertion, one who had obtained relief by false pretences, and the other an unsuccessful applicant for relief, who was a drunkard. I prosecuted them, or rather the Board did on my behalf, and they were sentenced to imprisonment; but right the way along I was persecuted to such an extent that I have had to send my wife and children to live outside the boundary of my district.” (*Ibid.*, Q. 40050.) Similar evidence was given by the Superintendent Relieving Officer of West Ham. (*Ibid.*, Qs. 20487–20493.)

the case straight through, viz., kind and amount of relief to be given, recovery of maintenance from relatives, settlement and removal of paupers, etc.”*

The function of the Destitution Officer is, however, not exhausted when he has ascertained the facts, and given to the Guardians his judgment upon them. He has also to carry out the course of relief decided on, alike in its responsible and in its mechanical aspects. “When the proceedings of the Guardians are ended,” says an Inspector, “the real work of the Relieving Officer commences. He has to pay the new relief which has been granted, as well as the old cases; and he has to be ready to receive fresh applications as well as fulfil other duties and responsibilities which differ in different Unions. . . . To begin with he has his own books to keep. He has to remove pauper lunatics to the Workhouse or Asylum. He is nearly always Collector to the Guardians: in other words, the official who finds out what relatives of paupers are liable and able to contribute to the maintenance, and collects these contributions. For this he is paid a percentage. A good Collector must carry on a large correspondence, and the office, if properly filled, is a very necessary and important one.”† It is, moreover, the duty of the Relieving Officer to watch carefully all the cases relieved, and to take upon himself the responsibility of reporting to the Guardians any facts which, in his judgment, ought to cause the relief to be stopped or varied.‡ If any pauper gets drunk, or begins to lead an immoral life, the Relieving Officer must take the initiative. He will himself stop the Outdoor Relief, in bad cases, and inform the Guardians at their next meeting.§ Nor is the work over when all the persons actually in receipt of relief have been dealt with. It is on the Relieving Officer, not upon the Board of Guardians, that rests the legal, as well as the moral, responsibility, in cases in which Outdoor Relief has been refused, and the applicants have not entered the Workhouse, for keeping the family continuously under observation, so as to be prepared to grant instant succour on “sudden or urgent necessity,” in the event of any member of the family falling dangerously out of health in consequence of destitution.|| We shall refer again to this responsibility at a later stage of our report.

The combination in a single Destitution Officer of such heterogeneous functions is, in our judgment, fatal to the establishment of an efficient service.¶ Struck by the imperfect qualification of the Relieving Officers for their varied and responsible duties, we asked what had been prescribed in the matter by the Local Government Board, only

* *Ibid.*, Appendix No. CXXVII. (Par. 7) to Vol. IV. See also the Evidence of the President of the Metropolitan Relieving Officers’ Association, which gives in a moderate and able manner, the attitude of the good Relieving Officer to his Board of Guardians. (*Ibid.*, Qs. 22532–22906.)

† *Ibid.*, Appendix No. XV. (A) (Par. 55) to Vol. I.

‡ *Ibid.*, Q. 19576.

§ One of our Committees heard a case dealt with in which the Relieving Officer had himself stopped the Outdoor Relief of a widow for a week, merely because her children’s attendance at school was very irregular.

|| We have had it forcibly brought to our notice that it is clearly the law that Relieving Officers are liable to criminal indictment for any negligence in relieving the poor; and that, if a person dies in consequence of such neglect, whether he has made application for relief or not, the officer may be committed to stand his trial for manslaughter (see *Clark v. Joslin*, 15 Cox Criminal Cases, 746, and *R. v. Curtis*, 27 *Law Times*, New Series, 762; Evidence before the Commission, Qs. 936–72, 1221, 13911–9, 22723–8). Such a case occurred in 1885 in England and one in 1893 in Scotland, where an Inspector of Poor had “thought his duty ended with the offer of the Poorhouse” (*Procurator-Fiscal v. Sinclair*, P.L.M. 1893, 387). “It has,” we were informed, “been an official rule for a great many years” that, where an applicant has not accepted the offer of the house, the Relieving Officer should, by visits and inquiries, ascertain the conditions of the case from day to day so as to be able to give instant succour if needed. (Evidence before the Commission, Qs. 956–7, 3520.) “There is always a criminal responsibility hanging over him.” (*Ibid.*, Q. 41062.) It is interesting to note that in this liability to the criminal law, as in other respects, the Relieving Officer in England and Wales has, in effect, simply succeeded to the old Overseer of the Poor, whose failure was ascribed to “the medley of confidence and menial duty” entrusted to him.

¶ A minor drawback of the combination of functions of the Destitution Officer is that there can be no adequate check on the accounts of an officer who, in his own person, alike receives the application, recommends the amount of relief, communicates the decision to the applicant, reports the facts on which its continuance depends, and week by week pays with his own hands the amounts awarded. It is not merely that the paupers, being still officially assumed to be unable to write, give no receipts. So long as one and the same officer is the sole medium of communication between the Board of Guardians and the pauper, so long will it be impossible, by any system of audit, to prevent a careless or dishonest Relieving Officer from paying the aged or the bedridden 6d. a week less than the Guardians have granted, from continuing such allowances for months after the old people have died, or from omitting to enter some of the shillings contributed by relatives. Such offences have been accidentally discovered in a few instances, and the delinquent officers sentenced to imprisonment. (See Evidence before the Commission, Q. 5947.) Only a few Unions have Cross Visitors, and a few others pay clerks, who may be made to serve to some extent as a check upon the Relieving Officers. We cannot regard it as satisfactory that the most helpless of the poor should be no better protected against a particularly mean fraud, or that a sum of more than £3,000,000 sterling should be annually dispensed with no greater security against peculation.

to find that no qualification whatever was required.* Nor could the Inspectors or the Clerks to Boards of Guardians suggest to us any qualification or training that could advantageously be insisted on for the office as it at present exists. "There is no standard," explained to us one of the Inspectors, "there is no college of Out-relief, there is no Faculty."† "You might impose an age limit," suggested another Inspector, "you might do some good by that; you might impose a certain amount of reading, writing and general information as a qualification, but I do not know that that would help you very much. It is very difficult to suggest a qualification which would ensure your having the men you want for the Poor Law work."‡ Even such examinations as those now required in the case of Sanitary Inspectors and Factory Inspectors could not, we were informed, be exacted from Relieving Officers, because "you cannot define a Relieving Officer's work." "You want the Sanitary Inspector to do certain definite work, but the Relieving Officer has no definite work. An Inspector of Factories and an Inspector of Nuisances . . . have certain definite duties to perform, for the performance of which you can ascertain their competency to a great extent by examination; but with regard to Relieving Officers you cannot do that."§ And this we agree is substantially the case, not because this Destitution Officer's duties are indefinite, but because they are not limited to one specialism, or even to two specialisms. It does not appear to us that one and the same officer can be qualified to obtain accurate and sufficient information on (1) the financial resources and circumstances of the household and its relatives; (2) the sanitary environment, personal health and *prima facie* need for treatment or removal of the various members of the family; and (3) the educational requirements of the children, and the *prima facie* fitness for their nurture of the home and the parents. These three sets of leading facts seem to us to require, in each case, a certain measure of specialised training, which cannot be expected to be found combined in one investigator at between 30s. and £3 a week. The same is true with regard to improving the sanitation of the home, to seeing that the Medical Officer's orders are obeyed, and to giving the necessary advice in matters of personal hygiene, for lack of which, at present, the Outdoor Relief for the infant fails to keep it alive, and that given to the phthisical father too often results in the contamination of the family. Similarly neither the financial officer nor the health visitor can supervise the children's schooling, test the home influence, and see that proper apprenticeship or corresponding training is in due course provided. And if this is true of investigation and execution, still more is it true of the responsible task of recommending what financial assistance, if any, the economic circumstances of the household warrant, and by whom the burden should be borne; or what kind of education and what general regimen each child or each sick person requires.

It will be unnecessary to point out, to those who are conversant with English Local Government, how adversely the absence of any prescribed qualification acts upon the selection of persons for any salaried post. A Board of Guardians, having no definite test of fitness to apply to candidates for a vacant Relieving Officership is apt, at best, to take refuge in the known probity of an entirely inexperienced neighbour or a minor subordinate; and, at worst, to fall a prey to mere favouritism and jobbery or even (as in some notorious recent cases) a squalid corruption. We are glad to find that the first of these alternatives is that which the majority of Boards of Guardians have chosen. The 1,700 or 1,800 Relieving Officers as a class appear to us to be upright and honourable men, hard-worked and poorly remunerated, regular and diligent in the performance of what they conceive to be their duties. But not infrequently, as we regret to have to report, the impracticability of any professional training and the absence of any prescribed qualification, has resulted, in some Unions, in the office being filled, not by the men best fitted for it, but by those who most desire it and have friends at court. "Relieving Officers," says Sir William Chance, "are often appointed for every other reason except that of a knowledge of their duties."|| "Many have qualified for the work," report our

* *Ibid.*, Qs. 1052-6, 1872-3.

† *Ibid.*, Q. 7603.

‡ *Ibid.*, Q. 8943. The only courses of training and professional examinations for Relieving Officers that have been established are those started by the School of Sociology and Social Economics in London. The training has so far taken the form only of short courses of lectures. The examinations have been confined to the elements of the law relating to the relief of destitution, the special accounts to be kept, and the economic doctrines usually known as the "Principles of 1834." But this is to leave out of account the whole question of the course of life to be required from those to whom Outdoor Relief is granted. Apparently, there has been no thought of the instruction of the Relieving Officer in hygiene and sanitation, none in the methods of investigation, and none in the educational requirements of children, subjects which, however necessary for any proper performance of a Relieving Officer's duties, could scarcely be taught with the rest in the time available.

§ *Ibid.*, Qs. 9021, 9026, and 9028.

|| *Ibid.*, Q. 27061, Par. 41.

own Investigators into Outdoor Relief, "as soldiers in the South African War, as Scripture-readers, or as gate-porters."* "You will sometimes see a man appointed as a Relieving Officer," testifies a Local Government Board Inspector, "simply because he has failed in everything else . . . he may have failed as a farmer; he may have failed as a contractor; he may have failed as a road surveyor; he may have failed in any sort of line of business to which he has devoted himself; but if he be well known and have a quantity of friends they will find something for him."†

But the difficulty of securing the appointment of suitable persons is not the only way in which the mixture of duties injuriously affects this Destitution Officer's service. It is one of the minor tragedies of the present arrangement that, as some of the best Relieving Officers have complained to us, the very heterogeneity of their functions, involving the absence of expert *technique* and the lack of any definite standard of professional efficiency, has a deteriorating effect on their character. Like the Workhouse Master and Matron, and for the same reason, this "Mixed Officer" almost inevitably comes to despair of the preventive and curative side of his task. "Any leaning towards thorough investigation," says our Investigator, "and plan-full relief which he may have had at his appointment, the Guardians will have steadily discouraged. The result is routine . . . The average officer has no policy, he works by rule of thumb."‡ Dealing indiscriminately, as this Destitution Officer must, without specialist training, with the vagrants and the unemployed, the widows and the unmarried mothers, the aged and the infants, the sick and the children, he is driven to ignore the special features of each class—and it is on these special features that its successful treatment depends—in the one common attribute of destitution. The one thing that is clearly expected of these Destitution Officers by their official superiors is to stave off this destitution from becoming pauperism.§ It is for a diminution in the number of unemployed men on the Outdoor Labour Test, in the number of deserted wives relieved, or in the number of medical orders granted, that the "model" Board of Guardians and the zealous Local Government Board Inspector will praise the Officer. "Their work," say our Investigators, "is such as to breed suspicion of their fellow men, and the more efficient the officer the more he comes to pride himself on his acuteness in ferreting out impostors."|| They are, we fear—to use the words of one witness before us—"expected to make it disagreeable for applicants to apply."¶ "The general feeling," says another witness, "is that Relieving Officers are more in the nature of watch-dogs"*** than anything else. The result is that even the kind and humane officer, excluded by lack of professional training from successful curative or preventive treatment of any one of the different classes with which he has to deal, feels it almost his duty to become, as a Medical Officer of Health complained to us, "a sort of detective who keeps out the improper cases."†† In some Unions, as a clergyman testified, "you do decidedly get men whose manner becomes, after years of work of that kind, harsh, and what you termed deterrent, which is fearfully painful to the deserving poor."‡‡ "It seems," said another witness, "as if the Relieving Officer was too

* Report . . . on Outdoor Relief in London by Miss C. Williams and Mr. Thos. Jones, p. 53.

† Evidence before the Commission, Q. 8937. There was, we may remind the reader, a similar succumbing to favouritism and jobbery in the appointments of elementary school teacher and sanitary inspector, until these offices were definitely specialised and safeguarded by examination tests and certificates.

‡ Report . . . on the Effect of Outdoor Relief . . . in Suffolk and Cambridge, by Mr. Thomas Jones, p. 17.

§ "The officers," reports a Chairman of a well-administered Union, "begin by considering not what a person wants, but whether the case ought not to go without. . . . They do not accept that the person is entitled to relief, but they rather try to see whether they cannot do without it." (Evidence before the Commission, Q. 45545. "The ideal Relieving Officer," states an Inspector, "would be a man who had not a pauper in his district. If a man did his work thoroughly well, he would prevent anyone from becoming a pauper." (*Ibid.*, Q. 8925.) "When he goes to the home, (he) will find out every possible incident connected with the families, what other resources may be available, whether the applicant can be got into an institution, whether work can be found for any of the children, and a thousand and one incidents by which the inquiry may lead to the solution of the case without its becoming a pauper." (*Ibid.*, Q. 9414.)

¶ Evidence before the Commission. Q. 32280.

*** *Ibid.*, Q. 43700.

†† *Ibid.*, Q. 41637. A special Committee appointed by the Willesden Board of Guardians in 1905, to inquire why Outdoor Relief had risen, reported: "That the whole question of Outdoor Relief depends to a very large extent on the manner in which the various Relieving Officers discharge their duties. The only effective way to prevent imposture and unnecessary relief is by a close and searching investigation into every application for relief, and constant and efficient supervision of those who have been granted an allowance by the Guardians." One Relieving Officer was thereupon censured (MS. Minutes, Willesden Board of Guardians, December 13th, 1905).

‡‡ Evidence before the Commission, Q. 46249.

often tempted to be a bully. The result is to make the refined among the poor frightened, the weaker ones sly and cringing, the bad or strong-minded insolent and defiant."* For the Relieving Officers, as another witness rather despairingly put it to us, "are desperately tried by deceit and trickery on the one hand, by overwork and by the necessity of *not giving* if it can be helped." So the poor "press and fawn and lie"; and there grows on the unfortunate Relieving Officer the invidious habit of feeling it his duty to "resist and deprecate, and disbelieve."† "Thus," says a Local Government Board Inspector, "the best Relieving Officer is the one who keeps fewest paupers," just as "the best Workhouse Master is the one whose establishment is least loved by the able-bodied loafer."‡

To sum up, it is to the combination of heterogeneous functions in one and the same person that we ascribe the failure of the Relieving Officers to prevent the disastrous social failure in the administration of Outdoor Relief that we have described. It is not, as is sometimes supposed, a question of inadequacy in the number and organisation of the staff. It would, in our judgment, be of no avail to reduce the size of the districts and multiply the number of the officers, even up to such a point that every one of them had only to deal with hundreds, instead of thousands of families. It would not cure the evil to raise, as is sometimes vainly done, one of them in each Union to the post of Superintendent Relieving Officer,§ and to set apart others as Cross Visitors, so as strictly to check the work. What has been found impracticable is not to get a sufficient number of these officers, nor yet to get them to work conscientiously and zealously, but to secure, in any one of them, the manifold training that would be necessary for the really successful performance of their present duties. To fit a man to carry out adequately even the subordinate duties of a Relieving Officer in all their different aspects would require an impossible combination of the training and attitude of an accountant and an enquiry agent, a debt collector and an Assessor of Income Tax, a Sanitary Inspector and a Health Visitor, a School Manager and a School Attendance Officer. To fulfil completely the higher moral and legal responsibilities of the office in all its ramifications—to qualify, that is to say, a Superintendent Relieving Officer to determine the policy to be pursued in regard to the due measure of financial assistance to be given, the contributions to be exacted from relatives, the health measures to be adopted, the conduct to be insisted on, and the education to be prescribed, for the children, the unmarried mothers, the widows, the phthisical members of the family, the chronic invalids and the acutely sick—would demand the training and intellectual habits of a Medical Officer of Health, a Director of Education and a County Court Judge.

(ii.) *The Many-Headed Tribunal.*

It is, however, to the Boards of Guardians, not to their Destitution Officers, that Parliament has entrusted the ultimate decision as to the grant of Outdoor Relief. We have therefore inquired how it is that these Boards have been so unsatisfactory in their decisions on the evidence presented to them. It was suggested to us by some witnesses that their failure to deal wisely with the problem of Outdoor Relief was to be attributed, in the main, to the character of their membership, and especially to a certain falling-off in social *status* which is alleged to have taken place since the abolition, by the Act of 1894, of the property qualification and the *ex officio* membership of the Justices of the Peace. Putting aside the question as to exactly what changes in social *status* may have taken place in different Unions, we have satisfied ourselves that, broadly speaking, the disastrous social failure of the Outdoor Relief administration neither began in 1894, nor has been increased or appreciably affected by the changes of that year. Moreover, though different Boards of Guardians tend to err in different directions—some granting Outdoor Relief where it ought to be refused, others refusing it where it ought to be given—we cannot say that, in our experience, we have found the so-called "strict" Boards appreciably different from the "lax" Boards, in such fundamental matters as the complete ascer-

* *Ibid.*, Q. 32267, Par. 11. This was confirmed by the manager of a large factory, who complained: "That the Relieving Officer, in his eagerness to keep down the cases, bullied the poor, and was so insolent to those who intervened for them that he had ceased to send deserving cases to him" (Report . . . on the Effect of Outdoor Relief . . . in Suffolk and Cambridge, by Mr. Thomas Jones, p. 17).

† Evidence before the Commission, Appendix No. CXLVII. (Pars 12, 13) to Vol. IV. Much evidence as to the harshness of the manners of Relieving Officers was obtained by the Royal Commission on the Aged Poor, 1895, Vol. II. Qs. 993-4, 1530-2, 6566-70, 7036, 8441, 8557; Vol. III., Qs. 15210, 17762-6.

‡ Thirty-Sixth Annual Report of the Local Government Board, 1906-7, p. 306 (Mr. Fleming's Report).

§ "The present Superintendent Relieving Officers," testifies an Inspector of exceptional experience, "are of much the same stuff [as the Relieving Officers]; they have been promoted from one to the other." (Evidence before the Commission, Q. 12827.)

tainment of facts, the specialised treatment of the different classes, the enforcement on the recipients of properly considered conditions of life, and, above all, impartial uniformity as between committee and committee, between meeting and meeting and even between case and case. The cause of so general and so prolonged a failure, common to all parts of the country, and to all periods of the past three-quarters of a century, must, we suggest, lie deeper than any personal characteristics of particular Guardians, or even of particular Boards.

We discover the cause of the failure of the Outdoor Relief administration in the very nature of the Local Authority itself. There is, first of all, the inherent difficulty that a "Destitution Authority" finds in providing itself with the varied technical advice necessary to the proper domiciliary treatment of so many different classes of persons. Just as the Destitution Authority, as we have seen, inevitably tends to have one General Mixed Workhouse, so it tends to content itself, for all classes alike, with the unspecialised counsel of the one "mixed official" known as the Relieving Officer. When it becomes conscious of the inadequacy of its staff, the only reform it can conceive is to multiply the number of these Destitution Officers, or to set one above the others as Superintendent, or to have one to check the others as Cross Visitor. It is significant that we have not discovered a single Board of Guardians that has sought to equip itself with a differentiated out-relief staff, in which one officer reported on personal hygiene and the sanitation of the home, another on the educational requirements and progress of the children, whilst a third specialised on the investigation of the financial resources and on the recovery of contributions from relatives. But apart from this lack of specialised officers, which is as inimical to successful Outdoor Relief as it is to successful institutional treatment, the present tribunal for hearing and deciding applications for Outdoor Relief has what, in our judgment, is the fatal defect of being a board—a board, by the way, of as many as twenty, forty, or even 100 members.* The Board of Guardians was established mainly for the purpose of administering the Workhouse. But the work of adjudicating upon individual applications for Outdoor Relief differs fundamentally from that of managing institutions. When a committee manages a school or a hospital, it does not decide what shall happen to each particular pupil or inmate. We recognise at once how fatal to efficiency it would be if the managing committee undertook to decide what should be taught to each particular child or gave orders about the treatment of an individual patient. In the administration of institutions, the resolutions of the committee, which are merely general decisions as to policy, do not become instantly and irrevocably operative in individual lives. In arriving at these decisions the suggestions and criticisms, the experience, and even the idiosyncracies of a number of different persons are all of use. The analogous work in the sphere of Outdoor Relief is the formulation, and from time to time the alteration, of the general rules according to which the relief should be given. This is essentially the work of a representative body.

Most unfortunately, the application of this well-established distinction between the functions of a representative body and those of its executive are obscured in the case of the Poor Law by a strong popular sentiment against officialism, and a general impression that the direct interference of the Guardians interposes a human element between the destitute and the soulless letter of the regulations. The Guardians themselves, jealous of the officers and their powers, and keenly alive to the electoral advantages of being able to oblige individuals and to obtain a reputation for sympathy with the poor in whole neighbourhoods, are naturally altogether on the side of popular sentiment in the matter. Even the educated classes are apt to be under the impression that the Poor Law of 1834 earned the execration of all benevolent men by its sacrifice of human rights to inhuman official theory. It is, therefore, necessary to point out that the restriction of a representative body to its proper function by no means dehumanises that function, any more than the fact that the jurymen in a criminal case are allowed neither to make the law nor to devise punishments according to their own fancy, withdraws from the prisoner the protection of that human element without which legal institutions would be impractical. It is not suggested that the Destitution Authority should not investigate grievances, or should be denied that access to the relieved without which it would remain in ignorance, not only of the grievances actually complained of, but of the far more important short-

* The more numerous the membership the less successful is the Board in its work. "It is a matter of common observation with me," reports one of the most experienced Inspectors, "that unwieldy Boards produce a certain uncertainty and laxity in administration." (*Ibid.*, Appendix No. XV. (A), Par. 85, to Vol. I.).

comings of which neither the paupers nor the officers are conscious. Apart from grievances, the main work of the Destitution Authority, that of drawing up the regulations and deciding general questions of policy, must depend for its effectiveness on continuous contact with and observation of its effect on the destitute, as well as on the community at large. There is, besides, the work of choosing the officers and, when necessary, dismissing them. In the exercise of duties thus scientifically limited there would be far more scope than at present for the exercise of that intelligent public-spirited humanity which at present is literally crowded out of the meetings of the Destitution Authority by the intrusion of individual applicants for relief, appealing to the short-sighted good nature, to the desire for electoral popularity, and to the inevitable tendency of the ward representative to be regarded by his constituents, and finally by himself, as a patron saint at whose intercession the Authority must either grant the prayer or slight the intercessor. We have ourselves repeatedly noticed the members of Relief Committees and Boards of Guardians, whilst the cases were being heard, paying very different degrees of attention to the evidence that was being given before them; swayed very differently by considerations other than those given in evidence; and governed by quite different views of social expediency. The joint decision of so composite a tribunal on individual cases can never be a good one.* All this is intensified if the Board or Committee is selected by popular vote of the districts in which it has to administer Outdoor Relief.† Moreover, the composition of the Board or the Relief Committee, whether elected or nominated, necessarily varies from meeting to meeting, and even from hour to hour. In some cases, to quote the description given by one of our committees, "the Guardians wander from one (Relief) Committee to the other at pleasure," and "administer relief to their own constituents."‡ When the Board does not divide into committees, the effect is much the same. "Each Guardian's attention," says a witness, "is attracted only by cases from his own parish," and, too frequently, "it is turned, during the rest of the time occupied with the relief lists, to other matters, to the loss of silence or orderly procedure."§ Under such conditions it is not surprising to learn, on the testimony of a Guardian in a large urban Union, that "Outdoor Relief granted on one occasion may on the next be reversed, without there being any change in the circumstances, but owing to different Guardians being present. This matter ought not to depend on the views held by individual Guardians, but upon a general policy of the whole, otherwise preferential treatment is obtained by some and in other cases the reverse."|| "I find in my own experience," testifies the President of the Metropolitan Relieving Officers' Association, "that cases are dealt with differently

* "Cases," says an Inspector, "are too often decided according to the sympathies of individual Guardians rather than on facts systematically ascertained by Relieving Officers." (Evidence before the Commission, Appendix No. VIII. (A.), Par. 22, to Vol. I.) "The relatively high number of paupers in a parish," says our Investigator, "is sometimes to be explained by the presence of an influential Guardian, whose word carries weight with the Board; not because he is a Poor Law expert, but because he is a prominent county councillor, and very large farmer. He will get cases put on the books much more easily than will an insignificant Guardian, and will obtain a higher scale of relief for them." (Report . . . on the Effect of Outdoor Relief in . . . Suffolk and Cambridge, by Mr. Thomas Jones, p. 16.) It is this consideration which explains the very common hankering, among Local Government Board Inspectors and Clerks to Boards of Guardians, after the grant of more power of deciding cases to the Superintendent Relieving Officer or even to the ordinary Relieving Officer; and which explains also the relative success in this sphere of the far more influential "Inspector of Poor," who, instead of the English Relieving Officer, nominally "advises" the Parish Councils of Scotland.

† "Men being as they are," observes the Chief Inspector of the Local Government Board, "you cannot expect any body of elected Guardians to administer relief in the way which all experience, as I submit, shows to be the one which is in accordance with public policy. The difficulties are too great." (Evidence before the Commission, Q. 3249.) We have ourselves come across the gravest instances of electoral perversion of Outdoor Relief. "The pressure at election times," reports our Investigators, "is considerable. 'If the Relieving Officer will not give you Out-relief, come to me' summarises the election addresses of some candidates." (Report . . . on the Effect of Out-relief . . . in London, by Miss C. Williams and Mr. Thomas Jones, p. 4.) "At the last election," they report of a provincial urban Union, where Outdoor Relief is freely given, "one ward had posters, 'Vote for X. and Out-relief, or for Y. and the Workhouse.'" (Report . . . on the Effect of Outdoor Relief . . . in England, by Miss C. Williams and Mr. Thomas Jones, p. 68.) "On one occasion," testified an Inspector, "I was pressing very much that a particular Board should inquire into the Out-Relief system, and a very prominent member got up and said: 'We are sent here to give Outdoor Relief to our relations—our fathers and our mothers, and our sisters and our brothers, and our cousins, and our uncles and our aunts—and if we did not do it we should very soon be sent about our business.' That statement was received without dissent from any of them." (Evidence before the Commission, Q. 4586.)

‡ Reports of Visits by Commissioners, No. 20. So objectionable is this practice that, in certain Unions, "some of the more conscientious and enlightened of the Guardians refuse to sit on the relief committee dealing with the district which they represent." (Report . . . on the Effect of Out-relief in England, by Miss C. Williams and Mr. Thomas Jones, p. 96.)

§ Evidence before the Commission, Q. 69293, Par. 7.

|| *Ibid.*, Q. 36263, Par 21.

according to the absence or presence of certain Guardians. Say my Relief Committee consists of eight persons. If Mary Jones comes one week, with certain Guardians present, she will perhaps get 3s. 6d. in grocery; but if she comes the following week before another batch of Guardians, she will perhaps get 5s.* "At present," says an Inspector, the Guardian "considers every case in his ward as 'my case,' and speaks and acts as if he was the specially appointed almoner of the ward that he represents. . . . When the case comes on the Guardian rises, and pleads the cause of his client. . . . I have observed," continues this Inspector, "that when Guardians have stated their cases, and have indeed acted first as counsel, and then as judge and jury for their client, they too often consider they have done their duty, and leave the room."† All this may be very human; but it is so in the sense in which to err is human; and the notion that such humanity is good either for the destitute or for the community at large must be thoroughly shaken off in reforming our system.

This fatal defect of "many-headedness," combined with that of mutability of membership, has, we need hardly say, no relation to the manner in which the board or committee is constituted. It is not a question of the name of the body, or of the method of its election or appointment, or the number of its members, or of the size of the area for which it acts, or even of the character and capacity of its membership. The business to be done is, by its very nature, unfit for decision by the votes of a board or committee, whether elected or appointed. There is in it absolutely no room for sentiment about an individual case, personal acquaintance or neighbourliness. It is, in fact, "one of the weak points" of the present "system of relief," says an Inspector, "that it gives opportunity for favouritism, or that preferential treatment which a spirit of neighbourly friendship is sure to engender."‡ To let in any such considerations—still more to allow the decision to depend on the accidental presence or absence of particular members—is to deprive the community as a whole of its power of control, and to risk non-compliance with the general rules which, by its elected representatives, the community has deliberately laid down. Far from the plan of decision of individual cases by an elected Board being essentially democratic, the chance whim or the accidental non-attendance of one member becomes the means of thwarting the popular will. This is none the less the case because the interference has been caused by a member who has been himself elected. When, however, the intervention is that of an *ex-officio* or nominated member, the arbitrary and undemocratic character of this assumption of power by an individual member becomes glaringly apparent. The work of deciding whether or not a given case comes within rules, is, in fact, essentially of a judicial character. As such, the only way to obtain effective democratic control, and the only way to secure a uniform impartiality, is to entrust the detailed application of the popularly-formulated rules to one responsible person, adequately trained for and professionally engaged in the task of hearing and weighing evidence, who can be definitely instructed to apply evenly to case after case the principles laid down by the elected representatives of the people.

(D) THE SCOTCH INSPECTOR OF POOR.

We have been able to include in one common description, and to subject to one common criticism the administration of Outdoor Relief in all parts of the United Kingdom, whilst paying attention more particularly to England and Wales, because the systems

* *Ibid.*, Q. 22657. "The worst feature in the system is that so many Guardians consider their responsibility ends when the cases from their immediate neighbourhood are disposed of. Over and over again I have seen them get up and go away after the cases from their own parish had been settled." (*Ibid.*, Appendix No. XV. (A), Par 53A, to Vol. I.)

† Thirty-Second Annual Report of the Local Government Board, 1902-3, p. 136. (Mr. Bagenal's Report.)

‡ Evidence before the Commission, Appendix No. XV. (A), Par 86, to Vol. I. The testimony is abundant that, as an Inspector puts it: "Local feeling, sentiment, neighbourliness, and the fear of being called 'hard,' are the elements that fight silently against scientific principles of relief." (*Ibid.*, Appendix No. XV. (A), Par 53A, to Vol. I. It is for this reason that the Inspectors now advise against local relief committees, and even against Guardians serving on the Committee that deals with their own parishes. "It is very difficult," says a Poor Law expert, "to be impartial in your own district, when you know the people and their friends." (*Ibid.*, Q. 17686.) Thus, personal knowledge by the Guardians of the circumstances of the applicant is a positive drawback, and ought, it is suggested, even to be made a cause of disqualification for voting on the case. It is a special defect of the Unions of Wales that: "The Welsh Guardian," says an Inspector, "is practically the Relieving Officer of his parish." (*Ibid.*, Appendix No. X. (A), Par 2I, to Vol. I.) "The effect of it is," says one of our Committees, "that the Relieving Officer does not go thoroughly into the circumstances of a case, but relies to a great extent upon the local Guardian giving the particulars to the Committee, and naturally the officer does not press his opinion against that of the Guardian, who possibly knows the applicant better than he does. This system is condemned by the Relieving Officers, as it discourages them in thoroughly sifting their cases." (Reports of Visits by Commissioners, No. 96.)

and the practice of Ireland and Scotland are, in our judgment, both in methods and results, not essentially different. The resemblance of the Scotch Poor Law to that of England is obscured by differences of terminology. But from the evidence given to us, and from what we have ourselves seen, we have to report that the "aliment" granted by the Parish Councils of Scotland, though commonly less adversely criticised, is open to nearly the same animadversions as the Outdoor Relief given by Boards of Guardians in England. It is at any rate as completely unconditional. It is given with as little real ascertainment of the economic facts of the case. It is administered, not by a body elected to do what is required in the public interest for any particular class of persons, but by what we have called a Destitution Authority, concerned only to relieve the destitution of all. It is very frequently, if not quite so universally, inadequate for any healthy subsistence. In one respect, however, the working of the system in Scotland appears to us to be more in accordance with the recommendations of the 1834 Report and less open to criticism than that of England, namely, in being given with greater uniformity. We have been impressed with the much greater approach in Scotland to identity of treatment of similar cases in the same parish, and of similar cases in different parishes. We attribute this greater evenness and impartiality of administration to two important differences between the Scotch and English organisations. In Scotland, and not in England or Ireland, there is an appeal from the decision of the Destitution Authority, on some points to the Sheriff, and on others to the Central Authority. Whilst the number of such appeals to the Local Government Board for Scotland is not large, we believe that the effect of the right of appeal in securing general uniformity of treatment is wholly advantageous. But the most important respect in which the Scotch organisation differs from the English is, in our judgment, the existence in each parish of an Inspector of Poor, who occupies a position far superior to that of the English Relieving Officer. Like him, indeed, he is what we have termed a Destitution Officer. He is under the disadvantage of having to deal with all sorts and conditions of men, merely in respect of their destitution; and cannot, therefore, specialise in the appropriate treatment of any one class. But unlike the English Relieving Officer he is himself effectively in communication with the Central Authority, and, indeed, usually acts as Clerk to his Parish Council. This right of direct communication with the Local Government Board for Scotland puts the Scotch Inspector of Poor in a position to prevent the deviations from uniformity which, in England and Ireland, so often proceed from the favouritism or neighbourly sentimentality of individual Guardians. In some of the largest towns, indeed, where the Inspector of Poor is a salaried officer of position and attainments, the Parish Council, whilst retaining fully in its own hands the direction of policy and the formulation of the rules as to relief, in practice largely leaves to the Inspector of Poor the adjudication upon individual cases, with the result, as we believe, of a much nearer approach to an accurate, impartial and even-handed execution of the will of the elected representatives than any English or Irish Board of Guardians can count on.

(E) THE SUGGESTED ABOLITION OF OUTDOOR RELIEF.

In face of the unsatisfactory results, and, in some cases, the disastrous social failure of the Outdoor Relief administration, some English Boards of Guardians have attempted to pursue the policy of practically abolishing Outdoor Relief altogether—not merely, as was recommended in the Report of 1834, to the able-bodied, but also, as was suggested by most of the Local Government Board's Inspectors of 1871–80, to the non-able-bodied. This prohibition of Outdoor Relief to the non-able-bodied has never been embodied in any authoritative document of the Local Government Board; but it has been, from time to time, practically effected in one Union or another, by the simple expedient of offering, to all applicants for relief, nothing but maintenance in the Workhouse—the General Mixed Workhouse that we have described.* We need not recount the well-known experience in this respect of such Unions as Atcham and St. Neots, Brixworth and Bradfield, St. George's-in-the-East, Stepney and Whitechapel. As has been forcibly represented to us, and demonstrated by repeated statistics, this policy undoubtedly reduces the number of persons maintained at the expense of the Poor Rate. The universal "offer of the House," whilst bringing rapidly to an end the swollen lists of outdoor poor, does not appreciably or permanently increase the number of the indoor poor. To a very large proportion of the non-able-bodied poor, the General Mixed Workhouse is, in fact,

* We were concerned to find that, even down to the present day, the children of widows and other persons to whom Outdoor Relief is refused are usually relegated—as at Bradfield and Atcham—not to any separate school, but to the General Mixed Workhouse itself; and in Atcham Workhouse they do not even go out to day school, but are taught within the Workhouse walls.

so deterrent that, rather than enter its portals, they will try every possible alternative, and even put up with almost any privation and suffering, to the physical and mental deterioration of their children and themselves. It would, however, be unfair to those Boards of Guardians who have adopted this policy, and to those advocates who have suggested it to us,* to imply that they are indifferent to this privation and suffering. They assert, on the contrary, that experience shows, "in the most incontestable manner, that the effective restriction of Outdoor Relief always improves the condition of the poor," and that there is no foundation whatever for the belief that its refusal inflicts any hardship.† The fact that the applicants refuse the offer of maintenance in the Workhouse is held to show that they are able, when pressed, to fall back upon other resources; and to prove that they were not really so destitute as they represented themselves to be.‡ In the Unions in which this policy has been adopted, it is asserted that the "hard cases" that occur have been dealt with partly by contributions from relatives able to assist, and partly by voluntary charities of one sort or another. On the other hand, it has been represented to us that the policy of refusing Outdoor Relief, whilst in some cases unnecessarily breaking up the home, and forcing women, children and the aged into the demoralising atmosphere of the General Mixed Workhouse, has, in others, resulted in failure to relieve destitution virtually equivalent to a local abrogation of the Poor Law, leading to misery, to degeneration, and sometimes even to premature death from want and exposure. We thought it necessary, in order to clear up this conflict of testimony, to supplement the very elaborate investigations that we set on foot as to the effect of Outdoor Relief, by the appointment of a special Investigator to make a detailed inquiry in six relatively "strictly" administered Unions in town and country—including some in which the Workhouse policy has been pursued for many years with apparent success—in order to ascertain what subsequently happened to families to whom Outdoor Relief had been refused, and who had not accepted the alternative offer of the Workhouse. Such an inquiry, involving personal investigation some time after the cases had been before the Board of Guardians, was beset with difficulties. Our Investigator was able, however, to trace out and report upon altogether forty-nine families in two Metropolitan Unions, one large provincial town, and three rural Unions.§

The results of this investigation, unfortunately, do not bear out the assertions that the refusal of Outdoor Relief is unattended with hardship to the poor, and that it is, if not actually beneficial, at any rate without injury to them. Our Investigator—herself an experienced Poor Law Guardian—sums up her conclusions as follows:—

1. "In no case was the support by relatives increased through the refusal of Out Relief. In practically all the cases they were so poor themselves that they were not in a position to give systematic assistance. If such additional help had been given it would have been at the cost of the physical efficiency of the younger generation.

2. "In no case has any charitable agency effectively dealt with the destitution. Occasionally, I found that spasmodic gifts were made, but with one exception, no effort was attempted definitely to place the family upon a sound economic footing.

3. "There was no evidence to show that the applicants themselves had been stimulated by the refusal of relief to greater personal efforts. On the contrary, the denial of assistance appeared to have discouraged and disheartened many whose energy might have been roused by wise guidance accompanied by sufficient temporary aid to enable them to maintain physical efficiency.

4. "Two of the cases (out of forty-nine) found work. In one of these the man went back to his old employment straight from prison, and in the other the man got some irregular and possibly only temporary employment.

5. "In more than half the cases the refusal of Out Relief led to a gradual dispersal of the household furniture and wearing apparel, often not even excepting the most necessary clothing. There were also unmistakeable signs of a marked physical deterioration of the members of the families, owing

‡ "It is said that the restriction of Outdoor Relief is a hardship to the poor, because it drives them into the Workhouse. It does nothing of the kind. It drives them into thrift and independence. How can it drive them into the Workhouse when it has reduced the number of the inmates of our Workhouses to less than one-half, when we have done away with all Outdoor Relief you may say?" (The Story of the Bradfield Union, by T. Bland Garland; Evidence before the Commission, Appendix No. CCXI. (G) to Vol. VII.)

§ Report . . . of an Inquiry in Six Unions into Cases of Refusal of Out-relief, by Miss G. Harlock.

to lack of food, warmth, and proper clothing. If eventually the applicants are forced to enter the workhouse, they will do so with health gone, home gone, and spirit and courage shattered. This deterioration is, from the national standpoint, probably most serious in the case of the children. The homes which were being broken up were of two classes: firstly, respectable homes which have been in the past thoroughly comfortable; secondly, homes which possibly have never reached a high standard of comfort.”*

These conclusions are of grave import. Moreover, it must be remembered that the effects of a policy of “offering the House” are not confined to the families to whom Outdoor Relief is actually refused. The policy of the Board of Guardians soon becomes known to the poor, and if nothing is to be obtained except an order of admission to the General Mixed Workhouse, even the destitute do not care to apply for relief. “They had very few cases of the refusal of Out-Relief,” said one Clerk. “The people in the district knew the policy of the Board and did not apply for relief unless they thought they had a strong case.”† “The applicants know the policy of the Board and rarely apply for relief,” reports our Investigator, “in the circumstances when the only thing given would be an order for the house.”‡ “Great hardships are undoubtedly borne in many cases by poor persons,” reports one of the Diocesan Committees whose assistance we have sought, “because of their extreme unwillingness to enter the Workhouse. It is alleged that in some cases ‘the House’ is offered by the Relieving Officers where they know it will not be acceptable, in order to avoid giving Outdoor Relief, and thus to keep down the expenditure of the Guardians.”§ “A sickly man will not go in,” reports another Diocesan Committee, “because he is helpless when he comes out; the mother will not appeal because she may be separated from her children . . . Many would starve first.”|| The result is that, as one official witness candidly put it, “the very poor are sometimes very badly looked after . . . when they are ill.”¶ The same witness adduced case after case in which grave injury had been caused, in some cases leading to death, owing to the lack of prompt Poor Law relief; the sufferers in most cases neglecting or refusing to apply to the Relieving Officer, because they did not want to enter the Workhouse; and the Relieving Officer not becoming aware of their need.** It is, in fact, not regarded as any part of the duty of this Destitution Officer to search out destitution as a School Attendance Officer searches out cases of non-attendance at school, or as a Sanitary Inspector searches out nuisances. As a general rule, the Relieving Officer neither discovers, nor is informed of, any case of want, otherwise than through the application of the sufferer. If—deterred by the known policy of the Board of Guardians—the poor do not apply

* *Ibid.*

† *Ibid.*, p. 5. These conclusions, it may be said, are in accordance with the general impressions of our other Investigators into the effect of Outdoor Relief. Whilst believing that the “offer of the House” staves off a number of “bogus applications,” and also elicits contributions from “the more benevolent children and relatives,” the Investigators conclude that: “In the majority of cases where relief is refused because of the bad habits of the applicants, the bad habits continue. There is no direct and inevitable connection between a refusal of help by the parish and a reformation of character, or a search for work. The number of this class who ‘float off and become independent,’ or who seek better paid work, as a result of refusal, is infinitesimal. They are only independent of the Poor Law; they are dependent on everything else, on pawnshops, on shelters, on missions, on landlords, on neighbours in the East End and on servants in the West End. . . . Where institutional relief is offered, it is sometimes accepted, but oftentimes after a considerable interval has elapsed, during which the family is going from bad to worse. The furniture is sold bit by bit; rent falls into arrears, and the landlord becomes obdurate; the energy required for successful begging proves too much; and sooner or later they enter the House.” (Final Report of Inquiry into the Effect of Outdoor Relief on Wages and the Conditions of Employment, by Thomas Jones, p.18.) In the Bradford Union, where the administration, though on strict principles, appears to us to have been conducted, not only with exceptional ability, but also with an intention of genuine humanity, our Special Investigator traced out forty-seven cases in which Outdoor Relief had been refused, including seven women with children dependent on them. Out of these forty-seven cases our Special Investigator reported: “That the refusal of relief has involved the applicants in suffering either mentally, physically or both, in the following (nineteen) cases. . . . I was particularly struck with the hardship of women with children, who are expected to be at the same time both the breadwinner and the housewife of their families. . . . These women so often go under in their struggle to perform this impossible task, dragging their children down with them. . . . From the lowest standpoint, that of a merely commercial one, would it not be a better investment of the national resources to help these women (*adequately*) while they are performing their duties as mothers, in order to assist them to bring up their children decently, instead of crushing them, and postponing the help until both the mother and the children are reduced to such a low state of mental and physical efficiency that no relief, when given, will ever be able to restore to them a decent home and their self-respect? The alternatives, then, are starvation or the Workhouse.” (Inquiry into Cases of Refusal of Out-relief by the Bradford Board of Guardians; Report by Miss G. Harlock.)

‡ Report . . . on an Inquiry in Six Unions into Cases of Refusal of Out-relief, by Miss G. Harlock.

§ Report of the Durham Diocesan Committee on Poverty and its Relief.

|| Report of Ripon Diocesan Committee on Questions of Poverty and its Relief by the Church.

¶ Evidence before the Commission, Q. 41489, Par. 25.

** *Ibid.*, Q. 41489, Pars. 25–47; Qs. 41629–41630.

for relief, they may, and sometimes do, sink gradually lower and lower in semi-starvation and misery until they are found actually dying, and are then removed to the Workhouse or infirmary in such a state that they survive their admission only a few hours or days.* It is clear that, in a few cases, they die of starvation.†

We may believe that, in particular instances, in small Unions, where persons of influence and means make a point of privately relieving every "hard case," the strict refusal of Outdoor Relief, to the non-able-bodied as well as to the able-bodied, may not actually increase the misery of the poor, or lead to death from starvation. But viewed from a national standpoint and having regard particularly to the children and to persons in the early stage of disease, we cannot say that the policy of refusing Outdoor Relief, even as described by those who believe in it, appears to us to be, in practice, any more satisfactory than the laxer policy that we have described. It appears to us, in fact, to fail at least equally in the two fundamental requirements of ensuring appropriate treatment to those in need of it and of enforcing suitable conditions of life upon those of irregular habits or improper surroundings. And the policy of refusing Outdoor Relief has the added drawback that—as is vividly shown by the Parliamentary Returns of deaths from starvation in the Metropolis—the cases do not usually come to the notice of any public officer until they have become hopeless. "I was much struck," reports our Investigator, "with the hopeless condition of some of the cases at the stage at which I visited them. With these, an earlier commonsense treatment would have prevented the development of destitution (and in some cases of degradation also) to its present acute form *To effectively suppress pauperism, cases of destitution should be dealt with at an earlier stage.*" And the earlier treatment must be, not deterrent but curative. "There are many cases," continues our Investigator, "which cannot suitably be met either by the grant of a Workhouse order or by"—the only alternative which most Boards of Guardians seem able to conceive, namely a money dole of—"out-relief. Some require curative treatment, others merely sound advice. *No case which has ever touched the Poor Law should be left to drift unaided.*"‡ We may cite as an example of the being "left to drift unaided" the case of one family, which was refused Outdoor Relief by an able and strict Board of Guardians, and in which, as our Investigator observes, "there were possibilities of development which were not taken. James, a lad of fourteen, when his parents first applied to the Board, was *allowed to remain untrained*, and now, at the age of twenty-four, is selling flowers in the streets instead of being employed at a good trade. The Relieving Officer calls the attention of the Guardians to the daughter Margaret, a girl of nineteen (a cripple) and suggests that she be taught some occupation by which she can earn her living, but nothing is done; and we now find her sometimes in the Workhouse and sometimes living with her mother, entirely untrained and incapable of supporting herself. In all probability she will be a source of expense to the State as long as she lives, and her happiness in life will be curtailed by her limitations. Yet when she first became chargeable she was only a child of eleven."§

(F) THE SUBSTITUTION OF CHARITY FOR OUTDOOR RELIEF.

It is sometimes suggested that, if all Outdoor Relief were refused, voluntary charity of one sort or another would come forward to deal with the cases that would not really be better in the Workhouse.|| Without discussing the probability of this happening in country and town, all over the Kingdom—for we have found no evidence whatever on which to base so optimistic an assumption—we were struck with the allegations that were made as to such voluntary charities as already exist. It was asserted that the work of these charitable agencies, whether individual or corporate, was open to the same

* "The worst cases of distress due to reluctance to accept Indoor Relief," reports the Durham Diocesan Committee on Poverty and its Relief, "occur among the sick and aged who live alone, and do not receive adequate attention, medical treatment, or nourishment in consequence."

† See the Returns annually presented to Parliament of the number of deaths in the Administrative County of London, in which a verdict of death from starvation, etc., has been returned. The number varies from thirty to fifty annually. The Return for the year 1906 (House of Commons, No. 313 of 1907) contains forty-eight cases.

‡ Report . . . on an Inquiry in Six Unions into cases of Refusal of Outdoor Relief, by Miss G. Harlock.

§ *Ibid.*

|| "There are occasionally—not often—cases of very worthy though destitute people who do not wish to go into the Workhouse; these may be proper objects of charity, and if so, should be given a small pension by their neighbours." (Reply of the Bradfield Board of Guardians to a Memorial from the Ratepayers of Pangbourne, December 3rd, 1889; Evidence before the Commission, Appendix No. CCXI. (E) to Vol. VII.

criticisms as those made against the Poor Law Guardians' administration of Outdoor Relief. We therefore thought it necessary to have a special inquiry made into the results of the charities and charitable endowments in a dozen different towns and villages.*

The outcome of this investigation was very largely to confirm these allegations. It was found that, in place after place, the charitable gifts—whether of individuals or the churches, of benevolent associations or of endowed trusts—are distributed without any complete ascertainment of the recipient's resources, and with even less inquiry and protection against overlapping than is practised by the Relieving Officer.† There was evidence that many of the grocery tickets are sold at the public-house,‡ and that, in one case, they had even been taken in payment at the local theatre.§ “Charity givers,” said a witness who had for thirty-eight years been a Local Government Board Auditor, “are more imposed upon than the Guardians, and the cases would not be sifted, and the gifts would go by favour.”|| “I do not consider,” says a rural clergyman, “it would be practicable to substitute charity for Out-relief. There could not be quite the same efficient investigation by the trustees . . . as there is by Poor Law Guardians.”¶ So experienced a Poor Law official as Mr. A. F. Vulliamy informed us that he considered “it would be very mischievous indeed to substitute charity for Out Relief; because . . . the administrators of charities have seldom” the necessary training, “and would be apt to relieve, in the majority of cases, without system or proper investigation.”** “Of the two” (charity and Poor Law Relief), testifies the Secretary of a provincial Charity Organisation Society, “I consider here that the Poor Law relief has the less demoralising effect, because there is careful inquiry by an excellent relieving officer, and a certain amount of supervision which acts as a deterrent.”†† “In a few cases,” says another witness, “it was very beneficial, but as a rule it was rather the contrary, because so many ladies, young ladies especially, would take a district and deluge it with charity, get very tired of it and then say: Well, you must now go to the Poor Law, which they would not have done in the first place.”‡‡ The Taunton Union is adduced by an Inspector as an example of “rigid and good administration,” by means of the strict limitation of Outdoor Relief. The Relieving Officers are vigilant and efficient, if not, as some say, “hard and somewhat brutal with the people.” On the other hand the town is over-run with charities, administered by trustees. Here there is canvassing of individual trustees, and “the usual wirepulling. . . . The applicants are not seen by the trustees at their quarterly meeting when pensions and grants are awarded. There is no officer corresponding to a Relieving Officer or a Charity Organisation Society agent to investigate the circumstances of the applicants.”§§

With regard to the no less important point of the recovery of the cost of relief, when the recipient or some of his relatives are in a position to repay it, the evidence goes to show that voluntary charitable agencies are far more remiss than the public authority. In fact, our Investigators report that they “rarely came across a case in which relations had been approached with a view to enlisting their assistance.”||| There is the very minimum of attempt, except in the case of almshouses, to enforce among the recipients better conditions of living; often indeed, there is practically no discrimination according to character. In the practice of one society “for relieving the sick poor,” which dis-

* Report . . . on Endowed and Voluntary Charities in certain places and the Administrative Relations of Charity and the Poor Law, by A. C. Kay and H. V. Toynbee.

† This overlapping among charities is reported by many witnesses. “The difficulty now is,” says one of them, “that the clergymen and the ministers and voluntary and philanthropic societies in various parts of the town deal with the sums, and some of these people get doles from three or four, and they overlap.” (Evidence before the Commission, Q. 45392.)

‡ “An instance was given of a publican cashing thirty tickets at one time” (Report . . . on Endowed and Voluntary Charities, by A. C. Kay and H. V. Toynbee, pp. 120, 121).

§ The relief tickets of another society, of which we are told that the organisation “is excellent on paper,” were not only passed freely from hand to hand, but also “sold for drink,” and even “taken in payment at the theatre” (*Ibid.*, p. 97).

§§ Report . . . on the Effect of Outdoor Relief in England, by Miss C. Williams and Mr. Thos. Jones, pp. 74, 75. It is impossible not to feel, in 1909, the force of the recommendation of the Poor Law Report of 1834 that: “Charitable foundations call for the attention of the Legislature because, in the districts where they abound, they may interfere with the efficacy of the measures recommended by the Commissioners with regard to poor relief.” (Report of 1834, p. 300.)

||| Report . . . on Endowed and Voluntary Charities, by A. C. Kay, and H. V. Toynbee, p. 65.

tributes above £800 annually, we are told that "poverty rather than character would appear to constitute a claim. . . . A lady who had been a visitor for the Society for three or four years said she had never rejected a case. . . . No attempt is made to co-operate with other societies in the weekly allowance cases, and there is a great deal of overlapping. . . . In a large number of cases the assistance is given in supplementation of Poor Law relief. For instance, out of twenty-five cases taken at random, it was found that ten were receiving Outdoor Relief." * This overlapping with the Poor Law, and with other charitable agencies was found to be almost universal.† Our Investigators report that "in the case of . . . almshouse and pension charities," not under revised schemes, "the beneficiaries are very commonly chosen from among persons receiving Outdoor Relief, and in the case of the Dole Charities it is only in the rarest instances that any attempt is made to discriminate between those who are and are not in receipt of Poor Law relief."‡ In one town, they state, "when lists . . . of the recipients of the charities were submitted by us to the Relieving Officers, over sixty cases of people receiving Out-relief were at once, *much to their surprise*, recognised by them."§ As if to complete the parallel with the laxest Poor Law, there is even a practice "especially in country districts," of giving "charity to agricultural labourers and others in supplementation of the ordinary wages current in the district, and not at times of exceptional need or distress."|| Above all, there is practically nothing in the nature of providing for each case exactly the treatment appropriate to its needs. "The work," reports our Investigators, "of providing assistance suitable to the varying circumstances of each case demands an amount of knowledge and interest in charitable work, and an expenditure of time and trouble which can rarely be found under the conditions of charitable administration . . . It is . . . much easier to find a body of trustees who will make good appointments of almspeople and pensioners than one which will satisfactorily perform the difficult work of from time to time giving appropriate assistance in cases of special need and distress."¶

It is interesting to find one small community in which organised charity has taken the place of the Poor Law. There are three small parishes in Herefordshire, adjoining each other, Letton, Bredwardine and Staunton on Wye, with an aggregate population of fewer than 200 families, which enjoy an honestly and, on the whole, ably directed charitable endowment producing (for almshouses, medical attendance and doles alone, besides boarding and day schools,) over £1,000 a year. Indeed, in these villages, the Trustees of Jarvis's Charity act instead of the local Board of Guardians. They relieve all temporary distress, distribute winter coals and blankets, educate and clothe and apprentice the children, provide gratuitous nursing and free medical attendance by their own doctor, pay for serious cases in the nearest hospitals, give regular weekly allowances to the aged, and accommodate those who need it in almshouses. The result is that there are practically no paupers in these villages, the total out-relief expenditure for them all being under 12s. a week. The Poor Law has, in fact, been superseded by organised charity. The result is significant. "There can be no doubt," say our Investigators, "that the Charity is doing the work of the Poor Law, *only on easier terms, and people get help from the Charity who would be refused by the Guardians*. For instance, no steps are taken to see that children do their duty by their parents and contribute to their support when able. On looking through his books, one of the Relieving Officers for the Weobley Union found that out of 107 cases he had on hand, in thirteen he had secured payments from children. As regards the Jarvis Charity there was not a single case in which the trustees had communicated with the children." It is interesting to note that the wages current in these villages are distinctly low for the county in which they are situated, and that "the cottages . . . are very poor." Practically no other charitable agencies exist, so that there is no overlapping, and none of that competitive philanthropy so much deplored in large towns. There are friendly societies,

* *Ibid.*, p. 96.

† "Nearly all persons on Out-relief," says a Guardian with regard to one great town, "receive charity as well, as, indeed, some of our charities practically refuse to help people unless we give them parish money first. The idea is that the parish keeps the people from destitution, and the charities then come in and make their lives comfortable in a small way." (Evidence before the Commission, Q. 35693, Par. 67.) "It may happen, and, no doubt, does frequently happen," says the Clerk to another Union, "that relief is being given to the same family by more than one society, in addition to what is allowed by the Board of Guardians." (*Ibid.*, Q. 36693, Par. 17.)

§ *Ibid.*, pp. 61, 118. "The overlapping is not confined to endowed charities. Out of thirty recipients of help from the York Benevolent Society . . . nine were found to be on the Outdoor Relief List, and five in receipt of occasional relief." (*Ibid.*, pp. 62, 127.)

|| *Ibid.*, p. 72.

¶ *Ibid.*, pp. 78, 79

but it is doubtful whether their membership is up to the average, as "many young men who ought to be members . . . neglect to join . . . with the idea that the Jarvis Charity will be available should sickness overtake them." In short, in these three villages in which a relatively well-administered charity is "doing the work of the Guardians," and the Poor Law is practically non-existent, we have exactly the same complaints as those made against a lax Poor Law. It "does away with thrift,"; it "creates a great tendency to laziness and dependence"; "it is difficult to get work done in the parish; men prefer to loaf about, and there is plenty of drinking going on"; it makes "the people careless, lazy and unthrifty"; "there is no demand at all for small holdings or land for allotments, while there is a growing demand in all the adjoining parishes"; yet "you could not find a more discontented lot of people in any parish in England." * It is interesting to observe that the failure of the various voluntary agencies administering charitable doles and allowances—whether individuals or societies, churches or endowed trusts—to avoid shortcomings and defects exactly similar to those of the Poor Law, is to be attributed to the same imperfections in the dispensing authority. We have examined the constitutions and rules of dozens of charitable agencies up and down the country, including Charity Organisation Societies and Guilds of Help; and we have not discovered one in which there is any requirement of specialist training in the "helpers," "visitors" or other workers, by whom the service is performed. The persons engaged, whether as paid officers or as volunteers, to inquire into the cases, to recommend the policy and to carry out the course of treatment decided on, have, in fact, no more specialist training in their complicated task—either in the ascertainment of economic circumstances, or in personal hygiene and sanitation, or in the educational requirements and progress of the children,—than the Relieving Officers themselves. Indeed, they have usually less competence than the Relieving Officers, as they have not the advantage of being continuously employed on investigation and relief. They are, in fact, for the most part, merely amateur "Destitution Officers," without the professional experience which serves, at any rate, to enable the Relieving Officers to protect the community from imposture. Moreover, the voluntary committees before whom the cases are brought are as "many-headed" in their composition and at least as shifting in their membership as are the Boards of Guardians. And whilst there is only one Poor Law authority in each Union, there are often, besides uncounted individual donors, dozens of separate charitable agencies—in large towns hundreds, and in the Metropolis, nearly two thousand †—each spending "its income without any relation at all to the spending of its neighbours, guiding its policy solely with a view to its own individual interest, neither knowing or caring, as a rule, what is done by any other agency, and almost inevitably creating extensive overlapping with its consequent waste and demoralisation." ‡ It is therefore not surprising, that a majority of the witnesses to whom we put the question, regarded the substitution of charitable agencies for Poor Law relief as neither practicable nor advantageous.

(G) CONCLUSIONS.

We have therefore to report:—

1. That the abolition of Outdoor Relief to the non-able-bodied is, in our judgment, wholly impracticable, and, even if it were possible, it would be contrary to the public interest. There are, and, in our opinion, there always will be, a large number of persons to whom public assistance must be given, who can, with most advantage to the community, continue to live at home; for instance, widows with children whose homes deserve to be maintained intact, sick persons for whom domiciliary treatment is professionally recom-

* *Ibid.*, pp. 42, 217–221. This interesting case appears to exemplify the statement repeatedly made to us that: "By substituting charity for Out-relief there would be an enormous increase in pauperism, and a corresponding less degree of self-help and self-respect." (Evidence before the Commission, Appendix No. LXXIII. (Par. 15.) to Vol. VII. As it was put to us by a Guardian: "The poor, in a large number of cases, seem to look at the receipt of money and gifts from private benefactors in quite a different light from that in which they regard relief from the pockets of the ratepayers as a body. While they will fight very shy of seeking help from a Board of Guardians, even when they are in dire necessity, some of them will not be above accepting assistance in money or kind from half-a-dozen charitable persons at the same time, without intimating that they have other friends. I have found this to be the case in my experience in town and country. . . . The effect of private charity, I fear, is at times to induce persons to lay themselves out to get the better of those . . . whom they know to be kindly disposed. The effect of Outdoor Relief, on the other hand, does seem to be *far less harmful than that of private charity.*" (*Ibid.*, Q. 72681, Pars. 27–30.)

† *Times*, January 13th, 1908. "There are," it is there said, "between 1,700 and 1,800 charities in London receiving among them £10,500,000 yearly."

‡ *Ibid.*

mended, the worthy aged having relatives with whom they can reside, and such of the permanently incapacitated (the crippled, the blind, etc.) as can safely be left with their friends. Nor can the community rely on voluntary charity providing for these cases. In many places such charity does not exist, and in many others there is no warrant for assuming that it would ever be adequate to the need. Moreover, our investigations show that voluntary charity, in so far as it exists in the form of doles and allowances to persons in their homes, has all the disastrous characteristics of a laxly administered Poor Law.

2. That so long as the alternative is admission to the General Mixed Workhouse, the policy of systematic refusal or restriction of Outdoor Relief to the non-able-bodied, pursued by a few Boards of Guardians in England, cannot be recommended for general adoption. We are unable to resist the evidence that this policy of "offering the House" even to the non-able-bodied, results, in not a few cases, in unnecessarily destroying the home and breaking up the family, in separating child from mother, and in exposing young and innocent persons to the demoralising atmosphere of the General Mixed Workhouse. Such a policy, moreover, by deterring the poor from applying for relief, leads, in far too many cases, to semi-starvation and physical and mental degeneration, from which the women and children especially suffer, and in a small number of cases, even to death from want and exposure. The proposal made to us by some witnesses that, in order to obviate this latter danger, the Destitution Authority should be granted powers of compulsory removal appears to us—in view of the character of the General Mixed Workhouse in which these poor people would be incarcerated—wholly out of the question.

3. That the present system of administering Outdoor Relief to the non-able-bodied in England, Wales and Ireland, and, to a lesser degree, also in Scotland, is open to the gravest criticism. The large sum of nearly four millions sterling which is now expended in this way annually—a burden on the community that is steadily increasing—is being dispensed, without central inspection or control, in doles and allowances, awarded upon no uniform principle, and differing widely from place to place. This lack of common principle is observable even in the Bylaws or Standing Orders by which the best administered Unions in England profess to guide their action. But in the actual practice the diversity between one place and another, in large districts between one Relief Committee and another, and sometimes even between one meeting and the next, according to the accident of which members attend—a diversity applying alike to the persons to whom Outdoor Relief will be given, to its amount and to its conditions—is still more extreme. It can, in fact, be described only as a total absence of principle.

4. That amid all this diversity of principle and practice, we find certain evil characteristics practically universal. Except in an insignificant number of well-administered districts in England and Scotland, the doles and allowances given are manifestly inadequate for healthy subsistence. They are given, not in relief of destitution, strictly so-called, but in supplement of other resources that are assumed to exist. In many cases, such other resources—whether earnings, charitable gifts or the contributions of relations—do exist, but are insufficient. In some cases, on the other hand, the total income of the household is such as not to warrant any relief from the Poor Rate. But no Destitution Authority that we have seen succeeds in ascertaining what other sources of income exist or whether any such exist; and the majority of them do not seriously attempt to do so. The result is that there are a great many cases in which, whilst Out-relief is given on the assumption that other resources will be forthcoming, none such are found; so that the dole of Poor Law relief—upon which thousands of old people, sick people and even widows with young children are steadily degenerating—is a starvation pittance.

5. That an equally grave defect in the Outdoor Relief of to-day, at any rate from the standpoint of the nation, is the unconditional character of the grant. With a few honourable exceptions, no attempt is made by the Destitution Authority even to ascertain how the household is actually being maintained upon the Outdoor Relief that is granted, still less to effect any necessary improvement in the home. The result, as we have grave reason to believe, is that a large part of the sum of nearly four millions sterling is a subsidy to insanitary, to disorderly or even to vicious habits of life. The saddest feature of all is that no small proportion of the 234,000 children whom, in the United Kingdom, the Destitution Authority elects to bring up upon Outdoor Relief—in the course of a year, probably, as many as 600,000 different children—are to-day, without any interference by these Authorities, chronically underfed, insufficiently clothed, badly housed, and, in literally thousands of cases, actually being brought up at the public expense in drunken and dissolute homes.

6. That we do not ascribe the disastrous social failure of the Outdoor Relief of to-day to any personal shortcomings of the individual members of Boards of Guardians in England, Wales and Ireland, or of Parish Councils in Scotland. We have found no evidence that the corrupt and criminal practices which have unhappily occurred in certain places, are at all frequent or widespread. Nor have we reason to suppose that the evil influences of electoral or social pressure have been otherwise than exceptional. We have, indeed, been impressed by the vast amount of zealous and devoted service, unremunerated and unrecognised, that is being rendered in all parts of the Poor Law administration of the United Kingdom, by men and women of humanity and experience. We ascribe the defects and shortcomings of the present administration of Outdoor Relief to the very nature of the Local Authority to which this duty is entrusted.

7. That we attribute the almost universal failure of the Boards of Guardians in England, Wales and Ireland, and of the Parish Councils in Scotland, in the matter of Outdoor Relief, in all districts, and in every decade, partly to an illegitimate combination, in one and the same body, of duties which can be rightly done by a board or committee, and those which can be efficiently discharged only by specialised officers continuously engaged in the task. The "many-headed" body is exactly what is required, whether for Outdoor Relief or for the management of institutions, for arriving at decisions of general policy; for prescribing the rules that are to be followed in determining particular cases; and for examining grievances and preventing the abuse of their powers by the officers. But if the administration is to be democratic in its nature—if, that is to say, the will of the people is to prevail—it is absolutely necessary that the application to individual cases of the rules laid down by the board or committee, should be determined evenly, impartially and exactly according to the instructions, by a salaried officer, appointed for the express purpose. We recognise this at once in the management of a school, a hospital or an asylum, where the most democratic committee finds the best guarantee for the execution of its will in ordering its salaried officials to apply the rules that it lays down. But in the dispensing of Outdoor Relief the same "many-headed" body that makes the rules, has also attempted to apply them to individual cases; and in doing so inevitably brings in personal favouritism, accident and the emotion of the moment, to thwart the will of the community as a whole. The relative success of the Outdoor Relief administration of some of the best governed parishes of Scotland, is due, we think, to the fact that, whilst the Parish Council makes the rules, their application to individual cases is not left to the chance membership of a particular meeting, but is in practice largely entrusted, as a judicial function, to the Inspector of Poor.

8. That it is, however, not merely that "many-headedness" of the existing tribunal that is the cause of the failure of the Outdoor Relief administration of to-day. We ascribe that failure quite as much to the fact that the duty is entrusted to a Destitution Authority, served by subordinates who are essentially Destitution Officers. To entrust, to one and the same authority, the care of the infants and the aged, the children and the able-bodied adults, the sick and the healthy, maids and widows, is inevitably to concentrate attention, not on the different methods of curative or reformatory treatment that they severally require, but on their one common attribute of destitution, and the one common remedy of "relief," indiscriminate and unconditional. And just as this Destitution Authority tends always, in institutional organisation, to the General Mixed Workhouse, with its promiscuity and unspecialised management, instead of to the appropriate series of specialised nurseries, schools, hospitals and asylums for the aged that are needed, so it tends also, with its general "mixed official," the Relieving Officer, to provide, alike for widows and deserted wives, the sick and the aged, infants and school children, one indiscriminate unconditional dole of money or food, instead of the specialised domiciliary treatment, according to the cause or character of their distress, that each class requires.

CHAPTER III.

BIRTH AND INFANCY.

We find the care of maternity, and of the infants under school age, undertaken in England and Wales, Scotland and Ireland alike, by two Local Authorities, both spending public funds upon this service, without co-ordination, and almost without communication with each other. Everywhere the Destitution Authority is providing maintenance and medical treatment for expectant mothers, and for mothers with infants, applying for relief in respect of their destitution. Besides this, and apart from this, the Local Health Authority is, in a rapidly increasing number of areas, affording medical advice, and sometimes food to necessitous mothers and infants in the poorer districts. These rival Local Authorities are influenced by diametrically opposite conceptions of what is the public duty in the matter. Boards of Guardians, priding themselves on "good administration," restrict their relief of expectant mothers and of mothers with infants, by deterrent devices, with the object of reducing to a minimum the volume of "pauperism." The more "enlightened" of the Public Health Authorities, on the other hand, are perpetually striving to extend their ministrations to every necessitous mother and infant within their areas, with the object of diminishing infantile mortality. What is remarkable is that both policies are, at the present time, simultaneously receiving the encouragement of the Local Government Board. The result is that the Public Health Service, though in this department of very recent growth, and still only imperfectly sanctioned by Parliament, is creeping over the whole country; and will, in the near future, if not checked, practically supersede much of the work of the Poor Law. Meanwhile, the partial and uneven duplication of the service, together with the fragmentary and entirely unco-ordinated provision made by voluntary agencies, is undermining parental responsibility, and causing wasteful expenditure, whilst failing to prevent excessive infantile mortality.

(A) THE PROVISION FOR BIRTH AND INFANCY MADE BY THE DESTITUTION AUTHORITY.

The Report of 1834 gave practically no directions as to the provision to be made for infants, who were assumed to follow the father (or, in his absence, the mother). If the father of a legitimate child was able-bodied, or if the child was illegitimate, the infant however young or sickly, was to be relieved only by admission with its parents to the Workhouse, where no special arrangements were made for it. The legitimate infants of fathers who were not able-bodied, and those of widows whether able-bodied or not, would, it was assumed, continue to be maintained on Outdoor Relief, without any direct responsibility for the infant's welfare being undertaken by the Local Authority. What would be the best course for the infant does not seem to have been considered.

These two methods of provision are still in use. The expectant mother, or the mother with her infants, may receive either a Medical (including midwifery) Order, with or without other Outdoor Relief; or may be provided with maintenance and medical treatment in a Poor Law Institution.

(i.) *Domiciliary Treatment of Expectant Mothers and Mothers with Infants.*

We find to-day an extraordinary diversity of policy between one district of England and Wales and another with regard to Domiciliary Treatment of mothers—a diversity which bears no relation to the character of the district, to the needs of the mothers or to the rate of mortality among the infants. This diversity is even prescribed and insisted on by the Local Government Board for England and Wales; though for what reason and with what object we have been unable to discover. In those parts of England and Wales, (comprising two-thirds of all the Unions, scattered quite indiscriminately up and down the country) which are under the Outdoor Relief Regulation Order, expectant mothers and mothers with infants may be lawfully treated in their own homes, whether they are married or single, whether their husbands are able-bodied or not, and whether or not they have already had illegitimate children. In other parts of England and Wales, comprising about one-fifth of the Unions, where the Outdoor Relief Prohibitory Order is alone in force, expectant mothers and mothers with infants cannot lawfully receive

Domiciliary Treatment, whatever their character or circumstances, if they have able-bodied husbands, or if (being unmarried) they are themselves able-bodied. In yet other parts of England and Wales where the Outdoor Labour Test Order or the Workhouse Modified Test Order is in force along with the Outdoor Relief Prohibitory Order, the expectant mothers or the mothers with infants, having able-bodied husbands, may lawfully receive Domiciliary Treatment, but only if the husbands fulfil the conditions of work in the Labour Yard or residence in the Workhouse. But the diversity of usage with regard to Domiciliary Treatment thus prescribed for mothers and infants by the Local Government Board for England and Wales, according to the geographical situation of their homes—whatever may be its reason—is thrown into the shade by the still more extraordinary diversity of policy among the Boards of Guardians that we have already described. We need refer here only to the fact that whereas many Unions in England refuse Outdoor Relief altogether to expectant mothers who are unmarried, and to the mothers of illegitimate children,* other Unions grant it frequently in such cases. Sometimes, as at Norwich, the Board of Guardians will withhold it until the infant is at least three months old;† on the other hand, the Board of Guardians of the little urban Union of St. Thomas, Exeter, not only grants Outdoor Relief to the mothers of illegitimate children, but even provides expressly in its standing rules, without objection by the Local Government Board, for the expectant mothers of such children, at a regular scale of 1s. 6d. per week prior to the birth and 3s. 6d. per week for four weeks afterwards.‡

Quite as important, however, to the community, as the diversity of treatment of expectant mothers and of mothers with infants, is the almost invariable inadequacy of the provision made under Domiciliary Treatment for the proper nourishment of the child. An expectant mother, if granted Outdoor Relief at all, is seldom given more than 2s. or 3s. per week, no consideration being given to the special needs of her condition. "It is unfortunate," says a Medical Officer of Health, "that in Poor Law administration (so far as I know) no particular instructions are issued to Relieving Officers to grant special food to women who are about to become mothers."§ In due course the Midwifery Order, if granted, provides the attendance of the District Medical Officer, or (in a few districts) of a salaried midwife; but it is seldom accompanied by any nursing; and the doctor does not by any means always recommend the grant of "medical extras." When the infant is born, the Outdoor Relief granted is, as we have described, usually only 2s. or 3s. per week—often, indeed, only 1s. or 1s. 6d. a week for the child, and nothing for the mother! Only in one or two Unions, such as Bradford, is care taken to see that the Domiciliary Treatment, if decided on, is accompanied by really adequate provision for subsistence.

Combined with this inadequacy is the wholly unconditional character of the treatment afforded. We cannot discover that, when a Board of Guardians decides thus to maintain on Outdoor Relief a destitute expectant mother or a mother with infants, it ever occurs to anyone to accompany the money with any sort of instructions as to prenatal conduct and health;|| or with any sort of directions as to how the child should be reared.¶ In view of the fact that the mothers are, in the great majority of cases, extraordinarily ignorant on these points, it does not seem to us economical that so large an expenditure should annually be incurred from the Poor Rate in order to provide for the birth of infants, without any precautions being taken to prevent these infants from dying within a few days or weeks of birth. Nor do we find the Destitution Authorities in any part of the Kingdom taking any heed whatsoever of the conditions under which the 50,000 infants

§ "Report on the Prevention of Infantile Mortality," by Alfred E. Harris, Medical Officer of Health, Islington, 1907, p. 25.

|| "It is very doubtful whether we shall ever be able to influence materially those [deaths] occurring in the first month of life, except by advising the mother as to the conduct of her life while pregnant, most of these deaths being primarily due to the debilitated condition of the child at birth." (Annual Report of the Medical Officer of Health for Salford, 1906, p. 19.)

¶ "There is," says a Medical Officer of Health, "probably no ignorance so profound as is that associated with the care of infants, and no lack of knowledge attended by such disastrous results as is that of the feeding of babies." (Report on the Prevention of Infantile Mortality, by Alfred E. Harris, Medical Officer of Health, Islington, 1907, p. 10.)

under five years of age, whom they have always on their books as Outdoor paupers,* are being reared. The mothers may nurse their infants themselves, or may use the most insanitary bottles; they may feed their infants properly, or give them potatoes and red herrings; † they may lock them up in a deserted room all day (since the Guardians make it necessary for the mothers to go out to work), or they may leave them (with dummy teats or "comforters") with the most careless neighbours; ‡ they may overlay them in bed; they may even insure their little lives with one of the Industrial Insurance Companies, and so use some of the Guardians' Outdoor Relief money thus hideously to speculate in death—all without the slightest instruction, without any warning or prohibition, and without even any attention by the Destitution Authority, out of whose funds these infants are being maintained. Under these circumstances we cannot but regard it as unfortunate that the Local Government Boards for England and Wales, Scotland and Ireland respectively, should never have procured any statistics as to the mortality among the 5,000 infants under one year whom the Destitution Authorities are now maintaining on Outdoor Relief.§

Some Boards of Guardians, as we have seen, solve the problem by refusing Outdoor Relief and even a Midwifery Order, to expectant mothers, or to the mothers of infants, unless under exceptional circumstances, or with deterrent restrictions. We are indebted to Mr. Theodore Dodd|| for pressing on our attention the fact that the rate of infantile mortality appears to be specially high in some Unions in which Outdoor Relief is practically always refused; and that no attempt is made by the Boards of Guardians actively to prevent such grave results of the destitution in their districts which it is their statutory duty to relieve. Mr. Dodd's statistical data are admittedly very imperfect, but the general purport of his evidence receives confirmation in other quarters.

"A distressing element of the work," we read in the Annual Report of the Medical Officer of Health for Kensington, "is the poverty which, during the lying-in period, reduces many a mother to a state of destitution, rendering it impossible for her properly to nourish her infant in the natural way. . . . I think," adds the Health Visitor, "I must have seen quite fifty mothers who, I have every reason to believe, were in a state of dire need, with their babies of a few days old lying beside them. . . . Appeals to the Relieving Officer for Out-relief in such cases, unless the District Medical Officer is in attendance, result in the 'offer of the House,' of which the mothers of families are unwilling to avail themselves."¶

With regard to the very common restriction of Midwifery Orders, many of our medical witnesses attributed serious consequences, in the low standard of health of working women, in the excessive infant mortality, and in various defects in the children who survive, to the frequent lack, in poor families, of qualified attendance at childbirth.** "In many emergencies," we were told by a great Medical authority, "there is no time to obtain a Medical Order from the Relieving Officer; and by the time medical help is secured

* In England and Wales alone, on March 31st, 1906, 40,344 under five years of age; in Scotland, 6,460; in Ireland, 3052.

† "No milk is given," we were informed (Evidence before the Commission, Q. 25373, Par. 142), by the Relieving Officer, in some Unions, when he gives relief in kind, unless it is an express recommendation of the Medical Officer, even where there are infant children and the mother is starving. We have it in evidence that, in one case in 1905, where application for relief was made by a man who was out of work, for his starving wife and infant twins of seven weeks old, the Relieving Officer gave, as a case of "sudden or urgent necessity," some rice and flour, bread and treacle (!); but no food for the babies beyond two tins of condensed milk in the course of six weeks, and no money to buy it with. One of the babies died; and the Coroner elicited the fact that the mother had tried to keep it alive on biscuits dipped in condensed milk. On the facts being subsequently represented to the Board of Guardians, the action taken by the Relieving Officer was not disapproved of (*Ibid.*, Qs. 25531-25542); nor did the case lead to any Circular by the Local Government Board directing proper food to be supplied to infants, when they were relieved in kind, on the plea of "sudden or urgent necessity."

‡ At Woolwich, so great was the infantile mortality from these causes, that the Medical Officer of Health was driven to remonstrate with the Woolwich Board of Guardians, asking them "to allow sufficient Outdoor Relief to mothers with young infants, for whom the Guardians were responsible, so that the mothers would not be obliged to go out to work and leave the baby to be fed with a bottle by some neighbour." (Annual Report of the Medical Officer of Health for Woolwich, for 1905, p. 22.)

§ In England and Wales alone, on March 31st, 1906, 4,616 under one year old; in Scotland, 590; in Ireland, 251.

|| Evidence before the Commission, Qs. 25625-25682; and Appendix No. III. (A) to (G) to Vol. III.

¶ *Ibid.*, Q. 25373 (Par. 90); Annual Report of Medical Officer of Health for the Royal Borough of Kensington, for 1905.

** See especially the Evidence before the Commission of Dr. E. J. Maclean, Senior Gynæcologist at the Cardiff Infirmary, Qs. 49492, 49623.

the opportunity for successful treatment may have passed.”* We were, for instance, confidently informed that a fourth or one-third of those blind from childhood—a large proportion of whom become permanent paupers—are blinded shortly after birth by *ophthalmia neonatorum*, which can usually be prevented by simple medical care.† Under these circumstances we have been surprised to find that—apparently without objection by the Local Government Board—many English Boards of Guardians have rules restricting the grant of Midwifery Orders—not, as might be supposed, to mothers in their first confinements—but to the experienced mothers only who have already had three children;‡ or four children,§ or sometimes even to those only who have had five children, who have all lived.|| Our Medical Investigator happened himself to see the working of this restriction.

“Application was made to the Relieving Officer for an order for the doctor to attend a labourer’s wife in her fifth confinement. But it turned out that only two of the four children previously born were still alive, and the Relieving Officer declined to grant the order, but promised to mention the matter to the Guardians, though without much expectation, as I understood, that they would break through their rule. Necessarily under the Poor Law, the point of view in these cases is solely the financial circumstances of the applicant, not the future health of the prospective mother. Manifestly for her health the most important confinement is not the fifth, but the first. If not properly guided in it, illness may result which will lead to permanent ill-health. But a labourer, it is held, should be able to pay for the doctor for the first confinement, and so it is only when the family has increased to four that relief is given.”¶

We feel compelled, at this point, very seriously to draw attention to a diversity of treatment of these cases in Scotland, which results in no little preventible suffering and mortality, if it does not also have consequences gravely affecting domestic morality. Under the Scotch Poor Law, as it has been interpreted by the Law Courts, an expectant mother, or a mother with infants, who is the wife of an able-bodied man, may not, however dire her necessity, lawfully be granted by the Destitution Authority, whether in the Poorhouse or in her own home, either medical or midwifery attendance, or food or other necessities, *so long as she is living with her husband*. In fact, the grant of any relief whatever to such a woman, even to save her or her infant from immediate death, and even with the sanction or consent of the Parish Council or the Local Government Board, would be an illegal payment, liable to be surcharged at audit. On the other hand, the expectant mother, or the mother with infants, who is unmarried, or whose husband has deserted her, may, if destitute, not only be granted adequate medical attendance and maintenance, whatever her past or present conduct or character, but can actually claim it as of legal right, whatever the Parish Council may decide in the matter, and can enforce this claim by summary appeal to the Sheriff.

We think that this extraordinary law should be at once amended, so as to give the necessitous married woman and the legitimate child at least as good a position as the unmarried or deserted mother, and the illegitimate child. At present, the Scottish Poor Law—we could scarcely have believed it if it had not been testified to us by the Legal

* *Ibid.*, Qs. 49492, 49623. This is confirmed by the Poor Law Medical Officers themselves. Their Council, we were informed, “think that much suffering is likely to accrue to poor lying-in women, owing to friction arising between District Medical Officers and Poor Law officials, owing to the refusal of midwifery orders by the latter, where cases of urgency have been attended by the former without first getting these orders. It is believed that the tendency will be more and more for the District Medical Officer to decline altogether—as he is legally entitled to—all pauper cases where a midwifery order is not forthcoming.” (*Ibid.*, Q., 33391, Par. 12.)

† *Ibid.*, Qs. 28169 and 49516; see also Report on the Medical Services of the Poor Law and the Public Health Departments, p. 21.

¶ Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, p. 110. We notice that the Medical Officer of Health of Hawarden (Cheshire) where the rate of infantile mortality is excessive, and actually increasing, expressly attributes it, apart from maternal negligence, to the want of medical attendance at child-birth and during lying-in, and in the inadequacy or unsuitability of the food afforded to the infant. (Annual Report of the Medical Officer of Health for the Hawarden Rural Sanitary District, for 1905.)

Member of the Local Government Board for Scotland *—deliberately puts a premium on irregular sexual intercourse, on permanent unions without marriage, and on the desertion of wives and children by their husbands and fathers. The grave results of this law are, we are informed, familiar to those acquainted with the lives of the poor in the great cities of Scotland. One of the least of these is the simulation of wife-desertion which is frequently practised, with the wife's connivance, by respectable husbands who find themselves unable to pay the expenses incidental to another birth. But there are more serious evils. We cannot help connecting the continuance in Scotland of a high rate of illegitimacy, the prevalence of irregular unions, and the increasing frequency of wife-desertion,† with the state of mind that has permitted this disqualification of the married woman living with her husband to remain on the statute-book, and even to find defenders.

We are aware that the more humane Parish Councils seek to evade this extraordinary provision of the Scotch Poor Law, by directing their Medical Officers, when wives or legitimate children are patently starving, to find some excuse for certifying the husband or father as non-ablebodied, however ablebodied he may in fact be.‡ We are not satisfied that this "subterfuge" as it was described §—we prefer to say this demoralising evasion of an immoral law—is sufficiently universally practised by Parish Council Officers, or is sufficiently widely known among respectable working-class families, destitute through lack of employment, to check the preventible suffering and mortality entailed by the law itself. "In point of fact," admitted the Medical Member of the Local Government Board for Scotland, "many cases of serious hardship do arise."||

It has been urged that the community has no reason to regret the large and unnecessary infantile mortality, which evidently results from the restriction of Domiciliary Treatment in England and from the refusal of all relief in Scotland to the dependents of ablebodied men, and from the ignorance and the suffering of the poorest class of mothers. It is suggested that this preventable mortality is but one aspect of the "survival of the fittest," by which the community is actually strengthened and the race improved. We prefer to say nothing as to the demoralisation of character which, in our judgment, attends upon any such deliberate condemnation of thousands of human beings to death or any such reasoned acquiescence in their preventable deaths, in order that the survivors may somehow be benefited. What will appeal more to those who take this view is the unmistakable evidence that there is no scientific justification for the assumption that the preventable deaths of infants either result in the survival of the fittest—whatever definition may be given of that term—or tend to the improvement of the race. The competition for the means of subsistence does not take place among the infants themselves. There is no evidence that the babies who perish in the first year of life, owing, not to their own physical or mental characteristics, but to the ignorance or the poverty of their mothers, are in any way mentally or morally inferior to those who survive; or even that they are physically inferior to the infants of other families who survive only by reason of elaborate and continuous care. We have to remember that, according to the best scientific evidence, "between 80 per cent. and 90 per cent. of the babies born in this country are born healthy. The greater part of the disease and mortality among infants is *not* due to ante-natal conditions; it is due entirely to the fact that a large number of babies cannot obtain food,"¶ and this virtual starvation of the infants is quite independent of their own physical fitness or strength. We cannot even assume, merely because the mothers are poor, that these children come of stocks in any way inferior to the average.** What is, however, more

¶ The Infants' Hospital and its Work: a lecture delivered by Ralph Vincent, M.D., B.Sc., M.R.C.P. March 6th, 1908, p. 19.

** Even illegitimacy is no proof of inferiority of stock. In visiting Poor Law institutions it has been noted that, whilst in some districts the illegitimates seemed mostly the backward and badly formed children, those in Hampstead, Kensington and Chelsea were often the most refined, well-built and promising.

important to those who have to consider (and perhaps to bear the expense of) the future maintenance of all the children is that the premature deaths of these infants imply a disastrous weakening of those who just escape death.

"The infantile mortality question," says a high medical expert, "is one, therefore, of extreme importance . . . in regard to the physique of the nation. While thousands perish outright, hundreds of thousands who worry through are injured in the hard struggle for existence, and grow up weaklings, physical and mental degenerates. *A high infantile mortality rate, therefore, denotes a far higher infantile deterioration rate, and this unwelcome fact must not be lost sight of.*"*

Sir John Simon, Chief Medical Officer to the Local Government Board, pointed out a generation ago that—

"A high infantile mortality almost necessarily connotes a prevalence of those causes and conditions which in the long run determine a degeneration of the race."†

"The more we investigated," significantly declares a scientific expert on the disease of children, "the more we were struck with another factor, which we regard as even more serious, and that is the *condition of the infants that do not die*. The statistics of infantile mortality at the present time afford a very important index of the serious conditions that affect infant life. This mortality is not by any means the worst result of the conditions as they are found in this country. By far the most serious matter, affecting the commonwealth in every possible way at the present time, is the condition of the babies who do not die, but who are reared in a condition of hopeless malnutrition. Let us consider, for instance, one disease—rickets. Its effects on the nervous system are of the most far-reaching character. Of the 'convulsions' which cause the death of babies at about twelve months of age, rickets is practically the sole cause. At a later stage of life the manifestations of the injuries caused by this disease are seen in epilepsy and in insanity. The lunatic asylums are largely occupied at the present time by cases of insanity arising from injuries of the nervous system by rickets. Adenoid growths, one of the common troubles of childhood, are practically caused entirely by deformed structure due to rickets. If you go to the chest hospitals and select the patients who are under treatment for pulmonary tuberculosis, you will find the majority of them are suffering from deformities of the chest due to rickets. The pulmonary disease is simply a secondary result of the injuries to the chest, and of the injuries to the tissues arising from rickets. All sorts of deformities which go to make up the number of cripples that we are acquainted with are caused by the same disease. And in addition to specific disease and deformities, rickets is responsible for a general and permanent enfeeblement of mind and body."‡

In short, we do not feel sure, in view of the scientific evidence that has been adduced, whether, in a final analysis, the excessive infantile death-rate caused by maternal poverty and ignorance, is not really intimately connected with the annual recruiting of able-bodied destitution and the "Unemployed." Has not Dr. A. K. Chalmers § said: "The dead baby is next of kin to the diseased baby, who in time becomes the anæmic, ill-fed and educationally backward child, from whom is derived later in life, the unskilled 'casual' who is at the bottom of so many of our problems"?

(ii) *The Workhouse as Maternity Hospital.*

But a large and increasing part of the Poor Law provision for child-bearing women takes the form of Indoor Relief. Few persons realise the extent to which, in England and Wales, Scotland and Ireland alike, the Workhouses or Poorhouses are being used as Maternity Hospitals. In Glasgow the number of births in the Poor Law Institutions of the city has doubled in five years.|| The Workhouses in the smaller rural Unions of England, Wales, and Ireland, and the Combination Poorhouses of Scotland, have perhaps only half a dozen confinements each in a year. In the town Workhouses they are numbered by dozens, or by scores. And in such populous Parishes or Unions as Liverpool, West Derby, Belfast, and Glasgow, a baby is born in the Workhouse nearly every day. We regret that the Local Government Board was unable to furnish us with any statistics as to this subject. From such statistics as are available we gather that the annual number of

§ Medical Officer of Health for Glasgow.

|| Evidence before the Commission, Q. 58087 (Par. 93). At Glasgow, the Destitution Authority has gone so far as to provide a well-equipped modern maternity section of its new buildings.

births in the Poor Law institutions of the United Kingdom probably exceeds 15,000. In the thirty-four lying-in wards of the Poor Law institutions of the Metropolis, nearly 3,000 births occur annually.* In the Irish Workhouses the number actually reported was, in 1906-7, 2,012. From exact returns obtained by one of our members from 450 out of the 645 Unions in England and Wales, we estimate that of the 11,000 children thus born in the Workhouses of England and Wales, about 30 per cent. were described as legitimate and 70 per cent. as illegitimate, the latter amounting to about 18 per cent. of all the illegitimate births.†

It is interesting to notice from the statistics that a large, and, as we have some reason to believe, an increasing proportion of these mothers, do not appear to be, in the ordinary sense of the term, destitute persons. They are usually not in receipt of Poor Relief of any kind prior to their lying-in; and they voluntarily take their discharge, with the infant, within a few weeks of its birth. In the Workhouses from which exact statistics were obtained, more than half the mothers in 1907 discharged themselves within a month—one-eighth of them, indeed, within a fortnight. In comparatively few cases are these women noted as being re-admitted to the Workhouse during the ensuing twelve months. In fact, they resorted to the Workhouse simply in order to be delivered.

The women who thus resort to the Workhouse in their hour of need are, we find, of all nationalities, all grades of character and conduct, and all degrees of intelligence. In the Metropolis especially there are many domestic servants, laundresses and the humbler members of such nomadic professions as that of the theatre and music-hall.§ “Poor girls refused the shelter of their own homes in time of trouble; syphilitic patients; women who have been knocked about, neglected, and ill-treated up to the last minute; cases actually in labour when admitted; in fine, all sorts and conditions of poor women who have nowhere else to go, find their way to the Poor Law maternity wards where,” optimistically observes an Inspector, “they receive the most skilful and tender care for themselves and their little ones.”|| Some of these are “Ins and Outs” of a peculiar type, recurring at something like twelve months’ intervals. An examination made by one of our members showed that in many cases the same woman’s name will be found occurring several times at varying intervals in the maternity ward register. In one case a name was pointed out as that of a person who had been in for three confinements, it having been verified that the woman in question had been in for three other confinements in the neighbouring Union, thus having been delivered of six illegitimate children at the public expense.

We were surprised to find that there is no system of classifying those who come in for confinement, a defect which, from the evidence of Matrons and Midwives, as well as of Poor Law Guardians, leads to the moral deterioration of many of those women who might otherwise have been induced to lead respectable lives.¶ This is true of the Workhouses and Poorhouses of England and Wales, Scotland and Ireland alike. “In a large number of Workhouses,” reports the Vice-Regal Commission on Poor Law Reform in Ireland, “can be found in the same ward young girls awaiting the birth of their first baby, unmarried mothers with an infant or a child under two years of age, and unmarried mothers with two or more illegitimate children. These girls and women are also employed throughout the Workhouse as scrubbers, attendants, and laundresses, and continually have opportunities for conversation with one another and with other female inmates. The result

† Annual Report of Local Government Board for Ireland, 1907-1908, pp. 446-67.

‡ It has been suggested that the mother’s description of herself as married or unmarried is not to be relied on. From inquiries made of Poor Law officials, we are inclined to believe that the great bulk of the mothers describe their condition correctly, and that, where a false statement is made, it is, perhaps, as likely to err on one side as on the other. Some unmarried women will describe themselves as married, in order to hide their shame; or because they have really been living in durable (though unlegalised) union. A check upon this is the obstacle it places in the way of obtaining from the father any subsequent contribution towards the child’s maintenance. On the other hand, some married women describe themselves as unmarried, in order to prevent any attempt by the Poor Law Authorities to recover the cost of their relief from their husbands, or to prosecute these for allowing their wives to become chargeable. In Scotland, it is only by some such subterfuge that a destitute wife, living with her husband, can lawfully receive relief.

§ Evidence before the Commission, Appendix No. XXVI. (A), Par. 13, to Vol. I.

is that in most cases girls lose a sense of shame and become more and more degraded." * "Nowhere," declared to us the Lady Inspector for the Local Government Board for England and Wales, "is classification more needed than in the maternity wards. The unavoidable and close intercourse between the young girl, who often enters upon motherhood comparatively innocent, and the older woman who is lost to all sense of shame and who returns again and again to the maternity wards for the birth of her illegitimate children, constitutes a grave danger. Too often the older woman invites the friendless girl to share her home on leaving and so leads her on to further ruin." † "We believe" declares the Vice-Regal Commission, with regard to Ireland, "that in the enormous majority of cases a Workhouse life debases such girls, who get used to their companions and surroundings; and they leave and return to the Workhouse as necessity compels or as their own blunted feeling inclines them." ‡ And the demoralisation becomes, we might almost say, a matter of inheritance. "We have frequently found in the Workhouse," declares the same Commission, "an illegitimate baby, its mother and its grandmother; and in one case we were shown in the same Workhouse a baby, its mother, its grandmother and its great-grandmother, or four illegitimate generations in the female line." §

We find that it is generally assumed that the women admitted to the Workhouse for lying-in are either feeble-minded girls, persistently immoral women, or wives deserted by their husbands. Whatever may have been the case in past years, this is no longer a correct description of the patients in what have become, in effect, Maternity Hospitals. Out of all the women who gave birth to children in the Poor Law institutions of England and Wales during 1907, it appears that about 30 per cent. were married women. In the Poor Law institutions of London and some other towns the proportion of married women rises to 40, and even to 50 per cent. It has in some districts become common, we are informed, for the wives of unemployed but respectable working-class men to resort to the Workhouse for their lying-in, in order to escape the ordeal of another confinement with no money coming in.||

The majority of these mothers, as we have mentioned, whether married or unmarried, stay only a short time in the Workhouse, ¶—sometimes as little as ten days—and no arrangements seem to be made for usefully occupying those who remain longer in a convalescent ward, or for affording any of them any kind of instruction in the management of their own health, or in the rearing of their infants.** "In their time after working hours they are compulsorily idle." Expectant mothers are not even allowed to prepare for the coming event by making any clothes for the infant; still less are they instructed how to do so. "It is," we were informed, "against the Workhouse rules," for expectant mothers to make the baby clothes, which "are made in the sewing-room by the older women." †† "No instruction or help of any kind," observes a lady Guardian, "is given to young mothers. There is no one to give it." ‡‡ We have observed in our own inspections of Workhouses that even the part taken by the mothers in the management and upbringing of their children is decided more from the point of view of what is convenient to the institution, than from the idea of developing any sense of responsibility in the mother. The nursery is usually in charge of a paid attendant, not a trained nurse, but a woman of some experience in the care of children, who is aided by "grannies" or old pauper women who nurse the

* Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., pp. 41-42.

† Evidence before the Commission, Appendix No. XXVI. (A), Par. 14, to Vol. I.

‡ Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., p. 42. It is not unimportant in this respect to note that the sanitary accommodation in Workhouses for women and girls is sometimes so arranged, as women Guardians have brought to our notice, as to render impossible all delicacy or refinement (Evidence before the Commission, Appendix No. LXXXV., Par. 26, to Vol. IX.).

§ Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., p. 42.

|| At Glasgow, for instance, "a considerable number of married women" are confined in the Poor Law institutions (Evidence before the Commission, Q. 57087, Par. 96); more than one-third of the births being legitimate. (*Ibid.*, Par. 93.)

¶ "The usual habit now in Workhouses is that after three weeks or twenty-eight days the girl very often takes her discharge, and also that of her child, with the consequence that the mother may be in a good physical condition of health, but she has very little notion of what her duties as a mother are. The ultimate result is that before the child is six or eight months old, we very often get the child back in a practically crippled condition, and the child has not very much further chance in life." (*Ibid.*, Q. 26735.)

** *Ibid.*, Qs. 14507-14512.

†† *Ibid.*, Appendix No. LXXXV., Par. 26, to Vol. IX.

‡‡ *Ibid.*, Appendix No. LXXXV. (B), Part II. (letter 24), to Vol. IX.

babies, and younger pauper women who do the scrubbing and charing. These are not usually mothers of children in the nursery. The matron finds that the children of such mothers cry after them, and it delays the work, and she prefers to employ the mothers elsewhere.* If mother and infant remain in the institution for nine months or a year the separation between them becomes complete. This being the organisation of the Workhouse, those mothers who come in for a temporary period, to whom some real training in responsibility, etc., would be valuable in their future life, have necessarily to fall in with the existing arrangements. When they leave the Workhouse with their babies, they pass officially quite out of the ken of the Destitution Authority, which takes no heed of how they are going to live, or whether, under the circumstances, the baby born at so much expense to the Poor Rate, is likely to live or die. The unmarried mother who takes out her infant finds on her no sort of pressure to take the trouble to keep it in health, or even to keep it alive.† There is not even any notification of the cases to the Local Health Authority, which is often simultaneously going to great expense in endeavouring to watch over all the infants in the district. "We have all births reported to the Health Department," said one Medical Officer of Health, "and it is the business of the Women Inspectors to visit and advise the mothers as to the feeding and rearing of infants. The infants who are particularly likely to die are the illegitimates. The mothers of these infants are to a large extent confined in the Workhouse Hospitals; and it is difficult for us to get the addresses of these children when they leave the Workhouse Hospitals, in order that they may be supervised." The result is, so far as can be gathered from those who come in contact with the facts, that the illegitimate babies whom their mothers take out with them after their two or three weeks' stay in the Workhouse lying-in ward only rarely survive. Many of them are dead within a few weeks. Here as elsewhere, in fact, we see the costly provision made by the Destitution Authorities so organised as to break down any sense of personal obligation on the part of the recipient, and so narrowly restricted as to avoid any stimulus or incentive to parental responsibility.

The only remedy for this grave social neglect that has been suggested to us on behalf of the Destitution Authorities is that they should have power to detain the mothers in the Workhouse for a certain period after childbirth.‡ We have been unable to ascertain how far this compulsory detention is advocated for the purpose of educating the mothers; how far for that of deterring them from "coming on the rates"; how far for that of punishing them for having caused expense; and how far for that of preventing them from further breeding. Whatever may be the value of compulsory detention as a remedy, it is, we think, clear that no such power can properly be granted to a Destitution Authority. In no case is the General Mixed Workhouse a place in which persons ought to be compulsorily immured. If the object of the detention is education, all our evidence goes to prove that the Destitution Authority, from its very nature, cannot be an efficient teaching body. If the object be deterrence or punishment, we cannot imagine any justification for its infliction without judicial trial and sentence for some definite offence. But we apprehend that the suggestion is really intended to apply only to those unmarried mothers who are so feeble-minded or so mentally or morally defective as to be unable to take proper care of themselves in the competitive world. We doubt whether, in practice, it will be found possible, with any sort of responsible medical and judicial discrimination, to bring any large proportion of women into this category. We agree with the Royal Commission on the Care and Control of the Feeble-minded that all such cases, whether few or many, ought to be wholly removed from contact with the Destitution Authority; and that they should be dealt with according to their condition, whether by detention under proper certificate or not, by the Authority responsible for all grades of the mentally defective.§

But the aspect of the Poor Law maternity hospital with which this chapter is primarily concerned is that relating to the infant. Early in our evidence our attention was drawn by Dr. Fuller, Medical Inspector of the Local Government Board for Poor Law Purposes, to the apparently excessive infantile mortality prevailing in Poor Law institutions. In the course of an inquiry into the care of infants made some years ago, he had

* "The discipline of the nursery is difficult," says the Lady Inspector of the Local Government Board, "owing to the number of mothers who return periodically [from other parts of the workhouse] to visit their babies, and who sleep with them in the night nurseries." (*Ibid.*, Appendix No. XXVI. (A), Par. 22, to Vol. I.)

† We desire, however, to recognise the admirable work unofficially done by the Ladies' Committees in connection with some Boards of Guardians, in seeking to befriend the young mothers, and to find them suitable situations on discharge. (*Ibid.*, Appendix No. XXVI. (B) to Vol. I.).

‡ *Ibid.*, Qs. 14044, 14243, 15619, 22136 (Par. 6), 22164-22166, etc., etc.

§ Report of the Royal Commission on the Care and Control of the Feeble-minded, 1908.

obtained incomplete returns from 546 workhouses, which showed that out of an average total of 3,719 infants under two years of age always in the nurseries and lying-in wards, there had been an average number of deaths per annum during five years of 1,315,* or more than one-third of the average infant population annually. This very alarming proportion of deaths among a constantly changing stream of infants is, however, not statistically comparable with any standard death rate; and the Local Government Board does not seem to have followed up the subject by more exact inquiry. We were, therefore, interested in the mortality statistics of the 8,483 infants who were born during 1907 in the Workhouses of the 450 Unions responding to the inquiry made by one of our members. Out of these 8,483 infants, no fewer than 1,050 actually died on the premises before attaining one year. The Registrar-General, as is well known, gives, for the whole population, the number of babies, out of every 1,000 born, who die before the expiration of certain days, weeks and months of the first year of life. Similarly, there has been worked out for these 8,483 babies born in 450 of the Poor Law institutions in England and Wales during 1907, taking only the deaths actually occurring in the institutions, the proportion dying within corresponding periods of their first year—making the assumption, for the purpose of comparison of death-rates, that those who left the Workhouse within the year had a death-rate equal to those remaining in the institution. We append the result in the following table:—

NUMBER OF INFANTS, OUT OF EVERY 1,000 BORN IN THE POOR LAW INSTITUTIONS OF 450 UNIONS IN 1907, WHO DIED WITHIN THOSE INSTITUTIONS WITHIN THE PERIODS SPECIFIED; TOGETHER WITH CORRESPONDING STATISTICS FOR THE WHOLE OF THE BIRTHS IN ENGLAND AND WALES AND IN LONDON RESPECTIVELY FOR 1906.

| Number of infants on whose experience from birth the above rates are based - | 1,479 | 4,421 | 1,002 | 1,581 | | |

This result appears to us somewhat startling. The infantile mortality in the population as a whole, exposed to all dangers of inadequate medical attendance and nursing, lack of sufficient food, warmth and care, and parental ignorance and neglect, is admittedly excessive. The corresponding mortality among the infants in the Poor Law institutions, where all these dangers may be supposed to be absent, is *between two and three times as great*. Out of every 1,000 babies born in the population at large, 25 die within a week and 132 are dead by the end of the first year. For every 1,000 children born in the Poor Law institutions, 40 to 45 die within a week, and, assuming the mortality among those who are discharged to be the same as those remaining, no fewer than 268 or 392 will be found to have died by the end of the year, the number varying according to whether we take the experience of the Poor Law institutions for legitimates or for illegitimates, in the Metropolis, or elsewhere.*

Corresponding statistics were obtained from the Poorhouses of eight great urban parishes in Scotland. In these institutions the births were only 391, but of these no fewer than 56 died on the premises before attaining the age of one year. Making exact allowance for the varying periods at which the other infants left the Poorhouse in the same way as has been done for England and Wales, these figures indicate that if none of the infants had been discharged, more than half of them would have been found dead before the expiration of one year. The infantile mortality for these eight large Scottish Poorhouses appears, in fact, to be much worse than that of the English Workhouses. For Ireland, statistics were obtained only for one large Workhouse, and in this case the results were as bad as those of the Scottish Poorhouses.

* We are fully aware of the shortcomings of the statistical data here analysed. It is never quite satisfactory to compare the mortality rates of institutions, having only limited numbers of inmates, placed under exceptional circumstances, and having peculiar antecedents, with those of the population at large. Moreover mortality statistics for a single year are always apt to be accidentally misleading. But there can be no doubt that, out of these 8,483 born in the Workhouses, 1,050 did die on the premises within twelve months of birth, notwithstanding that most of the infants were taken away long before a year had elapsed. Whatever caution may have to be exercised in drawing conclusions from the data, they are, we suggest, amply sufficient to warrant careful official inquiry; and we put them forward with no further claim. We only regret that the Local Government Boards for England and Wales, Scotland and Ireland, respectively, do not obtain annually, as a matter of course, properly corrected mortality statistics for the preceding five or ten years, with regard to each Poor Law institution. We have not been able to obtain exactly corresponding statistics for the infants born in voluntary maternity hospitals. But their annual reports give the total number of births and infantile deaths within the institution; and the stay in those of the Metropolis is so very generally a fortnight, that these statistics may be compared roughly with the deaths in the Poor Law institutions during that period after birth. The proportion of infantile deaths to the births during 1907 was, in the City of London Lying-in Hospital, 20·49 per 1,000; in the East End Mothers' Home, 21·07 per 1,000; in the Queen Charlotte's Lying-in Hospital, 26·1 per 1,000; and in the General Lying-in Hospital, 59·3 per 1,000; or taken together, out of 3,414 births, 30 per 1,000—to be compared with the 46 to 53 per 1,000 recorded of the Poor Law institutions as a whole. In the well-known Rotunda Hospital at Dublin, out of 2,262 births in 1906, there died in hospital only 30 infants; in 1907, out of 2,318, only 21 infants. The usual stay in hospital is, however, apparently only seven days; so that the extraordinarily small proportion of infantile deaths—13 or 9 per 1,000 must be compared with the 25 per 1,000 for England and Wales, and the 40·1 to 44·9 per 1,000 of the Workhouses for the first week. We have not been able to obtain statistics as to the comparative mortality of the mothers in the maternity wards of Workhouses and voluntary hospitals respectively, and under domiciliary treatment. This too, we think, calls for inquiry.

It is interesting to observe that these heavy infantile death-rates in the Poor Law institutions do not seem to bear any exact relation to legitimacy or illegitimacy. Taking particular ages or particular districts, the death-rate among illegitimate infants is sometimes below and sometimes above that for legitimate children. Thus, for the Poor Law institutions of London taken together, the death-rate is, for the whole year, much higher among the illegitimate than among the legitimate. For the institutions outside London, on the other hand, the death-rate for the year is actually lower among the illegitimates than among the legitimates. The variations in this respect as between the different ages, whether in London or elsewhere, are apparently quite without connection with legitimacy. It would seem as if the protection and food enjoyed by the infants in the workhouse, legitimate and illegitimate alike, removed the presumption against the survival of illegitimate infants.

Equally interesting is it to notice that the excess of infantile mortality in the Poor Law institutions is actually greater at the ages between one and six months, than during the first month of life. Whatever allowance should be made for the fact that the Poor Law institutions receive many cases in which the mother has been exposed to adverse conditions,* it is impossible to avoid the conclusion that the arrangements of the workhouse nurseries—to which Dr. Fuller so pointedly drew our attention—need serious examination.

This inference seems to receive some confirmation from the fact that the excessive infantile mortality in the Poor Law institutions is not universal; and that some have apparently a much higher death-rate than others. We do not wish to attribute too much importance to the statistics of particular institutions for so short a period as one year; but it cannot be right that there should be Workhouses in which 40 per cent. of the babies die within the year. When we find that out of the 493 infants born in ten Workhouses (having each not fewer than twenty births in the year) there were only fourteen deaths in the year, or 3 per cent., whereas out of the 333 infants born in ten other Workhouses (having each not fewer than twenty births in the year) there were as many as 114 deaths, or 33 per cent. we think it is high time for systematic enquiry. For these startling infantile death-rates, whether in all the Poor Law institutions, or in the worst of them, do not appear to result from epidemics, in the ordinary sense of the word. We do not find the deaths occurring in bunches, or even in excess in summer as compared with winter. It has been suggested to us, by persons experienced in the peculiar dangers of institutions for infants of tender years, that the high death-rates—especially the excessive death-rates after the first few weeks of life, right up to the age of three or four—may be due to some unnoticed adverse influence steadily increasing in its deleterious effect the longer the child is exposed to it. In the scarlet fever wards of isolation hospitals, it has been suggested that the mere aggregation of cases may possibly produce, unless there are the most elaborate measures for disinfection, a dangerous “intensification” of the disease. In the Workhouse nursery there is practically no periodical disinfection. The walls, the floors, the furniture must all become, year after year, more and more impregnated with whatever mephitic atmosphere prevails. The very cots in which the infants lie have been previously tenanted by an incalculable succession of infants in all states of health and morbidity. It may well be that human infants, like chickens, cannot long be aggregated together, even in the most carefully devised surroundings, without being injuriously affected.

A grave question arises on these statistics whether the policy of restricting out-door medical relief to expectant mothers, refusing Midwifery Orders, and offering only “the House” for lying-in, ought any longer to be allowed. If the effect of compelling the mothers to come into the Workhouse for their confinements is that twice or three times as many of their babies will die, as if they had been delivered in their own homes, we do not think that the community will, or should permit, such a policy to continue. We have not had time to give the matter the statistical investigation that it imperatively demands. But one of our members obtained, for the purposes of comparison, exact statistics of all the babies born during the same year (1907) under the care of the Plaistow Maternity Charity, an organisation for providing gratuitous midwifery attendance at birth, and for the first fortnight afterwards, *in the mother's own home*, in one of the most poverty-stricken districts of West Ham. Statistics were thus obtained for no fewer than 3,005 infants, all of them born in households having incomes of no more than twenty-one shillings a week. Of these, there died within the first fortnight only 47, or 15·33

* Evidence before the Commission, Appendix No. XXVI. (A), Par. 8, to Vol. I.

per 1,000 births.* In the four large voluntary maternity hospitals in the Metropolis, of which we have statistics, the infantile mortality taken together was, for the first fortnight, 30 per 1,000 births. This, too, was nearly the infantile death-rate for the first fortnight among the whole population (viz., 31·1). In the Poor Law institutions of the Metropolis the corresponding death-rate was, among legitimate children, 47·2, and among illegitimate children, 46·1 per 1,000 births. In the Poor Law institutions outside the Metropolis, the corresponding death-rate was, among legitimate children, 51·2, and among illegitimate children, 53·6 per 1,000 births. The three thousand infants attended to in their homes, poor and wretched as were these homes, by the competent nurses of the Plaistow Maternity Charity had, therefore, a death-rate, during the first fortnight after birth, considerably less than that in the most successful of the voluntary hospitals, and *less than a third* of that in the Poor Law institutions.†

(iii.) *The Workhouse as Infant Nursery.*

Some of the mothers who have come into the Workhouse to be delivered do not immediately take their discharge, but remain in the institution with their infants. Other infants of tender years are always being brought into the Workhouse by their destitute parents, or as orphans or foundlings. One way or another the Destitution Authorities accordingly find themselves having to provide in their institutions for a steadily growing number of children under school age—an infant population under five years old that amounts, in the United Kingdom, to about 15,000.‡ For this gigantic “State Nursery,” there is practically no other place at present than the General Mixed Workhouse.§

We regret to report that these Workhouse nurseries are, in a large number of cases—alike in structural arrangements, equipment, organisation, and staffing—wholly unsuited to the healthy rearing of infants. It is in vain that the Local Government Board has for more than a decade laid it down that: “In every Workhouse where there are several children, too young to attend school, a separate nursery, dry, spacious, light, and well ventilated, should be provided. . . . In no case should the care of young children be entrusted to infirm or weak-minded inmates. . . . Unless young children are placed under responsible supervision they cannot be said to be properly taken care of.”|| The Boards of Guardians have not obeyed. We have visited many Workhouse nurseries in the different parts of the kingdom; and we have found hardly any that can possibly be regarded as satisfactory places in which children should be reared. The mere fact that the infants are almost universally handled by pauper inmates, many of them more or less mentally-defective, makes it impossible for a Workhouse nursery to be a proper place. The infants, deposed one lady Guardian, “are left to the paupers to look after them,” and this has a bad effect, both on the infants and on the mothers.¶ “*I have*

* These figures include the sixty-seven cases received into a small maternity home, as being cases of difficulty, among which there were two deaths of infants.

† We have ascertained that in the births attended by the Queen Victoria’s Jubilee Nurses in 1907 (over 15,000 domiciliary cases in all parts of the country) the infantile mortality during the first ten days was under 19 per 1,000; a remarkable confirmation of the Plaistow experience.

‡ On March 31st, 1906, 11,424 under five years of age; in Scotland, 750 only; in Ireland, as many as 3,185.

§ The age at which the infants are transferred (if at all) from the Workhouse nursery varies. The Local Government Board forbids them to be sent to the Poor Law schools until after three years of age (General Order of February 10th, 1899). On the other hand, we were informed that the Manchester Board of Guardians transferred its infants to its large school at Swinton at two years old. In 1878, when the North Surrey District School decided to refuse admission to any under four, the Local Government Board acquiesced. (*Selections from the Correspondence of the Local Government Board*, Vol. I., 1880, p. 178.) The period of residence in the Workhouse nurseries has actually been increased. “The separate schools,” states the Senior Medical Inspector for Poor Law purposes, “formerly were allowed to admit children from two years and upwards, but they were a few years back brought into line with the district schools which have always been limited to three years, on the ground that the very young children are more liable to introduce infection than the older ones.” (Evidence before the Commission, Q. 23090.) It is extremely rare for a child under five to be sent to a certified school or home, and it is contrary to regulations to send such a child to an industrial school. In England and Wales it is also quite exceptional for children under five to be boarded-out, though this is done in Scotland and Ireland with orphan children (315 under five are thus boarded-out in Scotland). Hence the General Mixed Workhouse is, in England and Wales, the officially recognised place for infants up to three years of age, at least; and in most Unions until four or five. The City of London Union sends its infants to its Poor Law infirmary at Bow. In a few cases, latterly, in Unions having Cottage Homes, some of the infants have been placed in the homes with the elders.

¶ *Ibid.*, Qs. 44973, 44974.

frequently seen," declared to us another competent witness, "*a classed imbecile in charge of a baby.*"* The whole nursery, says a lady Guardian, has often been found "under the charge of a person actually certified as of unsound mind, the bottles sour, the babies wet, cold, and dirty."† There are, of course, occasionally fatal results. The Royal Commission on the Care and Control of the Feeble-Minded draws attention "to an episode in connection with one feeble-minded woman who was set to wash a baby; she did so in boiling water and it died."‡ This state of things is not unknown to the Local Government Board.§ We were supplied by Dr. Fuller, the Medical Inspector for Poor Law purposes with a copy of a Report that he made to the Board in 1897, showing that:—

"It is not an uncommon thing to find suckling mothers acting as ward-attendants, which means they rarely, if ever, get into the open air for exercise, and their infants rarely or never go out of the sick wards, except in the arms of a convalescent, into the airing courts. . . . In *sixty-four Workhouses, imbeciles or weak-minded women are entrusted with the care of infants*, as helps to the able-bodied or infirm women who are placed in charge by the matron, without the constant supervision of a responsible officer. In 370 Workhouses the inmates (a very large proportion of whom are aged or infirm women) have the charge of infants without any officer other than the Matron to supervise them. In 113 Workhouses, able-bodied or aged and infirm inmates are entrusted with the charge of the infants, with the occasional supervision of either the Assistant Matron, trained nurse, assistant nurse, industrial trainer, portress or labour mistress, in addition to the Matron, who visits twice a day."||

We recognise that some improvement has since taken place. But, as we have ourselves seen, pauper inmates, many of them feeble-minded, are still almost everywhere utilised for handling the babies; and the Workhouse nurseries, so far as paid officers are concerned, are still so inadequately staffed as to make pauper help indispensable.¶ The sanitary arrangements are nearly always so primitive, and so far below the standard of the best day nurseries of the present time, that a very large amount of personal service is necessary, if the nursery and the babies are to be kept in a proper state of cleanliness and purity.** As things are, the visitor to a Workhouse nursery finds it too often a place of intolerable stench, offensive to all the senses, under quite insufficient supervision, in which it would be a miracle if the babies continued in health.

* *Ibid.*, Q. 69293 (Par. 8).

† *Ibid.*, Appendix No. LXXXV. (B), Part II. (letter 20) to Vol. IX.

‡ Report of Royal Commission on the Care and Control of the Feeble-minded, 1908, Vol. VI., p. 221, Vol. VIII. p. 22.

§ Ten years ago an Inspector officially reported that, in his district, in order "to avoid the cost of a competent official, the infants are, too frequently, left practically to the charge of the inmates. I say 'practically,' because there is an official nominally in charge, but the other duties attached to her office claim most of her time. The women placed in charge of the nurseries are, at the best, ignorant and often careless. The feeding bottles are not always properly cleaned, and the milk turns sour. The atmosphere of the nurseries is seldom fresh, and the light not always what could be desired. The infants are kept too much in these rooms and are not taken into the *fresh* air to the extent they should be. The result of this false economy is that the children so often grow up delicate. This leads me," he continues, "to consider the infant children of wards-women in infirmaries. There is generally a difficulty in obtaining women for the duties of wards-women, and the most able-bodied are those who enter the Workhouse to be confined; these are mostly young women with illegitimate children. Consequently, when the child is a month old, the mother is transferred to the infirmary and becomes a wards-woman. I cannot but think that, in some cases, the infants suffer from the effects of this work on the mother; but my special point is that the infant suffers in health from being too much confined in the atmosphere of the infirmary." (Twenty-eighth Annual Report of the Local Government Board for England and Wales, 1898-1899, Mr. Wethered's Report, pp. 143-144.)

|| Evidence before the Commission, Appendix No. XXI. (C) to Vol. I. Another Inspector drew attention to the subject four years later. "Nothing has been said," observed Mr. Jenner-Fust in 1901, "about the nursery children, at present retained at the Workhouse till three years old, or even more, though the care of these requires attention as much as that of the older ones. They are almost always largely under the care of inmates and the conditions are seldom improved, even when these inmates are their own mothers. . . . I cannot but think that nursery homes with trained nurses as foster-mothers should form part of the equipment of all Cottage Homes, or if a separate receiving home be established, the nursery children might conveniently be placed there, the removal from the Workhouse not being delayed beyond the period when a child is able to walk." (Thirtieth Annual Report of Local Government Board for England and Wales, 1900-1901, p. 147; Report . . . on the Policy of the Central Authority from 1834 to 1907, p. 96.)

¶ It is apparently not even now required by the Local Government Board that there should be a paid nursery officer for six children. "It *should* be a compulsory regulation," Dr. Fuller suggested to us, "that where there are on an average six infants under three years of age, a suitable paid officer should be appointed whose sole duty is the care and control of them." (Evidence before the Commission, Appendix No. XXI. (A), Par. 79, to Vol. I.)

** Even so elementary a requirement as suitable clothing is neglected. "The infants," states one lady Guardian, "have not always a proper supply of flannel, and their shirts are sometimes made of rough, unbleached calico. . . . The infants of twelve months and thereabouts have their feet compressed into tight laced-up boots over very thick socks doubled under their feet to make them fit into the boots." (*Ibid.*, Appendix No. LXXXV., Par. 26, to Vol. IX.) "In some Workhouses the children have no toys." (*Ibid.*, Appendix No. LXXXV., Par. 26, (viii.) to Vol. IX.); and we have heard of cases in which the toys remain tidily on a shelf out of reach, so that there may be no litter on the floor!

A further evil, to which practically no attention seems to have been paid, is the extent to which these Workhouse nurseries are continually being decimated by the admission of infants bringing with them incipient measles or whooping cough; "and that, just at an age," to quote the words of Dr. Downes, the Senior Medical Officer for Poor Law Purposes, "when the common infections are most fatal."* We were surprised to find, in Workhouse after Workhouse, practically no arrangements for quarantining the new-comers, or otherwise preventing "the great danger of the introduction of infection among them."† In all but a few quite exceptional Workhouses, the constant stream of entering infants, of all ages between a few weeks and five years, many of them coming straight from the most filthy and insanitary homes—some of them, indeed, the dependents of "ins-and-outs"—passes instantly into the midst of the nursery population. The very least that ought to be provided, to use the words of the Senior Medical Inspector for Poor Law Purposes, is "a sort of duplication of their nursery so that the newcomers could be kept apart from the main body of the children."‡ But, as the Lady Inspector of the Local Government Board for England and Wales observed to us, the Workhouses of the great towns "always more or less crowded, *do not admit of probation nurseries*. . . . The present mixture of all the children under three years of age, those who are more or less permanent and the 'ins-and-outs,' varying in age from the infant of three weeks old to the children between two and three who can run about, appears, speaking generally, to be an insuperable difficulty."§ What exactly is the result of this extraordinary exposure to infection, in the prevalence of measles and whooping cough in the Workhouse nurseries, is unfortunately not recorded. "In some cases," euphemistically observes the Senior Medical Inspector for Poor Law Purposes, "epidemics of measles and whooping cough have been very troublesome."|| We have already mentioned the excessive mortality which Dr. Fuller found generally to prevail in England and Wales among the Workhouse children under two.¶ We have reason to believe that the mortality between two and five years is also excessive; and we regret that the Local Government Board has obtained no statistics on the subject.

We can add nothing to the gravity of the authoritative indictment of the Boards of Guardians, as managers of infant nurseries, with which Dr. Fuller and Miss Stansfeld—witnesses whose official position gives weight to their testimony—have thus supplied to us. But we may mention, as illustrative of the total incapacity of the Destitution Authorities to provide for even the most elementary requirements of an infants' nursery, three incidents that we have ourselves witnessed.

In one large Workhouse, our Committee noticed that the children

"From perhaps about eighteen months to perhaps two and a half years of age, had a sickly appearance. These children were having their dinner, which consisted of *large platefuls of potatoes and minced beef*, a somewhat improper diet for children of that age, and one which may partly account for their pasty looks. The attendants did not know the ages of the children; the children are not weighed from time to time and a record kept."**

In another extensive Workhouse nursery, our Committee found

"The babies of one to two years of age preparing for their afternoon sleep. They were seated in rows on wooden benches in front of a wooden table. *On the table was a long narrow cushion, and when the babies were sufficiently exhausted, they fell forward upon this to sleep!* The position seemed most uncomfortable and likely to be injurious. We were told that the system was an invention of the Matron, and had been in use for a long time."††

* *Ibid.*, Q. 23090.

† *Ibid.*

‡ *Ibid.* What is really required is a double probationary ward, the one half of it receiving the entering stream of babies day by day, and the other half taking them over in batches every three weeks, so that every child would have at least three weeks quarantine in the second half before passing into the general nursery.

§ *Ibid.*, Appendix No. XXVI. (A), Par 21, to Vol. I.

|| *Ibid.*, Q. 23090.

¶ *Ibid.*, Appendix No. XXI. (C) to Vol. I.

** Reports of Visits by Commissioners, No. 20, p. 45. Elsewhere we were informed the "infants weaned, but unable to feed themselves, are sometimes placed in a row, and the whole row fed with one spoon . . . from one plate of rice pudding; the spoon went in and out of the mouths all along the row." (Evidence before the Commission, Appendix Nos. LXXXV., Par. 26, viii., and LXXXV. (B), Part II. (1), to Vol. IX.)

†† Reports of Visits by Commissioners, No. 24 D., p. 65.

Finally, in the great palatial establishments of London and other large towns, we were shocked to discover that the infants in the nursery *seldom or never got into the open air*.* We found the nursery frequently in the third or fourth storey of a gigantic block, often without balconies, whence the only means of access, even to the Workhouse yard, was a lengthy flight of stone steps, down which it was impossible to wheel a baby carriage of any kind. There was no staff of nurses adequate to carrying fifty or sixty infants out for an airing. In some of these Workhouses it was frankly admitted that the babies never left their own quarters (and the stench that we have described), and never got into the open air, during the whole period of their residence in the workhouse nursery.†

(iv.) *The Cause of the Failure of the Destitution Authority.*

We do not attribute this failure to any personal shortcomings of the members of the Boards of Guardians and Parish Councils ; still less to any lack of humanity among them. The fact that these bodies, almost alone among Local Authorities, include women in their membership, is a confirmation of this inference. In our visits up and down the country, we have been much impressed by the high social standing, the sympathetic character and the superior intelligence of the great majority of the women members of the Boards of Guardians. It is they, almost alone among our unofficial witnesses, who have brought to our notice many details of the extraordinarily defective provision now made for women and children.‡ But the attention of the Boards of Guardians has never been directed to the evils that we have mentioned *as problems to be solved by appropriate treatment*. To them, there is in the Workhouse no "Maternity Hospital," no "Rescue Home," no Infant Asylum." What they believe themselves to be doing—what they are charged to do—is merely to "give relief"; and relief which, as a Destitution Authority, they are authoritatively told must neither be insufficient to support life, nor more than will just suffice for that purpose, to the good as to the bad—relief which may begin only when "destitution" sets in, and must suddenly cease when "destitution" ends. So long as the task set to a Local Authority in this service of Birth and Infancy is merely the "Relief of Destitution," no body of men and women is likely to do better than the present Board of Guardians or (in Scotland) the Parish Council. If they were removed from popular control they might—however carefully selected—easily do worse. Nor is there any reason to assume that an enlargement of the area for which the Destitution Authority acts would cause any improvement in this particular service. On the contrary, our own opinion is that the provision actually made for Birth and Infancy at the present time in the smaller Unions of England and Wales is both less demoralising to the mothers, and less fatal to the infants, than the promiscuous lying-in wards and the crowded nurseries of the palatial Poor Law Infirmaries and mammoth Workhouses of the Boards of Guardians administering districts of a population of more than a quarter of a million. We cannot escape the conclusion that a Destitution Authority, whatever its area, whatever its method of appointment, and whatever the character of its membership, is, by the very nature of its task, unsuited and positively disabled for making whatever provision for Maternity and Infancy is, in the interests of the community as a whole, deemed desirable.

B. VOLUNTARY AGENCIES FOR PROVIDING FOR BIRTH AND INFANCY.

We are supported in our condemnation of the use of the Workhouse as a Maternity Hospital or as an Infant Asylum by the emphatic conclusions of the recent Vice-Regal Commission on Poor Law Reform in Ireland, which paid special attention to this subject.§ That Commission recommended that the General Mixed Workhouse should absolutely cease to be used, either for the reception of expectant mothers, or for lying-in, or as a nursery for infants of any age. It was proposed, in accordance with an overwhelming concurrence of testimony, that girls on their first lapse should be placed, both before and after their confinement, in suitable voluntary institutions devoting themselves to this service :—

* "Until lately there was no perambulator," observes one lady Guardian, "so they could not go out at all." (Evidence before the Commission, Appendix No. LXXXV. (B), Part II. (letter 104), to Vol. IX.).

† We have heard it remarked by officers of Poor Law schools that the children transferred to them from the Workhouse nurseries were no better in health and strength than those entering direct from the homes of parents driven by absolute destitution to apply for relief. The officers expressly attributed this to the insanitary conditions of a Workhouse nursery, and to the fact that the infants seldom got out of doors.

‡ See the very cogent "Statement of Evidence by the Women's Local Government Society," (Evidence before the Commission, Appendix No. LXXXV. to Vol. IX., in which is tabulated and summarised the testimony of 141 women Guardians of the Poor.

§ Report of the Vice-Regal Commission on Poor Law Reform in Ireland, Cd. 3202, 1906.

"In this way," it was suggested, "there would be a hope that the life of the girl would not be wrecked owing to her fall, but that she might, as far as practicable, be restored to the possibility of living a good and useful life. When the time for the girl's confinement arrives, we contemplate that she should be sent to the nearest district or other hospital, from which she would return with her baby to the special institution after the usual period for remaining in a lying-in hospital. We would rely upon kind and prudent treatment of the girls individually, and to the placing of each of them as far as possible, in suitable situations after they had spent a year or thereabouts nursing their babies, and after spending such additional time, if any, as the managers of the institution might think necessary for the strengthening of their character. As soon as a girl-mother could be provided with a situation, and the sooner the better, we think, after the nursing period, we suggest that her child should be boarded-out unless it should be kept for medical reasons in the institution a little longer. We would make such institutions open, as regards adults, only to girls after their first fall."*

In view of this authoritative recommendation, and of suggestions made to us on similar lines as regards Great Britain, we deemed it necessary to inquire how far voluntary agencies were available and suitable for undertaking this important work. We were unfortunately unable in the time allowed to us to make anything like a complete survey, but one of our members has placed at our disposal the results of inquiries into the provision that is actually being made for Maternity and Infancy by voluntary agencies in two important areas of England, the Metropolis and the West Riding of Yorkshire, which together comprise nearly a quarter of the whole population of England and Wales; and in one or two other areas. These voluntary agencies may be classified, roughly, into:—

- (1) Rescue Homes.
- (2) Maternity Hospitals.
- (3) Domiciliary, Midwifery and Nursing Agencies.
- (4) Day Nurseries; and
- (5) Infant Asylums.

(i.) *Rescue Homes.*

The Rescue Homes usually receive unmarried expectant mothers for a few months before confinement, and for a few weeks afterwards, nearly always sending the woman to a Maternity Hospital for lying-in.† Such Institutions exist at present only in a few towns, and on a comparatively small scale relative to the total number of cases requiring attention. The information obtained with regard to twenty-four Rescue Homes in the Metropolis, half-a-dozen in the West Riding, and half-a-dozen elsewhere,‡ shows that they are supported by voluntary contributions, and to a small extent by payments made by the patients or their friends. In nearly every case they are managed by small committees, often connected with a religious denomination. They nearly all limit themselves to girls with their first illegitimate child, § and they can usually admit only ten or twenty cases a year each, hardly any among them having accommodation for as many as fifty at a time. The length of the girl's stay varies from three months to one year, during which she is trained in domestic service, and at the end of which a suitable situation is found for her. Foster-mothers are found for their infants, the mother being required to pay, from the time she gets a situation, 5s. per week for the support of her child. The idea that the girl must necessarily be ashamed of her child is fast disappearing, and she is encouraged to work for it and

* *Ibid.*, Vol. I., p. 42. Hardened offenders, it was recommended, should be dealt with in the same way, there being voluntary institutions devoting themselves specially to these cases. Married women needing institutional care in their confinements would go straight from their own homes to the maternity ward of the county or municipal (non-pauper) hospital, the cases being as far as possible segregated there in the three classes.

† The number of Rescue Homes in England and Wales appears to be nearly 300 (Report of Royal Commission on the Care and Control of the Feeble-minded, 1908, Vol. VIII., p. 175). Of these, 100 had received 14,725 inmates in the three years, 1902-4 (*Ibid.*), or an average of nearly fifty per annum each. A few of the homes have accommodation for a small number of lying-in patients. It is significant that many of them used to send their patients for lying-in to the maternity ward of the Workhouse (as some do still); but that most of them have relinquished this practice, as it was found that if the girl once entered the Workhouse for lying-in, she was so hardened and deteriorated as only too likely to return to it again for a similar purpose.

‡ Some evidence as to these homes was taken by the Commissioners. (See Evidence before the Commission, Qs. 44924-44969, 45124-45128, and Appendix No. XX. (A) to Vol. IV.; also Appendix No. xxvi. (D) to Vol. I.).

§ With regard to one such home, however, it was given in evidence by the promoters that they were "very anxious not to take only first cases, because among the cases that we have helped, according to experience, sometimes the second cases have done better than the first." (*Ibid.*, Qs. 44946, 44947.)

to take a pride in its well-being, instead of placing it in an institution such as the Foundling Hospital, where the primary condition of admission is that the mother must be willing to cede all claims over her child and never see it again.

The most extensive of these agencies is, perhaps, that administered in connection with the Salvation Army, with Rescue Homes in various parts of the country. We have been much impressed by what we have learnt from various sources of the invigorating and restorative effect of the treatment of the large number of girl-mothers annually dealt with in these Homes, and by the practical wisdom and administrative skill displayed in all the details of their management. We think that the methods adopted in these Homes merit careful study by those who may be responsible for dealing with the problem at the expense of public funds.

We are impressed—as was the Vice-Regal Commission on Poor Law Reform in Ireland—with the admirable social work done by the various Rescue Homes, and by their far greater success in reclaiming the best class of unmarried mothers, and enabling them to make a fresh start in life, than can be claimed by any Poor Law Institution. We regret that more use is not made of these Homes by the Boards of Guardians.* We suggest, however, that they require official inspection and supervision, especially from the standpoint of the welfare of the infant. At present, they concentrate their attention almost entirely upon the mother, and her future welfare. Comparatively little thought is given to what happens to the babies; and no information is available as to the rate of mortality among them. In view of the supreme interest of the community in the coming generation, the arrangements made for the rearing of these infants ought clearly to be under special supervision by the Public Health Authority.

(ii) *Maternity Hospitals.*

Special Maternity Hospitals seldom exist, we believe, except in London (which has less than a dozen), Dublin (three, including one large one), Edinburgh and Glasgow,† though there are sometimes maternity wards in the general hospitals.‡ Such Maternity Hospitals date from the middle of the eighteenth century. They do not appear to be a popular form of charity, and they exhibit a much smaller growth than other institutions for the treatment of the sick—perhaps because they have suffered in the past from a high rate of mortality among the mothers. This drawback, we gather, has now been overcome. Nevertheless, so far as we have been able to estimate, only 5 or 6 per cent. of the births in London, and only an insignificant percentage elsewhere, take place in voluntary institutions. Only in Dublin does the proportion rise to a high figure; and there it appears to reach 20 per cent. Nor are these institutions always accessible to poor women. Most of the Maternity Hospitals in London admit only women who obtain “letters” from one of the hospital governors or subscribers. This “letter” system doubtless facilitates the work of the hospital; it regulates the number of patients; and absolves the hospital authorities from the difficulties of selecting cases; but on the other hand, it reduces a woman’s chance of admission to a question of luck, and it frequently means that only those directly in touch with district visitors and clergy, who are given letters for use in their parish, can hope to obtain the benefits of the hospital. Such a system may become very demoralising, for by making people dependent on the favour or goodwill of the rich, it is apt to create a worse form of pauperism, with more disastrous results upon character, than any to be found in a public institution. It is impossible, moreover, to avoid the conclusion that these hospitals are run more for the sake of affording opportunities for the instruction of doctors and midwives than with any consideration of what is best for the mothers and infants. Under the present arrangements a woman is received only when actually in labour, and is usually retained only for fourteen days (occasionally only for eight days, rarely for three weeks). At the end of that time she has to return to her home, or to find a lodging; weak, quite unfit for the work of trying to make both ends meet, with an infant on her hands, and very little knowledge of how to look after it. The Maternity Hospitals, indeed, usually disclaim all responsibility, and refuse to make any domiciliary provision, for either mothers or infants, after they leave the wards. To some small extent this care and educational training before and after confinement is, as we have seen, supplied by the Rescue Homes. From the Public Health standpoint, however, it is clearly objectionable that any of the cases should disappear from ken, without instruction

* For such use, see *Ibid.*, Qs. 14240–14242, 14453, 14454, 14500–14506, 44942–44949, and Appendix No. XXVI. (B) to Vol. I.

† *Ibid.*, Qs. 58087 (Par. 95), 59988 (Par. 5).

‡ *Ibid.*, Qs. 32579, 37102–37104.

how to rear the baby, and without the stimulus to maternal responsibility that is given by the consciousness of being kept under observation. As it is, we are in the dark as to the rate of infantile mortality among the babies for whose birth the Maternity Hospitals are incurring so much expense. These hospitals, indeed, like the Rescue Homes, seem to pay comparatively little attention to the infants. Though the infant death-rate inside the best of the institutions is now far less than it used to be, and far less than that for the first fortnight in the lying-in wards of the Workhouses, there are some Maternity Hospitals which appear to lose three or four times as many babies in the fortnight as others. Here, too, there is clearly urgent need for supervision and inspection by the Local Health Authority.

(iii.) *Domiciliary Midwifery Agencies.*

There appear to be at least a score of large "out-patient" midwifery charities in the Metropolis, and there are others in connection with the general hospitals of the provincial towns, besides some smaller agencies in connection with missions and settlements. The most important of these are the out-patients' departments of the Maternity Hospitals, and of the General Hospitals having medical schools. The large number of medical students and midwives in training in London, Edinburgh, Dublin and the dozen other centres of medical education, each of whom has to attend a certain number of midwifery cases as a condition of obtaining a qualification to practice, renders the problem of public provision, as it does that of provident medical insurance, essentially different in these towns from that elsewhere. It was given in evidence that one hospital alone in this way provides medical attendance for 4,000 confinements annually.* The total number of confinements in the United Kingdom thus gratuitously attended to by voluntary agencies in the patients' own homes must, in the aggregate, run into many tens of thousands. The work is, however, confined to London and a score or two of other large towns. It is limited to the attendance of the doctor or midwife at birth, occasional subsequent visits by the midwife and sometimes daily visits by the nurse during ten days. No provision is made for the mother's instruction, or for subsequent care.

We can do no more than call attention to the extent of the domiciliary midwifery provision thus thrown, so to speak, gratuitously at the heads of the poor, practically without inquiry as to character or need, without any sort of co-ordination with other agencies, without connection with the provision for necessitous mothers both before and after child-birth, and without the cases being brought under the supervision of the Local Health Authorities.

(iv.) *Day Nurseries.*

For the children under the lower limit of school age—which may be three, four or five years—of mothers who are unable to look after them during the day, practically the only organised provision is that of Day Nurseries, or *crèches*.† In view of the fact that the Outdoor Relief afforded to mothers of young children is practically never adequate to allow them to forego earning money, and that many Boards of Guardians, as we have seen, actually incite the mothers to go out to work, it is important to inquire what becomes of the young children whilst the mothers are away. We found that in very few places was any systematic provision made for the care of these infants, or others in like case. Neither the Destitution Authority, which was assuming to maintain so many of these infants, nor the Local Health Authority, in its crusade against infantile mortality, has done anything in the matter. Voluntary charity has done very little.‡ We were supplied by one of our members with reports as to the charitable Day Nurseries of the Metropolis, the West Riding of Yorkshire, and a few other places. These institutions are far more prevalent in London than elsewhere; and even in London they appear to number only seventy or eighty, each accommodating between twelve and sixty infants; or, for all London's million families, not more than 2,000. They are managed by philanthropic

* *Ibid.*, Qs. 32578, 32579.

† "The word 'crèche' . . . has a fluctuating meaning. It is sometimes used for places where children are only retained to the end of their third year—which is the technical meaning of the word in France—and sometimes for places where children are kept to a later age, say, to the end of their fifth or even sixth year." (Report of the Consultative Committee upon the School Attendance of Children below the Age of Five, 1908, p. 16.)

‡ "At present, there are seventy-seven known crèches in London, and 103 in Great Britain." (*Ibid.* pp. 107, 108.)

committees on voluntary contributions, but they make a charge to the mothers (usually 3d. or 4d. per day) which about covers the cost of the infant's food. These institutions, which are at present under no sort of public supervision or official inspection, are scattered most irregularly over the Metropolis. A few of them have excellent buildings, good sanitary arrangements, competent staffs, and well-contrived provision for all the infants' requirements. Most of them were found to be faulty in some of these respects; and more than a third were distinctly open to grave criticism. These showed an utter lack of knowledge of the most elementary principles of the hygiene of child life. Many of them were overcrowded, ill-ventilated, dark, dirty and foul-smelling. The babies were in charge of totally inexperienced women. The milk and the bottles were often wholly unsuitable.*

We do not wish to offer any opinion upon the vexed question of how far Day Nurseries are desirable. But it is clear that, wherever the Destitution Authority incites the mother to go out to work and leave her babies, or where it gives Outdoor Relief so inadequate as to compel the mother to go out to work, it becomes responsible for seeing that the little children whom it is thus maintaining as Outdoor Paupers are properly provided for.† We cannot regard it as satisfactory that no attention should, at present, be paid to this matter; and we cannot help attributing some of the very high infantile mortality among Outdoor paupers to the neglect of the Destitution Authorities to consider what effect their policy is having on the children. It is plain that any Day Nurseries that exist, in which there ought to be no large aggregation of children, need to be under the supervision and inspection of the Public Health Authority.

(v.) *Infant Asylums.*

We cannot pass over without mention the fact that there exist extensive voluntary institutions providing maintenance for infants, which might be made use of by Local Authorities unable satisfactorily to provide for their younger children. Some of these institutions admit babies from the very earliest age, and appear to surmount very satisfactorily the difficulties in nursery administration experienced by the Destitution Authorities. These institutions are proud of their success, and many of them would welcome a voluntary inspection, which could not fail to be of use in suggesting methods of improvement. It would be an additional advantage of a supervision of these institutions by the Public Health Authority that their rates of mortality and their valuable experience would become available for comparison.

(vi.) *The Insufficiency of the Voluntary Agencies.*

We are much impressed, as we have already mentioned, with the value of voluntary agencies in dealing with the problems of birth and infancy, especially with that presented by the young unmarried mother with her first child. We think that suitable agencies of this kind might, with great advantage, be far more extensively utilised by the local authorities for particular cases than has yet been done. "The mothers of illegitimate children," emphatically declares the Vice-Regal Commission with regard to Ireland, "should never, it is suggested, be in future admitted or retained in any Workhouse or institution where they would have freedom of ingress or egress, and where they could associate with other classes. Unmarried mothers should, in our opinion, be provided for in special institutions under religious or philanthropic management, *their infants being kept with them until weaned.*"‡ Any philanthropic institutions thus made use of should be placed on the list of "Certified Schools and Homes" at present issued by the Local Government Boards for England and Ireland, and the Local Government Board for Scotland should frame a similar list. It would, of course, be necessary for every such institution to be periodically inspected by duly qualified officers of the Local Government

* An association entitled the National Society of Day Nurseries was established in 1907 for the purpose of raising the standard among them, and of securing their legal registration. "At present," deposed the Secretary, "such institutions are not liable to inspection, and there are a large number of very inferior ones, which do more harm than good. It is thought that the aim of the Society would best be achieved through the establishment of a system of compulsory inspection. Witness suggested that the inspectors for this purpose should be women appointed by the Board of Education; but she would not mind what Government Department controlled the work so long as it was done thoroughly. It is desired to bring the public to see that unless crèches are kept up to a proper standard and are open to inspection, they ought to be abolished. Grants will be given by the Society to recognised institutions; and it is proposed to issue a magazine which will contain a list of crèches, indicating those which the public are advised not to maintain." (*Ibid.*, p. 107.)

† There is a like responsibility in those Unions, unhappily numerous, in which Outdoor Relief is systematically refused to mothers having one child only, or two children only.

‡ Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., p. 61.

Board; and it should be a condition of such certification, and of the receipt of any patients, or of any payments, from any Local Authority, that the institution should come also under the regular inspection of the Local Health Authority.

But whatever may be the case in Ireland, there is in Great Britain no provision by Voluntary Agencies—whether Rescue Homes, Maternity Hospitals, Domiciliary Midwifery Charities, Day Nurseries or Infant Asylums—at all adequate to the need. This deficiency shows itself alike in amount of accommodation and in its geographical distribution, in the quality of the service and in its limited duration. As we have seen, none of the five forms of voluntary provision that we have described comes anywhere near being able to cover all the cases. What is done is limited to London and a comparatively small number of large towns. The efficiency of the service rendered is extremely unequal, and much of it would have to be very drastically reformed before it could be utilised by a Public Authority. Finally, all these Voluntary Agencies—the Rescue Homes being in this respect least open to criticism—share with the Destitution Authorities the drawback that they deal with these cases only during a narrowly limited period of time. Their patients come to them out of the unknown, and after the briefest of treatment, disappear again into the unknown, having received temporary physical advantage but the very minimum of mental or moral improvement. To be of any real value to the community, the temporary physical improvement afforded by these Voluntary Agencies to their patients must be set in a framework of more continuous preventive and educational activity, brought to bear on the character and intelligence of these persons both before and after the acute crisis of their distress.

We are, therefore, unable to share, so far at any rate as Great Britain is concerned, in the optimistic assumption of the Vice-Regal Commission on Poor Law Reform in Ireland that Voluntary Agencies are in a position adequately to deal with the problems of Birth and Infancy. Whatever use of them by the Local Authority may prove possible, it is clear that they will need stimulating and supervising by public officers, and, in nearly every district, they will require to be supplemented by public provision at the expense of the rates, both in the form of institutions for specific classes of cases left wholly or partly undealt with by the philanthropist, and in that of more extended, more systematic and more continuous domiciliary treatment than is afforded by any Voluntary Agency.

(C) THE SUPERVISION OF BIRTH AND INFANCY BY THE LOCAL HEALTH AUTHORITY.

The continuance of a high rate of infantile mortality in spite of a steadily falling mortality among persons of other ages has, within the last two decades, forced itself upon the attention of the Local Authorities. Whilst the general rate of mortality has fallen in the United Kingdom during the past forty years by at least one-sixth, the proportion of deaths under one year per thousand births has, until lately, remained almost undiminished.* The result has been a great outburst of sanitary activity in new directions. “The question of how we are to prevent so large an infantile mortality,” says a recent report, “is now engaging the attention of every Medical Officer of Health throughout Great Britain, and more or less of every Sanitary Authority, and the great factors . . . which they are to combat are ignorance, carelessness, and neglect of the hygienic laws. It, therefore, becomes necessary to instruct the people in these matters.”† At first, “the efforts of Health Committees” were “directed chiefly towards reducing the deaths among infants from epidemic diarrhoea.” But “statistics have clearly shown that the practice

* “It may safely be said that the health of the community at large, especially that of adults, depends upon many factors, some of which have been beneficially influenced by Public Health legislation; but the health of the infant population depends chiefly upon home and maternal influences, *i.e.*, upon the mode of feeding, clothing, etc., which Public Health legislation has only slightly touched. The general mortality reacts most quickly to sanitary measures of a municipal character, the infant mortality to domestic hygiene, and this, in my opinion, is the explanation of the different behaviour of the general death-rate and the infantile death-rate, during the last half-century. The fact is that personal and domestic hygiene, and in this I include all that relates to the proper care of infants, has been neglected in the past; it may be said in this respect we are very little better on the whole than a quarter of a century ago. With the exception, perhaps, of a nebulous idea that when an individual is known to be suffering from an infectious disease, such person should be separated from those who are healthy, the public, especially in crowded localities, may be said to possess no ideas on domestic hygiene, with the result that the community at large still suffers from an unnecessarily and preventably high infant death and sick rate.” (Report of the Medical Officer of Health, on Hackney, for 1905, p. 105.)

† Report on the Prevention of Infantile Mortality, by Alfred E. Harris (Medical Officer of Health for Islington), 1907, p. 30.

of feeding infants with artificial food is chiefly responsible for the terrible wastage of life at present going on.”* Thus the Local Health Authorities have found their work taking the novel forms of giving advice to mothers how to treat their babies—advice which it was difficult to distinguish from that given by the private practitioner or the District Medical Officer; and in some places of actually supplying the mothers with suitable food for their babies—food that might otherwise have been sought as Outdoor Relief from the Destitution Authority.

(i.) *Provision of Midwifery.*

We must first notice a small, and, we think, undesigned responsibility assumed by the Local Health Authority in some places, in connection with the provision of medical attendance on women in child-birth, who are destitute of the means of providing it for themselves. Under the Midwives’ Act of 1902, and the rules framed by the Central Midwives’ Board, the 12,000 practising midwives in England and Wales are legally required instantly to call in a qualified medical practitioner in cases of difficulty or danger.† No provision was made for the remuneration of the doctor thus imperatively summoned; and, in a large proportion of the cases, the patient is quite unable to pay him. Under these circumstances, the Local Government Board has permitted the payment to be made, sometimes by the Destitution Authorities, sometimes by the Local Health Authorities. In some places the Boards of Guardians have demurred to making any payment in such cases to a private practitioner, considering that the duty should fall exclusively on the District Medical Officers.‡ In some places the Boards of Guardians make the payment, provided that the doctor—summoned perhaps in the night—has first obtained a note from the Relieving Officer authorising his attendance, § or provided that it is proved that application was first made, and made in vain, to the District Medical Officer, or provided that the case is, after inquiry, considered by the Guardians to be destitute. In some places (as at Manchester, and Liverpool) the Town or District Council is, with the approval of the Local Government Board, making the payments under the general terms of Sec. 133 of the Public Health Act.|| There is nothing to prevent both Local Authorities paying for the same service. For instance, both the Manchester Town Council and the Manchester and Chorlton Boards of Guardians have actually resolved to make such payments under certain conditions.¶ On the other hand, in other places, the doctor fails to get his fee from either Local Authority.

(ii.) *Provision of Hygienic or Medical Advice.*

Whilst the provision of midwifery by the Public Health Authorities is, at present, occasional only, the provision of hygienic or medical advice for infantile ailments has already become an organised service. The most remarkable feature of this development has been its educational aspect. The Local Health Authority found the bulk of the poor mothers—those in receipt of Outdoor Relief no less than the others—totally unaware how to rear their babies in health. They were both unable and unwilling to pay for the private practitioner’s advice, at any rate so long as the babies were not actually ill, and the Destitution Authority provided no instruction even for the mothers whom it was relieving. It was argued by the Local Authorities that: “No education in school is likely to have much practical result in lessening the vast amount of preventible mortality and sickness among young infants. Very few of the mothers in the working classes have either the time or the ability to understand books or leaflets on the management of children. What is required is that they should have actual practical instruction from some properly trained and tactful visitor soon after the child’s birth, who would be able to show them that it would save them trouble in the long run if they spent a little pains in preparing for their child’s food, in the event of their not being able to nurse it themselves.”** The result has been the creation of a remarkable organisation, partly paid and partly ††voluntary, by

¶ Statement by the Midwives’ Committees of the London and Counties Medical Protection Society, *Ibid.*, (not yet in volume form.)

** Report of Medical Officer of Health for Margate, 1905, pp. 14, 15.

†† There appear to be already between 200 and 300 salaried Health Visitors in the United Kingdom, and at least ten times as many regularly engaged volunteers; or, in the aggregate, more than the total number of Relieving Officers.

which the Medical Officer of Health attempts to keep under observation during the whole of the first year of life, all the babies born in the poorer families, including those who are on the Outdoor pauper roll of the Destitution Authority, and those among them who are actually under the attendance of the District Medical Officer. This organisation has already gone very far. It may be said that Parliament has sanctioned the new development by expressly legalising the appointment of paid Health Visitors by the Metropolitan Borough Councils;* and by passing the Notification of Births Act of 1907, the avowed object of which was "to give Sanitary Authorities the opportunity of effecting improvements in Infant and Domestic Hygiene by means of Health Visitors."† Accordingly, at the present time, in the poorer districts of many towns of Great Britain, every house at which a birth occurs, or at which a child under two years has died (even those at which the District Medical Officer is in attendance) is visited by an officer from the Medical Officer of Health's Department—in some places by a lady volunteer, in others by a semi-philanthropic paid agent, in others again by a trained professional Health Visitor, qualified by a sanitary certificate or a nurse's experience. Including the organised volunteers, there are already more Health Visitors than there are Relieving Officers in England and Wales. At Huddersfield and elsewhere some of these Health Visitors are even qualified medical practitioners. They interview the mother and inspect the baby; they advise how it should be fed, washed, clothed, and generally treated; they criticise what is being done wrong or unskilfully; they keep a sharp eye for the presence of disease to be reported to the Medical Officer of Health; they suggest hygienic improvements in the household; if the baby is ailing they are often able to suggest the cause and remedy; and, finally, if the case looks serious, they urge the obtaining of further professional advice either by the calling in of a doctor for payment, or by application to the Relieving Officer for the attendance of the District Medical Officer.‡ The adoption of this system of domiciliary "health visiting," as applied to the 2·45 per cent. of the population which is under one year of age, has apparently resulted in a great improvement in its health; although the proportion of those visited to the total population has not yet risen to a sufficient height to have any marked statistical result on the whole.

Three features stand out in this expansion of the work of the Local Health Authority, all of them in significant contrast with that of the Destitution Authority. The first is its humanising and educational character. The poverty-stricken mother, tempted to regard the newly-born infant only as an additional burden, finds herself reminded of the importance of the child's life, finds its welfare a matter of interest to the visitor, and finds herself gradually acquiring a higher standard of child-rearing. The second significant feature of the work is the extensive use made of volunteers in an altogether new relation to the official machinery. Such volunteers, numbering in towns like Huddersfield several scores, visit the poor in a friendly, unofficial way, and yet serve systematically as the eyes and ears of the Local Authority, working always under the supervision, guidance and control of the responsible salaried officer, and his representative Health Committee. The third feature is the stimulus given by the action of the Local Authority to parental

* London County Council (General Powers) Act, 1908.

† Report upon the Infantile Death-Rate at Newport (Mon.), by J. Howard-Jones, M.D., D.Sc., Medical Officer of Health, Newport, 1907. "The Local Government Board, as stated in their Circular of September 27th last, to the Councils of the Metropolitan Boroughs, however, are of opinion 'that there is no occasion for imposing upon parents and others, the obligation of notifying births, unless steps are taken to carry out the ultimate object of the measure, viz., the giving of advice and instruction to those who have charge of the infants, and in ordinary circumstances they would not be prepared to consent to the adoption of the Act unless it appeared that arrangements would usually be carried out by local agencies under the Medical Officer of Health. The Board trust the Council will consider the question of adopting the Act, and of co-operating with any agency that may exist, so as to secure its successful operation.'" (Report on the Prevention of Infantile Mortality, by Alfred E. Harris (Medical Officer of Health for Islington), 1907, pp. 31, 32.)

‡ Evidence before the Commission, Appendix No. LVI. to Vol. IV., (as to Huddersfield); Appendix No. CXXXVIII. (Par. 2) to Vol. IV. (as to Birmingham); Qs. 41685-41689, 42546 (as to Leeds); Q. 41888, Par. 1 (d.) (as to Sheffield); Qs. 37605 (Par. 29), 37616-37618, 37801, 37802 (as to Blackburn). In Huddersfield, for instance, all "newly-born children are visited as soon as possible by the official Health Visitors. Each Saturday, a list of the cases in her district is sent to a Lady Superintendent, who distributes the cases among her lady-helpers. These keep the cases under observation, and where it appears necessary, invoke the aid of the Department. Great care is exercised to avoid touching upon the domain of the family doctor, and also to avoid any action which even might have the appearance of diminishing parental, and particularly maternal, responsibility." (Report of the Medical Officer of Health of Huddersfield, for 1905, p. 30.) In particular, the Health Visitor keeps a "watchful guard over the illegitimate children who are nursed in the District, much to the advantage of these little unfortunates." (Report of Medical Officer of Health for Walthamstow, 1905, p. 5.)

responsibility, personal self-control and regularity, and self-help. The Destitution Authority, grudgingly giving its dole of Outdoor Relief to the destitute mother, leaves her not only without instruction how to make the best use of it, but also free to neglect her infant, to endanger its life by irregular hours, and even to let it starve quietly to death if she chooses. What the Local Health Authority does is to persist in inquiring after the health of that baby; to send its Health Visitors to see its condition; to make the mother feel that she is being helped; to induce her to take some pride in the infant's thriving; and to show her how she can make it thrive. We have been much impressed by the evidence afforded to us of the beneficial results of this kind of State action in positively increasing self-respect, a sense of personal responsibility and maternal care.*

(iii.) *Provision of Milk.*

In a dozen towns (St. Helens since 1899; also Liverpool, Battersea, Finsbury, Lambeth, Woolwich, Glasgow, Leicester) the Health Authority has gone a step further. It provides a municipal milk depot, or rather a "milk dispensary," at which babies requiring artificial feeding are supplied with pure milk (and hygienic feeding teats) on payment of a small sum.† At Liverpool this has developed into an elaborate organisation with branch depots in various parts of the city, supplying "humanised sterilised milk" of seven different grades, for infants of various ages (in addition to the babies brought to the depots) to many hundred families by direct delivery. But the special interest of the "milk dispensary" to the sanitarian is the personal supervision which it enables the Medical Officer of Health to exercise over these ailing babies. At Finsbury the supply of the milk is made conditional on the babies being brought regularly for inspection, accurate weighing, and hygienic advice. Those who cannot be brought are visited in their homes. At Glasgow a qualified medical practitioner (lady) visits every home as a matter of course. Practically, though not avowedly, the Medical Officer of Health becomes the medical attendant of each of these infants; to whom, indeed, he not infrequently supplies the milk gratuitously rather than let them die or compel the destitute parents to "go through the rigmarole" of obtaining Poor Law relief for them. "During the hotter portion of the year," reports the Medical Officer of Health for Norwich, "and to a lesser extent since, with the sanction of the Health Committee, I have distributed (through the lady health visitor) a considerable quantity of dried milk powder to necessitous mothers and, on the whole, have been well satisfied with the results."‡ "It is clear," says Dr. Newman, now Chief Medical Officer to the Board of Education, "that such a specialised milk supply does not meet the whole problem of infant mortality. . . . Nevertheless it is true that a *properly equipped and controlled* Infants' Milk Depot is part of the solution at the present time and under present conditions and is a practical step in the right direction."§

Here, too, as with the advice given to the mothers by the Health Visitors, the most prominent features of the work are the education of the persons aided, and the stimulus to their sense of responsibility. When the baby has to be regularly brought to be inspected and weighed, the mother's interest in its physical condition is not allowed to slacken; there is praise and approval if the baby goes on well; there is blame and warning if it sickens. The connection between irregular hours, dirt, carelessness about the food and other forms of neglect, and the ups and downs of the baby's physical development are brought home to the most ignorant and apathetic of mothers. In marked contrast with the practice of the Poor Law, the actual gift of material relief is made only an incident—for the most part only an occasional incident—in the process of education and inspection. The self-respect, the power of will, the sense of personal responsibility, instead of being weakened, as it is under Outdoor Relief, is, with a Milk Dispensary, actually strengthened.

* Evidence before the Commission, Qs. 42664-42671, 56933, 56934, 56961-56964, 94589.

† As to these municipal milk dispensaries, see *Ibid.*, Qs. 47191, 47266, 47501, and Appendices Nos. CXVI. (Par. 3), CXLIV. (Par. 5), and CL. (Par. 1), to Vol. IV. (for Leicester); Qs. 41489 (Par. 35), 41492-41514, 41585, and 41700 (for Leeds); Qs. 94287 (Pars. 23 (h), 25 (h)), 94335-94343 (for Finsbury); Qs. 95100 (Pars. 13-16), 95106-95116, 95228-95243 (for Glasgow); Appendix No. xlv. to Vol. IX. (for Woolwich). Small as is the sum charged, it is sufficient to prevent the poorest mothers (those in receipt of Outdoor Relief) from obtaining the advantage of the municipal milk depot. At Liverpool and Finsbury, we have been informed that attempts have been made by the Town Council to get the Boards of Guardians to give orders for the milk, in lieu of other food, where there are young or delicate children; but so far with little success. At Battersea, the Board of Guardians sometimes give orders for milk instead of money.

§ Report of the Medical Officer of Health on the Infants' Milk Depot, Finsbury, 1905, p. 7.

(D) THE NEED FOR A UNIFIED SERVICE DEALING WITH BIRTH AND INFANCY.

The rapid up-growth of the organised supervision of Birth and Infancy undertaken by the Public Health Authorities, and the confusion and overlapping with the work of the Destitution Authorities to which this is giving rise, compel a consideration of the question whether the whole of the public provision for Birth and Infancy—whatever that provision may be—ought not to be placed in the hands of a single Local Authority. If, on the one hand, the Local Health Authorities have trespassed on the domain of the Destitution Authorities in paying midwifery fees, and in supplying medical advice and milk to necessitous mothers, the Destitution Authorities are administering certain other services with regard to Birth and Infancy, which form indispensable parts of the Public Health machinery. Our attention has been called, by the Boards of Guardians themselves, to the fact that, owing to historical accidents, it is upon them and not upon the Local Health Authorities, that has been cast the administration of the registration of births and deaths, of vaccination, and (outside the Metropolis) of the inspection of “baby-farms.” Throughout England and Wales it is the Board of Guardians which chooses and nominates the Registrars of Births and Deaths; and the Local Health Authority has absolutely no official contact either with these officers or with the indispensable registration which they conduct. The result is that the system of registration itself is less effective from the Public Health standpoint than it might easily be made; * and the Medical Officer of Health has no means of getting the instantaneous information as to every birth and every death within his district that should be automatically at his disposal. It is equally anomalous that the machinery for vaccination, a compulsory and universal provision against an infectious disease, should be entirely in the hands, not of the Local Health Authority, but of the Destitution Authority. We have found no one to defend this arrangement. All our witnesses recommend the immediate and complete transfer of both these duties of the Destitution Authority to the Local Health Authority, especially if that Authority acts for an area of adequate extent. It has been represented to us as no less anomalous that the administration of the Infant Life Protection Acts should, in England and Wales outside the Metropolis, † be entrusted to the Destitution Authority. This service is at present very imperfectly performed by the Boards of Guardians, several of which strenuously opposed the Infant Life Protection Bill in 1902; and it is by most of them wholly neglected. ‡ The transfer of the three services of the registration of births and deaths, vaccination, and the administration of the Infant Life Protection Act—now the Children’s Act, 1908—from the Destitution Authorities to the Local Health Authorities, which is necessary in the interest both of economy and efficiency, § would, in our opinion, by concentrating in the department of the Medical Officer of Health all the available knowledge as to the local facts, make it inevitable that the whole responsibility for whatever public provision is made for Birth and Infancy should be concentrated in the Local Health Authority.

This suggestion receives support from another consideration. What is needed, for a treatment of Birth and Infancy from the standpoint of the community, is *continuous* observation of the household both before and after birth. The Destitution Authority, by the very nature of its work, has, and can have, no such continuity of knowledge. The expectant mother, or the mother with infants, only comes within its ken when “destitution” sets in, and disappears the very moment that “destitution” ceases. The Local Health Authority, on the other hand, is—by its ubiquitous machinery of Health Visitors, and house to house visitation—continuously observing the circumstances of the household, irrespective of temporary destitution. By its staff of Sanitary Inspectors, it knows the character of the street, and even of the house, in which the expectant mother is living, and is therefore in a position to gauge the probable risk to mother and infant in domiciliary confinement. Above all, the Local Health Authority is primarily concerned with the

* For instance, we are told that “The law now allows a Registrar, almost always a layman, to accept a certificate from an unqualified person, provided that he, the Registrar, is persuaded that no deception is being practised. The proper course is, without doubt, to hold an inquiry in every such case, and, where needful, a post-mortem examination. These steps will probably be taken only when the registration of the cause of death is placed under the control of the Sanitary Authority.” (Report of the Medical Officer of Health, Norwich, for 1905, p. 21.)

† Evidence before the Commission, Qs. 434, 9820–9826, 40475 (Par. 5a), 40481, 45922 (Par. 5), 45957, and Appendix No. LI., to Vol. IV.

‡ See, for examples, *ibid.*, Appendix No. LXXXV. (Pars. 19–23) to Vol. IX.

§ *Ibid.*, Q. 9827. Curiously enough, the administration of the Infant Life Protection Act is under the Home Office. In the Metropolis the work already forms part of the County Health Service, under the London County Council.

prevention of disease and death, and has, for its responsible adviser, not a clerk or solicitor but a medical expert. Thus, if the Local Health Authority were responsible for the whole of the public provision for Birth and Infancy, it would decide the question of whether institutional treatment should be afforded to a confinement, upon grounds of the risk to health and life, and the chance of survival of mother and infant. Under the Destitution Authority, the decision is made, irrespective of considerations of health, or even of the character of the mother, according to the dominant policy of the Guardians against or in favour of "Outdoor Relief." As a matter of fact there is much evidence that, for the normal case, it is in many respects better, as well as less costly, to provide midwifery attendance in the home, than to require the mother to enter a Maternity Hospital. As we have seen, the statistics of infantile mortality in the lying-in wards of Workhouses and Maternity Hospitals alike, compared with those of domiciliary confinements where adequate food and attendance are provided, are such as to make us pause before we establish any more Maternity Hospitals at the public expense.* But there are other reasons, founded on the results upon personal character, and the integrity of the home, which make institutional treatment undesirable. For a poor mother to leave her home and family means often the abandonment of her children to most inadequate care, and an additional temptation to her husband to seek amusement elsewhere. Though her confinement in a crowded, poverty-stricken home may cause much inconvenience, she feels that she can still watch over her children, direct the elder ones what to do for the household, and (as it has been graphically put) "keep the purse under her pillow." We have been much impressed by the experience in this respect of the Plaistow Maternity Charity, to which we have already referred, a voluntary organisation for supplying midwifery attendance gratuitously to the homes of a very poor part of the West Ham Union. Here a great feature is made of the hygienic advice and instruction given to the mother. Those responsible for its organisation are firm in the belief that domiciliary treatment of confinement cases is the only sound one, for they consider that the nurse may leave behind her lessons of health which will long be remembered. This, however, is at present very imperfectly undertaken, owing to the absence of any co-operation with the Local Health Authority. The nurse only attends a case for ten days at the most, and it may require many months of simple instruction before a woman has the desire or knowledge for fighting against the overwhelming odds of a "slum" existence sufficiently well to obey even the simplest laws of health. It is here that the continuous supervision and friendly counsel of the Health Visitors—continued, as we have described, quite irrespective of whether or not the mother continues to be destitute—becomes of so much value. No such machinery is, or can be, at the disposal of a Local Authority concerned with the mere relief of destitution.

There are, however, a number of maternity cases which—whether on medical or social grounds—cannot properly be treated in the home. It is a powerful argument for entrusting the whole service to the Local Health Authority that such an Authority has, in its qualified staff, the means of discovering these cases in advance; and of arranging for their admission, not at the moment of labour, but in due time. It is clear that the Maternity Hospitals supported from public funds must be either supervised or administered by the Local Health Authority, which is already charged with the duty of dealing with puerperal fever. By its ability to exercise the necessary medical supervision, such an Authority would be able to do what the Destitution Authority never feels itself able to do, namely, make full use of philanthropic or charitable institutions undertaking the reclamation of girl-mothers. Above all, the Local Health Authority would be in a position, with regard to each case, to deal with it by the desirable combination of domiciliary and institutional treatment—to watch the patient at home, to arrange for admission to the appropriate institution just for the crisis, to continue the treatment at home, and to follow this up by the instructional care which goes far to strengthen and enforce personal responsibility. Whilst the good mother would be stimulated and encouraged, the bad mother would be kept under observation and, if necessary, prosecuted for letting her baby die.

It has been strongly represented to us that the special supervision of the Local Health Authority should not be confined to the first year of life; but should be continued until, at whatever age may be fixed, the children pass under the supervision of the Local Education Authority. "There is no doubt," testified the Clerk of the Glasgow School Board, "that the absence of public provision for children under five, so far as the poorest classes

* See, in confirmation, *Ibid.*, Q. 37104.

are concerned, is a crying evil. The evils of slum life in relation to these children cannot be minimised. Probably the evil influences of the slums upon them affect their whole lives and make the whole question of education right up to fourteen more difficult.”* “Young children in poor districts,” said an important London witness, “who do not attend school are often locked up in one room for hours without attention, while the mothers are out at work. Either they are in danger from a fire in an open grate, or there is no fire and they suffer terribly from cold. When not locked in a room they are left to run about alone in the streets. In either case it frequently happens that no attempt is made to keep them clean, this being done only when they go to school. Under such conditions it is hopeless to expect children to acquire good and clean habits.”† The Destitution Authority, as we have seen—even with regard to the considerable proportion of these children which it is maintaining on Outdoor Relief—exercises no supervision over such cases. It is, we think, clear that it is the Local Health Authority that should be charged with the responsibility for the whole of the public provision that is made for the child under school age,‡ whether this takes the form of supervision, from the standpoint of Public Health, of infants at large, or the maintenance of infants discovered to be in a state of destitution. We are supported in this assumption of the proved necessity for a systematic supervision of infants up to school age by the recent authoritative Report of the Consultative Committee of the Board of Education. “The first three years of a child’s life,” states that Committee, “are the most critical of all, and . . . if the State acknowledges the duty of providing care and training for certain children after the age of three there is even greater reason for extending that care to children below that age. As to the permanent effect of proper care during the first three years of life, the Committee entirely agree. . . . They would like . . . to record their conviction that the improved treatment of such children depends almost entirely upon the improved conditions of their homes, and this opinion strengthens them in urging that in making provision for children over three nothing should be done which might arrest the development of the idea that the best place for all children under five is a good home.”§

This unification in the hands of the Local Health Authorities of whatever public provision is made with regard to Birth and Infancy seems to us as desirable in the interest of economical expenditure of the public funds, as it is in the interest of efficiency of service. We do not agree that the assumption by the Local Health Authority of the work now done by the Destitution Authority in providing medical attendance and maintenance for sick or destitute mothers and infants, would involve any extension of gratuitous service. It has been found, in practice, easier for the Local Health Authority to obtain repayment of the cost of the milk that it now supplies to necessitous mothers and infants, than for the Destitution Authority to recover the cost of the “relief” doled out in the homes, or of the fortnight’s sojourn in the maternity ward of the General Mixed Workhouse. The greater willingness of the poor to pay for the food thus obtained from the Local Health Authority arises from the fact that it is tendered in a spirit of helpfulness to persons discovered to be in need of it, with no accompaniment of humiliation, and conditional only on their making a right use of it; instead of being, like Poor Relief, grudgingly granted, without consideration or counsel, to such applicants as brave the deterrent tests, and submit to the humiliation of pauperism and the stigma of civil disability. But apart from this effect on the recipient, encouraging in him responsive effort, there is, in all the range of operations of the Local Health Authority, an even greater safeguard to the rates in the fact that this Authority prevents destitution, and is not confined to merely treating it when it arises. In all these cases, prevention is far more economical, as well as more efficient, than cure. The Destitution Authority has not, and never can have, any cognisance of the fact that an expectant mother, or mother with infants, is, owing to the neglect of her husband properly to maintain her, getting into such a state of weakness that she will shortly become chargeable to the rates. The Local Health Authority, by its machinery of Health Visitors and

* Report of the Consultative Committee upon the School Attendance of Children below the Age of Five Years, 1908, p. 127. (Evidence of Mr. J. Clark, Clerk to the Glasgow School Board.)

‡ “This system,” said the Medical Member of the Local Government Board for Scotland, “of sanitary inspection, supplemented by the system of health visiting which is springing up in our Scotch towns, and under our Medical Officers of Health, your milk depots, and so on . . . are all tending to complete the supervision from infancy up to school age.” (Evidence before the Commission, Q. 56955.)

§ Report of the Consultative Committee upon the School Attendance of Children below the Age of Five Years, 1908, pp. 55, 56.

Sanitary Inspectors, can discover the approach of destitution, and by moral pressure and, if need be, by legal prosecution, can enforce on husband or parent the responsibility for maintenance, before actual destitution or chargeability arises. We see the superior economy of this preventive activity of the Local Health Authority in the work which it has already accomplished. The great improvements in town sanitation of the past half-century, which have so enormously diminished among adults both the death-rate and the loss by preventable sickness, have been effected quite as much by enforcing on owners and occupiers their obligation to keep their own dwellings in a sanitary condition, on traders their obligation to sell only wholesome food, and on employers their obligation to provide healthy workshops, as by expensive street improvements effected at the cost of the rates. It is only in default of private action that the Local Health Authority does the work itself; and then it is often enabled to recover the cost from the individual in default. This principle it is that we seek to extend from the sanitation of the environment to the personal hygiene of the mother and infant. At present, as we shall show in our chapter on "Charge and Recovery by Local Authorities," the law and practice of recovering the cost of maintenance from the persons benefited, especially in the present sphere of the Destitution Authority, is in a state of utter confusion and futility. In that chapter, and more definitely in the chapter giving our "Scheme of Reform," we shall point out how these financial responsibilities of husbands and parents may be really enforced.

(E) CONCLUSIONS.

We have, therefore, to report :—

1. That the Boards of Guardians of England, Wales and Ireland, and the Parish Councils of Scotland have proved themselves to be, by their very nature as Destitution Authorities, wholly unsuited to cope with the grave three-fold problem as to Birth and Infancy with which the nation is confronted. Alike in the prevention of the continued procreation of the feeble-minded, in the rescue of girl-mothers from a life of sexual immorality, and in the reduction of infantile mortality in respectable but necessitous families, the Destitution Authorities, in spite of their great expenditure, are to-day effecting no useful results. With regard to the first two of these problems, at any rate, the activities of the Boards of Guardians and Parish Councils are, in our judgment, actually intensifying the evil. If the State had desired to maximise both feeble-minded procreation, and birth out of wedlock, there could not have been suggested a more apt device than the provision, throughout the country, of General Mixed Workhouses, organised as they now are to serve as unconditional Maternity Hospitals. Whilst thus encouraging irregular sexual unions and the procreation of the feeble-minded, the Destitution Authorities are doing little to arrest the appalling preventable mortality that prevails among the infants of the poor. The respectable married woman, however necessitous she may be, can, with difficulty take advantage of the free food, shelter and medical attendance provided at great expense by the Destitution Authority for maternity cases. In Scotland she is—if living with her own husband, he being in good health—absolutely debarred from relief by law. In England and Wales she is, as far as possible, deterred.

2. That in view of the fact that the Destitution Authorities of the United Kingdom have constantly on their hands more than 65,000 infants under five years of age, and that there is grave reason for believing the mortality among them to be excessive, alike among the 50,000 who are maintained on Outdoor Relief and among the 15,000 in Poor Law Institutions, careful statistical enquiry ought immediately to be made, in order to discover where the mortality is greatest, and how this loss of life can be prevented.

3. That, in accordance with the recommendations of the Royal Commission on the Care and Control of the Feeble-minded, those unmarried mothers who come on the rates for their confinements and are definitely proved to be mentally defective, should be dealt with exclusively by the Local Authority for the Mentally Defective.

4. That, whatever provision is made from public funds for maternity, whether in the way of supervision, or in domiciliary midwifery, or by means of Maternity Hospitals, should be exclusively in the hands of the Local Health Authority.

5. That, in accordance with the recommendations of the Vice-Regal Commission on Poor Law Reform in Ireland, the fullest possible use should be made, under the inspection and supervision of the Local Health Authorities, of such Voluntary Agencies as Rescue and Maternity Homes, Midwifery Charities, and Day Nurseries.

6. That the system, which has already proved so successful, of combining the efforts of both salaried and voluntary Health Visitors with the work of the Medical Officer of Health and his staff, should be everywhere adopted and developed so as to extend to all infants under school age.

7. That the Local Health Authority should, in all its provision for birth and infancy, continue to proceed on its accustomed principles of:—

(a) The provision, free of charge, of hygienic information and advice to all who will accept it;

(b) The strict enforcement of the obligation imposed upon individuals to maintain in health those who are legally dependent on them; and

(c) Where individual default has taken place in this respect, the immediate provision of the necessaries for health, and the systematic recovery from those responsible, if they are able to pay, of repayment according to their means.

CHAPTER IV.

CHILDREN UNDER RIVAL AUTHORITIES.

The authors of the Report of 1834 found only one Local Authority dealing with poor children, namely, that acting under the Elizabethan Poor Law. In 1909 we find the work shared among three distinct Local Authorities expending rates and taxes, the Destitution Authority, the Education Authority, and, in England and Wales, also the Police Authority. Each of these Local Authorities acts under its own set of Statutes, and is, in England and Wales, subject to the control of a different Government Department—the Poor Law and other Divisions of the Local Government Board, the Board of Education, and the Home Office. Of these three Local Authorities dealing with poor children, the Education Authority (which now often provides maintenance as well as instruction) has become, within the last few decades, by far the most extensive in its operations, now spending at least £25,000,000 annually. The total expenditure of the Destitution Authority on all its 237,000 children between five and sixteen,* including instruction as well as maintenance, may be estimated at nearly two millions sterling annually. The Police Authorities, the County and Borough Councils, which have sometimes established industrial schools of their own, take rank with the Voluntary Committees which, alongside of them, administer other schools of this kind at a cost of £600,000 a year, met partly by substantial grants in aid from the Home Office. All the three kinds of Local Authorities provide, in a certain proportion of cases, both maintenance and instruction; all three deal with children who, whatever else they may be, are certainly destitute; and, as a matter of fact, it is not uncommon to find the different children of one and the same family being treated by two, or even by all three, separate Local Authorities simultaneously.

(A) CHILDREN UNDER THE DESTITUTION AUTHORITY.

We need not again recur to the fact that the authors of the Report of 1834 recommended that, for the destitute children of school age, there should be provided entirely separate residential institutions under schoolmasters; and that this recommendation applied, not merely to orphan or deserted children, but also to the families of all the able-bodied persons who were in any way relieved from the rates. The only children aided from the rates whom the authors of the 1834 Report would have left with their parents were those of sick or infirm persons, for whom alone Outdoor Relief was contemplated. This recommendation was ignored by the Poor Law Commissioners of 1835, who relegated to the General Mixed Workhouse the children of all those who received institutional relief; and left in the homes, on small weekly allowances without any education at all, the children of the constantly increasing number of parents—widows, the sick, the aged and the infirm, men on Outdoor Labour Test, etc.—who were excluded from the operation of the Outdoor Relief Prohibitory Order.

From 1841 onward, as we have already described, the Central Authority in England and Wales has been persistently striving to induce the Boards of Guardians to reverse the policy with regard to the children of school age which it unfortunately pressed on them in 1835. It has done its best to get the Guardians to provide efficient education for the children; to establish separate schools for them; to obtain trained and qualified teachers for them at adequate salaries; to get the children of school age out of the General Mixed Workhouse into which they had been driven; and to diminish the number of children who, on Outdoor Relief, were left without either adequate education or proper supervision.

Unfortunately, the Destitution Authorities have, nearly everywhere, shown themselves very slow and reluctant to adopt the new policy. At the present day, out of the 186,000 children between five and sixteen maintained by the Poor Law Authorities in England and Wales alone, there are 130,000 on Outdoor Relief, and about 3,000 in the ordinary wards of the General Mixed Workhouse, apart from several thousands more

* The number of children between five and sixteen among the paupers of England and Wales was, on March 31st, 1906, 186,105; those of Scotland, 32,075; and those of Ireland, 19,020.

who are in the sick wards of General Mixed Workhouses, and several thousands in addition who are in separate Infirmaries, usually without separate wards for children.

We have already described the treatment meted out by the Destitution Authorities of England and Wales to the 130,000 children of school age, whom they elect to maintain on Outdoor Relief. After the elaborate report of our Special Investigators into the conditions of these children, as well as from what we have ourselves witnessed, we are unable to resist the conclusion that the great bulk of these children are growing up underfed, wrongly clothed, and housed under insanitary conditions. They are demonstrably being stunted in their growth and physical development, falling, as they grow up, year by year, farther behind the average in height and weight.* What is even more deplorable is that, *with regard to ten or twenty thousand of them*, it is, as we have seen, only too probable that they are being subjected to the influences of parentage and homes of dissolute or immoral character. The condition of the children on alimient in the large towns of Scotland is, in these respects, quite as bad as that of the Outdoor Relief children in England and Wales.† “The out-relief children,” emphatically sums up our Children’s Investigator, “are definitely and seriously suffering from the circumstances of their lives.”‡

With regard to the 3,000 children between five and sixteen (not including the 7,000 others who are in the sick wards or infirmaries) who are still living in the General Mixed Workhouses of England and Wales, we need do no more, after our description of the evil promiscuity of that institution, than emphasise the universal condemnation of such a method of providing for the rearing of the young. “The retention of children in Workhouses,” reports our own Children’s Investigator, “is always unsatisfactory. Even where they have special attendants they are never completely separated from the ordinary inmates. . . . In York certainly the children were dull and inert; they stood about like moulting crows, and did not seem able to employ themselves with any enthusiasm or vigour. The arrangements for their tendance and training are never as good as in an establishment wholly given up to them; the separation from the ordinary inmates of the Workhouse was very incomplete in each case I saw.”§ Despairing of being able to induce the Destitution Authorities to send the children away to proper residential schools, the Local Government Board for England and Wales has, during recent years, contented itself with pressing the smaller Unions to let the children in the Workhouses attend the public elementary day schools.|| This is doubtless an advance on the old school within the Workhouse walls; but we cannot too emphatically express our disagreement with those who accept this as any excuse for retaining children in the Workhouse at all.¶ The day school accounts for only about one-third of the child’s waking life. The Local Government Board Inspectors themselves point out that it leaves the children, in practice, exposed to the contamination of “communication with the adult inmates whose influence is often hideously depraving.”**

“It is a serious drawback,” says the Inspector, “that every Saturday and Sunday, to say nothing of summer and winter holidays, have, for the most part, to be spent in the Workhouse, where they either live under rigid discipline and get no freedom, or else if left to themselves are likely to come under the evil influence of adult inmates. The Workhouse is at best a dreary place for children to

* “At three years the Out-relief children are as tall and as heavy as the averages (for all England and Wales); after that age they are at every age smaller and lighter, and the defect becomes greater with increasing years. . . . The defect is greater in weight than in height. The Out-relief children are unduly light, even for their defective height.” (Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, p. 115.)

† Report . . . on the Condition of the Children . . . in Scotland, etc., by Dr. C. T. Parsons. No fewer than 24 per cent. of the children investigated in the Scotch towns were found to be living with “bad” mothers (*Ibid.*, p. 44).

‡ Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, p. 116.

§ *Ibid.*, p. 103.

|| These efforts have been so far successful that on January 1st, 1907, it could be said that only 565 children of school age were being taught in the workhouses. (Report to the President of the Local Government Board, by T. J. Macnamara, p. 6.)

¶ “When sent out to school,” observes our Children’s Investigator, “they did not enter into the play or out-of-school life of the other children. I have often felt, as I have watched the little groups of workhouse children drawing off from the others, that, to certain natures at any rate, this must painfully emphasise their position.” (Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, p. 103.)

** Twenty-Eighth Annual Report of the Local Government Board, 1898–1899, Appendix B, p. 136; Mr. Preston Thomas’s Report.

spend their lives in, and I should like to see them quite cut off from it.”* “The most unpleasant feature of this system,” says another Inspector, “is that in some of the small rural Unions there are so few children that the Guardians cannot reasonably be expected to pay additional officers to look after them. There are but few Unions where there is no paid officer in charge of the children, but there are many where there is only a female officer, and where a pauper inmate is placed with the boys and sleeps in their bedroom. The male pauper selected for this purpose is generally the best man available, but too often he is not the sort of character which it is good for the boys to associate with.”†

We paid special attention to this point of the provision for children on our visits to Workhouses, large and small, in town and country, in England, Wales, Scotland and Ireland. We saw hardly any Workhouse or Poorhouse in which the accommodation for children was at all satisfactory.‡ We unhesitatingly agree with the Inspector of the Local Government Board who gave it to us as his opinion that “no serious argument in defence of the Workhouse system is possible. The person who would urge that the atmosphere and associations of a Workhouse are a fit upbringing for a child merely proves his incapacity to express an intelligent opinion upon the matter.”§

From what we saw of the Poorhouses of Scotland, great or small, we came to the conclusion that the residence of children in those institutions was no more to be justified than it was in the Workhouses of England and Wales. It does not seem to be realised in Scotland to what a large extent the Poorhouse is used for children. Disregarding the infants under five, with whom we have already dealt, there were in the Scottish Poorhouses on March 31st, 1906, no fewer than 1,095 boys and girls between five and sixteen; or actually one-third of the corresponding number in England and Wales, which has seven times the population. Nor does this represent the whole story. The number of children found in the Poorhouses on any one day is less than half the total that passes through these institutions in the course of the year; so that we may infer that at least 3,000 boys and girls of school age came under the evil influences of the Scottish Poorhouse during last year. We do not think that it is generally known in Scotland that the General Mixed Poorhouse harbours at least twice as many children of school age, in proportion to population, as the General Mixed Workhouse does in England and Wales.

* Twenty-ninth Annual Report of the Local Government Board, 1899–1900, p. 115; Mr. Preston Thomas’s Report. “On my last visit,” notes the same Inspector as to a particular Union, “out of a total of 91 inmates there were no less than 15 boys, 22 girls, and 17 infants—a total of 54—for whose supervision no officer had been appointed, and who were left to the care of two women who are themselves inmates because unable to maintain their own illegitimate children. It is not hard to imagine the sort of influence which such persons would be likely to exercise on those under their charge. As stated in a previous Report, I have repeatedly remonstrated without success against this arrangement, as likely to affect injuriously the future of children for whom the Guardians are responsible, and last year I again brought the matter before them, but once more a majority decided, on the score of supposed economy, to make no change. I am glad to learn, however, while this Report is going through the press, that they have now reconsidered their decision, and that a paid caretaker will be appointed forthwith. Whether one officer will be able to supervise (out of school hours) nearly forty boys and girls, and to keep them entirely apart from adult inmates, is a point which will have to receive attention.” (Thirty-second Annual Report of the Local Government Board, 1902–1903, p. 103; Mr. Preston Thomas’s Report.)

† Thirty-fourth Annual Report of the Local Government Board, 1904–1905, pp. 202, 203; Mr. Fleming’s Report.

‡ “During their stay in the Workhouse,” notes one of our Committees, “the boys are placed with the infirm old men, and the girls with the infirm old women.” (Reports of Visits by Commissioners, No. 12, p. 25.) “Though they had separate day-rooms and dormitories,” says another Committee, “there was practically no attempt to keep them from contact with the other inmates. Thus, for instance, the boys’ playground opened directly into the yard for able-bodied and other men, and in the dining-hall both boys and girls sat close by the other inmates.” (*Ibid.*, No. 57, p. 126.) “The boys’ day-room,” notes another Committee, “is absolutely dreary and bare; and they share a yard and lavatories with the young men. . . . An old man sleeps with the boys.” (*Ibid.*, No. 82, p. 153.) Another Committee notices that “there seems no real attempt to separate them from the inmates. They dine together in the hall with the adults, and so far as we could see, on the girls’ side female inmates were constantly going in and out, and on the boys’ side there was no serious attempt to keep the lads from contact with the male inmates.” (*Ibid.*, No. 83, pp. 154, 155.) We found that, even where the arrangements for segregation were least imperfect, the Workhouse children nearly everywhere had their meals in the presence of the other inmates, of both sexes and all ages, including the imbeciles and idiots. “There were,” notes one of our Committees, “fifty-nine children resident in the Workhouse. I saw them just as they were coming to the dining-room to have their midday meal, seated along one side of the hall, the adult inmates occupying the centre and the other side. One could not help thinking that this must have a demoralising and deleterious effect.” (*Ibid.*, No. 93, p. 163.)

§ Evidence before the Commission, Appendix No. XXIII. (G) to Vol. I. One witness only defended the maintenance of children in the Workhouse itself, namely, the Rev. Canon Bury, late Chairman of the Brixworth Board of Guardians, so long noted for its “strict administration.” “I see no way,” he said, “of treating them less eligibly than the independent labourer’s child except by bringing them into the Workhouse.” (*Ibid.*, Q. 48221.)

As to Ireland, we have been able to obtain only imperfect statistics. But we gather that, of children between five and sixteen years of age, there are over 6,000 in Poor Law Institutions. We infer that there must be, in the General Mixed Workhouses of Ireland, something like 5,000 boys and girls of school age, who are mostly being educated within the Workhouse walls.*

Turning now to the specialised treatment provided by the Destitution Authorities of the United Kingdom for about 60,000 out of the total of 237,000 children between five and sixteen whom they maintain, we are confronted with six different methods of provision varying greatly in the amount and quality of what is done, and therefore in the cost. The expense in fact, shows the most extraordinary variation—some children being maintained on eighteenpence or half-a-crown a week, whilst others run up to as much as twenty-five shillings a week. Without at present attempting to estimate the comparative advantages of these six methods, we proceed first to describe them in the order of their apparent cheapness, taking first that which is apparently the least costly.

(i.) *Boarding Out within the Union.*

Of the method of providing for children known as Boarding-Out, there are, in England and Wales, two varieties existing under very different conditions. Under an Order of 1889 Boards of Guardians may board out children "within the Union," which means, in practice, no more than paying a small sum weekly to a foster parent residing within the same Union, who undertakes to maintain the child. "In point of fact the cases boarded-out within the Union are cases with regard to which the Guardians would ordinarily give Outdoor Relief, and . . . did give ordinary Outdoor Relief prior to the . . . Order being sent out."† It is a system "which extends automatically," stated the Senior Boarding-Out Inspector:—

"For many persons who might maintain children related to them, but for whom they are not legally responsible, will not do so if they see that their neighbours receive parish pay for children under similar circumstances. Also, though there are now about 107 committees within the Unions for which they act, there is no official inspector to report on, and help their work; while the rest of the children are only under the supervision of the relieving and medical officers, who cannot make the thorough inspection of the homes and bodily condition of the children which a woman can. It is, therefore, probable that many of the homes are accepted in ignorance of what the treatment of the children really is, and that many of the foster-parents would decline to receive them at the low rates of payment often given if official investigation were made into the nature of that treatment and their expenditure of those payments."‡

We regret to report that we have been unable to find any official information as to the condition of the 6,806 children thus dealt with in England and Wales, children who, though placed out at sums varying from eighteen-pence to five shillings per week, to persons not their parents,§ are not under the inspection of any officer of the Local Government Board, and usually, indeed, have in a majority of Unions not even the protection of a Boarding-Out Committee.|| Because the foster-parents happen to live within the geographical boundaries of the Union to which the children belong, the theory of the Local Government Board is that the inspection and supervision of the Guardians themselves, the Relieving Officer and the District Medical Officer¶ will suffice to ensure that the children are being properly cared for, much as if they were children on Outdoor Relief. As we have seen, the Guardians, in the majority of cases, give no supervision at all, and there is evidence that the prescribed inspection of the children by the District Medical

* "A child of ten had not been to school at all" and others not "for seven months" (Evidence before the Commission, Qs. 99400–99402).

† *Ibid.*, Q. 9689.

‡ Thirty-third Annual Report of Local Government Board (Report of Senior Inspector of Boarding-out), 1903–4, p. 264. See also Miss Mason's evidence before the Commission, Qs. 9648–9655, 9688–9690, and Appendix No. XX. to Vol. I.

§ In some cases, by what is almost an evasion of the Boarding-out Orders, the child is "boarded-out" with a relation, who thus sometimes receives several shillings a week for providing for a niece or a sister; or even for a grandchild whom the grandparent is legally obliged to maintain (*Ibid.*, Q. 52556). This is permitted by the Local Government Board (*Decisions of the Local Government Board*, p. 78, Par. 5).

|| Frequently a Boarding-out Committee, for children within the Union, is well-organised and efficient see, for instance, the Extracts from the Rules of the Bristol and Clifton Certified Committee for Boarding-out Union Orphans and Deserted Children, 1905, a pamphlet printed by the Local Government Board as a model to others.

¶ Evidence before the Commission, Qs. 3982, 52552.

Officer is seldom adequately carried out ;* and it is remarkable that where a Boarding-Out Committee exists, the official regulations enable such medical inspection to be entirely dispensed with.† The only responsible person is, in that case, the Relieving Officer. This "Destitution Officer" does not think it his duty minutely to inspect the children ; and even if he were a desirable person with whom to bring the child in contact, he can hardly be expected to be expert in ascertaining and enforcing the physical and mental requirements of healthy child life. The children are, in fact, often under no supervision at all. In one Union our committee heard of "Thirty-one children boarded-out within the Union at a cost of from 1s. 6d. to 2s. 6d. per child. There is no list of boarded-out children except the entry in the Application and Report Book ; in fact it is really Out-relief. There is no superintendence and inspection except such as the Relieving Officers give."‡ One of the Local Government Inspectors informed us that he had himself become aware of several cases of neglect, and even of cruelty to these totally uninspected children ; and he suggested to us the desirability of "an absolutely independent inquiry . . . to see how they do fare, and whether they are well treated or badly treated. All the people who take them want to make money out of them. The worse they treat them the more money they make."§ Such an inquiry we found ourselves without time to undertake. But our Special Investigator into Children inquired into the condition of the children boarded-out within the Union in six different districts of England and Wales. The results of this sample inquiry are, in our judgment, very disquieting :—

"It is clear," sums up our Investigator, "from the accounts of these six Unions, that effective supervision of boarded-out children and their homes is not obtained under the ordinary Poor Law administration. . . . Supervision of homes and children by Guardians and Relieving Officers was never found to be satisfactory. Relieving Officers have too much the standard of the ordinary Out-relief family ; also a man cannot investigate the sleeping accommodation, beds and clothes of girls in any effective fashion. He cannot discuss with the foster-mother the girl's health and temperament in the way a wise woman can do."||

In view of these statements and of the very grave facts that are constantly being discovered by the lady Inspectors of the Local Government Board among the other boarded-out children who are inspected in England and Wales, we cannot but regard the total absence of official information with regard to these 6,806 children as unsatisfactory. This is the more important in that it is only this section of boarded-out children that, in England and Wales, shows any sign of increasing in numbers. Without waiting for any systematic reform of the Poor Law, they ought, in our opinion, to be at once made the subject of a special inquiry, and placed for the future under the same official inspection as the children boarded-out beyond the Union.¶ This, we may observe, would need no legislation, and could be instituted next week by a stroke of the pen.

(ii.) *Boarding-out in Scotland, and "Boarding-out without the Union" in England and Wales.*

But the system of boarding-out "within the Union" in England and Wales is but an anomalous offshoot of the general plan of placing out the children, far from Poor Law associations, with carefully chosen foster-parents who should care for them as for their

* "The customary three-monthly examination by the Poor Law Medical Officer within the Union is," reports our Children's Investigator, "in my experience, mostly very perfunctory." (Report on the Condition of the Children, by Miss E. Williams, 1908, p. 95.)

§ Evidence before the Commission, Qs. 12362-12369 ; see also Qs. 4594-4597. "My impression is that a good many bad cases would be found" (*Ibid.*, Q. 4594). In 1888, a special inspection was made, which revealed a number of instances of neglect and cruelty (*Ibid.*, Qs. 5960-5962), which led to new regulations, but not to any regular inspection. (*Ibid.*, Qs. 5417, 12363.)

|| Report . . . on the Condition of the Children, by Dr. Ethel Williams, 1908, pp. 91-92 ; see also the incidental references in the Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. C. McVail, 1907, pp. 76-78.

¶ "I do think," said to us a representative of the Metropolitan Association for Befriending Young Servants, "the boarded-out [children] within the Union want the same inspection exactly, by trained inspectors, as children who are boarded-out without the Union. It seems to me unreasonable to deny it to the children. We have had painful cases." (Evidence before the Commission, Q. 33922.) This proposal was supported by the representative of the Association of Poor Law Unions (*Ibid.*, Qs. 24860, 24861), and by other witnesses. (*Ibid.*, Qs. 39555, 39556.) We may add that we were informed that the system had been found so unsatisfactory by many Unions as to be abandoned.

own offspring. We need not recount the well-known story of the immemorial practice of the Scotch Kirk Sessions in boarding-out orphan and deserted children, which became, after 1845, the regular system of the Scotch Poor Law.* Nor need we describe the adoption after 1862 of a similar system for Ireland, and after 1870 also for England and Wales. To those who had become conscious of the terrible promiscuity and evil associations of the General Mixed Workhouse, or of the machine-like routine of the great "barrack schools," the plan of boarding-out the children in the cottages of foster-parents in the country promised the best substitute for the home life which the orphan or deserted child had irrevocably lost. "The testimony" of many witnesses, as the Departmental Committee on Poor Law Schools reported in 1896, "is emphatically in favour of the boarding-out of pauper children as the best system, and that which secures to them the healthiest and most natural life, and gives them the best chance of . . . becoming absorbed into the respectable working population."† Accordingly, there are at present over 10,000 children "boarded-out" in the United Kingdom (apart from the anomalous "boarding-out within the Union" already referred to), namely, about 6,000 in Scotland, 2,100 in Ireland and 1,800 in England and Wales; out of the total of about 305,000 infants and children under sixteen whom the Destitution Authorities are maintaining.

The provision for children in Scotland by means of boarding-out, though commonly assumed to be the principal, if not the only method there adopted, is made use of only for orphan, deserted or "separated" children, and is applied, in fact, only to one-sixth of the pauper children. But it is estimated that of the orphan and deserted children over 80 per cent. are now boarded-out. Of the 7,552 infants under five in receipt of Poor Relief on March 31st, 1906, 315 were boarded-out; of the 32,075 children between five and sixteen, 5,700 were boarded-out. There are, it must be remembered, in Scotland no Poor Law schools, Cottage Homes or Scattered Homes, and little use is made of institutions under voluntary management.

We have to report that the plan of boarding-out, as applied in Scotland to the orphan and deserted children, appears to be endorsed by Scottish public opinion.‡

It has, however, been observed to us that these thousands of children are entrusted for money to stranger foster-parents—sometimes four or five to one person, and a score or two to a single Highland village §—without any sort of independent official supervision or inspection. The work of selecting the foster-parents, and bringing the children, is left to the Destitution Officer of the Destitution Authority from whose district—often far distant—the children come.

Our own Investigator reports that—

"When a child is once boarded-out, the supervision exercised over it is not very close. The Inspector of Poor for the parish in which the children are placed has no legal responsibility, and sees little of the children, unless, as in Lanark, he gives part of his time to visiting them just as he visits his own. The formal inspection by the parish to which the children belong is always the same, and consists of two visits a year by an inspector, once alone and once accompanied by two members of the Parish Council. These visits have little value in advice to, or control over, the foster-parent, but they may afford opportunities for gaining information as to the condition of the child. Parish Councils seem to rely a good deal on the informal supervision of neighbours, ministers and school-

* The Boarding-out of Pauper Children, by J. Patten MacDougall, in Transactions of the Fourth International Home Relief Congress, 1904.

† Report of the Departmental Committee on Poor Law Schools, 1896. The recent Commission on the Irish Poor Law strongly supports this view. "We think that nearly all children can and ought to be boarded-out, from (say) one year old up to whatever age it may be thought best to fix as a maximum limit of age for boys and girls, respectively. Those children, few in numbers according to our view, who, for any sufficient reason, cannot at once be boarded-out, might be placed temporarily in certified or industrial schools, according to circumstances." (Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., p. 61.)

‡ Memorandum on Boarding-out in Scotland (Visits: Scotland. Not yet in volume form); the Boarded-out Children in Iona (*Ibid.*, also not yet in volume form); the Boarding-out of Pauper Children, by J. Patten-MacDougall.

§ From Edinburgh, there were sent, to thirty-five of the foster-parents, no fewer than 159 children, five of them taking six apiece. From Glasgow, there were sent, to 130 of the foster-parents, no fewer than 540 children, twenty of them taking five apiece. (The Boarding-out of Pauper Children, by J. Patten MacDougall, p. 13.) In the Island of Iona, with a total population of 216 (thirty-two being children) we found no fewer than twenty-nine children boarded-out from Glasgow, practically all families eagerly competing for them. (The Boarded-out Children in Iona, by Professor Smart.)

masters for bringing abuses to light, but people are not usually inclined to give information against their neighbours, especially in a small place where everyone knows everyone else, and a good deal of neglect and injudicious treatment, if not actual cruelty, might easily go on without anyone feeling it his business to bring such matters to the notice of those in authority.”*

Such cases, we were informed, have been known to occur.† It appears to us, moreover, somewhat remarkable that there is no systematic medical supervision of the boarded-out children.

“There is,” notes our Investigator, “no medical inspection of these children at all. The foster-parents are expected to take them to the doctor when necessary, and have a right to his attendance for them, but they are themselves the only judges of the necessity. One child, boarded in Saltcoats, was attending an eye hospital in Glasgow, on the advice of the inspector given at one of his half-yearly visits. There was a boy of ten in Lanark who had a tubercular knee, and ought to have been kept in bed. Indeed, when the doctor visited him he was there, but at other times he was found hopping about the room. Another girl (one of those belonging to Lanark itself) was feverish and obviously ill. When she was medically examined at school, she was sent home with a message that she was to be put to bed. She was found subsequently playing in the street, and though again advised to do so, her guardian did not put her to bed, apparently through sheer carelessness, and did not send for the doctor. It was afterwards found that this child had been in hospital for some time, and discharged because she had phthisis, and such cases were not treated there. She was under no kind of medical supervision.”‡

We note that the practice of Scotland is to include as “boarded-out,” children who would not, according to the English terminology, be so described. A certain proportion of the children said to be “boarded-out” are merely placed in institutions under voluntary management, some of which are of large size. Thus the Edinburgh Parish Council has always a score or two of children in a large Roman Catholic orphanage, and fifty or sixty in other voluntary institutions, which would, in England and Wales, be inspected by the Local Government Board, and “certified” as suitable for the reception of the children. Various other Parish Councils in Scotland dispose of children in this way, the total number amounting, apparently, to about 750; without, so far as we have been able to gather, any systematic inspection of these private institutions being conducted, either by the Local Government Board for Scotland, or by the Parish Councils concerned. We cannot approve of considerable sums of public money—amounting, as we understand, to thousands of pounds annually—being thus paid to private, and often denominational, institutions, without official inspection or public representation on the governing bodies.

There is also another practice disguised under the term “boarding-out.” One of the General Superintendents under the Local Government Board for Scotland speaks “most emphatically of the success of the system . . . when the children are really boarded-out,” but he goes on to say that: “In some cases the children have been left with relatives—a grandmother, elder sister or brother or aunt—who have probably offered to take the children at a reduced aliment, say 1s. 6d. a week each. In these cases I have not found the children so well accommodated and cared for.” The proportion of children dealt with in this way, even in the poor “slums” of the great cities, appears to be sometimes considerable. In Aberdeen, for instance, where there were, on July 1st, 1907, altogether 1,557 pauper children, 1,297 were simply on Outdoor Relief and no fewer than 75 were living in the General Mixed Workhouse; 185 were nominally “boarded-out,” being nearly 12 per cent. of the whole. But we found that of these 9 were in various private institutions, 29 were living with relatives on a low aliment, and only 147 were really boarded-out with strangers, and these by no means all outside the city itself. Of the whole 6,710 children reported as “boarded-out” in Scotland on May 15th, 1907, whilst about 750 were in institutions, 1,929 were boarded with relatives, and only about 4,000 with stranger foster parents.§

We hesitate to express an independent opinion on the Scottish plan of boarding-out. But we cannot escape the feeling that so extensive a system of “farming-out” the children

* Report on the Condition of the Children . . . in Receipt of Poor Law Relief . . . in Scotland, by Dr. C. T. Parsons, p. 66.

† It was stated that the National Society for the Prevention of Cruelty to Children had proceeded against some foster-parents for cruelty to boarded-out children (Evidence before the Commission, not yet in volume form; see the report of the discussion at the meeting at Edinburgh in 1904 in Transactions of the Fourth International Home Relief Congress, 1904).

§ Thirteenth Annual Report of Local Government Board for Scotland, 1907, p. xiii.

of the poor, great as may be its advantages in the best cases, ought not to continue without systematic medical inspection once a quarter, and regular visitation of all the cases at least once a year by trained lady inspectors under the Local Government Board for Scotland.

Very different are the conditions under which the Destitution Authorities in England and Wales have been permitted to board out their children beyond the limits of their own districts. There must be a Voluntary Committee* of local residents, individually and collectively approved by the Local Government Board, each of whom must engage in writing to undertake the responsibility of choosing the foster-parents, supervising the homes, visiting them at least every six weeks, making the payments for the children's maintenance, and reporting periodically on the children's condition. The master of the local Public Elementary School must report quarterly on each child on an official schedule. A definite contract must be made with a local medical practitioner for the attendance of the children in sickness. And over and above this local supervision, which is strictly insisted on, the Local Government Board maintains three trained and specialised lady inspectors who do nothing else but travel up and down the country examining the homes, the health, the food and clothing, and the physical and mental condition of these 1,800 children.† On the other hand—in sharpest contrast with the arrangements which content the Local Government Board for Scotland—the Relieving Officers, whether of the Union from which the child goes, or of that in which the foster-parent lives, have absolutely nothing to do with the case. The Board of Guardians into whose district the child comes knows nothing of it. And what is the more remarkable, the Board of Guardians which pays for the child, and is responsible for its welfare, is strongly discouraged, if not even actually forbidden, to send any of its officers or to depute any of its members to visit the child's new home or personally inspect its condition.‡ Any such visitation or inspection would, it has been officially stated, be objectionable, “as keeping up associations of pauperism which it is one of the objects of the boarding-out system to remove,”§ and expenses incurred for this purpose would, it has been intimated in at least one Union, be liable to be disallowed and surcharged by the District Auditor.

The vigilant and incessant supervision of the three lady inspectors of boarding-out in England and Wales—not extended, we must repeat, to the 6,000 children “boarded-out within the Union,”—has, we gather, resulted in these carefully watched children being, on the whole, kindly treated. Many of them, it is clear, receive the great advantage of a first-rate working-class home. “Boarding-out,” states our own Children's Investigator, “when properly supervised, and with an active and wise Boarding-out Committee, is, I believe, the ideal system both for boys and girls, but especially for girls.”|| But we have some doubt whether the system can, under present circumstances, be greatly extended in scope. We do not think, for instance, that it can be used for children who have mothers of their own, not being such as deserve to be completely and permanently deprived of their offspring. Nor is it applicable to the not inconsiderable number of children who, from mental or physical peculiarities, have to be dealt with by persons skilled in the treatment of the abnormal child. Thus the percentage of children who can be made eligible for boarding-out cannot, we think, appreciably exceed the present class to which the Boarding-Out Order applies, which probably comprises only about one-tenth of the total number of Poor Law children. Further, the number of foster-parents who are both able and willing to receive boarded-out children and who possess suitable homes is, in England even more than in Scotland, plainly very limited. We have regretfully to admit that, good as it is as far as it goes, “boarding-out can only touch the fringe of the problem of the training and upbringing of pauper children.”¶

§ Local Government Board to West Ham Board of Guardians, July 23rd, 1906; MS. Minutes of West Ham Board of Guardians, August 30th, 1906.

|| Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, pp. 95, 103.

¶ *Ibid.*, p. 103.

Moreover, amid all the advantages of the foster parent's home, we have felt uncomfortable, in such personal inspections as we have been able to make, in Scotland, Ireland and England alike, as to whether sufficient care was being taken to see that these boarded-out children were in all cases being fed, clothed, educated and medically attended *in such a way as to make them into healthy and productive citizens*. The official inspection in England, and local public opinion in Scotland, may, in cases of open abuses, protect them (in all but a few exceptional cases) against wilful cruelty, or gross neglect. But it ought frankly to be recognised that the standard of efficiency of the average mother in the rearing of children is a low one, often not consistent with the continued health and adequate training even of her own children, to which she brings the incalculable compensating advantage of instinctive care. It cannot be said that the present occasional inspections protect the boarded-out children against a foster parent's low standard of knowledge of how to bring up a child, or against a foster parent's lack of means. Practically nothing can be done by the Local Government Board Inspectors to ensure that the children get continuously sufficient food of the proper kind, or the right sort of clothing, or even adequate sleep.* The amount usually paid for their maintenance—3s., 4s. and occasionally 5s. a week, with 10s. a quarter for clothes—is, with the usual limited knowledge as to how best to lay out this sum, insufficient for adequate food and clothing of a growing child and ordinary remuneration for the very real labour of attending to it.† We do not feel any assurance that the boarded-out children, if properly weighed and measured, would be found to be much more nearly equal to the average weight and height for their years than the children on Outdoor Relief. Unfortunately the boarded-out children are, as a rule, not medically inspected,‡ or even periodically weighed and measured at all; and we have it in evidence that this lack of medical inspection results in many minor ailments remaining untreated.§ “I believe,” sums up our Medical Investigator, with regard to these Boarded-out Children, “the main reason for present defects to be that the children are regarded as belonging to the Poor Law system of the country, are under charge of the Poor Law Authority, and that their whole management is pervaded by the Poor Law spirit. They are a burden on the rates; no more should be done for them than the absolute minimum demanded by necessity. It is the duty of the Guardians to keep down expenditure, and to see that pauper children shall not be better cared for than the children of the poorest labourer. Proposals as to better treatment, better feeding and better control hardly belong to the sphere of Poor Law work.”|| And, seeing that the very object of the system is to free the child from any connection with the Poor Law, so that neither the members nor the officers of the Board of Guardians responsible for the child's maintenance and welfare can properly be allowed to visit or inspect it, lest this should keep up “associations of pauperism,” we fail to see why the Destitution Authority should continue to have anything at all to do with the boarded-out child. Such a child might, it would seem, just as well be entrusted to the care of the Local Education Authority—“an authority,” to use the significant words of our Medical Investigator, “whose special duty would

* “Nearly a dozen cases came under my notice where children were suffering from not having sufficient sleep at night, owing to not going to bed in good time.” (Thirty-fifth Annual Report of the Local Government Board, 1905–1906 (Report of Inspector of Boarding-out), p. 548.)

† “The payments made by Guardians for clothes do not nearly cover the cost with older children. Boots and shoes for girls and boys over ten cost at least 15s. to 25s. a year, especially in the country where they have a long walk to school.” (Report on the Condition of the Children, by Dr. E. Williams, 1908, p. 96.)

‡ It is a strange anomaly that whilst the Local Government Board insists that every child boarded-out within the Union where there is no Boarding-out Committee, should be regularly inspected once a quarter by the District Medical Officer, who is paid a fee of half-a-crown for this medical overhauling, there is no such requirement for children boarded-out beyond the Union, *who are accordingly not medically inspected at all*. “Where,” says our Children's Investigator, “a small regular payment is made by Guardians for medical attendance for children boarded-out without the Union, this is often regarded as of the nature of a provident payment to ensure attendance in sickness, and not to provide medical inspection and supervision.” (*Ibid.*, p. 95.)

§ “Regular medical inspection of all boarded-out children is,” says our Children's Investigator, “essential. These are often children of poor physique who need special care. In almost every case I saw, the child's teeth needed attention. I saw several cases of very much enlarged tonsils, enlarged glands and adenoids, also defects of vision, all needing attention. *I saw no set of boarded-out children amongst whom there were not untreated defects.*” (*Ibid.*, p. 95.) “The Medical Officer,” notes our Medical Investigator, “is not expected,” with regard to boarded-out children, “to suggest the calling in of dental aid for the right ordering of the growth of the teeth. Operations for removal of enlarged tonsils, or adenoids, are not so regularly done among labourers' children as to yield a good precedent for their performance among pauper children.” (Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. C. McVail, 1907, p. 88.)

|| *Ibid.*, p. 87.

be the proper guidance and control of these children . . . so as to fit them for a useful life, and to remove as far as practicable the evil effects of their mental and physical heritage" *—an authority which is now to have systematic arrangements for medical inspection by doctors having special knowledge of children's physical needs, and which has its own staff of School Attendance Officers, and its own voluntary bodies of School Managers or Children's Care Committees, free from any of the "associations of pauperism."

(iii.) *Certified Schools and Institutions.*

Closely connected with the system of boarding-out the children with foster-parents, is that of placing them in schools and homes under the management of voluntary philanthropic committees, to which, in England and Wales, the Destitution Authority pays a sum, approved by the Local Government Board, of from 3s. to 10s. 9d. per child per week.† Other institutions, not certified, are made use of by special permission of the Local Government Board in each case.‡ This method of providing for the children is now resorted to by about half the Boards of Guardians in England and Wales, who place out in this way over 11,000 children, mostly of school age; 8,171 being sent to the 269 certified homes and schools,§ and about 3,000 to uncertified institutions.|| About a score of Unions have each more than a hundred boys and girls so disposed of. In a large number of cases, these are children of Roman Catholic parentage, for whose reception about fifty-five Roman Catholic certified schools, homes and orphanages are maintained, having altogether about 5,000 Poor Law inmates. There are a score of certified institutions for the blind, deaf and dumb, crippled or idiotic, with about 700 inmates. There are three certified training ships, having about 250 Poor Law boys. The other 191 certified institutions, containing about 2,200 Poor Law children (or, on an average twelve apiece) include a great variety of "homes" and "schools" and "orphanages," mostly small in scope; frequently undenominational, but sometimes definitely Anglican, and occasionally Wesleyan or Jewish in character; established, as a rule, by little groups of philanthropists; almost invariably unincorporated, unendowed and supported partly by voluntary contributions; and administered by Voluntary Committees, largely composed of benevolent ladies. "They are," somewhat optimistically deposed the Chief Inspector of the Local Government Board, "perhaps the best illustration of charity working in co-operation with the Poor Law. Good people start these homes; we certify them; the Guardians pay for the children going there; and we inspect them." ¶

The striking feature about this method of providing for over 11,000 of the "Children of the State" is the lack of official knowledge of what is happening to them. Of the 3,000 in the uncertified institutions—which include other training ships, sanatoria of various kinds, schools for epileptics, blind asylums and farm colonies—we have found no information at all. But even of the officially certified institutions little is apparently known. Some of them are large,** ably administered and apparently very successful. Others are small and obscure places, with indefinite variations according to the personality and means of the persons who happen, for the time being, to be taking an interest in them. Some that we happened to visit seemed to leave nothing to be desired. Others were much less satisfactory.†† The first question that is naturally asked with regard to children

* *Ibid.*, p. 88.

† This method of provision dates from 1859, and was formally recognised in 1862, when the Certified Schools Act authorised the certifying of such institutions by the Central Authority, for the purpose of receiving Poor Law children. See *The Children of the State*, by Florence Davenport Hill, pp. 86-117.

‡ Evidence before the Commission, Qs. 3461, 40151.

§ List of Schools and Institutions certified by the Poor Law Board and the Local Government Board etc., January 24th, 1908, *Ibid.* (not yet in volume form).

|| *Ibid.*, Q. 3461.

¶ *Ibid.*, Q. 3460.

** There are a dozen certified as accommodating 300 or upwards, one taking 697, and another over 900.

†† One of our Committees visited a small "home" for boys, and reported that "the impression left on our minds was of dirt, discomfort and inefficiency." (Reports of Visits by Commissioners, No. 22 D., p. 52.) We notice that, from one large certified school containing hundreds of Poor Law boys, the Local Government Board in 1902 withdrew its certificate, presumably because the conditions were not satisfactory. The school was re-organised, and afterwards re-certified. In the case of a children's "home" in the Midlands, the certificate was withdrawn, because it was found that adult women suffering from acute disease were also being received.

of school age is what are the arrangements for their education ; but there are no official Reports published as to either the educational attainments or the physical condition of these eleven or twelve thousand children, most of whom are of school age, and nearly all the others are supposed to be still under educational training of one sort or another. The Local Government Board presumably obtains, at the outset, all the necessary evidence before certifying that an institution is in all respects fit to receive Poor Law children ; but we gather that it relies on a visit by one of its General Inspectors, who “satisfies himself that the children are properly fed and clothed, and that the cubical and superficial space is sufficient,” for the number for which the place is then certified.* We understand that no Report is obtained from any educational expert as to the sufficiency and suitability of the education provided—in fact, we have been unable to discover that the Poor Law Division of the Local Government Board even knows which of these places are themselves schools and which of them merely board and lodge the children.† Down to 1871 they were not inspected. Those which are certified are now subject to an annual visit by the General Poor Law Inspector in whose district they happen to be situated, but no reports of these visits are published or were supplied to us ; it is no part of the duty of the Inspector to estimate the efficiency of the children’s education ;‡ and we have been unable to ascertain whether the inspection extends nowadays to more than it did in 1888, when it was officially stated to relate to no more than seeing that the children had enough food and clothing, and were not overcrowded.§ Representations appear from time to time to have been made as to the desirability of some inspection being made of the educational work by qualified inspectors. In 1883 a London Board of Guardians inquired, with some anxiety, whether there was any Government inspection at all of the education in these certified schools for which the Boards of Guardians were paying large sums. In consequence of this inquiry arrangements were made, in the course of the next few years, for getting twenty-three out of the fifty-five Roman Catholic institutions—but *no others* ¶—regularly inspected by the Inspectors of Poor Law Schools. In 1904 the duty of inspecting the education in these twenty-three schools (and in these only) was transferred to the Board of Education, who have communicated to us an interesting report on the results of the recent visits to them of His Majesty’s Inspectors of Schools.** So far as we can ascertain, the education given in the other Roman Catholic schools, some of which have over a hundred boys or girls,†† and that given in the schools and homes belonging to other denominations or to no denomination‡‡—apart from a score of institutions which happen to receive grants also from the Board of Education as being public elementary schools—is, to this day, not subject to any inspection whatever.

We gather that in many of the smaller “homes” no schooling at all is provided, and it is assumed by the Local Government Board that in these cases the children of school age are sent out to the local public elementary school. We find that it is not generally known to the Boards of Guardians concerned, any more than it is to the Poor Law Division of the Local Government Board, which institutions provide schooling and which

* Qs. 430, 431, in Report of House of Lords Committee on Poor Relief, 1888.

† Owing to the courtesy of the Poor Law Inspectors, we have ascertained that at least 80 of the total of 269 certified institutions are themselves schools, and about 180 are merely residential homes, not professing to provide instruction for children of school age, though often undertaking the domestic economy and other education of older girls.

‡ In the official form on which the Inspector is required to make his report, the various points to which his attention should be directed are specially set forth under seventeen heads. *Among these education is not included*, though “industrial training” is. The Inspector has to report the number of Industrial Trainers employed, but nothing about the teachers of elementary school subjects. As one of the Inspectors pointed out, “there is not a word said about my having to make inquiries or report on schooling. As a matter of fact that is not part of my business at all.”

§ *Ibid.*, Q. 452.

¶ We have been unable to discover why this particular selection was made.

** Report upon the Educational Work in Poor Law Schools, and in the twenty-three schools certified under the Poor Law (Certified Schools) Act, 1862, which are inspected by the Board of Education, 1908.

†† Thus, the Paul’s Roman Catholic Home at Coleshill (Warwickshire) has 161 Poor Law boys ; and the St. Clare Roman Catholic Orphanage at Pantasaph (Flint) has 146 Poor Law girls, both without educational inspection ; and there are others.

‡‡ Many of these are themselves providing the schooling of several scores of boys or girls.

are merely homes ; and there is no arrangement for ensuring that the managers of the institutions of the latter kind cause the children entrusted to them to attend school at all, still less that they attend regularly and continuously up to the age for legal exemption. It has been suggested that it may be assumed that the Local Education Authority should see to this matter ; but there is, we find, no arrangement for informing the Local Education Authority when Poor Law children are sent into its district ; it has no power to inspect residential institutions which are not public elementary schools ; and we do not feel sure that children in residential institutions are always included in any systematic scheduling of children that may be undertaken by the School Attendance Officers.

Moreover, we fear that the annual visit of the General Poor Law Inspector to the certified institutions does not necessarily ensure, even in respect to the matters which he attends to, that every one of these 8,171 children that have been sent to these institutions will be seen by him. The Inspector is not supplied with any list of names of the Poor Law children who ought to be presented to him in each institution, and does not even know how many ought to be seen by him. There is accordingly nothing to prevent some of the Poor Law children from being withheld from his inspection, either because they were not in a fit state, or because they had been sent out to work, or because they were in excess of the maximum number for which the institution was certified, or because they had been, without the knowledge of anybody concerned, illegally boarded-out.

We feel bound to call attention to this remarkable laxness, because—though we have no further information on the subject—it has been given in evidence, by an officer of the Local Government Board, that cases have been accidentally discovered in which children, entrusted by a Board of Guardians to a home duly certified by the Local Government Board, were found to have been illegally boarded-out in cottages with foster-parents, for payments less in amount than those which the certified home was receiving.* And it must be remembered that these children have no other protection than that which official inspection affords. “The Guardians,” reports one of our committees, “practically wash their hands of them entirely.”† Some Boards do visit a few of the institutions they make use of,‡ but such visits are officially discouraged ; and in at least one Union they have been discontinued on a threat from the District Auditor that he would disallow and surcharge the expenses. It has been held, in fact, that it is the duty of the Guardians to rely on the certificate of the Local Government Board. We cannot feel that it is either right or convenient that the power of placing children of school age in these voluntary institutions—which thus receive about £200,000 a year from public funds—should continue to be exercised by Destitution Authorities, who cannot be expected, any more than the Poor Law Division of the Local Government Board, to be qualified to form any skilled judgment as to the efficiency of the training given at the public expense.§

(iv.) *Scattered Homes.*

In view of the fact that it was impracticable to board-out more than a fraction of the children who had to be maintained from the poor rates, the Sheffield Board of Guardians, in 1893, started what has since been termed the system of “Scattered Homes” :—

“The Guardians set themselves the problem of how to procure for children, unsuited for boarding-out, the best available conditions for health and education, with such supervision as would prevent abuses. They began by renting houses—such as are generally occupied by families of the working-class—in which they placed from fifteen to eighteen children with a motherly woman as housekeeper. They aimed to retain, as much as possible, the original character of the house, taking pains, however,

* Evidence before the Commission, Qs. 9634, 9638, 9639, 9797, 9930–9932. This has also been officially reported. “In more than one case,” reports the Senior Inspector of Boarded-out children, “I have discovered that children sent by the Guardians to certified homes under such an association had been illegally boarded-out in cottages in the neighbourhood without the knowledge or sanction of the Local Government Board or Guardians.” (Thirty-third Annual Report of the Local Government Board, 1903–1904 (Report of Senior Inspector of Boarding-out), p. 266.)

† Reports of Visits by Commissioners, No. 48, p. 103.

‡ Thus, the Whitechapel Board of Guardians appoints two of its members to visit once a year each of five institutions only, out of eighteen to which it sends children. (Annual Report for 1907–8.)

§ The Chief Inspector of the Local Government Board himself appears to have some doubts as to the quality of many of these institutions. “These homes vary very greatly in efficiency, and it may be hoped that ultimately they will be put under the management of some Central Committee who should be able to classify the children in them, and to provide for a more efficient training than is possible at some of the smaller institutions.” (Thirty-third Annual Report of the Local Government Board, 1903–1904, p. 156.)

that the drainage should be good, and the air-space sufficient for children. At the same time, they established an administrative centre, for the reception of all children who might be thrown on the rates of their Union, which centre, unconnected with any other Poor Law institution, was designed to lodge each child during the few weeks necessary for the observation of its health and character, until it could be sent, without any Workhouse memory, and with fair security of success, to one of the houses. All the houses are under the supervision of a superintendent and his wife, who keep the necessary accounts, report to the Guardians on the state of the homes, form a necessary link between the various homes, and generally secure that order which is essential in the expenditure of public funds under the control of the Local Government Board.”*

This system, which “has the advantage over all the others [except boarding-out] that there is less capital expenditure,”† costs only a few shillings a week more for maintenance than boarding-out itself; and has now been adopted by about sixty Unions, for nearly 5,000 of their children, practically all of them being of school age.

There are many persons of knowledge and experience who regard this system as, on the whole, the best yet devised for the normal child whom the community has to maintain. It has distinct advantages over boarding-out, in that it is applicable to children whose parents are themselves in the Workhouse; the food, clothing and housing are always adequate; the foster-parent is more carefully selected and is a salaried officer; regular medical inspection is provided for; and there is continuous skilled supervision of the home. It is claimed that it is superior to the system of Poor Law Schools and Cottage Homes, presently to be described, in that, whilst being much less costly, the children are less “institutionalised,” and mix naturally with other children at school and at play. But, in our opinion, it is a drawback that the children in the Scattered Homes are still in contact with the Poor Law. They usually pass through the Workhouse‡ or some other Poor Law institution before admission to the Scattered Homes, or on discharge from them; § they are officially visited by officers of the Poor Law, and by the Poor Law Guardians, || instead of, like other children, by the officers of the Local Education Authority and members of the Children’s Care Committee; and they are classified as being in the category of the destitute, rather than according to their several talents and requirements. As we have mentioned, “defectives are very often to be found in the Children’s Homes,”¶ merely because they are destitute like the rest. “In one of these Homes,” deposed the father of the system at Sheffield, “we had a girl of feeble mind, now about fifteen. . . . She grew worse as her womanhood developed. . . . She corrupted the other girls in the Home. . . . There are two or three other girls in our Home who look to me to be going in the same way.”** Moreover, it is impossible not to admit that, as compared with the most modern of the Poor Law Schools or Cottage Homes, the children in the Scattered Homes do not, under the administration of the Destitution Authority, get such good opportunities for manual instruction, for learning swimming, for domestic economy and generally for industrial training, as can be afforded in the more highly organised institutions. All this, however, merely comes to the fact that the children in the Scattered Homes are the wards, not of the Local Education Authority, but of the Destitution Authority, which cannot be got to think of much beyond their board and lodging. They suffer, in fact, from not being specially provided for by the Local Education Authority, which, if the Scattered Homes were within its jurisdiction, might well arrange for the children to share, over and above the ordinary schooling, ending at thirteen or fourteen, in the necessary industrial training and domestic economy instruction which the wisest parent wishes to secure for his family, and which the most advanced among Local Education Authorities are already beginning to provide.

(v.) *The Boarding School of the Destitution Authority.*

All the systems for the specialised treatment of Poor Law children that we have so far described have arisen since 1870, and depend on the ubiquitous provision of public

elementary schools by the Local Education Authorities. Prior to 1870 the only method of withdrawing Poor Law children from the General Mixed Workhouse or the unconditional Outdoor Relief that we have described, was to establish the separate boarding schools recommended in the Report of 1834. As we have mentioned, this policy, though rejected by the Poor Law Commissioners of 1835, became, from 1841 onwards, the favourite policy of the Central Authority,* and in the course of the next forty years, several dozens of such schools came into existence in England and Wales and two in Ireland.† Some of these, serving combinations of Unions, were of huge size, accommodating over 1,000 children.

We need not describe the change in opinion that has taken place during the last twenty years, and the consequent arrest of this policy, leading to the breaking up of two of the largest of the "barrack schools," and to the adoption, for all new boarding schools, of the plan of building the children's residences in detached blocks, which sometimes take the form of the separate villas known as "Cottage Homes," grouped into "Village Communities."‡

Of these boarding schools of the Destitution Authority, of the old type or the new there are, we gather, at present about 100, containing just over 20,000 children, all between three and fourteen years of age.§ Whether this plan of providing for the children who have to be maintained by the community is or is not superior to that of placing them in Scattered Homes or in Certified Institutions, or of boarding them out with foster parents, is a matter of great controversy. The last official examinations of the problem are those made by the Departmental Committee on Poor Law Schools of 1896,|| the conclusions of which were generally adverse to these boarding schools, and the suggestively critical report on the industrial training that they afforded to girls, by Miss Stansfeld in 1899.¶ On the other hand, such scanty evidence as we have received on the subject has been, on the whole, in their favour; ** and it seems as if great improvements had taken place in the last decade, alike in the organisation of the institutions and in the education provided.††

The issue between those who advocate and those who oppose the extension of these boarding schools for Poor Law children seems to have been obscured by a constant intermingling of two separate considerations; whether boarding schools furnish an advantageous method of bringing up some or any of the "Children of the State"; and whether schools of any sort are, or are ever likely to be, from an educational standpoint, economically and successfully administered by a Destitution Authority. The advantages of corporate life among equals and the incalculable mental and physical education of organised games have caused the boarding school to be preferred for their own children by the majority of parents who are in a position to choose what they think best for them. On the other hand, no middle or upper class parent would dream, if he could avoid it, of immuring his child in a boarding school for the whole twelve months of the year. We

* Report . . . on the Policy of the Central Authority from 1834 to 1907, pp. 23-24, 54-55; Report of Departmental Committee on Poor Law Schools, 1896, Vol. I., p. 6; Vol. II., Qs. 15967-15988.

† None were ever established in Scotland.

‡ We class together the separate school, whether in a single building or divided into blocks, and the Village Communities of Cottage Homes with their partially independent housekeeping, as they all partake of the institution type, as compared with the Scattered Homes already described. In a few cases, the Cottage Homes (though grouped together under a single superintendent) do not include provision for schooling, and the children go out to the neighbouring Public Elementary School. This, though in some respects a beneficial arrangement, runs the risk of falling between two stools, and of securing for the children neither the advantages of the everyday home, nor those of the boarding-school.

§ These figures do not include the boys and girls, nearly 2,000 in number, in the schools (for ophthalmic or ringworm children, etc.), of the Metropolitan Asylums Board.

|| Report of Departmental Committee on Poor Law Schools, etc., Cd. 8027 (of 1896).

¶ Report to the Local Government Board on the Industrial Training of Girls in the Separate and District Schools of the Metropolitan District, by Miss Ina Stansfeld (Cd. 237, of 1899).

** Evidence before the Commission, Qs. 3485-3493, 10807-10809, 14276-14281, 14394-14581, 14611, 14612, 23108, 23594, 23620, 28470-28774, 33911, 36628, 39421, etc.

†† On this point we have the Report by Mr. T. J. Macnamara, when Parliamentary Secretary to the Local Government Board (Cd. 3899, 1908); and, most recent of all, a valuable Report on the Educational Work in Poor Law Schools, by Mr. J. Tillard, His Majesty's Inspector, and Miss M. B. Synge (July, 1908), published by the Board of Education.

regret the almost universal practice of the Destitution Authority,* of making no provision to enable the children whom it places in its boarding schools to spend a month or two in every year, by way of holidays, *in the home of everyday life*; either boarded-out with suitable relations or friends, or provided for in country cottages.† It is to this lack of holidays out of school, to this absence of experience of home life, to this extraordinary immuring of the child continuously for seven or ten years in an institution, that nearly all the cogent objections to the “barrack schools” are to be attributed.

One solid objection to the boarding school as a system of providing for poor children is its great expense, compared with the actual cost of maintenance of the child in a working-class home. The various Poor Law schools and Cottage Homes established during recent years show that it costs from £100 to as much as £250, in capital outlay, to accommodate one Poor Law child,‡ and from £30 to £55 per annum for its maintenance. To deal at this cost with all the 237,000 Poor Law children of school age up and down the kingdom appears to us out of the question. And whilst part of the expenditure on this or that costly new institution may have been an unnecessary extravagance, it is clear that, alike in capital outlay and annual maintenance, the cost of the boarding school must always greatly exceed the five or six shillings a week for food and clothing, and the four or five pounds a year in the public elementary school which is all that is spent on the average child, even in the most prosperous sections of the wage-earning class. The boarding school run “on the cheap” has no good points. We are far from suggesting the discontinuance of the existing residential schools, but we think that these boarding schools, by whatever Authority administered, should be specialised for particular classes and reserved for those children who cannot be successfully provided for in their parents’ homes on adequate allowances, or in Scattered Homes, or in suitable certified schools or homes, or by boarding-out.

We are, however, of opinion that such boarding schools cannot, from the educational standpoint, be economically and efficiently administered by a Destitution Authority. We may pay an ungrudging tribute of admiration and respect to the managers and staffs of the Poor Law schools, and to the officers of the Local Government Board who have been concerned, for the success with which they have, in the main, overcome the difficulties formerly experienced by these schools in maintaining the children in health and vigour; and in protecting them from the “blight” which in former times too often devastated the young lives whom the community was in this way rearing.§ Indeed, the majority of the Boards of Guardians, having such schools, have certainly not spared

* Various enlightened Boards of Guardians have lately instituted holiday excursions. The West Ham Board of Guardians sends the children from its schools for a fortnight’s sea-side holiday at Clacton; but does not disperse them in cottages. (Minutes of West Ham Board of Guardians, September 6th, 1906.) On the other hand, our own Investigator found, in the Poor Law school of the Glasgow Parish Council that “the children go to church in the grounds, and practically *never go outside until discharged*. When it is remembered that some of the children have been in the hospital” (Stobhill Hospital, Glasgow) “for years, this arrangement cannot be too much condemned.” (Report on the Condition of the Children . . . in receipt of Poor Law Relief . . . in Scotland, by Dr. C. T. Parsons, p. 94.)

† It would probably be easy to arrange to utilise for this purpose some of the Cottage Homes already used by the Children’s Country Holiday Fund, either before or after the August holidays.

‡ Evidence before the Commission, Qs. 1634–1637, 1863, and Appendix No. V. (4) and (5) to Vol. I.

§ “Whatever may have been the case in the past,” reports the late Parliamentary Secretary of the Local Government Board, “there is no doubt that to-day the Barrack School is usually conducted in such a way as to secure that the children shall leave it physically well set up; and every care is taken to anticipate the spread of those contagious diseases to which children are particularly liable.” (Report by Mr. Macnamara, Cd. 3899, 1908, p. 20.) The Board of Education Inspectors bear testimony to the fact that “the training in cleanly habits, the regular feeding, good clothing and housing, and all the healthy physical surroundings provided in Poor Law schools have a wonderful effect in transforming half-starved weakly children into strong and healthy boys and girls. As long as they remain in these schools, they are protected from the evil influences of home, from bad language and violent and debasing scenes. Not only are they hedged in from evil, but every care is taken that they may be as far as possible exposed to positive influences for good. They are watched over and encouraged, trained to be useful and obedient. Games, too, are organised for them; physical training, gymnastics and swimming still further improve their health and strength. Teachers of Public Elementary Schools which are attended by Poor Law children testify to their superior habits of cleanliness and obedience. In the best of schools *esprit de corps* is developed, which is worthy of comparison with that of a public school, so that children are proud of their school, and jealous for its good reputation.” (Report upon the Educational Work in Poor Law Schools, by Mr. J. Tillard, His Majesty’s Inspector, and Miss M. B. Synge, 1908, p. 18.) Many of them have now “old boys’ clubs” and similar societies.

expense. We have frequently noticed, in personally inspecting the Poor Law Schools and Cottage Homes, that these institutions—like the Poor Law Infirmaries—tend to be needlessly elaborate and extravagant in buildings, ornament and arrangements, without really securing the highest technical efficiency. Neither the Destitution Authority, nor any of its officers, nor yet the Poor Law Division of the Local Government Board which sanctions the plans, has any continuous experience or expert technical knowledge of what a modern educational building requires to be. Even the largest Destitution Authority only builds a school once in half a century, whereas the Local Education Authority for the same area may be building one a year, or even (as in London) one a quarter. The Destitution Authority, is, in fact, for any such building, almost necessarily at the mercy of an architect casually selected for the job by persons having no experience of educational buildings.* In the same way, we have found that the Destitution Authority, even if willing to spend largely on buildings, seldom realises adequately the importance of obtaining a sufficiently large and sufficiently highly qualified teaching staff. The salaries to the headmasters of the large Poor Law Schools, like those of the assistants, are habitually “very appreciably lower” than those paid by the Local Educational Authorities around them for work of equal magnitude and difficulty; † whilst the holidays in the Poor Law service are shorter, and the teachers are usually expected to perform much of the work “which properly belongs to paid attendants.” ‡ It is, in fact, almost impossible for a Destitution Authority to free itself from the feeling that the teaching of pauper children,—still more the responsible duty with regard to his pupils that falls to the headmaster of a boarding school—is a matter on which it would be unreasonable to spend as much as upon the same duties with regard to other children. Yet it is plainly work of at least equal difficulty and importance. Nor is it easy for a Destitution Authority, even if it seeks to do so, to get the best teachers. The Poor Law Schools do not form part of the educational service of the country; and the teachers in that service cannot pass into that of the Boards of Guardians without encountering pecuniary loss. § The separateness of the service prevents the Boards of Guardians attracting the best of the certificated teachers; || and stands in the way of their getting the utmost out of such teachers as they do attract into their service. It gives rise, the Board of Education Inspectors report:—

“To a special difficulty in dealing with weak teachers in Poor Law schools. Guardians have no choice of schools, and are, therefore, unable to move worthy but weak teachers from places for which they are unsuitable to places where, by means of stronger support and guidance, they may become passably efficient. Their only alternatives are to dismiss a weak teacher, or to let him stay on in a place for which he is unfit; and being human, they usually choose the latter course.” ¶

Even if the legal difficulties were removed which at present impede free circulation of teachers between the educational and the Poor Law services, there would still remain the drawback, in the latter, of professional isolation and aloofness.** “Poor Law teachers,” as the Inspectors of the Board of Education report, are:—

* Thus, the Board of Education reports, of a new Poor Law school, built at a huge cost, that “it is most disappointing in many respects. . . . The class-rooms are all built along a corridor, so that supervision is very difficult; in the infants’ room the teacher stands facing the light, and there is a large high gallery.” “Again at the — Cottage Homes,” which were erected regardless of expense, “the school has been placed in a remote corner of the site, so far from some of the houses, that in rough weather the infants can hardly go to school. In this school, too, there are serious defects of lighting, and no attempt has been made in planning the school to admit the sunshine, even to the rooms occupied by the infants.” (*Ibid.*, p. 9.)

† Evidence before the Commission, Q. 28308, Par. 4.

‡ *Ibid.*

§ They have to sacrifice any growth of their prospective superannuation under the Elementary School Teachers (Superannuation) Act, 1898; whilst, once in the Poor Law service, they are not only debarred, in practice, from chances of better appointments in the Elementary School Service, but they cannot even pass back again into that service without giving up all growth of their accrued rights to Poor Law superannuation. (*Ibid.*, Appendix No. LXXXII. to Vol. V. Q. 28470, Par. 54.) Moreover, promotion in the Poor Law schools themselves is slow, and seems scarcely to exist. There are Superintendents who have come from one school to another, but, in general, each school acts as a single independent unit, seldom exchanging officers with another, and usually not promoting its own but taking in for higher posts teachers from the Elementary Education service or Voluntary Schools.

|| Report upon the Educational Work in Poor Law Schools, by Mr. J. Tillard and Miss M. B. Synge, 1908, p. 10. “The teachers in Poor Law schools,” states the Headmaster of one of them, “are not equal in training or attainments to the teachers in the ordinary Public Elementary Schools in which I worked for twenty years.” (Evidence before the Commission, Appendix No. LXXXII. (Par. 8) to Vol. V.) “The teacher in the Poor Law school, as a rule, is a teacher of lower grade and lower qualifications than the teacher in the Council or Board School.” (*Ibid.*, Q. 28320.)

¶ Report upon the Educational Work in Poor Law Schools, by Mr. J. Tillard and Miss M. B. Synge, 1908, p. 10.

** Evidence before the Commission, Appendix No. LXXXII. to Vol. V.

"A class apart from teachers of Public Elementary Schools, and each Poor Law school is a water-tight compartment. The teachers miss the stimulus to self-improvement, and the interchange of ideas on their work, which do so much to refresh their fellow-teachers outside, and to extend their views; nor do they share in the friendly rivalry which grows up when many people are working under one large Authority."*

Nor is the influence of the Destitution Authority any better upon the curriculum of the Poor Law School than it is upon the teaching staff.

"The average Guardian," it has been said, "has but little opportunity of seeing other schools at work, and his consequent inexperience of what is good in education, and what is merely fustian has been the origin of the 'show work,' which is still so prominent in the Poor Law schools. . . . As a result of the visits of inexperienced managers, there is to be noticed in many Poor Law schools a desire to make a display, whether it be by means of a 'showy' piece of needlework or drawing, or by 'pretty' groupings and posings in physical exercises or recitations by a few 'show' infants. It is not unlikely that teachers have discovered that the average Guardian is impressed more by these trifles than by solid work, of which it is not easy to make an attractive display."†

This backwardness in "booklearning" is sometimes supposed to be compensated for by the superior industrial training. Boys and girls in the Poor Law schools spend a large part of their time—in some cases, it is reported, at an earlier age than is legally allowed under the Education Acts ‡—in industrial and domestic work, from which they doubtless derive some training. But we doubt the educational value of much that, in these schools, is called industrial training. What is most evident is the desire to utilise the elder boys and girls in digging and scrubbing and turning the handles of the machines used in the laundry, partly out of a vague feeling that the children have got to be "taught to work," but principally with the object of reducing the expenses of the establishment. Even where boys are supposed to be taught a trade, such as shoe-making or tailoring, the work is of little value as industrial training.§ The latest report shows that:—

"The work that is done in the shops is generally of a utilitarian character, and consists of making and mending for the institution. As its aim is so different, it is unfair to compare it with the handicraft instruction of the Public Elementary School. It is felt by many of the Board of Education Inspectors, with much reason, that it would be possible, without serious interference with the present system, to make industrial instruction more intelligent and educative; but no effective reform can be expected in this department unless the training of the boys themselves on educational lines, and in ways that will develop their intelligence and skill, and give them a thorough technical training is given precedence over the merely industrial work of the Institution. *This is now organised mainly with a view to saving the poor-rate, by causing the young lads in the institution to do as much as possible of the various jobs needed in its daily working.*"||

The girls are employed in the kitchen, the scullery and the washhouse, but in many of the schools it cannot be said that they are taught cookery or laundrywork.

"We found," say the Board of Education Inspectors, "that, while all the girls did a certain amount of washing and ironing, their work was incomplete; that is to say, they would iron collars they had not learnt to starch, and wash articles they never learned to iron, exactly in the same way in which they peeled potatoes that they could not cook. They assisted as 'hands' in the work of

* Report upon the Educational Work in Poor Law Schools, by Mr. J. Tillard and Miss M. B. Synge, 1908, p. 10.

† *Ibid.*, pp. 7, 15. "In a large number of cases," it has been said, the educational work of "the school seems to be regarded as little more than a 'side-show' by the Guardians, who, while taking the greatest interest in the bodily comforts of the children, or the economics of the Institution, were disposed to rest content with a comparatively low standard of efficiency in all matters appertaining to the schoolroom and its work." (*Ibid.*, p. 6.)

‡ *Ibid.*, p. 13.

§ The Departmental Committee of 1896 reported: "The industrial trainers . . . are, as a whole, poorly qualified. Very often they are good people who are doing a great deal of work in their shop, but they are not teaching the children the foundation of a trade, because the physical labour of the child is employed for the purpose of keeping the institution at the lowest cost. This . . . is the great difficulty, and until we get over that we shall never get the best results out of the schools. The result of this inadequate training is that the boys are not interested in their work, and are rarely able, when they leave the school, to take good positions in the trades for which it was supposed they had been trained. Indeed, the Educational Inspector went so far as to say that masters who had had experience of boys trained in Poor Law schools preferred to engage those who had not received any instruction in the particular branch of trade for which they were intended. . . . They say: 'No, I will choose a boy out of the general school. If I take any of these others, I shall have to unteach him all that he has learned here, he only learns to botch and cobble.'" (Report of the Departmental Committee on Poor Law Schools, 1896, p. 46.)

|| Report upon the Educational Work in the Poor Law Schools, by Mr. J. Tillard and Miss M. B. Synge, 1908, p. 21.

a large laundry; but for that very reason, they failed to acquire any practical knowledge of the complete art of washing clothes."*

Indeed, "many Boards of Managers," of Poor Law schools, made up, as these are, exclusively of members of the Destitution Authorities, "have so little experience of the value of improved methods" of industrial training, "that expenditure on such methods often seems to them to be to the loss rather than to the gain of the ratepayers."†

Hence, alike with regard to buildings and equipment, to teaching staff and to curriculum, "it is difficult to avoid the conclusion," to which the Inspectors are driven, "that the educational part of the work, which is now done by Guardians, would, in the majority of cases, be much more efficiently performed by the local bodies, whose primary function is to deal with schools, and which are, or might be, composed of persons who are interested in and conversant with educational matters." In view of the enormous importance of "giving an efficient education (both general and technical) to girls and boys who are in the public care, very often up to sixteen years of age, and of the many difficult problems involved in planning and working a good system of education for children of such varying ages and capacities, it seems deplorable that the experience and knowledge which have been and are constantly being acquired in these very matters by the members and officials of Local Education Authorities should not in some way be brought to bear upon the problem."‡

There remains, however, a further drawback to the Poor Law school. However well the members of a particular Board of Guardians might happen to be qualified for the task of educational administration, however wisely they might select the school architect, their headmaster, their specialist teachers and their industrial trainers, and however educational might be the curriculum upon which they decided, they would still be baffled, in their desire to build up a really successful school, by the extraordinarily inept selection of the children for which they had necessarily to provide. In visiting some of the best administered Poor Law schools, we have been struck by seeing, side by side in the same class, doing the same lessons, under the same teacher, a bright child of "scholarship" capacity, a child of criminal type, the anæmic child of defective circulation and dull wits, and the ordinary normal child. All these children of the same age are being taught together, not by reason of anything in themselves, but merely because their parents happen to be destitute and to have their legal settlements in one and the same Union. The attempt to remedy this mixture of capacities by sorting the children into classes of equal attainments leads to groupings even more injurious to educational efficiency. There may be seen "in infant classes . . . elder children, admitted in a state of almost absolute ignorance. Thus it is not uncommon to find children of ten and eleven learning to read and write by the side of children of five and six. Such big children sit in small desks with evident discomfort, they are depressed at finding themselves among much younger children, and they apparently learn little under the circumstances. The situation becomes absolutely grotesque when the infant classes turn out for organised games, and well-grown boys of eleven years old are required to play infantile games. Thus we found such boys playing 'Who killed Cock Robin?' with the infants, and a boy of thirteen reading aloud from a primer (already read twice) 'What Dottie did,' before a class of children half his age."§ In one Union no

* *Ibid.*, p. 23. "As a rule, though we saw many boys working in the garden, we saw little evidence, of any systematic instruction in gardening. . . . Girls who are capable of scrubbing are taught to scrub, not with a view to improve their domestic capacity, but in order that the floors may be kept clean. . . . They have had no definite industrial training in the real sense of the words. And, somewhat reluctantly, we must add that, with a few exceptions, they leave the institution at the age of fourteen, fifteen, or sixteen, with little or no training of that nature. . . . Not only is the needlewoman too busy, but she is untrained to teach, so that here again the girls receive no training of real educational value." (*Ibid.*, pp. 22, 24.)

† *Ibid.*, p. 48. Report of the Departmental Committee on Poor Law Schools, 1896.

‡ Report upon the Educational Work in the Poor Law Schools, by Mr. J. Tillard and Miss M. B. Synge, 1908, pp. 7, 28.

§ *Ibid.*, p. 17. "The great difficulty," sum up the Inspectors, "is that the Poor Law school has to deal with children of all grades of intelligence in the lump, and the existing circumstances as regards administrative areas, finance and management are very unfavourable to discrimination and to the employment of different methods of instruction for different classes of children. Thus, on the one hand, children of special ability, who might profit by an opportunity for higher education, and, on the other, children of stunted mental development, who require to be taught by methods approaching those used in schools for the mentally defective, are all placed and dealt with in one school. This difficulty is almost insurmountable so long as children belonging to a Union are all placed in the same school, and, where any classification is now attempted, it is apt to be too much determined by age. If, on the contrary, all the children of school age in a town, irrespective of whether they were destitute in the Poor Law sense or not, were placed under the charge of the Local Education Authority (at all events for educational purposes), the classification of them all could be properly organised. The defective or seriously unfit children could then, even though technically destitute, be given a share in the benefits already provided from public funds for such children; the ordinary children could be graded suitably; the cleverest children could be fitted into the local system of Higher Elementary Schools, or possibly the scholarship system leading to Secondary Schools; and so forth." (*Ibid.*, pp. 19-20.)

fewer than fifty-one mentally defective children were found intermingled with the other children in a very costly Poor Law school, to their mutual detriment. None of the fifty-one appeared to the skilled investigator to be beyond the reach of special training, but they were getting none. *

Finally, there is, in this association of the school with the Destitution Authority, the insuperable objection that the child never does get absolutely free from the evil influence of pauperism. Because they are built by Destitution Authorities, these schools are, in too many instances, actually within the curtilage of, or closely adjacent to, the workhouse.† In nearly all Unions the children are taken to the Workhouse first, and spend some time there, before going to the separate school or Cottage Homes.‡ When they leave the school they are usually taken to the Workhouse, or at any rate to the porter's lodge,§ before passing out into the world. Whilst at the school, they see constant comings and goings of children to and from the Workhouse, || frequent comings and goings of Poor Law officials, and occasional visits of Poor Law Guardians. "These arrangements," as one of our committees noted, after inspecting one of the best administered of the Poor Law Schools, "to a large extent defeat the object of removing children from the evil associations of Workhouse life."¶ It was in recognition of these inevitable consequences of the connection of these schools with the Poor Law Authorities that the Departmental Committee of 1896 was emphatic in declaring that "all children should be cut off absolutely from the first from all association with Workhouses and their officials, and that no child of three years old or upwards should, under any circumstances, be allowed to enter a Workhouse." It was for this reason that it recommended that all "children over three years of age should be immediately handed over," to an authority other than that of the Boards of Guardians, "which should have the absolute care of them so long as they remain chargeable to the State."** The experience of the last twelve years, and the latest reports of the Educational work in the Boarding Schools of the Destitution Authorities in England and Ireland alike, appear to us, for all the improvement that they reveal, only to confirm the validity of this decisive judgment.

(vi) *The Receiving Home.*

The undesirability of admitting and discharging children through the Workhouse has led some Boards of Guardians, during the past decade, to establish Receiving Homes or Probationary Schools. This course was, after the Report of the Departmental Committee on Poor Law Schools, suggested by the Local Government Board, who thought it "most undesirable that children should be . . . detained in the Workhouse, and also very desirable that those who ordinarily continued in receipt of relief for very short periods should be kept separate from the children of the more permanent class in the District or Separate School."†† Twenty-four Unions in the Metropolis, and several in other parts of England and Wales, have now provided such Receiving Homes for children at an expense, for the Metropolitan Unions alone, of about £200,000.‡‡ In respect of these Receiving

* Report of the Royal Commission on the Care and Control of the Feeble-minded, 1908, Vol. VIII., p. 20.

† As at West Ham (Evidence before the Commission, Q. 21141). We are informed that the Local Government Board sanctioned, as recently as 1905, the erection of a new school in the Sunderland Workhouse grounds; and another in 1908 at Bromley.

‡ "The usual method is for the children to go into the Workhouse with their mothers, and remain there until the Medical Officer of the Workhouse is able to certify them as being fit to be removed to the Cottage Homes" (*Ibid.*, Q. 50555). In some Unions they are always deliberately retained in the Workhouse—the General Mixed Workhouse that we have described—until the Guardians are satisfied that they are "likely to be permanently chargeable." (*Ibid.*, Qs. 43341–43343.)

§ Even in such a well-administered Union as Bradford, where a special Receiving Home for Children has been erected, all the children are brought in the first instance to the porter's lodge of the General Mixed Workhouse, and there examined by the Workhouse doctor, before entering the Receiving House or the Scattered Homes. The clerk explained in 1906, that "in every Workhouse there is a small building at the entrance gates called the porter's lodge. [The children] do not go beyond the lodge. They are there seen by the Resident Medical Officer." (Report of House of Commons Select Committee on Education (Provision of Meals) Bill, 1906, Q. 17566.)

Homes, England is in advance of either Scotland or Ireland, where every child who comes under the complete care of the Destitution Authority has to enter the General Mixed Workhouse or Poorhouse, and reside there for a longer or shorter period, before it can be boarded-out.

But even the best of the English Receiving Homes for children suffer from their connection with the Poor Law. We note that, where the Boards of Guardians have, on the incitement of the Local Government Board, incurred the expense involved in establishing these separate Homes, in order to free the children, as far as possible, from association with the Workhouse, the mere fact that it is the Destitution Authority which has undertaken this task has gone far to nullify all that has been done. Thus, more than one Board of Guardians has insisted on establishing its Receiving Home as near to the Workhouse as possible, sometimes actually within the curtilage of the Workhouse, entered by the Workhouse gate, and guarded by the Workhouse porter's lodge, through which every tramp and pauper passes.* Moreover, even when the Receiving Home is quite away from the Workhouse premises, the children are—by an arrangement for which there seems to us no rational excuse whatever—actually sent to the Workhouse, or the Workhouse lodge, whenever they have to be reunited with their parents, on these taking their discharge from the Workhouse.† The usual practice is for children to go from the Workhouse to the Receiving Home in charge of the porter or one of his messengers—often an elderly pauper—or a paid officer who assists in that part of the Home. From the Receiving Home children go to the schools in charge of one of the Receiving Home attendants, either the Matron, one of the nurses, or even the cook. If they are discharged with their parents they usually return to the Workhouse to be clothed in their own garments again, and then discharged. In such cases they are taken by a Receiving Home Officer to the Workhouse; or an officer may come from there with the notice of discharge and take the child back with him. The business of discharge is very rapid. A message or messenger comes from the Workhouse, and within a few minutes the child has been found and despatched in return. They seem even to be taken when half way through their meals. We strike here one aspect of the most baffling problem of child life with which the Destitution Authority finds itself forced to deal—the problem of what to do with the child of parents unwilling or unable to afford it a proper home.

(vii) *Children of Unfit Parents.*

This problem, so far as the Destitution Authority is concerned, takes three main forms—the children of “Ins-and-outs,” the children of vagrants, and the children in the Workhouse of parents who have deserted them or definitely proved their unfitness to have the control of them.

(a) *The “Ins-and-Outs”*

We deal first with the children of the so-called “Ins-and-Outs.” There are, among the Workhouse inmates in England and Wales, Scotland and Ireland alike, especially

* In one of the most recent cases, the clerk to the Board of Guardians, as he himself informed us, advised that it should be built “so that access would be provided to it from the front road, without going through the porter's lodge. That was agreed to, but I am sorry to say that a week or two ago, a Committee upset that, and they would have the access for all and sundry through the porter's lodge.” (Evidence before the Commission, Q. 52660.) The Receiving Wards (of the Metropolis) in several Unions are in charge at night of a pauper attendant, not necessarily selected for his or her respectability of character, and it is not to be expected that there should be any restraint on lewd talks and actions. The customary pauper is the kind who will be up to the tricks of the place and is usually ready enough to put the children up to them too, and instruct them in all the little meannesses and lies which gain petty advantages in such institutions.

† Some Boards of Guardians used actually to send the wife and children of a man in prison to be formally handed over to him at the prison gate, on his discharge at the completion of his sentence, before he could possibly have provided a home or even a night's lodging for them. This inhuman and irrational practice—which was defended as being the only way to prevent the discharged prisoner from leaving his family on the Guardians' hands—was expressly forbidden by the Local Government Board for England and Wales. It is still customary in Scotland. “When,” it was given in evidence, “a woman, usually accompanied by a child, is arrested for vagrancy or begging, she is committed to prison, and the child (if over twelve months old) is handed over to the parochial authorities. In the Poorhouse it is taken care of, washed and fed, but just when beginning to benefit an officer is sent off with the child to the prison, to hand it over to its dissolute mother on her discharge. When the child sees its mother, it frequently screams and clings to the official. This may seem incredible, but for proof of this statement I refer you to the officers at the Calton Prison. They could testify to some painful scenes of this kind. No questions are asked or information sought as to whether the parent can provide the child with food, or even shelter for the night.” (*Ibid.*, Q. 62808, Par. 2 (b)).

in the large towns, a certain number who are not permanent residents, but who are perpetually claiming their discharge, going away for a few days or weeks or months and then returning to the shelter of the institution.* There is even, in Scotland and Ireland, as well as in England, the habitual "week-ender," who makes a practice of entering the Workhouse or Poorhouse for a few days' rest whenever he finds himself absolutely penniless or exhausted by debauch or inanition.† These "Ins-and-Outs," or—to use an American term—these "revolvers," are sometimes able-bodied men or women, sometimes feeble-minded or half-witted, or more or less incapacitated or crippled. What is important is that they very often have dependent children, whom, as the law at present stands, they have the right to take with them when they leave the Workhouse, and of whom, in fact, they are required to assume the custody on being discharged, whether or not they wish to do so, or have any means of providing a home or even a night's lodging for them. "Children of this class give great trouble to the Guardians everywhere. They are sometimes discharged and readmitted several times in the year; they often bring back disease, dirt, and bad habits, and though permanently belonging to the pauper class, are unable to receive the regular instruction and discipline in either the district or the separate school."‡ Such children are, indeed, the despair of those in charge of Poor Law schools.§ As was graphically said by Miss Florence Davenport Hill, they "come and go like buckets on a dredging machine," passing in and out of "all sorts of horrible places and scenes of vice," and periodically mixing "with the children in the school and . . . turning their moral filth on them."|| To protect the more permanent children from this contamination and this perpetual interruption of their studies, some Boards of Guardians turn their Receiving Homes into regular "schools for Ins-and-Outs." Thus the Kensington and Chelsea Guardians have a "school for 'permanent' children at Banstead, but the 'Ins-and-Outs' are kept and taught at Marlesford Lodge, Hammersmith, until the Managers are satisfied that their parents will remain in the workhouse permanently or, at any rate, for some considerable time. The children are then drafted to Banstead. In this way Banstead Cottage Homes are to a great extent immune from the trouble and interruption caused by 'Ins-and-Outs.' The same system has been adopted at Olive Mount, Liverpool."¶ One of our colleagues has extracted the following tables from the Admission Books to show the extent to which the Receiving Homes are made use of for the children of "Ins-and-Outs."

| Name of Receiving Home. | Number for which it is certified. | Number of Families who are Ins and Outs. | Greatest number of times any family has been admitted within five years. | Average number of times, etc. |

¶ Report on the Educational Work in Poor Law Schools, by Mr. J. Tillard and Miss M. B. Synge, 1908, p. 19; Evidence before the Commission, Qs. 28657, 36014, and Appendix No. XXVI. (A), Par. 69, to Vol. I.

The returns of the Kensington and Chelsea School District Receiving Home (certified for 137) show, with 680 to 820 admissions yearly, the following percentages of re-admissions, the large majority of which are "Ins-and-Outs."

| | Kensington. | Chelsea. |
|--------------|-------------|----------|
| 1903-4 - - - | 28 % | 15 % |
| 1904-5 - - - | 38 % | 12 % |
| 1905-6 - - - | 31 % | 13 % |
| 1906-7 - - - | 30 % | 20 % |
| 1907-8 - - - | 39 % | 14 % |

Out of twenty special cases of which details have been obtained, twelve families have been in and out ten or more times. One child has been admitted thirty-nine times in eleven years; another twenty-three times in six years.

The Wandsworth Union has a large number of dissolute persons in the Workhouse with children in the Intermediate Schools. The parents never go out without taking the children and seem to hold the threat of doing so as a rod over the heads of the Guardians. Any quarrel or strictness of discipline at the Workhouse, or even a refusal on the part of the Matron at the Receiving Home to let the children receive presents of sweets from their parents in the Workhouse, is followed by a demand for a discharge and the children in the Home must be sent for at once. One mother frequently had her child brought out of his bed to go out into the cold winter night. It must be remembered that children who are discharged are sent out in their own clothes unless these are hopelessly ragged or too small. There is also the fact that parents of this class have some feeling against the children going to the District Schools, which are further away; and whenever the children are transferred to the schools the parents discharge themselves at once. One boy, who had been re-admitted twenty-five times in ten years, had been sent more than once to the Banstead Schools, but had never stayed there long. Whenever he knew that he was to go there he used to write to his mother in the Workhouse, and she would apply for her discharge and go out with him.

This plan of using the Receiving Home as an Intermediate school protects the Poor Law school from what a Board of Education Inspector calls the "aggravating influx and exodus," which, in other Unions, goes far to render nugatory the expensive provision of schooling, especially in the junior classes.* But it affords this protection at the cost of largely depriving the Receiving Home of the character of a strictly temporary probationary ward, and even to some extent unfitting it for this use.† It does nothing to protect the children from being dragged in and out, as it suits their parents' whim or convenience. The man or woman may take the children

* At the magnificent "Village Community" of Cottage Homes built by the Chorlton Board of Guardians at great expense for the children of that Union, the Board of Education's Inspector notes that the school, which has an average attendance of 260, is perpetually disorganised by the coming and going of "Ins-and-Outs," many of whom stay less than a week, and who make up, at all times, *from one-fourth to one-third of those under instruction*. The Wandsworth Board of Guardians informed the Local Government Board in 1906, that "from a return prepared by the matron it would appear that during the last twelve months 422 children were sent to school, and 310 brought back, to be discharged to parents, etc., at a cost of £58 ls. 2d., and the Guardians feel that it is simply useless to try to educate children when parents have the power to claim them the moment they are sent to the District School, and they would be glad if the Board would advise them of the best way of dealing with the difficulty." (Wandsworth Board of Guardians to Local Government Board, December 7th, 1906.)

† Evidence before the Commission, Q. 28093, Par. 2. "There are many Boards of Guardians," deposed a witness who was himself a Poor Law Guardian, "who keep children of ins-and-outs for nine or twelve months consecutively in the Workhouse or Receiving House." Cases have been brought to our notice in which parents have deliberately contrived to prevent their children being sent away to the Poor Law school. The Wandsworth Board of Guardians informed us that: "Upon the last admission day, a child who had been resident in the Intermediate School for over a month, and, therefore, could hardly be classed as one of the "ins-and-outs" was sent to Anerley, but before the Officer had left the school, a telephone message was received, stating that the parent was taking her discharge, and the child must be brought back. It would almost appear, on the face of it, that certain parents, the moment their children are sent to Anerley, decide to take their discharge, and then return to the Workhouse the same evening, so that their children shall remain at the Intermediate School." (Wandsworth Board of Guardians to the Local Government Board, December 7th, 1906.)

to a succession of Casual Wards or the lowest common lodging-houses ; there may be no prospect whatever of an honest livelihood or a decent home ; the parents may go out with the intention of using the children, half-clad, and blue with cold, as a means of begging from the soft-hearted ; or they may go out simply to enjoy a day's liberty from workhouse restrictions, and find the children only encumbrances, to be neglected and half-starved. One family of children at Wandsworth used to be taken to the Common in rain or shine and left there without food for the day. Another family of children used to go out with their father and follow him from one public-house to another till evening when he would hand them his Workhouse admission order and send them back with it. As the Porter would not admit them without their father they would wait about until late and then find a policeman, who would take them to the gates and have them admitted. The father would return later when the public-houses were closed. All this misuse of liberty is, to the Destitution Authorities, a matter with which they have and can have no concern. As Destitution Authorities their jurisdiction ends absolutely as soon as a person ceases to be chargeable to the poor rate. They have neither the legal power nor the official machinery for following the children from the Workhouse or the Poor Law school to the lodgings to which they are taken, and for seeing that they are provided with a home, food and clothing, and a continuous education. The Local Education Authorities, on the other hand, do not become aware of the children's existence unless and until they are discovered by the School Attendance Officers in their periodical schedulings of their districts. Between these two Authorities—the one dealing with children only as destitute persons, the other responsible only for the education of children resident within a given district—the unfortunate boys and girls who are dragged backwards and forwards by parents of the “in-and-out” class practically escape supervision. They pass the whole period of school age alternately being cleansed and “fed up” in this or that Poor Law institution, or starving on scraps and blows amid filth and vice in their periodical excursions in the outer world, exactly as suits the caprice or the convenience of their reckless and irresponsible parents. The class of “in-and-out” children is a large and, we fear, an increasing one.

(b) *The Children of Vagrants.*

The children of the Vagrant are, even more than the children of the “in-and-out,” excluded from the benefits provided and the protection given by the Local Health and Education Authorities to the children who are known to be resident in one locality. Dragged along the roads by day and spending night after night either in the common lodging-house or the Casual Ward, they may never, in practice, come within the ken either of the School Attendance Officer or of the Sanitary Inspector. For such vagrant children—who number at any one time in the United Kingdom at least several hundreds, and probably several thousands*—the Destitution Authority does nothing except provide a night's lodging and food in the Casual Ward in England and Wales, in the Workhouse in Ireland, and (whatever may be the strict law on the subject) in the Poorhouse or “Casual Sick House” in Scotland. Yet the Destitution Authority is the only organ of the State with which these unfortunate children come in contact.

For their attitude of official indifference to the fate of the children of the “ins-and-outs,” and the children of the Vagrants, the Boards of Guardians can plead that the policy of opening and shutting the door of the Workhouse and Casual Ward simultaneously upon parent and child alike—unconcerned as to what happens to the child—is strictly in accordance with the principles on which the 1834 Report proceeded. Throughout that Report it was laid down that the able-bodied man, if married, and the able-bodied woman, if unmarried, should be considered as alone responsible for maintaining their offspring. Unless the able-bodied parents consented to enter the Workhouse, no child of theirs was to be admitted ; and whenever they decided to leave its shelter, their dependents were

* “Children represent a proportion varying from about 2 to 5 per cent. of the total” vagrant population, or they may sometimes even be as much as 6 per cent. (Report of Departmental Committee on Vagrancy, 1906, Vol. I., pp. 19, 113, Vol. II., Qs. 265–270, 10931). This vagrant population varies, in Great Britain, from 30,000 to 80,000, according to “the conditions of trade, weather and economic causes.” (*Ibid.*, p. 22.) The number of children thus “on the road” in Great Britain, at any one time may, therefore, vary between 600 and 4,800. Only a small proportion of these will be found in the Casual Ward. Very frequently the man will go to the Casual Ward, and send the woman and children to a common lodging-house (*Ibid.*, Vol. II., Qs. 1461, 5557), or a shelter (*Ibid.*, Qs. 5922–5925). Similar conditions obtain in Scotland and Ireland. In one Scotch parish, where “the Parish Council has a Casual Sick House for tramps,” an average of 112 children have been admitted (with their parents), in each of the last ten years, or more than two a week. (Evidence before the Commission, not yet in volume form).

to go out with them. The only way by which they could get Poor Relief for their children, without entering the Workhouse themselves, was to desert the children, a proceeding which, whilst it threw the children on the rates, exposed the parents to criminal prosecution. Omitting, for a moment, the effect upon the child of this policy of 1834, we may note that its advantage to the ratepayer depends upon continuously maintaining the deterrent character of the Workhouse to the particular class concerned. Now, in spite of all the horror which the General Mixed Workhouse excites among the respectable poor, this institution, as it exists in England and Wales, Scotland and Ireland alike, is found, in fact, to offer distinct attractions, as a place of temporary residence, to the dissolute and worthless men and women who comprise the growing class of "ins-and-outs" or "week-enders." When such persons have children, this periodical use of the Workhouse becomes even more advantageous to them. At some ages, and at certain seasons of the year, children are necessarily a burden on their parents; at other ages, especially at particular seasons, they may be made sources of actual profit. For the Destitution Authority to follow in this respect the policy of 1834—to maintain the whole family in the Workhouse whenever the parents think fit to come in, and to let the whole family go out whenever the parents see any advantage in going out—is, at the cost of the rates, to offer the maximum of subsidy to a particularly disreputable and injurious perversion of parental rights.

Passing from the effect of the present policy on parental responsibility to its results on the children concerned, it is plain that the existing arrangements are about as bad as they can possibly be. Imagination fails to picture the evils of the life of the child of the "in-and-out" or habitual Vagrant, during the periods when it is outside the Workhouse or the Casual Ward. It is the smallest part of the injury thus done to no trifling proportion of the coming generation of citizens that such children, as we have already mentioned, usually get practically no schooling. These children might be properly brought up if their parents remained in the Workhouse; they might conceivably be passably brought up if their parents were refused all relief whatsoever. But the present arrangement of letting them pass alternately in and out of the Workhouse or Casual Ward combines all possible disadvantages to the unhappy children thus dragged in and out, and to the other children whom they are perpetually contaminating.

(c) *The Abandoned Child.*

The third class of children belonging to unfit parents are those who are left on the hands of the Destitution Authorities, either because the parents have simply deserted them or because the surviving parent is in prison, in a lunatic asylum or in an inebriates' home.

In respect to the class of deserted children we have again to draw attention to the demoralising provision of the Scotch Poor Law which makes it impossible for an able-bodied man, however destitute, to get food or shelter for his children without deserting them. We have been informed that child desertion, especially in Scotland, is becoming steadily more frequent.* It is not uncommon for parents who have thus voluntarily or perforce abandoned their children subsequently to appear and claim them as soon as they attain an age at which they can be made to earn money.

(d) *The Assumption of Parentage.*

To meet this threefold problem of the unfit parent—the child of the Vagrant, the child of the In-and-Out, and the deserted child—the only expedient afforded to the Destitution Authority has been to give it power itself to "adopt" any child that it found in the Workhouse by reason of parental neglect. By Acts of 1889 and 1899 the Boards of Guardians in England and Wales are authorised to assume, up to the age of eighteen, complete rights and responsibilities of parentage in respect of orphan or deserted children, in respect of the children of parents in confinement, and, in certain cases, also in respect of the children of parents of vicious life or habits. This expedient of adoption gets over the difficulty presented by the deterioration of the child, at the cost of depriving the parents of their parental rights and responsibilities, and at the expense of placing the child wholly on the rates. Some Unions have already made considerable use of this power of adoption, there being now, in England and Wales alone, no fewer than 15,000 children so taken away from

* See, for instance, *Ibid.*, Qs. 61481, 61482. We have been unable to verify this by statistics.

parental control. It has, however, so far been used most largely with regard to children who are orphans or whom their parents have deserted.*

It has been represented to us that, by the Acts of 1889 and 1899, Parliament has laid down the principle that, whenever there is reason to believe that a child is being habitually and seriously injured in body or mind by the evil or disorderly life of its parents, it is desirable, quite apart from any punishment meted out to the guilty parents, that the community, in the interests of the child, should itself assume full parental duties and responsibilities with regard to it. It has been forcibly pointed out to us that all the considerations that lead to the adoption of the deserted child, or the prisoner's child, or the cruelly treated child, apply equally to the child of the habitual Vagrant or "In-and-Out." The recent Departmental Committee on Vagrancy did not hesitate to recommend that the present power of adoption should be explicitly extended to the children now found in the Casual Ward. The Local Government Board itself has suggested its application to the children of habitual "Ins-and-Outs."† Other witnesses pressed us, in the children's interest, to extend the advantages of adoption to larger and larger circles.‡ The extension of the law to Scotland has been demanded.§ The Vice-Regal Commission on Poor Law Reform in Ireland has made still larger proposals of the same nature.|| These authoritative proposals for the increased use or legal extension of the power of adoption open up serious considerations. To many persons it is a matter for grave concern that the community should thus relieve parents of all financial and other responsibility for their offspring. And the further question arises whether, if there is to be any such assumption of parentage by the community, the power and obligation should not be entrusted to an Authority charged with the education and care of children, rather than to a mere Destitution Authority.

We think it is clear that, in view of the paramount importance of protecting the children from deterioration, the policy of the Assumption of Parentage must be continued, and that it must be extended to all cases in which leaving the child under the control of its natural parents can be plainly shown to lead to its grave physical or mental injury. From the standpoint of the ratepayer, there is even more reason for this power of taking the children away from their parents, when these are "Ins-and-Outs" or Vagrants, than when the children have been deliberately deserted. For it has been given in evidence that a large proportion of the parents who now come in and out of the Workhouses and Casual Wards would, if they ran the risk of having their children permanently taken from them, hesitate thus wantonly to throw themselves and their families periodically on the rates—partly because these parents often retain a real affection for their children, and partly because they find them profitable.¶ But we see grave objection, not merely with regard to any extension, but also with regard even to a continuance, of the present

* *Ibid.*, Qs. 15413, 15459, 28572, 36128, 46104, 46105. Regret has, for instance, been expressed that the power of adoption is not used with regard to the children of Vagrants, however unfit may be the lives that they are leading. (Report of Departmental Committee on Vagrancy, 1906, Vol. II., Q. 5011.) From statistics obtained as to the action of the Metropolitan Boards of Guardians under the Act of 1899, it appeared that three-fifths of children adopted were orphans or deserted; and two-fifths the offspring of parents unfit to have their custody.

† "I think the Guardians ought to adopt them," said the present Chief Inspector (Evidence before the Commission, Q. 3943). And when the advice of the Local Government Board was sought by a Board of Guardians as to the course they should adopt when a woman with illegitimate daughters habitually discharged herself and her daughters from the Workhouse in the summer months, and went on tramp with a man whose character was notoriously bad, the Board referred the Guardians to this power of adoption. (Decisions of the Local Government Board, p. 45, Par. 3.)

‡ Evidence before the Commission, Qs. 244, 23778, 28605–28758, 46000 (Par. 13a).

§ *Ibid.*, Qs. 61832 (Pars 22, 23), 61866–61873, and the evidence on behalf of the Society of Inspectors of Poor, Q. 57038, Pars. 9, 49 (10).

|| "In our opinion the test for permitting such a woman to remain in charge of her children should be a formal determination by the Local Authority in each case whether she is fit to have charge of children. If it be decided that she is not fit, we think she might be dealt with like the mothers of two or more illegitimate children, but in any case of separation of parent and child, we think a parent should have the right to appeal to some Court of Justice, clear indication being given by Statute as to the grounds upon which separation between parent and child might be enforced." (Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., p. 51.) "If the mother could satisfy the local body managing the institution, of which she is an inmate that she could properly maintain herself and her child, we think she might be permitted to take her child with her on her discharge. Otherwise we think that the child ought to be boarded-out, but that the mother should have no right to resume possession of the child until she could satisfy the local body in charge of the child that she was in a position to support it, and that her conduct since the birth of the child had been good." (*Ibid.*, p. 50.)

¶ Evidence before the Commission, Q. 46086.

power of adoption, alike in its procedure and in the Authority to which it is entrusted. At present the parent may be deprived of his child without notice, by a mere resolution of the Board of Guardians, arrived at on the mere opinion of such members as happen to attend,* without necessarily hearing any evidence, and without any kind of judicial decision. Moreover, if the child is adopted, the parent is, in practice, wholly relieved of the cost of maintenance,† and, apart from particular criminal acts, he is not made liable to prosecution and punishment for the fact of having so conducted himself as to make it necessary to take his child from him. Whenever it is deemed necessary in the public interest that the community should deprive the parents of their control over a child, and that the full responsibilities of parentage should be permanently assumed by a Local Authority, the case ought to be properly dealt with, however contemptible and unworthy the parents, by a judicial authority, and that authority should, in our judgment, be empowered at the same time to make such an order for a contribution towards the cost of maintenance, and to inflict on the parents such a punishment as the circumstances may require. And when adoption by the community is decreed, a Destitution Authority is, in our judgment, the very last to which the responsibilities of parentage should be transferred. The object clearly is to free the new "Child of the State" from evil associations and bring it up as a healthy, independent citizen. It stands to reason that such a child should be kept as scrupulously clear of association with the Workhouse as with the gaol; that it should never see the Destitution Officer or be brought into any kind of contact with pauperism. What the community undertakes is to watch over the child's life up to the age of eighteen; and the Destitution Authority has normally no jurisdiction except over persons actually in receipt of relief, and no machinery, other than the Relieving Officer, for continuously watching over the life of the young person. It is, in our opinion, plain that all such rights and duties in connection with the adoption of children ought to be entrusted to the Local Education Authority, which is specially charged with dealing with children, which has its own officers looking after children, which is experienced in children's requirements, and which would find no difficulty in including all necessary provisions for the adopted child among those which it already makes for the other children in its special residential schools. Moreover, if the full responsibility for the well-being of the children, including the power of adoption in default, were entrusted to the Local Education Authority, it would, in our opinion, probably become less frequently necessary to make use of so extreme a measure. At present the Destitution Authority must either do all or nothing. When a child is discharged from any of the institutions of that Authority, it has no further control over it, and ceases, in fact, to be cognisant of its existence. If, however, the child were discharged from one of the residential institutions of the Education Authority, that Authority, with its School Attendance Officers, could follow that child to his home, even after the destitution of the parents had ceased. The Education Authority, in fact, is rapidly developing, in the most advanced districts, in its highly differentiated series of schools and scholarships, its continuation classes, its technical institutes, its medical inspection, its attendance officers, its systematic house-to-house visitation and scheduling, and its local managers and Children's Care Committees, all the machinery for following up all the children coming in any way within its ken, even those of migratory or worthless parents, and for bringing a duly graduated pressure to bear on all the parents, so as to induce them continuously to fulfil their parental responsibilities. By this constant supervision of the children of unfit parents, before and after the crisis of destitution, it would be possible, in many cases, to prevent, at an early stage, any such flagrant neglect or ill-treatment of children by careless or vicious parents, as might otherwise be continued to the point of making necessary the extreme measure of public adoption.

(B) CHILDREN UNDER THE POLICE AUTHORITY.

The first rival to the Destitution Authority in its work of maintaining the children of poor persons was not the Local Education Authority, but the Home Office, acting through the magistrates and the police. Under a series of statutes extending from 1854, and now consolidated in the Children's Act of 1908, there grew up, before there existed any Local Education Authority, a number of so-called Industrial and Reformatory Schools, to which

* The procedure of Boards of Guardians in this important matter is sometimes very lax. "Children," said an experienced Poor Law official, "are adopted at one meeting of a committee, and at the next Board Meeting I shall find an order to discharge them to their parents." (*Ibid.*, Q. 46066.)

† "As for getting the money from the parents afterwards, the powers might very nearly as well not exist." (*Ibid.*, Q. 9531); see also Qs. 19224-19226.

poor children might be sent by the magistrates,* quite irrespective of the Poor Law, and in which they were maintained at the expense, partly of such contributions as could be extracted from their parents, partly of voluntary contributions or the County Rate, but mainly of a substantial Government Grant administered by the Home Office. The Reformatory schools began as alternatives to the prison, and were designed for juvenile offenders. The Industrial Schools were the direct heirs of the Ragged Schools founded in the first half of the nineteenth century. But the inclusion in the Ragged Schools and in Industrial Schools of children whose destitution, among other circumstances, placed them in danger of growing up to be criminals, caused them to infringe on the sphere of the Poor Law. At first the schools were sharply divided into Reformatory Schools, to which young criminals alone were sent, and Industrial Schools, to which perfectly innocent but neglected children were sent. Gradually, however, this line of demarcation has become obscured; and in the latest classification, though the original names are maintained, these schools are divided principally according to the age of admission and discharge. Thus, the 30,000 boys and girls now under detention in these schools belong to many different categories, the majority of them falling distinctly within the sphere of the Poor Law.†

These Industrial and Reformatory Schools have in common the characteristic of being mainly places of compulsory detention, to which children, though not necessarily criminals, are committed by judicial authority. But "voluntary cases" are now also received, amounting in 1906 to one-tenth of the whole.‡ The 211 separate schools are now managed either by voluntary committees or by County or Borough Councils, at a total expense of over £600,000 annually, of which amount about five-twelfths are contributed by the Government and more than five-twelfths from local rates whilst one-twelfth only is derived from voluntary subscriptions, and one-twentieth is extracted from the parents of the children.§ They are controlled, not by the Board of Education nor by the Local Government Board, but by the Home Office, which certifies them, inspects them, and controls their Grant-in-Aid.

We have not had time to inspect many of these schools, although they constitute no small proportion of the public provision for destitute children;|| and although, of the 30,000 children whom they maintain, a large proportion would otherwise have to be maintained in Poor Law institutions. They even contain a number of pauper children, sent to them by the Destitution Authorities.¶ We received a certain amount of evidence

* See the Report of the Departmental Committee on Reformatory and Industrial Schools, Cd. 8204, 2 vols. 1896; the fifty Annual Reports of the Home Office Inspector, 1856-1906; and the interesting evidence by Mr. J. G. Legge before the Royal Commission on the Care and Control of the Feeble-minded, 1908, Vol. I., Qs. 1159-1316.

† The children who can be sent to industrial schools may be thus classified:—(1) *Destitute children*, if orphans; if found wandering; if surviving parent is in prison; if mother is in prison having been twice convicted of crime. (2) *Mendicants*. (3) *Vagrants*, if destitute; if not having proper guardianship. (4) *Paupers from workhouses*, if refractory; if either of the parents has been convicted of crime punishable with imprisonment. (5) *Truants* from Public Elementary Schools, if education neglected; if found habitually wandering; if found not under proper control; if found in company of rogues; also truants from day industrial schools. (6) *Incipient criminals*, viz., those charged with offences or found associating with thieves. (7) *Children of bad parents*, viz., children taken from disorderly houses; children not having proper guardianship if found wandering; children not under proper control; children having a surviving parent in prison, if destitute; children whose mother, having been twice convicted of "crime," is in prison, if they are destitute; workhouse children either of whose parents has been convicted of crime punishable with imprisonment. (Home Office Circular to County Councils, December 30th, 1903; Report of Departmental Committee on Vagrancy, 1906, Vol. III., p. 186.) Truant schools are industrial schools which have been certified solely for the reception of boys committed by the magistrate for persistent non-attendance at the public elementary school. The day industrial school is one providing industrial training, elementary education and one or more meals a day, but not lodging. Reformatory schools are for older children, over twelve or fourteen, who have been convicted of criminal offences.

‡ Fiftieth Report . . . on Industrial and Reformatory Schools, 1906, p. 162.

§ *Ibid.*, pp. 6, 7.

|| "Destitution," says the report of the first of these industrial schools to be established in London, "is the primary condition of a boy's admission." (The Report of the Boys' Home Industrial School Incorporated Society, 1907.)

¶ Thus, the residential industrial schools received in 1906, from the various Destitution Authorities in Great Britain, £6,230; representing payment for over 300 boys and girls. (Fiftieth Report . . . on Reformatory and Industrial Schools, 1906, p. 22.) Especially in Scotland have the Industrial Schools been used for Poor Law children; and about half the money now collected by the Home Office in respect of children in the Scottish Industrial Schools is collected from Parish Councils; a sum which will be, under the Children's Act, 1908, largely increased. We shall recur later to the extent to which, in Glasgow and Liverpool the Destitution Authorities send Outdoor Relief Children to the Day Industrial Schools.

about them, and we made special inquiries of the London County Council, from whom we have received three valuable statements on the subject.* What has most particularly struck us is the overlapping and confusion which results from the division of authority. The Industrial Schools have so essentially the same object and task as the Boarding Schools of the Destitution Authorities and the Certified Schools made use of by these Authorities, and they deal to so large an extent with the same classes of children, that we see no reason for any separation or distinction between them. The Destitution Authority themselves make no such distinction, sending boys, for instance, indiscriminately to those training ships which the Local Government Board has "certified" as schools or homes,† and those which the Home Office has "certified" as Industrial Schools.‡ Indeed, in half a dozen cases, at least (including one out of the seven English training ships), the same institution is certified both by the Home Office and the Local Government Board;§ receives, in respect of identical children, grants from the former and payments by the Boards of Guardians under the authority of the latter; and is presumably visited by the Inspectors of both departments who do not communicate to each other their several reports. In Scotland, where the device of "certifying" is unknown to the Local Government Board, we gather that suitable children (who are usually returned among those "boarded-out") are sent by the Destitution Authorities indiscriminately, and the weekly payments made at the same normal rates, to the Industrial Schools to which the Government is paying grants, and to other institutions unconnected with the Home Office, the Government Grants being paid in respect of pauper and non-pauper children alike.

What stands out is the extraordinary lack of co-ordination, or even of mutual consciousness of each other's existence, between the operations of the Destitution Authority and of the Authorities administering the Industrial and Reformatory Schools Acts. Both Authorities are admittedly dealing to a large extent with children of the same class. "The fact of children being sent to one kind (of school) or to the other, is," we are informed, "largely accidental;" || depending, as we gather, when no offence against the criminal law has been committed, chiefly on which Authority gets hold of the case first. It was expressly stated that: "There is at present no co-operation between the Council," acting under the Industrial and Reformatory Schools Acts, "and Boards of Guardians." ¶ "There is no record," we are informed, "as to whether any of the families from which children are sent to Industrial Schools are in receipt of Poor Law relief. No inquiry is made . . . upon this point, and the fact of such relief being granted would not disqualify a child for admission to an Industrial School." ** "The parents of many of the children" in the Industrial Schools of the London County Council "are . . . persons who frequent Workhouses and Casual Wards." †† No fewer than 113 cases were brought to our notice in which, within a single year, in London alone, the same family had been relieved out of the same fund of rates and taxes, by one or more children being sent to Industrial Schools, whilst other children, together with the parents, were being maintained (often as "Ins-and-Outs") in one or other Poor Law institution. Many parents who have already been relieved by having some of their children placed in Industrial Schools are subsequently relieved under the Poor Law, by admission to the Casual Ward or Workhouse, and even, occasionally, by Outdoor Relief. It not infrequently happens that different children of the same family will be simultaneously maintained in Industrial or Reformatory Schools and in Poor Law Schools.‡‡ We have even come across a case in which the mother was in receipt of

* Evidence before the Commission, Qs. 3549, 39993-40002, 45157, 46000, 46070, 93187, and Appendices No. LXXXII., Par. 12, to Vol. IV., and Nos. IX., LXXIII. and LXXIV. to Vol. IX.

† The "Indefatigable" at Birkenhead, the "Mercury" at Southampton, and the "Wellesley" at Newcastle.

‡ The "Clio," the "Mount Edgecumbe," the "Wellesley," at Newcastle, the "National Nautical" (late "Formidable"), and the "Southampton."

§ These doubly certified schools, under both the Home Office and the Local Government Board, appear to include the St. Joseph's Home at Darlington, the Northumberland Village Homes at Whitley, the Princess Mary Village Homes at Addlestone, the St. Elizabeth School of Industry at Salisbury, and the Training Ship "Wellesley" at Newcastle. The Church of England Waifs and Strays Society, which has between 700 and 800 children "boarded-out," and about 2,700 in 100 "Homes" of various grades, has some of these Homes certified by the Local Government Board, and some (as industrial schools) by the Home Office. (Report of Royal Commission on Care and Control of the Feeble-minded, 1908, Vol. II., Qs. 12994, 13003-13004, 13009.)

|| Evidence before the Commission, Appendix No. IX. (Par. 23) to Vol. IX. See Q. 93187.

¶ *Ibid.*, Appendix No. IX. (Par. 23) to Vol. IX.

** *Ibid.*, Par. 22.

†† *Ibid.*, Appendix No. LXXIV. (Par. 3) to Vol. IX.

‡‡ A case was adduced to us in which, three daughters being already in a Poor Law school, a fourth daughter was sent to an industrial school. In another case, one child was sent to an industrial school and another, simultaneously, to the Workhouse. (*Ibid.*, Appendix No. LXXIV, (A) to Vol. IX.)

Outdoor Relief in respect of some children, another child was in a Poor Law School, and another in an Industrial School; and we may here add, though it anticipates a future section of this Report, that some of the children are being fed at school during the winter under the auspices of the Local Education Authority.

There is one development of the Industrial School which comes very near indeed to the work of the Destitution Authority. In a score of towns in England and Scotland there have been established Day Industrial Schools. "The first idea of a preventive institution," we are informed, "seems indeed to have been a day feeding school which, planted in the thick of the slums, was to fight at close quarters against parental neglect and the evil association of which the children were the victims."* At the Day Industrial School the child attends from 6.0 a.m. or 8.0 a.m. in the morning till 6.0 p.m. at night, having provided for him not only instruction, but also properly supervised recreation and three meals of plain wholesome food. The children may be committed by the magistrate, or ordered to attend by the Local Education Authority, or merely admitted on the application of their parents. In every case the law has required a payment of at least 1s. to be made by or on behalf of the parents, whilst the Government Grant is limited to 1s. per week. For these and other reasons the Day Industrial Schools have not made much progress, and in half a dozen towns they have even been discontinued. Such schools, however, especially under the wider powers given by the Children's Act, 1908, appear to us to have a very distinct use for the large class of parents—usually widowed mothers—who can earn a livelihood only by being absent from home for the whole day, and who are quite unable properly to look after their children. We have already described in what an enormous proportion of cases the children whom the Destitution Authorities are maintaining on Outdoor Relief are demonstrably suffering in body and mind, and growing up to be themselves weaklings, paupers and criminals, from the inability or neglect of the parents, to whom the Destitution Authorities are entrusting the scanty dole of Outdoor Relief for the children, to give them the necessary amount of care and attention.† It is, we think, a most unfortunate consequence of the separation of the provision for the children who come under the Poor Law from that made for other children in the same locality, that only in two towns does it seem to have occurred to the Destitution Authority to make use of the Day Industrial Schools as a means of providing for the children on Outdoor Relief. At Liverpool the Board of Guardians pays 9d. a week to the Local Education Authority for each child admitted with their approval, the cases being "the children of poor widows whose means are insufficient to provide the children with adequate food, or of women who have been deserted by their husbands, both of which classes have to earn what living they can in employment which very frequently requires them to leave home early in the morning." In Glasgow, too, the Parish Council arranges with the Local Education Authority for a number of children of widows on Outdoor Relief to be sent to one or other of the four Day Industrial Schools which the Joint Delinquency Board, a municipal authority, maintains; and the Parish Council pays 1s. a week for each child so sent. It has been suggested to us that such "day feeding schools," to use the old phrase, are apparently exactly what is needed for the children of those widowed mothers who cannot be trusted to expend wisely on their children the full amount necessary for their maintenance, and yet who are not morally bad enough, or mentally defective enough, to warrant their children being completely taken out of their control.‡ If the children attend the Day Industrial School from morning to night, it is possible absolutely to ensure their being properly fed, clothed, taught and supervised, without running the risk of subsidising the mother in careless or irregular habits of life. The mother, in fact, may be set free to earn her own living, and, if possible, provide the rent, without Outdoor Relief in any ordinary form, and without the family home being broken up. Such a "Day feeding School" has, we believe, once or twice been started by English Boards of Guardians, only to be abandoned.§ The Day Industrial School stands, in a score of towns, ready to hand,

* Fiftieth Report . . . of the Inspector . . . of Reformatory and Industrial Schools, 1906 (Cd. 3759), p. 15.

† We asked one doctor, with reference to the insufficient relief allowed to widows with children, Is that bringing up the children to be good wage-earners and healthy men and women? And he replied: "No, I am afraid it is not . . . the next generation will suffer." (Evidence before the Commission, Qs. 75939, 75940.)

‡ *Ibid.*, Qs. 30622 (Par. 44), 43441-43446, 43649-43654, 44215, 45157, 46502, 46503; Appendix No. LXXXII. (Par. 12) to Vol. IV.; Appendix No. LXXXIII. to Vol. IX.

§ Under its Local Act of 1831 the Birmingham Poor Law Authority had power to establish such a school (*Ibid.*, Q. 43653). The Manchester Board of Guardians actually maintained such a school, including three meals a day, for its Outdoor Relief Children, for some years between 1856 and 1866.

offering exactly what is needed. Yet so strong is the influence of the separate existence of the Destitution Authority, and so intense is its jealousy of any other Authority, that only in two towns have any children been sent to what apparently seems to the Board of Guardians the institution of a rival Authority.* In Edinburgh, the Parish Council, rather than send the children whom their widowed mothers could not look after in the middle of the day to the Day Industrial School which the Edinburgh School Board maintains, where they would be properly supervised, has preferred to start a feeding scheme of its own, distributing to such Outdoor Relief children as desired them, tickets entitling them to cheap meals in eating-houses, where (as we ourselves noticed) the conditions as to the serving of the meals, and the manners of the children—entirely without supervision—are anything but civilising.† Everywhere else the children of the widowed mother on Outdoor Relief are left, so far as the Destitution Authority is concerned, in the condition that we have described.

It has, however, come to be regarded as an anomaly that children should be dealt with by a Police Authority; and the maintenance of the Industrial Schools of Borough or County Councils in England and Wales has now, on the pressing advice of the Home Office itself—possibly even to a stretching of the law—been transferred to the Education Committees of those Councils.‡ This transfer has been emphasised by the modifications in the law effected by the Children's Act of 1908. The provision for the children now in these schools has accordingly become part of the work of the Local Education Authority, which we have now to describe.

(C) CHILDREN UNDER THE EDUCATION AUTHORITY.

The principal public body in England and Wales dealing with children of school age is, of course, the Local Education Authority. Beginning originally as the School Board, a mere supplementary organisation, established only where required, to supply elementary schooling only for those poor children for whom their parents and the various churches and voluntary agencies had failed to provide, it has become definitely the Local Education Authority, necessarily existing in every district of England and Wales, empowered or required, not merely to supply deficiencies, but to see that all the children of the locality whatever their social grade, have provided for them all the education, whatever its kind or degree, which is, in the public interest, deemed necessary. Thus, in place of the "common school," of uniform type, provided in sufficient numbers as required, we have the Local Education Authority systematically laying itself out to equip its area with the varied array of different kinds of schools that the multifarious needs and idiosyncrasies of its children demand—elementary schools and secondary schools; day schools and boarding schools; schools for the precocious and schools for the mentally defective; schools for the blind, the deaf and dumb, and the crippled; trade schools and domestic economy schools; schools for the children who are well, and schools for the children who are suffering from anæmia or incipient tuberculosis, favus or ringworm. In Scotland the School Boards are at least keeping pace in development with the Local Education Authorities of England and Wales. Only in Ireland are there yet no Local Authorities for Education.

(i) *Medical Inspection and Treatment.*

But the Local Education Authorities do not stop at the provision of schooling. Many of the children attending the public elementary schools were found to be suffering from lack of medical attendance and treatment: they had upon them untreated cuts and sores; they had adenoid growths requiring surgical removal; their glands and tonsils were

* The Children's Act of 1908 removes all possible doubt as to the competence of the Destitution Authority to pay the necessary shilling a week for the child's voluntary admission to a day industrial school (Secs. 75, 78); and both to punish drunken parents, and to enforce committal to a residential industrial school of their neglected children (Secs. 11, 56).

† "A feeding scheme, whereby the children of paupers residing in Edinburgh, who apply for its benefits, are supplied with hot dinners daily (except Sunday) has now been instituted for some years, and is very successful. It is under the charge of a lady inspector, who reports to a committee monthly. The dinners to the children are supplied at restaurants near the several schools in the city. The outlay is not large, £60 per month or thereby; and the average number of children daily supplied is about 390. The class for whom this scheme is specially meant to apply is the children of widows who are employed at work all day, such as charring, etc., and who have little time to attend to the wants of their children." (Evidence before the Commission, Qs. 61371 (Par. 12), 61552–61563, 61832 (Par. 9).

‡ Home Office Circular, 1903.

swollen and inflamed ; they had incipient curvature needing remedial drill ; their eyesight was often defective, sometimes rapidly degenerating for lack of proper spectacles ; they had discharges from the ears, and inflamed eyelids, and skin diseases of various kinds—to say nothing of such gravely contagious conditions as ringworm and favus, and “ dirty heads.” * In the large towns of Scotland the condition of the children in these respects was found to be, if anything, even worse than in England.† These tens of thousands of children were, from one cause or another, plainly destitute of the medical attendance that was necessary for them. According to law it was the duty of their parents to provide this needed medical attendance, and, in case of inability to pay for it, to apply to the Relieving Officer for a medical order. It was the duty of the Board of Guardians to grant that medical order whenever necessary, and to prosecute the parents under the Prevention of Cruelty to Children Act if they failed to apply. It is difficult at the present day to understand how the Destitution Authorities, even from their own standpoint of keeping down pauperism, can ever have reconciled themselves to allowing so great a mass of destitution (with respect to medical attendance) to remain unrelieved. So far as we can ascertain, they do not seem either to have taken any steps to furnish the medical treatment of which these children were clearly destitute ; nor yet, in the majority of cases, to have acted upon their statutory duty of proceeding against the parents who were thus guilty of neglect of their children. We find them even complaining of the action of the School Boards in pressing that every child detained at home through illness should be seen by a doctor. Thus the Chairman of the Atcham Board of Guardians—so widely known for its strict administration—complained in 1890 of the steps taken by the Local Education Authorities. “ The action of School Boards,” he writes, “ is telling upon the question of Medical Relief, as some School Boards insist upon medical certificates being obtained when the reason for non-attendance of the child at school is alleged to be sickness ; and thus many poor people, who would be able to provide for slight ailments by warmth, care and attention, are driven to the District Medical Officer for the sole purpose of obtaining this certificate, and thus becoming pauperised. This might be avoided by the School Boards engaging a medical man to visit, examine and certify for these purposes, if not satisfied with their existing officers. It appears to be necessary for the Guardians to watch this most closely so as to prevent Medical Relief being abused. It is desirable to study what steps can be taken for this end.” ‡ In Scotland, where the services of the Poor Law doctor are seldom, if ever, granted to persons not already on the pauper roll, even less is done than in England. The Parish Councils have, of course, the excuse that the Scottish Poor Law does not permit the grant even of medical relief to the dependents of able-bodied men, however destitute the men and however ill their dependents might be.§ But the law does not prevent the Scottish Parish Councils from providing medical treatment for the children of widows or for those of disabled men ; and we do not find that any better provision has been made for the relief of the glaring destitution of these children than for those of the able-bodied men.

What is even worse, we do not find that the Destitution Authorities have even troubled, in this respect, to look after the children whom they were themselves maintaining. The Reports || of our own Children’s Investigator, as to the physical condition of these Outdoor Relief children in London, at Liverpool, and elsewhere bring to light innumerable cases of untreated sores and eczema, untreated erysipelas and swollen glands, untreated ringworm and impetigo, untreated heart disease and phthisis. “ There was,” she reports, “ one exaggerated instance. . . . The children,” whom the Board of Guardians were maintaining on Outdoor Relief, “ were in so filthy and neglected a state that the School Nurse herself interviewed the mother. Later the mother was formally warned ”—*not by anyone sent*

* We may give two testimonies out of many. At Wimbledon, which is not a “ slum ” district, the Medical Officer of Health found, in 1904, “ out of an average attendance of 5,430 in the total of schools, 358 cases of defects of sight have been detected in the year . . . 216 affections of the nose, throat and ear . . . and the total number of notifications sent to parents in the year from the 5,430 is 852, which works out at 15·6 per cent. of the total number of children.” (Report of Inter-Departmental Committee on Medical Inspection, Vol. II., Cd. 2784, p. 200, Q. 5582.) Out of 2,378 children in Worcestershire Schools examined by the Schools’ Medical Officers under the new Act, 1,660 were in such a condition that it was necessary to call the attention of their parents ; 545 had neglected heads ; 254 had neglected teeth ; 279 had enlarged tonsils and adenoids there were 44 cases of external eye diseases ; 120 cases of defective eyesight ; 70 children were consumptive and 115 were anæmic.

† See the Report of the Royal Commission on Physical Training (Scotland), 1903, Qs. 56943, 56945–56950. and the special investigations into the physical condition of the children in Edinburgh, Glasgow and Dundee.

‡ Report of Chairman of the Atcham Board of Guardians, June 24th, 1890.

§ In Scotland, as we were informed by the Medical Member of the Local Government Board for Scotland, “ an able-bodied applicant as such is not entitled to relief, even if he is destitute, and it does frequently happen that he has sick dependants. These, if not in desertion, cannot receive medical or other relief, although they may be dying of disease.” (Evidence before the Commission, Q. 56605, Par. 24.)

|| Report . . . on the Condition of the Children, by Dr. E. Williams, 1908.

by the *Guardians*—but by “the National Society for Prevention of Cruelty to Children, whose Inspector visited her and examined the children.”* The state of things is the same in the large towns of Scotland. In the elaborate investigations that have been made into the condition of the school children in Edinburgh, Glasgow and Dundee, the fact is brought to light that a large proportion of the children who are found to be suffering from lack of medical attendance, with all sorts of untreated ailments, are children whom the Parish Councils are maintaining on Outdoor Relief.†

Owing to this widespread failure of the Destitution Authorities in England and Scotland alike to relieve the destitution of children in the matter of medical attendance, and to the equal failure of voluntary agencies,‡ we find the duty gradually undertaken—even to the stretching of their legal powers §—by one of two other authorities. In the smaller Boroughs we see the Local Health Authority permitting the Medical Officer of Health to accede to the express or implied invitation of the Local Education Authority to institute a medical examination of all the children in the public elementary schools; sometimes on the plea of detecting infectious disease, sometimes frankly to discover physical defects rendering the children unfit to profit by the instruction. In town after town we see the Medical Officer of Health advising on the children’s diseases, as well as on defective eyesight and hearing, sometimes systematically weighing and testing all the children.|| We see the Town Council’s Health Visitors following the children back to their homes, and giving advice to the parents how to treat the defects discovered.¶ Occasionally a special nurse is engaged by the Town or District Council,** to visit the homes, in order to offer her services gratuitously for actual treatment of the cases as well as to advise the mothers how to remedy the trouble and prevent its recurrence. In this way the Local Health Authority has, in many towns, undertaken a proportion of the Medical Relief of poor children, which the Destitution Authority, dominated by its desire at all hazards to restrict its work, had failed to provide.††

In London and the larger Boroughs we see the work which the Destitution Authorities refused or neglected to do undertaken by the Local Education Authorities themselves. School Medical Officers and School Nurses have been appointed, whose business it is to examine all the children; to discover all physical defects; to test eyesight and hearing, and advise what steps should be taken as to treatment; to instruct the mothers how to remedy the evils; to supply gratuitously or at a nominal charge the spectacles required by the child’s defective eyesight;‡‡ and, in not a few cases, even systematically to provide the treatment required.§§ “In Liverpool . . . over 50,000 dressings have been done in the

* *Ibid.*, p. 155.

† Report of the Royal Commission on Physical Training (Scotland), 1903.

‡ Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. I., Cd. 2779, Par. 7, p. 2; Report of Royal Commission on Physical Training (Scotland), 1903.

§ As lately as 1905 it could be said that “there is no specific statutory provision for Local Education Authorities to conduct the medical inspection of the children attending the Public Elementary Schools.” (Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. I., p. 2.) School doctors and school nurses were appointed as being “necessary officers” to schools, under the general powers of the Education Act (*ibid.*, Vol. II., Q. 99.)

|| Thus at Salford, we learn, “children suffering from ringworm are excluded from school, and parents [are] advised what to do. . . . Children suffering from pediculosis are pointed out to the teachers, who interview the children and give instructions as to treatment. Where the teacher’s influence is insufficient, the parents are seen by the Medical Officer. In this way a considerable improvement has been effected.” (Annual Report of Medical Officer of Health, Salford, 1904, p. 9.)

¶ Thus, to give one example out of many. At Liverpool, the female Inspectors of the Public Health Authority “visit children suffering from ringworm, sore eyes, sore heads, skin diseases, etc.” (Annual Report of Medical Officer of Health for Liverpool, 1905, p. 89.)

** As at Reading and Widnes and Wimbledon (Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. I., p. 6; Vol. II., pp. 161–166).

†† For the extent to which the Medical Officers of Health, had, even by 1904, carried the medical inspection and treatment of school children, see *Ibid.*, Vol. I., pp. 89–99.

‡‡ Evidence before the Commission, Q. 38758 (Par. 8), 38766.

§§ Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. I., pp. 89–99; see also Q. 3744 of Vol. II. of the same. At Croydon, the Local Education Authority itself cures ringworm, free of charge to all children attending the Public Elementary Schools, by the Röntgen-ray process, at an expense of about £100 a year. (Evidence before the Commission, Q. 22952; Annual Report of Medical Officer of Health for Croydon, 1905, p. 90; Annual Report to the London County Council of the Medical Officer (Education) for 1906–1907, p. 34.) In various towns, as at Glasgow (under its Police Act), and in several of the Metropolitan boroughs, verminous children are treated free of charge by the Local Health Authority, under the Cleansing of Persons Act, 1897. (Annual Report of Medical Officer of Health for Glasgow, 1905, p. 132.)

course of 1904. In Birmingham there have been in four schools over 20,000 dressings in twelve months. . . . At Reading a nurse is employed . . . to attend to the heads of verminous children where the parents fail to do so.”* In 1907, by statute and by order of the Board of Education, these duties were not only sanctioned, but were even made obligatory on all Local Education Authorities, with regard to all the children in attendance at public elementary schools.† Nor are the Local Education Authorities to stop at mere inspection. “It is important,” declares the Board of Education “that Local Education Authorities should keep in view the desirability of ultimately formulating and submitting to the Board for their approval under Section 13 (1) (b) of the Act, schemes for the amelioration of the evils revealed by medical inspection, including in centres where it appears desirable, the establishment of school surgeries or clinics, such as exist in some cities of Europe, for further medical examination, or the specialised treatment of ringworm, dental caries or diseases of the eye, the ear or the skin. It is clear that to point out the presence of uncleanliness, defect or disease does not absolve an authority from the consequent duty of so applying its statutory powers as to secure their amelioration, and to prevent, as far as possible, their future recurrence or development.”‡ Accordingly, a “school clinic” has already been established by the Bradford Education Committee.

This deliberate invasion of the sphere of the Destitution Authority by the Local Education Authority, so far as concerns the medical attendance of the 20 per cent. of the population who are of school age, has been unfavourably commented on.§ It has been represented that should the action taken by some Local Education Authorities become universal—as seems now to be required by the Board of Education as a condition for its Grants—there can be, in respect of the medical attendance of this large section of the population, no destitution left to be relieved by the Destitution Authorities. On the other hand, it is urged that the medical inspection, and consequent medical treatment, of school children is not only financially advantageous to the Local Education Authorities by securing a higher average attendance, but also vital both to national health and national wealth production, and has been, by the virtual abdication of the Destitution Authorities, too long delayed. Nor can we altogether blame the Boards of Guardians and Parish Councils for this abdication. They have never been told to search out destitution in the matter of medical attendance. They have been called upon only to provide such medical relief as was actually applied for. They have been praised for deterring people from applying for medical orders by means of inquisitorial inquiries, giving such orders “on loan” and recovering the cost, and even making it a condition that the head of the family should enter the workhouse when his child was ill. In Scotland, as we have seen, the Poor Law does not permit even the visit of the Parish Doctor to the sick child of any able-bodied man.

We are of opinion that it is, on the whole, advantageous that the medical attendance of poor children of school age should not be undertaken by the Destitution Authority. If that Authority does the work, it does it as “Medical Relief”; such relief, as we have seen, is afforded grudgingly; granted only to those who apply to the Relieving Officer; almost necessarily made to depend, not on the gravity of the illness of the child, but on the *status* of the parent; withdrawn as soon as the parents wish to be without it; and, when given, given wholly unconditionally and usually without even the necessary hygienic advice. On the other hand, the medical examination and treatment of school children by the Local Education Authority (or by the Local Health Authority at its instance) is never of the nature of relief, but rather of hygienic discipline. It is systematically applied without any implication of pauperism to all children who are found to need it, without waiting for application to be made. It is continued so long as is found necessary, whether or not the parents actively desire it. And it always takes the form, to a very large extent, of hygienic advice, obedience to which is strongly pressed both on the child and on the parent. This medical inspection, it has been given in evidence before us, has actually a tendency to increase parental responsibility. When, for instance, under the London County Council, the School Nurse visits a school to put in force the cleansing scheme, “she examines every child, noting all that have verminous heads. The parents are notified by a white card, on which is also printed directions for cleansing. . . . At the end of a week, if not

§ Evidence before the Commission, Qs. 22952–22953.

cleansed, the child is made to sit separately from the rest of the class, and the School Attendance Officer serves a more urgent warning 'red card' at the home. The Nurse, too, often visits to offer advice; and then, if in another week the child is still unclean, it is excluded, after having been seen by the Medical Officer; and the parent is prosecuted for not sending the child in a fit state to school.* Under the influence of such a system, the obligations of the parents in this one matter of cleanliness have, in the course of the last few years, been so greatly increased that the proportion of verminous children has, through the exertions of the mothers, steadily diminished. The expenditure incurred from public funds, far from being "relief" to the parents, has been actually the means of compelling the less responsible among them to devote more time and money to their children's welfare.

(ii) *School Feeding.*

We come now to the most remarkable, and, it must be admitted, the most controversial, of the invasions by the Local Education Authority of the sphere of the Destitution Authority. During the past two or three decades, in London and more than 100 other towns, in England, Wales, Scotland and Ireland alike, there has grown up a system by which, under the auspices and with the active assistance of the Local Education Authorities, many thousands of destitute children are provided with food.† In some towns a larger number of children are now, each winter, fed in the schools of the Local Education Authority, than are maintained as paupers by the Destitution Authority. The statistics for the Metropolis are specially remarkable. Between the ages of five and fourteen the various Boards of Guardians in London relieve on any one day some 14,000 children as indoor paupers and some 10,000 children as outdoor paupers. But in March, 1908, the London County Council was organising the simultaneous feeding of no fewer than 49,000 children between these ages,‡ or more than twice as many as those relieved by all the Metropolitan Boards of Guardians put together. The cost of this new service of school feeding has hitherto been largely provided from voluntary donations; though the organisation, most of the paid service, nearly all the plant and even some of the fuel, have long been provided from the Education Rate. During the year 1906, however, Parliament not only directed the formation by the Local Education Authorities of England and Wales of "School Canteen Committees" definitely to undertake this service, but also empowered them, subject to the approval of the Board of Education, to supply the necessary food at the cost of the Education Rate.§ In the very first winter under the Act, though London still relied on voluntary donations, no fewer than fifty such Authorities—nearly one-sixth of the whole—obtained the necessary sanction to feed their necessitous school children out of the Education Rate.|| The number has already grown to more than seventy. We cannot but anticipate that this action will become general throughout the towns of England and Wales. The nation is thus superseding the Destitution Authorities, so far as the provision for destitute children of school age is concerned, not merely in such specialised services as schooling and doctoring, but actually also in the simplest and most primitive of all needs, that of food. This paradoxical situation compels us to consider the reality of the alleged child destitution which the Local Education Authorities are relieving, the character of the relief given, and the advantages and disadvantages of so important a supersession, so far as regards the children of school age, of the Destitution Authority by the Local Education Authority.

We have made no inquiries of our own as to the number of children who were, in the winter of 1907-8, so far destitute as to be provided with meals under the auspices of the Local Education Authorities; though it is clear that the total for the kingdom must have

* Report of Medical Officer (Education) to London County Council, 1905, Appendix III., p. 17. During the year 1906-1907, 81,629 children were thus examined, 12,975 white cards were issued, 6,090 red cards, and there were 277 prosecutions, at which fines were imposed. (*Ibid.* for 1906-1907, pp. 32, 33.)

† Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. I., Appendix II; Report of House of Commons Select Committee on Education (Provision of Meals) Bill, 1906, Qs. 5-7.

‡ Report of the Sub-Committee on Underfed Children to the London County Council, 1907-1908.

§ Education (Provision of Meals Act), 1906. The Act does not apply to Scotland or Ireland.

|| Annual Report of the Board of Education for 1907-1908. Among the towns so feeding their children are London, Manchester, Birmingham, Sheffield, Hull, Bradford, Newcastle-on-Tyne, Birkenhead, Bootle, Coventry, Norwich, Nottingham, Swansea and Cardiff; residential centres such as Bath, Brighton, Hastings and York; suburbs of London such as Tottenham, Walthamstow and West Ham; and even non-municipal parishes in the Counties of Durham, Kent, and the West Riding, administered by the County Councils. In a majority of cases, the amount applied for and sanctioned was the maximum of a halfpenny rate.

risen, at its maximum, to over 100,000, and that this number must be largely exceeded during the winter of 1908-9.* Nor have we taken any systematic evidence as to the reality or the cause of the destitution in these cases. The subject had been so recently investigated by no fewer than four successive Commissions or Committees,† within five years, that we thought ourselves justified in utilising their evidence as our own, and in accepting their statement of the facts. We received, however, some important independent testimony on the subject, which was generally in support of that already given.‡ Moreover, the general conclusions of the four official inquiries as to the nature and extent of child destitution have since been confirmed and illustrated by an elaborate investigation, undertaken by the Sub-Committee on Underfed Children of the London County Council, into the actual family circumstances of a large sample of the 49,000 children whom it was feeding as necessitous in March, 1908; the sample being carefully chosen so as to be accurately typical of the whole number. This latest inquiry, which was carried out by paid investigators who had been specially trained for such work, appears to us conclusive as to the facts. Taking what seems to be the low "Poverty Line" of a family income, after the rent was paid, at the rate of 3s. per week § per adult unit, or a little over 5d. per day, the Investigators found that by no means all the necessitous children had been reported by the teachers; that of the whole 3,334 children whom they investigated, 78·88 per cent. were genuinely necessitous "in the sense of lacking sufficient food and 21·12 (per cent.) non-necessitous; and that school meals will be required by the former until effective Care Committees are able to check the diseases attendant on partial employment, bad housing and other evils." || Such information as has been supplied to us of the proceedings in Liverpool, Manchester, ¶ Leeds, ** Blackburn, †† West Ham, ‡‡ Swansea, §§ and other places, indicates that the lines on which action has been taken do not differ essentially from those followed in London. We find it, therefore, difficult to resist the conclusion that, estimating the total of children fed by Local Education Authorities throughout the kingdom to be 100,000, at least three-fourths of these were genuinely "destitute," that is, in want of food, and lacking means to obtain it, whilst it is probable, on the analogy of the London cases,

* "The proportion of children in utter want in London," deposed an experienced Divisional Chief Inspector of the Board of Education, "is certainly not greater—I am inclined to think it is smaller—than in Birmingham or Liverpool and Manchester." (Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, Q. 2818.)

† See the Report of the Royal Commission on Physical Training (Scotland) 1903; Report of the Inter-Departmental Committee on Physical Deterioration, 1904; Report of the Inter-Departmental Committee on Medical Inspection and Feeding of Children attending Public Elementary Schools, 1905, Vols. I. and II.; Report from the House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906 (House of Commons No. 288, of 1906).

‡ See, for instance, in our evidence, Qs. 246-250, 6076, 6077, 6445, 6446, 8525-8529, 12037, 18730, 18731, 20418-20741, 25154, 29769, 30540, 30622-30731, 36182-36226, 37605-37861, 39648, 43626-43810, 46493, and Appendices Nos. XXXVII. (Pars. 11-13), XXXVIII. (Par. 17), LXIII. (Par. 11), and LXXXII., to Vol. IV. and Nos. XXIV. (Par. 3), and XXIX. (Par. 18), to Vol. V., together with the incidental references in the Report of our Medical Investigator.

§ At Birmingham, the practice is to supply meals where the net income, after the rent has been paid, does not exceed 2s. 4d. to 2s. 9d. per week per head, *including children*.

|| Report on the Home Circumstances of Necessitous Children in Twelve Selected Schools (London County Council), July, 1908. Out of the sample 1,218 families investigated, the family income was definitely ascertained in 663 cases. Of these, 331 had less than the "poverty limit," adopted for comparison, of 3s. per week per adult, after the rent had been paid; and 187 more had less than 4s. per week per adult. Thus, 78 per cent. may be taken to have less than 7d. per day per adult to live on. With this may be taken the evidence afforded by the home; 911 out of the 1,218 families or 74 per cent. were found to be living in the "overcrowded" condition of more than two persons to a room. In no fewer than 544 out of the 1,218 families or 44·7 per cent., one or other parent was reported to be "intemperate and wasteful." But though this may have caused the poverty, the poverty was demonstrably there. In these families the children were undeniably necessitous, in the sense of not having sufficient food; the families to the extent of 80 per cent. of them were living in an "overcrowded" condition; and, what is even more cogent, of all the cases in which the family income of this class was definitely ascertained, 68·5 per cent. fell below the line of 7d. per day per adult (after paying rent). So that, although intemperance may conceivably have brought the families into that state, it cannot be said, in these 68·5 per cent. of cases, that the income (of less than 7d. a day each) would have permitted the feeding of the children, even if there were now nothing spent in drink.

§§ *Ibid.*, Appendix No. XXIV. (Par. 3) to Vol. V.

that some thousands more who were equally destitute were never reported by the teachers. And this calculation omits altogether the child destitution, doubtless much less in proportion, of the large number of towns in which no similar action has yet been taken by the Local Education Authorities.

The first attempt to cope with this evil of child destitution was made by voluntary philanthropic agencies. As the hunger among the school children became known to the benevolent public, there grew up, at intervals during the last forty years, a whole series of charitable agencies for giving, sometimes during spells of severe weather, sometimes throughout the whole winter quarter, and occasionally throughout the whole year, free meals, or meals at nominal charges below cost, to the hungry children of the poorer districts. We do not find that these agencies acted, in any one case, in co-operation with the Destitution Authorities, and they do not appear to have even sought to discriminate between the hungry children already nominally provided for by Outdoor Relief, and those who were not being so relieved. It is impossible to withhold our admiration from the many thousands of humane and benevolent persons who have thus come forward, often at great sacrifice of money and personal service, to relieve the destitution of the children. But this unco-ordinated and irregular distribution of gratuitous or cheap food by irresponsible agencies had many obvious disadvantages. The relief given was in nearly all cases quite inadequate for the really destitute children, seldom amounting for each child to more than two or three meals a week. It was usually spasmodic and temporary, money being collected freely, when a cold snap, or a dramatic cessation of employment, brought home to the hearts of the charitable the perennial destitution that existed.* The relief was usually afforded in the least advantageous manner. Sometimes doles of soup, bread and pudding were shovelled out to crowds of hungry children without any attempt being made to secure the ordinary decencies of civilised meals.† Sometimes dinner tickets were distributed, which had to be presented at eating-houses of a cheap type, where the children were fed without responsible supervision; and where, moreover, the tickets could sometimes be exchanged for cigarettes or sweets. It was rare that any adequate investigation was made into the home circumstances of the children who looked anaemic and hungry. Finally, from beginning to end of these attempts to meet the need by charitable agencies there was, we may say, no thought of anything but unconditional relief: there was no suggestion of obtaining, in return for the food, any greater exertions by the parents for the benefit of their children, or of securing from the children any improvement in manners or greater regularity of life, or of enforcing by the prosecution of negligent and drunken parents, any greater fulfilment of their parental responsibilities.‡ After all that was done by charitable agencies, there remained, in certain schools, in certain districts and at certain seasons, an amount of child destitution which public opinion eventually found to be intolerable.§

The existence of this enormous mass of child destitution in the schools was very slowly, and we may add, very reluctantly, perceived by the Local Education Authorities; and still more slowly and reluctantly were any steps officially taken by them for its relief. Established to provide schooling only, the School Boards were naturally averse from assuming responsibility for the home circumstances of their pupils. They were under no legal or

* Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, Q. 1015; Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. I., p. 75.

† In London, it was found on inquiry by the London County Council in 1908 that, in some of the centres, absolutely no plates or mugs or knives or forks were provided, the children, as it was said, being "fed like hounds," and eating the food out of their hands. In other centres no sufficient provision was made for washing the plates, etc., and several children had to use the same article without any attempt being made to cleanse it. Only rarely did the children sit down, at a table provided with a table-cloth, to a meal served with decent amenity. Great stress has been laid by educational experts—in our opinion, rightly—upon the importance of so serving the meals, and so supervising the children's methods and manners at table, as to raise their standards of decency and civilised amenity, as well as of mastication. We regret that these considerations have, so far, where the work has been undertaken by Voluntary Agencies or the Destitution Authority, usually not received sufficient attention. (See Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, Qs. 76, 1082, 1831–1834, 2396, etc., 2464, 2779, 3505, 3544; and the valuable Report of the Medical Superintendent . . . on a course of Meals given to Necessitous Children (Bradford Education Committee, 1907).)

‡ To use the description given by Mr. C. S. Loch, it was "purely a movement against destitution without regard to education." (Report of Inter-Departmental Committee on Physical Deterioration, 1904, Qs. 10192–10199.)

§ "I would taboo voluntary agencies feeding in a wholesale way altogether," deposed one experienced witness, "they are fluctuating, they are inadequate, and not co-ordinated." (Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, Q. 2458.)

even moral obligation to see that their pupils were properly cared for out of school. What forced them to realise the existence of child destitution was the manifest absurdity of wasting costly education on hungry or starving children. When active physical exercises, which could not be shirked by the child, were added to mere sedentary listening to the teacher's lesson, which did not need to be learnt, this absurdity approximated to cruelty. To the keen educationalist, as to the practical teacher, it became apparent that the semi-starvation, from which in "slum" districts whole schools were suffering, was producing two types of abnormality, both disastrous alike to the future welfare of the community and to the present efficiency of the school. These results of child destitution are graphically described by the medical expert who examined the children in the schools of the Liverpool Education Authority:—

"Starvation acting on a nervous temperament," reported Dr. Arkle as to the children whom he examined, "seems to produce a sort of acute precocious cleverness. Over and over again, I noted such cases of children, without an ounce of superfluous flesh upon them, with skins harsh and rough, a rapid pulse, and nerves ever on the strain, and yet with an expression of the most lively intelligence. But it is the eager intelligence of the hunting animal, with every faculty strained to the uttermost so as to miss no opportunity of obtaining good. I fear it is from this class that the ranks of pilferers and sneak thieves come, and their cleverness is not of any real intellectual value. On the other hand, with children of a more lymphatic temperament, starvation seems to produce creatures much more like automata. I do not know how many children I examined among the poorer sort, who were in a sort of dreamy condition, and would only respond to some very definite stimulus. They seemed to be in a condition of semi-torpor, unable to concentrate their attention on anything, and taking no notice of their surroundings, if left alone. To give an example of what I mean, if I told one of these children to open its mouth, it would take no notice until the request became a command, which sometimes had to be accompanied by a slight shake to draw the child's attention. Then the mouth would be slowly opened widely, but no effort would be made to close it again, until the child was told to do so. As an experiment, I left one child with its mouth wide open the whole time I examined it, and it never once shut it. Now that shows a condition something like what one gets with a pigeon that has had its higher brain centres removed, and is a very sad thing to see in a human being. I believe both these types of children are suffering from what I would call starvation of the nervous system, in one case causing irritation, and in the other torpor. And further these cases were always associated with the clearest signs of bodily starvation, stunted growth, emaciation, rough and cold skin, and the mouth full of viscid saliva, due to hunger. With such children I generally had to make them swallow two or three times before the mouth was clear enough to examine the throat. . . . I do not think I need say any more to show that the extent of the degeneration revealed by this investigation has reached a very alarming stage. . . . What is the use of educating children whose bodies and minds are absolutely unable to benefit by it. In my opinion, the children must first be taught how to live, and helped to get food to enable them to do it."*

The question arises why the Destitution Authorities had not already relieved the obvious destitution—not of education or of medical attendance, but actually of food—of this appalling number of children found to be positively suffering from hunger. The first answer is that, in quite a large number of cases—we suspect, in all, many thousands—the Destitution Authorities were actually providing simultaneously by Outdoor Relief for the very children whom the Local Education Authorities found themselves driven to feed, because the Outdoor Relief allowed to the family was positively insufficient for its support. In the Metropolis it was found in 1907–8 that 3·29 per cent. of the 49,000 children fed were at the time in receipt of Outdoor Relief, whilst no fewer than 13·46 per cent. had recently been in receipt of such relief, though it had been brought to an end before the date of the investigation.† Thus, it would appear that of the 10,000 children of school age on any one day maintained by the Metropolitan Boards of Guardians on Outdoor Relief, *something like 1,600, or one in every six, were actually being fed, in the winter of 1907–8, by the Local Education Authority*; whilst of the 30,000 separate children who got Outdoor Relief during some part of the year, no fewer than 7,000, or one in every four or five, also got fed in that winter at school.‡

† Report on the Home Circumstances of Necessitous Children in Twelve Selected Schools (London County Council, July 1908).

‡ Similar overlapping is reported in other towns. In the elaborate Report on the Physical Condition of 1,400 School Children in Edinburgh, extracts from which are given in our evidence (not yet in volume form), many cases are given of families in receipt of Outdoor Relief receiving also for one or other of their children, school dinners, school clothing and boots, free meals provided by the Destitution Authority itself and maintenance in Industrial Schools. The Outdoor Relief, in fact, was inadequate. "In many cases," sums up our Medical Investigator, "the amount allowed by the Guardians for the maintenance of Outdoor pauper children cannot possibly suffice to keep them even moderately well." (Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, p. 79. (See Evidence before the Commission, Qs. 2413, 2415, 2830, 5092, 8867, 9127, 12729, 12741, 17037, 20394, 25449, 25543, 31837, 32103–32229, 32384–32393, 35968, 36061, 37280–37292, 40362–40411, 43439, 44209–44216, 43004, 43005, 44976, 45067–45069, 45160, 46398, 46399, and various Appendices to Vol. IV. and Vol. V).)

The second answer of the Destitution Authorities is, apparently, to say that no application for relief had been made to them by the parents of the children. On this we have to point out that the Poor Laws do not require application to be made before relief is granted. It is the statutory duty of the Destitution Authority to relieve all the known destitution within its district, whether application be made or not.* The Destitution Authority could hardly plead that it was unaware of the existence of hungry children unable to get food. The fact that children at school were actually suffering from want of food, was known to every Board of Guardians or Parish Council in the principal towns of the United Kingdom. Moreover, in the case of children, the Destitution Authorities have been, since 1868, under a special statutory obligation to proceed against parents who fail to supply their children with food—an obligation which was specially brought to the notice of the House of Lords Committee on Poor Relief in 1888 :—

“There is,” said the late Rev. W. B. Waugh, speaking for the National Society for the Prevention of Cruelty to Children, “an Act of Parliament, 31 & 32 Vict., c. 122, Sec. 37, which requires that every Board of Guardians shall (the word ‘shall’ is used) institute prosecutions and pay the costs where they have reason to believe that children are not sufficiently fed. . . . The Guardians do not act upon it to any great extent. . . . There are cases in which they are habitually doing it, chiefly where ladies are upon the Board, but in a very small number of cases, indeed, throughout the country. . . . It is a matter of fact that the Relieving Officers know of cases of children starving to death, and take no action. . . . I will take a case at Swindon. Last week, we sent to prison two persons who had seven children in their custody, all of whom were looked after by the Relieving Officer to this extent. In January last he visited and reproved the woman, and I think he called the house very filthy in March, but no action was taken. The children were all dying. . . . They were children who might have been looked after by the officers of the Poor Law ; children who ought to have been looked after under that section.”†

Since this remarkable testimony, the law has been so far altered, owing to the neglect of the Boards of Guardians, as to allow other persons as well as these Boards to institute prosecutions in these cases ; and we gather that the Destitution Authorities have thereupon practically ceased to institute any proceedings whatever. It is, however, under the Prevention of Cruelty to Children Act, 1904 (now re-enacted in the Children’s Act, 1908), still open to them to do so in all cases that come to their knowledge. The Local Government Board for Ireland specially drew the attention of the Irish Boards of Guardians to this fact in sending them the Act of 1904.‡ We have it in evidence, from one of the English Local Government Board’s Inspectors that : “The laws of the land are perfectly adequate for bringing every man, who neglects his children by starving them, to the Police Court. . . . If the law was stringently administered . . . you would stop the starving of children to a great extent.” The Boards of Guardians have “a power of prosecuting” and also “a power of relieving.”§ The Destitution Authorities, we were informed by another witness, have “ample authority” to punish parents who neglect their children, but “they think it is not advisable to do so.”||

It has been urged on behalf of the Boards of Guardians that, in the early stages of the movement for the feeding of hungry children, no effort was made by the Poor Law Division of the Local Government Board to put them in a position to carry out their statutory obligations. Where the Outdoor Relief Prohibitory Order was in force, the Destitution Authority could lawfully relieve the children of able-bodied men only by receiving both father and child in the Workhouse. In other Unions, where the Outdoor Relief Regulation Order was in force, it had long been customary for the Board and its Inspectors to press Boards of Guardians to adopt the same policy of refusing Outdoor Relief to able-bodied men and their dependents. Not until 1905 did the Poor Law Division of the Local Government Board reverse that classic policy. In that year an Order

* We were authoritatively informed by the Legal Adviser to the Local Government Board that the Relieving Officer “has not to wait for an application from the head of the family,” or from anyone else. “A third party’s notification would be equivalent to an application,” even to the extent of making the officer personally responsible. (*Ibid.*, Qs. 970–972.)

† Report of House of Lords Committee on Poor Relief, 1888 (Qs. 5957–5965.)

‡ “The Act does not impose upon Boards of Guardians the duty of instituting proceedings in these cases, but it contemplates that they will do so where the circumstances are such, as, in their opinion, render it desirable in the public interest that proceedings should be instituted by them ; and they are by Section 21 empowered to pay out of the funds under their control, the reasonable costs and expenses of any proceedings,” etc. (Circular of Local Government Board for Ireland of October 27th, 1904.) The Local Government Board for England and Wales made an intimation to the Boards of Guardians to the same effect in its Circular of January 1st, 1907, pointing out that they could proceed either under the Vagrant Act of 1824, or under the Prevention of Cruelty to Children Act, of 1904, against fathers who habitually neglected to provide their children with food. We have not found any Report showing that any such proceedings were taken by the Boards of Guardians, merely for not providing food.

§ Evidence before the Commission, Qs. 7609–7611.

|| *Ibid.*, Qs. 8528–8531.

was issued empowering Boards of Guardians, on the application of the Local Education Authority or its officers, to grant relief to the child of an able-bodied man, without requiring him to enter the Workhouse, or to perform the Outdoor Labour Test. But all such relief was, if the father was deemed guilty of neglect, to be given only "on loan" and might be so given in all cases; proceedings were (except in any special case to be reported to and sanctioned by the Local Government Board) always to be taken for the recovery of the amount from the parents; and whether or not the amount was so recovered, the parent became legally a pauper and was consequently disfranchised. For some reason that we fail to understand this Order was expressly stated not to apply to the children of widows, or to children residing with other relatives than their father, or to children who were blind or deaf and dumb, or to children whose fathers were for any reason absent from them.*

This belated attempt of the Local Government Board to spur the Destitution Authorities on to perform their statutory duty was a complete failure. In very few Unions was there any action at all taken under it. The express exclusion from its scope, without explanation, of the children of widows and deserted wives, and of absentee fathers seemed, to many of the Authorities concerned, to render it almost useless.† We do not find that the Local Government Board explained that the only reason for omitting these classes from the Order was that the Boards of Guardians had already, without any Order, unlimited power to grant Outdoor Relief at their discretion for the support of all destitute children, except such as resided with fathers who were able-bodied. Nor was it explained that it was open for the Local Education Authorities, or for anyone else conversant with the facts, quite irrespective of the Order, to send in lists of destitute children, every one of which would then have to be dealt with by the Destitution Authority. Amid all the misunderstanding and confusion, the Order quickly became a dead letter.‡ "The labour given to the officials," one of the Local Government Board Inspectors informs us, "and the expense to the Guardians, appear to be out of all proportion to the benefit conferred."§ At Manchester, Leeds and Bradford, where most seems to have been attempted under it, the action quickly broke down. The Local Education Authorities and the Boards of Guardians found it impossible to agree on any systematic scheme. When children were reported as underfed, the Boards of Guardians struck four-fifths of them off,|| not because they disputed the children's need of additional food, into which they did not inquire, but because they chose to assume, on the information supplied to them by the Relieving Officers, that the parents could have provided food for their children if they had chosen to do so. But the Guardians took no steps whatever to enforce on these parents their legal responsibilities, and the children remained unfed. For the small minority of children whose parents the Guardians admitted to be destitute, they issued tickets which could be exchanged, at eating-houses of a cheap type and at other shops, for any food desired, this plan having all the unsatisfactory features of private charity. The fathers of many of the children who had received such tickets, indignantly refused to allow them to continue to receive them, when they understood that it involved, not only the striking off of their names from the electoral roll, but also the subsequent refunding of the value of the tickets under circumstances of public indignity. The numbers fell off to a nominal figure. Meanwhile, on the assumption that the Guardians were meeting the need, private donations declined: and a large number of children remained hungry.¶

* *Ibid.*, Qs. 246-254.

† "The whole Order," deposed the Clerk of the Education Committee of the Manchester Town Council, "was a most perplexing thing. Very early in the year there came down to Manchester a Poor Law Inspector who said that the construction of the Order was that the children of widows or deserted women should not come under the Order. That swept away a great many of these we had been feeding." (Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, Q. 1208.) Similar evidence was given by School Managers and officers of the London County Council, who thought that the Order "rules out two classes of parents who really form the most difficult classes." (Report of Inter-Departmental Committee on Medical Inspection and Feeding of Children attending Public Elementary Schools, 1905, Vol. II., Q. 483, etc.).

‡ Evidence before the Commission, Qs. 5795, 6076, 6440, 6076, 7608, 8524, 8602, 9530, 12475, 13529, 18730, 18731, 20418-20756.

§ *Ibid.*, Appendix No. XIII. (A) Par. 34, to Vol. I.

|| The same result followed at Kettering, Northampton, and Norwich, among other places. (*Ibid.*, Appendix No. XIII. (A), Par. 34, and No. XXIII. (G), to Vol. I.).

¶ *Ibid.*, Appendix No. LXXXII. to Vol. IV., (as to Leeds); Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, Qs. 1173-1218 (as to Manchester), and Qs. 1651-1839 (as to Bradford); Report of Inter-Departmental Committee on Medical Inspection, etc., 1905, Vol. I., p. 83; Vol. II. Qs. 2270-2273, 5670, 5671.

The result of this long-continued abdication of duty by the Destitution Authority has been, in England and Wales, after calamitous delay, the assumption by the Local Education Authority of the obligation of seeing that hungry children are fed. There was no power to provide food out of the Education Rate, but we see the Local Education Authorities, in town after town, gradually driven to put themselves at the head of the movement, to do their utmost to spread out the charitable gifts so as to cover evenly the whole ground, to lend the aid of the school organisation, and to provide premises, equipment, staff and even fuel.* At last Parliament felt itself compelled to intervene. A Bill to enable Local Education Authorities to undertake the feeding of necessitous children was read a second time, and referred to a Select Committee. This Committee recommended "that the Local Education Authority ought to undertake the administration rather than the Board of Guardians," † up to the limit of a rate of $\frac{1}{2}$ d. in the £; and a measure to that effect became law in 1906.‡ In the winter of 1907-8, and still more in that of 1908-9, most of the Local Education Authorities of the great towns in England and Wales were, as we have mentioned, feeding children out of the Education Rate.

(D) THE FAILURE OF THE DESTITUTION AUTHORITY TO RELIEVE CHILD DESTITUTION.

We do not attribute the failure of the Destitution Authorities to prevent child destitution, to prosecute the negligent parents or to feed the hungry children—any more than we do their failure properly to supervise the host of children on Outdoor Relief—to any defects of the unit of area of Poor Law administration, or to any shortcomings in the persons who constitute Boards of Guardians. We have, indeed, been much impressed by the humanity, zeal and self-sacrificing industry displayed by the members of these Authorities—especially the women members—in all their dealings with the children. The failure is certainly as great in the large Unions, wielding practically the whole powers of populous Urban communities, as it is in the smaller ones. Thus, no alteration in the membership, no change in the constitution, no enlargement of the area of the Destitution Authority would remedy the defects that now stand revealed. The failure of the Boards of Guardians in the great centres of population in England, Wales and Ireland, and of the Parish Councils in those of Scotland, to relieve so much of the child destitution, is rooted in the very fact that they are Destitution Authorities, with a long established tradition of "relieving" such persons only as voluntarily come forward and prove themselves "destitute." § What is required is some social machinery, of sufficient scope, to bring automatically to light, irrespective of the parents' application, or even of that of the children, whatever child destitution exists. We see such machinery actually at work, so far as regards all the children of school age, in the organisation of the Local Education Authority. From its fifth or sixth to its fourteenth or fifteenth birthday, every poor child resident in the district is daily under the notice of the officers of this Authority. A staff of School Attendance Officers is occupied in searching out all children who ought to be on the school rolls. Once on the roll, if a child stays away, the School Attendance Officer visits its home as a matter of course. In school, the child is hour by hour under the observation of the teacher. The amount of its energy is being perpetually tested, mentally or physically. The systematic medical inspections now commanded will reveal the less obvious causes of malnutrition, for experience has shown "that it is very difficult to trace the source from which the unhealthy condition of the children arises, and that it might be due to congenital causes,

* Report of the Inter-Departmental Committee on Medical Inspection and Feeding of Children attending Public Elementary Schools, 1905.

† It was represented to the Select Committee by the President of the Association of Poor Law Unions that, in the opinion of the Association, the provision of food to necessitous children "must be unquestionably allowed to be a question of the relief of the destitute," and the Association submitted "that their past experience in relief matters entitles them to the confidence of the country." (Report of the House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, Q. 2167.) But the witness doubted the existence of many cases needing relief (*Ibid.*, Qs. 2177-2273). On the other hand, other Poor Law witnesses expressed a desire to be rid of the work. "I should prefer," said the Clerk of the Bradford Board of Guardians in 1906, "that the Education Authority should have the whole of the machinery" for providing food for necessitous children at school. "I think it would work better." At the same time he thought that the Poor Law Authority should undertake the necessary prosecution of neglectful parents, as it already possessed the legal powers to do so. (*Ibid.*, pp. 88, 89.)

‡ An amendment was inserted by the House of Lords excluding Scotland from the scope of the Act. It is significant that, after two years' experience, the power to feed necessitous children has now been given to the Scottish School Boards by the Education Act of 1908.

§ "From what I know of those neglectful parents," said a witness of great experience, "when the child is starting for school he will be warned that if he dares to tell his teacher that he wants a meal he will get a thrashing when he gets home, because his father will be locked up for not feeding the child." (Report of Inter-Departmental Committee on Medical Inspection, etc., 1905, Vol. II., Q. 423.)

late hours, insanitary surroundings, uncleanness, or work out of school hours." * It is clear that the Destitution Authority could not possibly duplicate this official machinery for keeping constantly and automatically under observation the entire child population. The evil to be remedied is not the destitution of a day or of a month, but the continuous carelessness and ignorance bred of chronic poverty. This fact was abundantly demonstrated in the four official inquiries the reports of which we have quoted, as well as in evidence that we have ourselves received. Though money and food were often necessary, it was not school dinners that would remedy the evils from which the children were suffering :—

"The general features," we were informed, "prevailing in the homes of these neglected or underfed school children are strikingly alike. . . . There is an absolute lack of organisation in the family life. It seems to be entirely absent under conditions where careful and minute organisation of the family resources is more essential than anything else. Existence drags along, anyhow; the hours of work, leisure and sleep are equally uncertain and irregular. . . . The underfeeding of the children is but a part of a more important feature of the life in this district. The children's health is affected by many different evils, overcrowding, want of sleep, dirt and general irregularity of life."†]

An Authority dealing with the child, or with the family, merely at the crisis of destitution, having no excuse for intervening before or after this crisis, can never cope with the conditions here revealed. What is required is the steady and continuous guidance of a friend, able to suggest in what directions effective help can be obtained where help is really needed, which will gradually remedy parental ignorance or neglect. In many cases friendly advice and warning will suffice.‡ Such an organisation for systematic friendly visiting can, we think, only be supplied by voluntary effort, working as part of the machinery of the Local Education Authority, and enabled in ways that we shall subsequently describe to bring to bear the material aid that the children, in some cases, are found actually to require. These Children's Care Committees, under one title or another, are now becoming part of the machinery of the Local Education Authority. They were, for instance, required by the Act of 1906, and their establishment has been expressly called for by the Board of Education.§ It is obvious that Committees of this sort, equipped with the personal knowledge of each child derived from the School Attendance Officers, the Teachers, the School Nurse, and the medical inspection, and sending their members as friendly visitors to the homes of the parents, are far better able to effect the improvements required than any machinery that the Destitution Authority can devise. Where the parents prove recalcitrant to moral suasion, the Local Education Authorities, besides their full power to prosecute the parents under the Children's Act, 1908, have at hand, in the Day Industrial Schools that we have described, which they have in some towns already established, a method of ensuring the proper sustenance of the children,

* Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1906, p. v. It was largely for this reason that the House of Commons Committee were of opinion "that the Local Education Authority ought to undertake the administration" of the meals provided for necessitous children, "rather than the Boards of Guardians. It is true that the Boards of Guardians are in touch with the extreme poor in their districts, but the Local Education Authorities are in touch with the children. The latter have a machinery ready to deal with the problem reaching to the homes of the children. . . . The Local Education Authority through its managers and officers, assisted, as far as possible, by voluntary helpers, would form the desired connecting link with the home. The duty of investigation and inquiry appears to be one peculiarly suitable for them to assume." (*Ibid.*, p. viii.). "I would rather keep it in the hands of the Local Education Authority," deposed the Roman Catholic Vicar-General of the diocese of Southwark, after a lifetime of experience of extremely poor parishes, "than put it in the hands of the Boards of Guardians, for this reason, that once you bring it under the Boards of Guardians you inevitably bring the child, as it were, on the threshold of the work-house. The next thing to not being fed at school is to be 'offered the House,' because Outdoor Relief is not given much in many of the Unions in London where there is an able-bodied man." (*Ibid.*, Q. 1030.) The difficulty that the schools are not open and the meals are not provided, in the holidays, has been met, in practice, by the teachers arranging for the children known to be specially necessitous to be otherwise provided with meals during these periods. (*Ibid.*, Qs. 937, 938, 3395-3399.)

† Evidence before the Commission, Q. 83251 (Pars. 38, 39, 69) (being the Report of an Inquiry by Miss Phelps in connection with Underfed School Children in the Dock District in Liverpool).

‡ "The moment they were inquired into," says one witness, "they began to feed them." (Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. II., Q. 176.) "In many instances, warning has proved to be sufficient." (Report of House of Commons Select Committee on Education (Provision of Meals) Bill, 1906, p. ix.).

§ Such committees were often called Relief Committees, or Children's Relief Committees, but Miss Frere found the term objectionable as importing Poor Law Associations. (Report of Inter-Departmental Committee on Medical Inspection, 1905, Vol. II., Qs. 630-633.) Parliament, thinking only of meals and of the *cantines*, *scholaires* of Paris, adopted the term School Canteen Committee. This was felt by the London County Council to be open to various objections, and the term Children's Care Committee has been adopted in London and in some other towns.

without relieving those parents who can maintain their offspring from the burden of providing for them. These Day Industrial Schools, originally established for the purpose of dealing with the neglect of parents to take the trouble to send their children regularly to school, have proved very successful in enforcing this particular parental responsibility.* The parent, far from escaping scot free, is ordered to make such weekly contribution to the cost of feeding his child as his means will allow; and experience shows that, far from dealing laxly with such parents, the Local Education Authorities have been quite strict in their enforcement of this parental obligation.† This use of the Day Industrial School has had a wonderful effect in stopping the particular form of parental neglect which shows itself in the child's truancy.‡ It has been suggested that the Local Education Authority has in the power of committing children to these schools an instrument which, whilst ensuring the proper feeding of the child, and not relieving the careless or neglectful parent of its cost, is likely to be equally efficacious in bringing to an end a large amount of wanton parental neglect to provide meals.§

(E) THE SUPERSESSION OF THE DESTITUTION AUTHORITY BY THE LOCAL EDUCATION AUTHORITY.

The legislation of 1906-7, authorising the Local Education Authorities to give medical treatment and food to children found at school destitute of these requisites, sets the seal, in our opinion, on the necessity for completing, so far as children of school age are concerned, the supersession of the Destitution Authority by the Local Education Authority. It is, we think, clear that wherever the Local Education Authority performs what is now its statutory duty, and provides, or gets provided, not only schooling, but also medical inspection and treatment, and food for all who are in need of it, the Destitution Authority, in respect of the 20 per cent. of the population who are between the ages of five and fourteen, becomes superfluous. Where both Authorities are actively at work, there will be perpetual friction, overlapping and waste.|| Moreover, the rapidly developing machinery of medical inspection at school, and the visits to the homes of School Attendance Officers,

* Appendix No. LXXIII. to Vol. IX.

† Throughout Great Britain the parents of the children at the Day Industrial Schools, taken together, actually paid, on an average, more than 1d. per child per day. (Fiftieth Annual Report of Inspector of Reformatory and Industrial Schools, 1906, p. 7.) In Manchester, the Local Education Authority gets an average of 9d. per week. (Report of Inter-Departmental Committee on Medical Inspection, etc., 1905, Vol. II., Q. 2939). In the sixteen day schools for the physically defective (crippled) children maintained by the London County Council, all the children, about 1,100 in number, are provided with meals every day. The Council provides the accommodation, the stoves and utensils, the fuel, the nurses who supervise, and about half the wages of the cooks. The parents are required to pay 1d. or 2d. a day, according to their means; about 3 per cent. only being altogether excused owing to extreme poverty. The balance of the expense is provided from charitable funds. (*Ibid.*, Qs. 1-134.) In Chapter VIII. of this Part of our Report we shall deal fully with the question of recovering the cost from parents or other persons legally chargeable.

‡ Evidence before the Commission, Appendix No. LXXIII. to Vol. IX.

§ This suggestion has been made to us by witnesses of the most varied opinions and diverse experience. Thus Mr. Toynbee thought "that a Day Industrial School would, on the whole, be the best way of dealing with exceptional cases." (*Ibid.*, Q. 30622, Par. 44.) A similar suggestion was made by the Clerk to the Education Committee of the City of Manchester. (Report of Inter-Departmental Committee on Medical Inspection, etc., 1905, Vol. II., Q. 2933.) We have the proposal brought before us by many other witnesses, *see* Evidence before the Commission, Qs. 43441-43446, 43649-43654, 44215, 45157, 46502, 46503, Appendix No. LXXXII., (Par. 12) to Vol. IV.; Appendix No. LXXIII. to Vol. IX.

|| Our own Children's Investigator informs us that, at one non-provided school in the Metropolis, "the level both of education and of discipline is distinctly lower than that of other schools in the same district. Unfortunately, a particularly large proportion of Out-relief children attend this school, because free breakfasts are given in the winter, and an outfit of clothing every year." (Report . . . on the Condition of the Children, by Dr. E. Williams, 1908, p. 155.) At Bury St. Edmunds, we learn that it was found last winter that a large percentage of the families whose children were fed at school were in receipt of Outdoor Relief of an amount which the Education Authority thought inadequate. The attention of the Board of Guardians was called to the fact, but no steps were taken by them. The Education Committee of the Town Council accordingly continued to feed the children, whilst the Board of Guardians continued to give Outdoor Relief, and, we may add, the Distress Committee under the Unemployed Workmen Act provided relief works and wages to men who were, in many cases, the fathers of the children thus fed. This is what is happening this winter, in town after town. In Edinburgh, Liverpool, and various other large towns there is even another committee concerned. The Police-aided Clothing Association, administered in close connection with the Watch Committee and the municipal police force, supplies destitute children with clothing, children who may be simultaneously getting Outdoor Relief from the Board of Guardians, and free meals from the Education Committee, besides private charity, none of the donors being necessarily aware of the operations of the others. The Annual Report of the Edinburgh "Police-aided Scheme for Clothing Destitute Children," for 1905-1906 (which clothed 1,136 destitute children in the year), actually specifies, as the two typical examples of its work, two cases in each of which the family was known to be in receipt of Outdoor Relief (pp. 8, 9). At Liverpool, it has been brought to our notice that "a family received help from the Central Relief Society, the clergyman of the parish, the Police-aided Clothing Association, the 'Hot Pot Fund' and finally the parish authorities, in the space of four months." (Evidence before the Commission, Q. 83251, Par. 65.)

School Nurses and members of Children's Care Committees seems to furnish, for the first time, an effective instrument for keeping under practically continuous supervision the 160,000 children of school age for whom Outdoor Relief is being granted, and the 35,000 more who, in different parts of the United Kingdom, are boarded-out or placed in residential homes. With such continuous supervision by the Local Education Authority, we believe that by far the best way for the community to provide for a destitute child is, so to speak, "to board it out with its own mother," upon an allowance really adequate for its full maintenance, provided that the mother is not mentally or morally unfit to be entrusted with its care. For undertaking the complete custodial care of children of school age who are without parents, or who have been compulsorily withdrawn from their unfit parents, the Local Education Authority offers manifest advantages over an Authority limited to the relief of destitution. Here the Local Education Authority has ready to hand, not only the device of Boarding-out already employed by that Authority under the supervision of Special Committees of philanthropic workers for some of the defective children, but also its residential schools, at present used only in the form of schools for special classes of children.* If, for other sections of children, the plan of Scattered Homes commends itself, the Local Education Authority can most conveniently place these Homes in proximity to the day schools which the children should attend, and can allocate the children among them in such a way as to provide each of them with accommodation in the type of school that its faculties make most appropriate. In so far as "Certified Schools and Homes" are made use of for particular kinds of children, the Local Education Authority, unlike the Destitution Authorities, will have at its command, qualified inspectors, accustomed to deal with the managers of voluntary institutions, and able to satisfy themselves of the value of the care and instruction given. Compared with the Local Education Authority in this respect, the Destitution Authority, even at its best, stands at a grave disadvantage. It either has to divorce the children from all the official machinery which it directs—the Guardians and the Relieving Officers striving, so to speak, to hide themselves from the children's view, in order to free them from all associations with the Poor Law—or else it smears their young lives over with the stigma of pauperism, and brands them as a special caste. What the Destitution Authority does in this dilemma is to impale itself alternately on each of the horns; never succeeding in wholly dissociating the children from the Workhouse or its precincts, and yet failing to maintain over them the watchful supervision that all systems require. Finally, even if it overcomes all these drawbacks, the Destitution Authority, as an Authority for children of school age, has, in the matter of education, an impossible task. The children with whom it has to deal are arbitrarily selected from the general child population by circumstances wholly irrelevant to their classification in the school, namely, by the destitution of the parents—the result being that old children and young, bright children and the mentally defective, criminal children and scholarship children, children who have been regularly under instruction and those who have been wandering untaught, are all dumped down in the same building, in the same classes, before the same teachers. In short, for the grouping of children in schools, as for the grouping of the sick in hospitals, the category of the destitute is a mischievous irrelevancy.†

(F) CONCLUSIONS.

We have therefore to report:—

1. That the Destitution Authorities of England and Wales, Scotland and Ireland have proved themselves—in spite of the devoted personal service of many of their members—

* It is not generally realised that the Local Education Authorities in England and Wales are already providing and maintaining residential or boarding-schools (thirty-two under the Children's Act of 1908, formerly under the Industrial Schools Acts; and eleven under the Education Acts, for blind or deaf children). (See Report of House of Commons Select Committee on the Education (Provision of Meals) Bill, 1905, Qs. 19–21.) These have now increased to fifty, which is half as many as those of all the Destitution Authorities put together. For particulars of the practice of Education Authorities in "boarding-out," and otherwise providing for the maintenance of special classes of children, see Royal Commission on Care and Control of the Feeble-minded, 1908, Vol. V., Appendix B., pp. 49–61. There are elaborate rules made by the Board of Education, regulating this boarding-out (Statutory Rules and Orders, 1900, No. 158); see *Ibid.*, pp. 206–210.

† "What all these children require," says a competent authority, "to whatever class they may belong, is moral, physical, and industrial education. The supreme authority in charge of delinquent and dependent children should be the Education Department of the State. So long as these children are looked at, as at present, through the eyes of the Criminal Department, or through the eyes of the Pauper Department, they will not receive the humane consideration to which their miseries entitle them; and Society will be punished for refusing them this consideration by seeing an ominous percentage of them relapsing into a life of habitual criminality and becoming a permanent danger to the community." (*Juvenile Offenders*, by Rev. W. D. Morrison, 1896, p. 304.)

inherently unfitted, by the very nature of their functions, to have the charge of the 237,000 children of school age for whom the State, in the United Kingdom, assumes the responsibility of whole or partial maintenance.

2. That, as a result of this inherent unfitness of a Destitution Authority for the rearing of children, it has been demonstrated to us by our own expert investigators, and confirmed by other evidence, that certainly a majority of all the Outdoor Relief children—probably 100,000 boys and girls—are to-day suffering, definitely and seriously, in health and character, from the circumstances of their lives—these circumstances being, in great part, the inadequate and unconditional character of the Outdoor Relief upon which they are supposed to be maintained, and the lack of care and supervision exercised by the Destitution Authorities, and of inspection by the three Local Government Boards, to prevent the too frequent neglect and ill-treatment of these wards of the State.

3. That, in spite of almost universal condemnation and notwithstanding a whole generation of effort on the part of the three Local Government Boards to get the children otherwise maintained, there are, in Great Britain three or four thousand, and in Ireland as many more, children of school age being brought up in the demoralising atmosphere of the General Mixed Workhouse; and we have found no evidence of any effective desire or intention on the part of the Destitution Authorities to take steps to bring to an end this discredited method of providing for children.

4. That the system of “boarding-out” the children with foster-parents, or placing them in certified institutions—a system which, under careful and continuous supervision, and confined to a minority of suitable cases, has much to recommend it—is, at present, seriously prejudiced by the fact that the Destitution Authorities and their officers are, by the very nature of their functions, unqualified to maintain an efficient inspection of the homes and institutions which they select for their children, let alone any continuous supervision of their welfare. In some cases it has even been deemed advisable to discourage or prohibit such visiting of the homes or institutions in order to avoid the connection of the children with the Destitution Authority which is supposed to look after them.

5. That the children in Poor Law Schools and Cottage Homes—the conditions of which have, for the most part, greatly improved—are, in many instances, maintained at an unnecessary cost; an excessive expenditure sometimes directly attributable to the inexperience of a Destitution Authority in school management, and one which still leaves the children suffering, even in well-administered institutions, from:—

(a) The difficulty of getting the best teachers in Poor Law Schools.

(b) The impracticability of affording these “institutionalised” boys and girls proper experience of life in a small home; and

(c) The educationally defective grouping together of children merely by the common attribute of their parent's destitution, instead of allocating them severally to the particular types of school (*e.g.*, mentally-defective schools, crippled schools, higher-grade schools, technical schools, etc.) that their individual characteristics require.

6. That owing to their lack of any appropriate machinery for the purpose, the Destitution Authorities fail to-day even to discover a large amount of the destitution that exists among children in the great towns; and this not merely in the matter of medical treatment urgently required, but even in the matter of actual inadequacy of food, so that the powers entrusted to the Boards of Guardians for the prosecution of cruel or neglectful parents are hardly ever put in force, and many thousands of children are, for lack of the necessities of life, growing up stunted, debilitated and diseased.

7. That, as a consequence of this failure of the Destitution Authorities to prevent or to relieve child destitution, Parliament has been led, after many official investigations, to entrust to the Local Education Authorities the duty of providing meals for the children found at school unfed, at any rate on those days of the week, and those weeks of the year

when the elementary schools are open ; with the result that these Authorities are in England and Wales, during the present winter, feeding more than 100,000 children, and probably nearly as many children of school age as are being relieved, otherwise than in institutions, by all the Destitution Authorities put together.

8. That these competing systems of relieving child destitution by rival Local Authorities in the same town—in many cases simultaneously assisting the same children—without any effective machinery for recovering the cost from parents able to pay, and for prosecuting neglectful parents, are undermining parental responsibility, whilst still leaving many thousands of children inadequately fed.

9. That it is urgently necessary to put an end to this wasteful and demoralising overlapping, by making one Local Authority in each district, and one only, responsible for the whole of whatever provision the State may choose to make for children of school age.

10. That the only practicable way of securing this unity of administration, and also the most desirable reform, is, in England and Wales, to entrust the whole of the public provision for children of school age (not being sick or mentally defective) to the Local Education Authorities, under the supervision of the Board of Education ; these Local Education Authorities having already, in their Directors of Education and their extensive staffs of teachers, their residential and their day feeding schools, their arrangements for medical inspection and treatment, their School Attendance Officers and Children's Care Committees, the machinery requisite for searching out every child destitute of the necessities of life, for enforcing parental responsibility, and for obviating, by timely pressure and assistance, the actual crisis of destitution.

11. That in Scotland, the whole of the public provision for children of school age might be entrusted, at any rate in the large towns, to the School Boards, and elsewhere, perhaps, either to the District Health Committee or to the newly-formed "County Committee of the District," under the supervision of the Scottish Education Department.

12. That in Ireland, where no Local Education Authorities exist, it should be considered whether the whole of the public provision for children of school age might not advantageously be entrusted to the County and County Borough Councils, acting through special "Boarding-out Committees," on which there should be women members, and sending the children to the existing day schools.

CHAPTER V.

THE CURATIVE TREATMENT OF THE SICK BY RIVAL AUTHORITIES.

We find, throughout the United Kingdom at the present time, two separate and distinct public authorities dealing with the sick poor, the Destitution Authority, providing medical attendance, nursing and medicine, and often institutional treatment, for destitute sick persons whatever their diseases; and the Local Health Authority, providing, in the same area, medical attendance, nursing and medicine, together with institutional treatment where required, for persons whatever their affluence, suffering from certain specific diseases. Alongside of these two ubiquitous rate-supported Medical Services, we find a whole array of medical charities of one sort or another, dealing with essentially the same classes of persons and many of the same diseases.

(A) THE MEDICAL SERVICE OF THE POOR LAW.

Of the 915,000 simultaneous paupers in England and Wales, probably 120,000 are acutely sick, requiring, not merely maintenance, but also appropriate medical treatment. It is, therefore, somewhat remarkable that the Report of 1834 contained no recommendations as to the treatment of the sick.* Among the four separate institutions which the authors of that Report recommended as the minimum for each Union, a hospital found no place.† This was not because they were careless of the sufferings of the sick poor, but because the institutional treatment of sick persons was, at that date, hardly recognised as important, either from a curative or a preventive standpoint. What the authors of the 1834 Report contemplated providing for the sick poor—what indeed, was at that time the customary provision for the sick of all degrees—was merely the attendance of a medical man in their own homes and a plentiful supply of medicine. Accordingly when the Poor Law Commissioners of 1834–47, instead of establishing in each Union these four separate institutions, pressed for the building of one General Mixed Workhouse, this did not include any specialised provision for the sick. The most that was done was to set aside a room for such of the Workhouse inmates as became ill, for medical attendance upon whom the Board of Guardians contracted with a local doctor. Thus, whether within the Workhouse or in the sufferers' own homes, the conception of medical care was, in 1834, of the simplest.

During the past seventy years the influence of the Central Authority on the Boards of Guardians has, in this branch of their work, been of a two-fold character; it has attempted to restrict the area of Outdoor Medical Relief, whilst striving to improve the quality of Indoor Medical Relief. The crusade against Outdoor Relief, conducted, as we have seen, by the Inspectorate of 1869–86,‡ included as one of its departments a tightening-up of the conditions on which Medical Orders were habitually granted. Boards of Guardians were encouraged to subject the applicant for a Medical Order to the same inquisitorial inquiries and the same treatment by the Relieving Officer as if the application had been for money or food; to grant the relief "on loan," and to threaten to recover its cost; and generally to deter persons from applying for the services of the District Medical Officer except in dire necessity. On the other hand, there has been, especially from 1866 onwards, a steady pressure on the Boards of Guardians to improve the institutional provision for the sick poor, by erecting separate hospital buildings, by augmenting the medical staff, and by substituting trained nurses for the pauper attendants. This apparent inconsistency between the two parts of the medical policy of the Central Authority is explained by the assumption that Outdoor Medical Relief, whilst not in itself deterrent, was an open door to other forms of pauperism, to which it was apt to

* We estimate, though no statistics are available, that the pauper sick in England and Wales numbered on March 31st, 1906, probably 120,000; in Scotland, probably 16,000; and in Ireland, possibly 24,000, apart from the merely infirm aged, and the mentally defective. Including "chronic" cases, the number would be much greater. A Return obtained by the Commission from 128 Unions, comprising 31 per cent. of the population of England and Wales, showed that on a given day, 31·4 per cent. of all the paupers, indoor and outdoor (excluding lunatics in asylums) were actually receiving medical treatment. This indicates that throughout the United Kingdom there are probably 300,000 paupers under treatment. But half of these are merely "chronic" or "senile" cases.

† Report of 1834, p. 303.

‡ Report . . . on the Policy of the Central Authority from 1834 to 1907

lead ; * whilst Indoor Medical Relief, however good in quality, would, by its very nature, always be deterrent, owing to the necessary loss of liberty, and would thus never be taken advantage of by any but those who were absolutely destitute.

The two-fold policy thus emanating from the Local Government Board has been reflected in the medical administration of the Boards of Guardians up and down the country, in an irregular manner and to a varying degree. Some Boards have distinguished themselves for diminishing, almost to the vanishing point, the number of Medical Orders given for the attendance of the sick poor in their own homes. Other Boards have marked themselves out by the efficiency and elaborateness of the costly "infirmaries" or "hospitals" that they have provided for the sick poor, and by the complete separation of these institutions from the General Mixed Workhouse. We have, however, to record that, in the great majority of Unions, especially those of rural or semi-rural character, the Boards of Guardians have shown themselves equally impervious to both sides of the advice and injunctions of the Local Government Board ; and have continued, with a minimum of improvement, much the same primitive provision for the sick poor, alike for those residing in their own homes and those within the General Mixed Workhouse, in which the authors of the Report of 1834 seem tacitly to have acquiesced.

(B) DOMICILIARY MEDICAL TREATMENT UNDER THE POOR LAW.

The domiciliary medical treatment of the sick poor is entrusted, in England and Wales, to 3,713 District Medical Officers, averaging five or six for each Union, severally appointed for life or during good behaviour by the Boards of Guardians concerned. The Local Government Board insists that the person appointed shall be legally qualified ; that he shall reside within the district assigned to him, and that he shall receive a permanent and personal appointment. Subject to these requirements, the selection of the District Medical Officer, the amount of his remuneration, and the detailed conditions of his appointment are left entirely to the discretion of the Guardians, who have usually, for this purpose, no expert advice at their command. In the first years of the Poor Law Commissioners the new Boards of Guardians were urged by them to put these appointments up to competition among the medical practitioners of the Union, and to appoint the man who, being duly qualified, offered to take the post (including the supply of the necessary medicines) at the lowest price.† This gave rise to much objection, and the Poor Law Commissioners

* Investigation did not give much support to this assumption. Our Medical Investigator, for instance, reports that to him at the outset it seemed "a perfectly natural one, and I had no doubt of finding abundant evidence of its soundness in the first Union to be inspected. I decided to ask every inmate of its Workhouse who could give any information on the subject whether he or she had received medical Out-relief before getting any other kind of relief from the Guardians, and accordingly spent an afternoon interviewing the paupers. dependently of other Out-relief. The replies were so unexpected that I asked the master to continue catechising on the same lines and to give me a note of the particulars of all the answers obtained. He did so, and the result was similar." Dr. McVail then extended his inquiry, so as to include persons on Outdoor Relief. The outcome was that : "In only four out of 490 indoor paupers, and in only twelve of 1,198 outdoor paupers, or in practically 1 per cent. of each of the two classes, had general pauperism begun with Medical Out-relief only, so that in only this 1 per cent. is it possible that, in the rural Unions, Medical Out-relief had led the way to Indoor Relief, or to Outdoor Relief in money or in kind. The figures given for January 1st, 1905, correspond very closely to these. In a total of 6,018 paupers in the eleven rural Unions only sixty-six, or very little over 1 per cent., were in receipt of Medical Relief only. And it cannot be assumed that even this 1 per cent. was led into pauperism by receiving Medical Out-relief. In short, I found it impossible to get on a statistical basis any evidence of this alleged evil influence of Medical Out-relief" (Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, pp. 141-2). In the Metropolis, where it is "the nearly unanimous opinion of Relieving Officers," that "the obtaining of Medical Orders, especially in the cases where nourishment is prescribed," is "a most prolific cause of pauperism," our Investigators into industrial conditions "found that of a total of 237 male operatives in the boot and shoe trades, a Medical Order formed the kind of relief first given in thirty-four cases, or about one-seventh of the total" (Report . . . on the Effect of Industrial Conditions on Pauperism, by Mr. A. D. Steel-Maitland and Miss R. E. Squire, p. 15). This, however, leaves it uncertain whether, even in those cases, the cause of pauperism was not the disease, rather than the issue of the Medical Order. We have been unable to get any evidence as to the relative effect on subsequent pauperism of cases of disease left unattended to, and cases of disease for which a Medical Order was granted.

† First Annual Report of Poor Law Commissioners, 1835, p. 53 ; Report of the Poor Law Commissioners on the Further Amendment of the Poor Law, 1839, pp. 73-78, 156-287 ; Reports of House of Commons Committees of 1838, 1844, 1854, and 1864 ; *Life and Times of Thomas Wakley*, by S. Squire Sprigge, 1897.

and their successors in office gradually became converted to the advantage of transferring the competitive pressure from price to quality—offering an adequate salary for the duties required, of paying separately for drugs and other accessories of the treatment, and even of providing an official dispensary and a salaried dispenser. Unfortunately, but few of the 650 Boards of Guardians have yet adopted the new policy, in spite of all the pressure that the Local Government Board has exercised. In the great majority of Unions the District Medical Officers still have to find their own drugs and medicines, and any dressings and bandages that are required, and they are paid fixed stipends which vary from as little as £10 or £15 a year up to as much as £300 or £400, a very usual figure being £100; together with additional fees for midwifery cases and operations. Many of them declare that they do not receive more than 4d. or 6d. per visit.* Both the amount and the method of the remuneration of the District Medical Officers have repeatedly been made the subject of official criticism, which was brought forcibly to our notice. “It is undeniable,” testified the Poor Law Medical Inspector of the Local Government Board, “that the majority of medical officers, in or outdoor, are paid salaries miserably inadequate.”† This is obviously due to the continuance, in a veiled form, of the practice unfortunately encouraged by the Poor Law Commissioners, of putting the office up to competitive tender. The Medical Inspector himself informed us that when, on one occasion, he “was a candidate for an outdoor medical officership, . . . a colleague of mine offered to do the work for nothing for one year if he was appointed, and afterwards at a much less salary than I asked for.”‡ “When I tell guardians that their . . . medical officers are not adequately paid,” remarked to us one of the General Inspectors of the Local Government Board, “they answer: ‘Well, at all events, we have only to advertise it, and we shall get any amount of candidates who are perfectly ready to come forward and do the work on the terms we offer. In the face of that, can we, in the proper performance of our duty to the ratepayers, offer more than we can get what we want for?’”§ What was not fully considered by the Poor Law Commissioners, and is still not adequately realised by the Boards of Guardians, is that so long as these appointments are thrown open to private practitioners, they will be taken for other reasons than the salaries offered. “One knows,” testified a competent witness, “that the medical men in a great many instances do not take office for the emolument which they will get from the office, but for various other considerations. Probably one of the chief considerations is to keep somebody else out. There are a certain number of men who have the medical work in a certain area between themselves and they naturally want to keep another practitioner from coming in. That is one motive. Another motive is that holding Poor Law offices does indirectly bring them practice. . . . Even taking all that into consideration, I do not think that there is any justification for not paying a man a fair value for his work. I think it is very undesirable that Medical Officers should be able to say: ‘Well, if they find fault with me, at all events I feel this—that I am giving them more than their money’s worth.’”|| “The evils arising, or likely to arise, from this underpayment,” says a competent witness, “are various. The Medical Officer is compelled to economise his time too strictly; he cannot afford to supply expensive medicines or to carry out modern improvements in medical

* Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, pp. 119–121; Report by Mrs. Sidney Webb, on the Medical Services the Poor Law and Public Health Departments, p. 13. It seems gradually to have become customary for the Guardians in their contract with the District Medical Officer, to undertake to supply certain “expensive” drugs, usually cod liver oil, and quinine. The selection of these drugs in this way seems, in view of altered prices and the changes in medical practice, somewhat out of date. Potassium iodide, for instance, is sometimes included, sometimes not. Diphtheria antitoxin is hardly ever supplied; though the Local Government Board has informed one Union that this may be done (Local Government Board to Winchcombe Board of Guardians, July, 1906). One District Medical Officer found that he spent 8s. upon it for two cases only, so that the antitoxin is, in fact, hardly ever used for paupers. The Local Government Board has lately declared, in answer to an inquiry, that, not only the above, but also antiseptic surgical dressings, cocaine, phenacetin, trional, antipyrine, salicylate of sodium, tincture of digitalis, and serum preparations ought all to be included in “expensive medicines.”

† Evidence of Dr. Fuller, Inspector for Poor Law Medical Purposes in the Provinces of England and Wales, Appendix, No. XXI. (A), Par. 25, to Vol. I.

‡ Evidence before the Commission, Q. 10460.

§ *Ibid.*, Q. 8920, 9320.

|| *Ibid.*, Q. 9320. This evidence was confirmed by that given by the Secretary of the Poor Law Medical Officers’ Association, *Ibid.*, Q. 33419.

treatment.”* Nevertheless, only in two or three instances have the whole services of a Medical Officer been secured, at a “full-time” salary. Only in the Metropolis and a few other towns is an official dispensary or a salaried dispenser provided.† Practically only in these few cases is the District Medical Officer set free to prescribe what he may deem necessary for the patient, without having to pay for it out of his own pocket. Everywhere, with but two or three exceptions, the whole duty is entrusted, at a scanty and inclusive stipend, to one of the local practitioners.

The conditions under which the District Medical Officers carry out their duties are as unsatisfactory as their remuneration is demoralising. They are at the beck and call of the Relieving Officer, a non-medical authority, who has the right, at his unaided discretion, to refuse a sufferer access, to direct him to call at the doctor’s house, or (by merely marking the medical order “urgent”) to require the doctor himself immediately to visit the patient’s residence.‡ If the District Medical Officer, obeying the dictates of humanity, attends any urgent case without the Relieving Officer’s order, he not infrequently finds himself refused, “on some frivolous pretext or another,” the midwifery fee or other emolument to which he would normally have been entitled.§ The majority of the cases that he has to attend are, moreover, of the most disheartening kind—largely old people, with chronic complaints, or persons of more than the average degree of ignorance, carelessness, intemperance and, above all, grinding poverty, with the drawbacks of bad housing, the poorest kind of clothing, insufficient and unsuitable food, inadequate attendance,|| and an almost total absence of skilled nursing. The Boards of Guardians have power to appoint salaried nurses for the outdoor sick, but they have almost uniformly refused to do so. In a small minority of Unions they pay a subscription to the local nursing association, so that the paupers may obtain a share of the services of the district nurse. But over the greater part of the country there is no district nurse; and it is rare for the Guardians to make any sort of provision for nursing the outdoor sick poor.¶

* *Ibid.*, Q. 33391, Par. 4. In one rural Union, the Vice-Chairman of the Board of Guardians stated that the District Medical Officer got no allowance for even the most expensive medicines, and that he had been heard to complain that his salary hardly covered the cost of the medicines he supplied (*Ibid.*, Qs. 71432, 71433). “The poor do suffer to some extent,” declared a District Medical Officer, “we could do much more justice if we were paid better; if there is a choice between an expensive and better method of treatment and an inexpensive method of treatment not quite so good, I am afraid they get the inexpensive method.” (*Ibid.*, Qs. 74925–8). “Drugs should be provided by the Guardians,” said a Medical Officer of Health, “the doctor giving a prescription to be taken to the chemist. The poor would then get the drugs they need, and not what the Medical Officer thinks he can afford to give them on his diminutive salary” (*Ibid.*, Appendix No. CLIX, (Par. 8) to Vol. VII.

† The Poor Law Dispensary, with premises, drugs, and a salaried dispenser provided by the Board of Guardians, where the District Medical Officer attends at stated times to see such of his patients as can come to him, has been, since 1867, established at the instance of the Central Authority in all but two of the Metropolitan Unions. Similar dispensaries have since been established by the Boards of Guardians of a score of provincial towns. This brings with it the advantage of freeing the District Medical Officer from the misplaced duty of providing, out of his meagre stipend, the drugs and medicines that he prescribes, and also, to some extent, of facilitating his work by enabling him to deal more expeditiously with the half of his patients who come to the dispensary, at the cost, however, of diminishing for that half the opportunities for diagnosis and appropriate hygienic advice that are afforded by seeing the patient at home. In all other respects the arrangements are the same as where no Poor Law Dispensary is provided. The shortcomings of the Poor Law Dispensaries from the standpoint of curative treatment are stated in our Medical Investigator’s Report. (Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, pp. 126–139; see also Report . . . on the Medical Services of the Poor Law and Public Health Departments, pp. 14, 15.)

‡ It is said to be a practice in some Unions to mark all Medical Orders “urgent,” that are given out of regular hours.

§ Evidence before the Commission, Q. 33391, Par. 11.

|| Here is a case which one of our Committees happened to visit. Their Report says: “This is the case of a man dying of cancer in the throat. We found the door locked, and but for a kindly neighbour who opened a window and found the key, we could not have got in, the man being quite alone, hardly able to speak, and horribly ill. The house very poor. A daughter earns 9s., the only regular income, and the rent is 4s. 2d. The old wife had gone to a neighbour where she would earn 4d. by minding the house. The Relieving Officer did seem to see the horror of this man lying there locked in, and suggested sending the ambulance. Relief, 5s. and a loaf.” (Reports of Visits by Commissioners, No. 22 G., p. 57.)

¶ There used to be an idea that one outdoor pauper could nurse another; and some Boards of Guardians still embody in their By-laws that: “Out-paupers will be required to attend other out-paupers in sickness, when ordered by the Relieving Officer to do so.” (Rules of Kingsclere Board of Guardians.) Some Boards occasionally allow a shilling or two to a neighbouring woman to look in upon a sick patient. This is, however, discouraged and restricted. “No allowance,” run the rules of several Unions, “shall be made for nursing except in special cases.” (Rules of Warwick Board of Guardians; similarly, in various terms, at Brixworth, Cheltenham, Banbury, etc.) At Chichester, where it so happens that the Workhouse Medical Officer is also the Outdoor Medical Officer for the whole Union, the Workhouse nurses are—as at Merthyr, Rochdale and Sculcoates—sent out as required, to attend to the patients on Outdoor Relief. “The result is,” says the Medical Inspector, “that at Chichester we get a vastly better nursing staff than we have in other Workhouses of the same size,” and the Outdoor poor are better nursed (Evidence before the Commission, Qs. 10376–9).

Our Medical Investigator reports that "In many villages and their surrounding neighbourhood, I found that no district nurse whatever was available. District Medical Officers complained very much of this want of assistance, and the complaint was well founded. . . . Quite unquestionably, in some rural districts the want of sick-nursing of paupers is a serious defect in the present system of Poor Law medical relief." * This was, indeed, frankly stated by the General Inspectors of the Local Government Board. "The lack of nursing upon the outdoor sick poor," testified one of them, "is another source of hardship, and one which urgently needs to be dealt with." † The fact that wool, lint and bandages are hardly ever supplied by the Guardians aggravates the evil. The District Medical Officer can order nothing better than clean rags for dressings, lest " (as one of them said "the bad legs should ruin him.") ‡ As things are, it is unfortunately painfully true, as an experienced District Medical Officer informed us, that "many cases die simply from want of proper nursing. I cannot," he said, "speak strongly enough on this point. It is one of the Medical Officer's greatest drawbacks that he cannot get efficient nursing for his outdoor cases." § "It is dreadful," reports a Local Government Board Inspector, "to think of the amount of unnecessary inconvenience, to say the least, suffered by out-patients now, looked upon as a matter of course, and allowed to continue with no practical effort to prevent it. If expense were incurred it would be doubly justifiable. Firstly, because of the suffering it would alleviate. Secondly, for the more cynical reason that it would restore the patient to health, and get him off the rates much more quickly. Medical Officers are handicapped in their work when they have no intelligent nursing power behind them, and know that it is useless to try many things that might be done if there were the requisite attendance at hand." || Finally, the District Medical Officers are deprived of the stimulus and encouragement of official recognition or supervision. They have no medical superior to whom they can report; they are not even in official communication with the Medical Officers of Health of their districts, or with the County Medical Officer. As some of them have complained to us, they are never asked, either by the Boards of Guardians or by the Local Government Board, for particulars of their success or failure in treating cases, or for details of any improvement in treatment that they may have introduced. There are no medical statistics of their work. According to the "year's count" of pauperism that the Commission had taken for England and Wales, no fewer than 216,022 persons received "Medical Relief only" in the course of one year, to say nothing of those who got other relief as well. Yet, by what seems to have been an official oversight that we do not understand, these 3,713 District Medical Officers are left to do their work without either supervision or inspection by the Local Government Board. ¶ From 1834 down to the present day there has been no official inspection of this Poor Law Medical Service, which costs in salaries, dispensaries, and drugs alone, nearly £500,000 sterling annually.

Under these circumstances, we were not surprised to find existing a certain dissatisfaction with the Outdoor Medical Service of the Poor Law. The Medical Inspector of the Local Government Board, who "has no duties in connection with the supervision or administration of Outdoor Medical Relief," ** informed us, in reply to our questions, that, "unofficially," he was "constantly hearing complaints" that patients on Outdoor Medical

* Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, p. 112.

† Evidence of Mr. Baldwin Fleming, Appendix No. XIX. (A), Par. 22, to Vol. I.

‡ "Many of the old people whom I saw," reports our own Medical Investigator, "were afflicted with ulcers of the legs; the use of proper and sufficient dressings for such ulcers was the exception. Lint and gutta-percha tissue and other non-porous coverings are seldom provided. Linen rags are the rule. These are usually obtained from neighbours or from the charity of the better-off in the community. Linen rags saturated with a medicated lotion may be comfortable enough, so long as the rags are kept wet, but at night, when the patient goes to sleep, the lotion will quickly evaporate, and in the morning the rag and ulcer will be closely adherent, and not separable without a good deal of pain." (Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. McVail, 1907, p. 102.)

§ Evidence before the Commission, Q. 34566, Par. 6 (c). "There is no doubt in my mind," testifies another witness, "but that the medical assistance to the poor (paupers) is seriously affected by the complete absence of any organised scheme for the proper nursing of the patients in their own homes." (*Ibid.*, Q. 75774, Par. 6.) Nor need this attendance be wholly that of a trained nurse. "Much help could be given, and better results obtained," says a District Medical Officer, "by the employment of respectable women to thoroughly cleanse and keep clean the homes of the poor where there is sickness in the house, and a qualified nurse is not necessary for this purpose." (*Ibid.*, Appendix No. CXLVIII. (Par. 6) to Vol. VII.) "The very poor people, I am sure," says another witness, "are very much neglected indeed; there are a great many deaths due to it (inadequate nursing) that would otherwise get better." (*Ibid.*, Q. 34672.)

|| Thirty-Fifth Annual Report of the Local Government Board, 1905-6, p. 466. (Mr. Fleming's Report.)

¶ This lack of official inspection was made the subject of complaint by several of the District Medical Officers themselves; see Evidence before the Commission, Qs. 34566 (Par. 6 (b)), 34648, and Appendix No. XCI. (Par. 6) to Vol. VII. We were informed that, with the exception of two Reports on the London dispensaries, there were no systematic Reports in existence on the working of Outdoor Medical Relief. (*Ibid.*, Q. 22923.)

** *Ibid.*, Appendix No. XXI. (A), Par. 29, to Vol. I.

Relief were not well and sufficiently attended.* The District Medical Officers, said one witness "do the work according to the pay." He did not think the paupers were treated as well as the paying patients. "The doctor," he said, "takes these positions in order to further his private practice, and I am afraid the poor very often have to suffer for that reason; he takes it too cheap." † "The present plan of medically assisting the poor under the Poor Law," says a medical practitioner, himself a Guardian, "is not an efficient system. The average Poor Law Medical Officer (outdoor) does not give the satisfaction he ought to his patients." ‡ "The working classes," says another medical practitioner, "have the idea that the attention they get from the Poor Law Medical Officer is not satisfactory." § "They feel," said another witness, "that the District Medical Officers have not the time to attend to them." || "I am inclined to think," deposed a Shropshire Guardian, "that they do not get much of his services. He goes round to them in a casual way, but there are great complaints that the patients of the Poor Law . . . do not get very much attention from the doctors . . . I merely speak from my knowledge of the cottagers themselves, and where there is illness, I find if there are more important cases in the neighbourhood the poor are neglected." ¶ "The poor people are very dissatisfied, I find," said the Hon. Sydney Holland, "with the medical relief that they get from the Poor Law authorities; it is given in a very grudging spirit, and they do not believe in it." ** One of the District Medical Officers himself admitted to us "that the tradition of the service is that every pauper is to be looked on as being such through his or her own fault, and the tendency is to treat the case accordingly. . . . In the town . . . I believe that the tradition, as to a pauper, is that he is a shade only above a criminal. . . . Now to this tradition the Medical Officer tends, like all other officers, to become a victim, and the tendency is that the case of sickness is treated as a 'pauper' and not as a 'patient.' The Commission will, I trust, see the distinction." ††

These complaints appear to us to do less than justice to the District Medical Officers themselves. So far as we have been able to see anything of their work, we have been struck by their personal kindness to the poor, and by their desire to relieve suffering. When we consider the method and amount of their remuneration, and the conditions of their duties, we are impressed with the zeal and devotion displayed, with the humanity shown to the poor, and with the large amount of unpaid, unrecognised and unrecorded work performed by them as a class. But taking into account all the evidence, we have to make two main criticisms on the Outdoor Medical Service as a system involving a large expenditure of public money. In too many Unions, it is clear, outdoor medical relief begins and ends with a bottle of medicine and, in the twentieth century, we have ceased to believe in the bottle of medicine. It is not regarded as any part of the duty of the Poor Law Medical Officer to insist on, or even to inculcate, the personal habits necessary for recovery. "Under the Poor Law," reports our Medical Investigator, "there is practically no sanitary supervision of phthisis in the home of the patient. . . . Phthisis cases are maintained in crowded unventilated houses. . . . Diabetes cases live on the rates and eat what they please. Infirm men and women supported by the Poor Law are allowed to dwell in conditions of the utmost personal and domestic uncleanness. . . . It is not worth while entering on any reform of the Poor Law unless this policy is changed. Beneficiaries must be compelled to obedience, alike in their own and in the public interest. And the officers who are placed in direct charge of the beneficiaries must themselves be subject to supervision and discipline." ‡‡ Our second criticism is that, from first to last, there is, in the Poor Law Medical Service, no thought of anything but "relief." It is not regarded as any part of the duty of the District Medical Officer to take any steps to prevent disease, either in the way of recurrence in the same patient, or in its spread to other persons. His work is entirely unconnected, on the one hand, with the institutional treatment of the

(*Ibid.*, Appendix No. XXVIII. (Par. 7) to Vol. VII.) "The poor," said another medical practitioner, who is himself a Poor Law Guardian, "are choked off by the Relieving Officer, and by the Guardians in many cases; and I am afraid the manner of some of the Medical Officers chokes them off as well." (*Ibid.*, Q. 42519.)

‡‡ Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, pp. 91 and 149.

sick in the workhouse or Poor Law Infirmary, and on the other with the operations of the Medical Officer of Health. It is not regarded as any matter of reproach to a Board of Guardians or to its staff, that numerous mild cases of scarlet fever or chickenpox and even thirty or forty per cent, of the cases of measles or whooping cough, ringworm or mumps should be wholly destitute of medical attendance, to the serious danger of the public health.* It is not even the business of the District Medical Officer to reduce the amount of sickness in his district. All that he is charged to do, as it is all that he is paid to do, is to "relieve destitution" in a certain specialised way, namely, to supply medical relief to those applicants who have braved the deterrent attitude of the Relieving Officer and satisfied him that they would otherwise be without it. From first to last, in short, the Outdoor Medical Service of the Poor Law has no conception of the Public Health point of view.

(c) THE RESTRICTION OF DOMICILIARY MEDICAL TREATMENT.

In the early part of our inquiry it was brought to our notice by the advocates of strict administration, that many Boards of Guardians had failed to carry out the policy pressed on them by some of the Inspectors of the Local Government Board to restrict the grant of Medical Orders to persons actually destitute. We found, indeed, that in a large number of Unions the grant or refusal of a Medical Order was practically left to the discretion of the Relieving Officer—on occasions, indeed, even to the discretion of the workhouse porter.† One of our committees, for instance, after visiting a large urban Union reported that the "orders for medical relief were sanctioned *en bloc*."‡ Of another populous Union our committee reported that "the medical relief was in all cases ordered by the Relieving Officer, the Committee (of the Board of Guardians) merely confirming his action. The order in each case lasted for a month."§ Under these circumstances the tendency naturally is for the Relieving Officers to grant Medical Orders freely and indiscriminately; sometimes in order to protect themselves against the risk of having an applicant die for lack of help; || sometimes "with a view," as the President of the Association of Poor Law Unions informed us, of "getting rid of" applicants for relief on the easiest possible terms. A Relieving Officer will say, for instance, "we will give you a Medical Order if you like, but we will give you nothing else."¶ Frequently every person, well or ill, who receives Outdoor Relief, is put on "the permanent list," and becomes entitled himself to send for the District Medical Officer whenever he chooses.** In the laxest Unions, as we have gathered, Medical Orders are given to all who apply for them, without even being entered in the Application and Report Book.†† We have even had it given in evidence that, in one Union, the practice is for the Relieving Officers to sign a batch of such Orders at a time, with the names and dates blank, and to leave them with the shopkeepers of the villages, from whom any person gets one who chooses to ask for it.‡‡

This lavish and indiscriminate grant of Medical Orders, by medically unqualified persons, without any verification of the fact of illness, or of its urgency or gravity, has, we think, a disastrous effect, both on the quality of the service rendered and on the spirit in which it is accepted. Under such a system a District Medical Officer is quite in the dark as to the weight to be attached to the Order that he receives from the Relieving Officer; he can feel no assurance that his services are really needed, or that the case is one of urgency. We have even heard of instances in which he has suspected, apparently with some justification, that the Order has been applied for by a malingerer,⁴ given by a Relieving Officer, or marked by him urgent, in order to vex or harass the doctor in

† *Ibid.*, p. 8.

‡ Reports of Visits by Commissioners, No. 24 C., p. 63.

§ *Ibid.*, No. 2 E., p. 11. Another of our Committees found that: "Medical Orders are given with practically no inquiry, and the recipients do not appear before the Committee" (*Ibid.*, No. 112, p. 177). These facts were confirmed by the Medical Inspector of the Local Government Board, who informed us that, in some Unions, "an order for Outdoor Medical Relief is given without any inquiry, simply on the application of the person." (Evidence before the Commission, Q. 10302.)

|| *Ibid.*, Qs. 22767-71.

¶ *Ibid.*, Q. 25024.

** In the Metropolis alone there are 20,000 persons on "the permanent list."

‡‡ *Ibid.*, Qs. 70671-82.

revenge for some former lack of compliance on his part with an unwarranted request. Moreover, a lavish distribution of Medical Orders to all applying for them is a contravention of the present contract with the District Medical Officer, who is paid a meagre salary for attendance only on parishioners who are both sick and actually destitute. All this tends to make the District Medical Officers reluctant and suspicious—to quote again the words of one of them, to make them regard the holders of Medical Orders “as paupers rather than as patients.” It is to the credit of the District Medical Officers that their representations to us have taken the form, in the main, of complaints that many poor persons who in fact need their attendance are, under the present system, deterred from getting it; and that, when such persons do succeed in obtaining a Medical Order, the delay has often injurious results. It has been pointed out that this would not be the case if, instead of the Relieving Officer, it was the District Nurse, the Certified Midwife, the Health Visitor, the Sanitary Inspector, or any qualified person under obligation to search out and report cases of illness, who notified to the District Medical Officer that a sick person was in need of medical attendance. Nor is the effect of this indiscriminate grant of peremptory orders to the District Medical Officer, to visit persons who may or may not be ill, any less harmful to the recipients. Whatever may be the advantage of a public organisation of medical assistance, as universal and as free—if not also as compulsory—as that of education, a careless and ignorant issue, by a Destitution Authority, of Poor Law Medical Orders to persons not really entitled to them, encourages fraud and malingering. The holder of a Medical Order may have merely pretended to be ill or pretended to be destitute; he is under no responsibility with regard to his own illness, or to the order which he has obtained; he presents it or not, as he chooses; he takes the medicine or throws it away at his option; he follows the doctor’s advice, or remains dirty and dissolute, exactly as he pleases—without feeling under any obligation to the community to co-operate in his own cure, or under any kind of compulsion to abandon the evil courses which may have led to his ill-health.

On the other hand, it was represented to us that, in some Unions, there has been a persistent, and in a sense successful, attempt to restrict the use by the sick poor of the services of the District Medical Officers provided for them. In these Unions “Good administration of the Poor Law Medical Service” is apparently taken to mean not curing the sick or preventing ill-health, but cutting down the number of Medical Orders. This policy is even expressed in standing orders or bylaws. Thus, Relieving Officers are often forbidden to grant Medical Orders without first paying a personal visit to the home of the applicant and investigating his circumstances,* in order, not to find out how best to cure the sufferer, but if possible to discover some ground which makes him ineligible for aid. Other Boards expressly say “that orders by the Relieving Officer for Medical attendance must be more charily given, due inquiries being made when possible at the house before being granted, or at any rate at the earliest moment possible after being granted.”† In some Unions the applicant for a Medical Order is required to attend personally before the Guardians at their meeting, and explain, to this non-medical authority, how he comes to need medical aid. “Midwifery Orders,” says one Board, “shall not be given by the Relieving Officer, except in urgent cases, without the consent of the Board of Guardians, given on personal application to them.”‡ An even more usual way of staving off applicants is, whatever their circumstances, to insist on granting the Medical Order only as “relief on loan,” this being sometimes printed, as a matter of course, on the form. “All orders for medical attendance,” says a Suffolk Board of Guardians, “shall be granted in the first instance by way of loan, the applicant to repay 10s. for each midwifery case, and 5s. for each other case.”§ The applicants then remain liable to repay the cost; and the Relieving Officer is sometimes allowed a commission of 20 per cent. on what he can recover. Occasionally the grant of Medical Orders in midwifery cases is restricted to families having less than a prescribed income, it may be 15s. or 18s. or 21s. a week, whatever the number of children,|| or it may be at the rate of 2s., 2s. 6d., or 3s. a week for each member of the family.¶ In the Ellesmere Union we were informed that Medical Orders were never

|| Rules of the Chertsey, Lymington, Godstone and Lewisham Boards of Guardians.

¶ “That where the earnings of a family amount to 3s. per week for each member thereof, orders for medical aid be not given, except in fever or other extreme cases.” (Regulations of Evesham Board of Guardians.) “Able-bodied people, if earning less than 2s. 6d. per head in family, may have Medical Orders for man, wife, and children. . . . Midwife; basis not to exceed 2s. per head in family.” (Resolution of East and West Flegg Board of Guardians, 1904.)

given to anyone, however ill, who was not otherwise in receipt of relief ; in fact, the Guardians were under the impression that it could not lawfully be done.* A more ingenious way of deterring applicants is to resolve "that when relief is administered to a labouring man who is himself ill (if the disease is not contagious) the Board requires that some of the children shall come to the Workhouse during the sickness,"† that is to say, into the General Mixed Workhouse that we have described. When the Medical Order has been given, it is made the duty of the Relieving Officer to visit the case frequently and regularly ;‡ not to see whether the patient is obeying the doctor's orders, or whether anything else is needed to restore him to health, but in order to discover whether he has not some undisclosed resources which would permit of the relief being withdrawn. The Guardians are, in fact, as one committee reports, "strongly of opinion that a large number of the cases relieved would manage without assistance from the Guardians if they were properly and systematically visited and dealt with by the Relieving Officer."§

We have found the practice of some Boards of Guardians even more severely restrictive of the use of the District Medical Officers than is implied by the foregoing Bylaws. Thus, the Bradfield Union in this way claims to have reduced the number of Medical Orders granted from 700 to forty-seven per annum.|| In the Bermondsey Union, where the poor are said to "have more difficulty in getting relief now than they used," the permanent list of those on whom the District Medical Officers have to attend has fallen from over 1,000 in 1901, to 322 in 1906, not because there is less sickness in Bermondsey, or less destitution, but merely because more difficulty has been put in the way of the sick poor getting Medical Orders ¶ Nor is there any doubt as to the cause of the reduction. One District Medical Officer informed us that he was convinced that the reduction in the number of Medical Orders granted in a particular Union was due entirely to the deterrent effect of insisting on prior investigation and personal application to the Board of Guardians.** The St. Pancras Board of Guardians reduced the number of its Medical Orders from 5,324 in 1899 to 2,546 in 1903,†† by making stringent inquiries on every application, requiring the applicant to appear personally before the Board, tendering the Medical Relief on loan in many cases, and offering the alternative of admission to the Workhouse whenever deemed advisable. Thus the Medical Superintendent of the Mill Hill Infirmary of the West Derby Union (Dr. Nathan Raw) states "people will struggle on with a disease and spend all their money, and then apply to the Poor Law, in some cases almost when the people are dying . . . in many cases they are deterred from seeking it until it is too late."‡‡ "The neglect of the poor to apply for Medical Relief," says another witness, "is partly due to the idea that Poor Law relief is a degradation. It has been so officially styled by the Poor Law Board, and I believe it is so considered by many of those engaged in the administration of the Poor Law."§§ "You will find," we were told, that "in most cases where" the delay in getting prompt medical assistance "is the fault of the people, it is because sending for the doctor means making themselves paupers."|||| The representatives of the British Medical Association were emphatic in their testimony that the association of the public medical aid with the Poor Law was in itself deterrent ; it was, they said, "the experience of every practitioner . . . that people avoid calling in

the parish doctor because he is the parish doctor." * The reluctance to come forward and state their need is increased by the fact that it is not to a medical man or a nurse that the sick persons have to make their applications for public medical assistance, but to the Relieving Officer, who,† as we have seen, almost inevitably comes to think of himself as bound to do all that he can to keep people "off the rates." ‡ To the Relieving Officer, under the instructions of the Local Government Board and the Bylaws of the Boards of Guardians, this medical treatment of the sick by the District Medical Officer, even without other aid, is not to be denied to those who are both in need of it and actually destitute, but nevertheless to be restricted to as few cases as possible. The Hon. Sydney Holland, who has been a Poor Law Guardian in two different Unions, and whose experience of hospital administration is very great, informed us that when he was a Guardian he himself entirely acquiesced in this policy and "thought it was a very good thing. I thought that everybody who came before us was a swindler and must be most carefully inquired into, and asked whether he had not drunk too much, and all the rest of it. That is the ideal Guardian, a man who prevents imposition. . . . All Poor Relief," he continues, "is given reluctantly. Every Guardian is told to give it reluctantly; every Poor Law Officer gives it reluctantly, and, in fact . . . the only person you relieve in the Poor Law is the person who is starving. . . . It is exactly the same with regard to medical relief. You are not to treat medically unless they are paupers." The result is, as he informed us, "that the poor people were dissatisfied with the medical relief they got from the Poor Law; that it is given grudgingly . . . the man going to the Relieving Officer, being put in the dock, questioned up hill and down dale, and treated as a thief." §

The advocates of this policy of restricting the use of the District Medical Officers asserted that it resulted in no hardship to the poor, or injury to the community. Other witnesses declared that it was "a real danger to the public," || and that it was responsible for much of the excessive mortality among infants and unnecessary ill-health and premature invalidity among the wage-earners. In face of this conflict of testimony, we thought it necessary, not only to appoint a special medical investigator, but also to consult those who were officially responsible for the public health—taking evidence, oral or written, from no fewer than 51 Medical Officers of Health. We regret to report that the authoritative testimony thus obtained does not support the optimistic assumptions of the advocates of restriction of public medical aid. Whilst some of the witnesses seemed to take for granted the present system as inevitable, and not to have noticed any of its drawbacks, the great majority of the medical practitioners who gave evidence were definitely of opinion that a "deterrent" administration of Poor Law Medical Relief had a gravely adverse effect on the public health. Many of them went further, and deposed that, in their opinion, the stigma of pauperism that was attached to the mere use of the services of the District Medical Officer, by the very fact of his connection with the Poor Law, ¶ and the inconvenience and delay caused by having first to make application to the Relieving Officer,** were, in themselves, even without stringent administration, inimical to the health of the district. This has been demonstrated by many instances. We were informed that the present high mortality from the diseases of young children, and also many serious complications among those who survive, are undoubtedly due to the common

* *Ibid.*, Qs. 39389–91.

† "It stops the more decent ones, the really more deserving cases," deposed one District Medical Officer (*Ibid.*, Q. 51863).

‡ "Probably as long as medical relief is only granted on an order obtained from the same officer who with grudging hand gives an order for ordinary relief, the respectable poor will be as unwilling to apply for the former as for the latter" (*Ibid.*, Appendix XLIV. (Part III.) to Vol. IX.).

§ *Ibid.*, Qs. 32776–86.

|| *Ibid.*, Q. 25373, Par. 157.

¶ "There is very considerable unwillingness on the part of the working classes to apply for an order for medical treatment," testified a Medical Officer of Health, "on the ground that they lose caste, lose their vote and become paupers. It is not generally known that by having medical relief the franchise is not lost. It is probable that the Relieving Officers, in their endeavour to diminish Outdoor Relief, do not concern themselves to make known the fact that the Legislature has drawn this distinction between medical and other forms of relief" (*Ibid.*, Appendix XLIV. (Part I. (B)) to Vol. IX.).

** Thus, as one medical witness put it to us: "A pauper, therefore, being taken suddenly ill at twelve o'clock, cannot see the Relieving Officer before next morning, the necessary inquiries into his case will not be made until, perhaps, the afternoon of that day, and the doctor may not see the patient until the day after that" (Evidence before the Commission, Q. 38631, Par. 12). "The present system of medical assistance to the poor," we were informed, "is unsatisfactory, as cases of serious delay from time to time occur in obtaining orders for medical attendance in urgent cases. . . . The method by which medical assistance can be obtained in the absence of the Relieving Officer, who may be gone, for instance, in charge of a pauper lunatic to the asylum, causes dangerous delay" (*Ibid.*, Appendix No. IV. to Vol. VII.). The difficulties and delay caused by this procedure in rural districts were forcibly put to us by District Medical Officers (*see Ibid.*, Qs. 34566 Par. 6 (a), and 34631–4); and emphasised by the British Medical Association (*Ibid.*, Q. 39013, Par. 31).

lack of medical attendance in the families of the poor, for what are regarded as the simple affections of measles and whooping-cough, and mild and often unrecognised cases of chicken-pox and scarlet fever.* "There is a widespread disinclination," testified a Medical Officer of Health for a Metropolitan Borough, "to utilise the services of the Poor Law doctors. In consequence of this failure to seek skilled medical advice, many cases of infectious disease go unrecognised, and to this fact we must attribute the comparative ineffectiveness of our modern methods of dealing with scarlet fever and diphtheria."† Nor does the Board of Guardians, aiming at restricting medical relief, make things easier for those responsible for the health of the district. "Both friendly suggestions," publicly states a Medical Officer of Health, "and simple reports, appear to cause irritation and resentment on the part of Relieving Officers and all officials connected with the Poor Law administration."‡ A case was brought to our notice in which, when an officer of the Public Health Department was seeking to get sick children treated by the District Medical Officer, this action was made the subject of serious reproof by the Destitution Authority.§

"As a typical illustration of the great waste of money entailed by the present methods of Poor Law administration," officially reports a Medical Officer of Health, "I may mention a case that occurred in this district. Two cases of scarlet fever occurred in a family of six children. The mother was a widow with no income. There was sufficient room in the house for the proper isolation of the cases, and they could have been nursed at home, if a little help could have been obtained. Every possible effort was made to get assistance from the Poor Law authorities, but without success, and the cases were removed to the Isolation Hospital. Nine days later, two more children had to be removed, and ten days later still another two. The total cost to the district for the treatment of these cases was £55, whereas a total allowance of £5, or even of food only, would certainly have prevented this unnecessary expense. This is a single instance. The sacrifice of life, health, and money resulting from the untreated cases of disease is beyond estimation."|| "Among the poor," says the same authority, "there is a vast amount of infectious illness continually present. Many of such cases remain unreported, untreated, practically unknown. They serve, however, as a continual and ever-present focus for the spread of such diseases among the general public. There is thus constituted a most grave public danger. The only possible way to remove such danger is to devise improved and more easily available means for treating these cases. Treatment and prevention are inseparably associated in practically all disease. The one is essentially the complement of the other. By adequately providing for the early recognition and the proper treatment of all disease, an almost incredible improvement in the public health would rapidly result. The mere existence of disease, altogether apart from any consideration as to whether it is accompanied by destitution or not, should be sufficient to ensure proper medical treatment, if the public are to be relieved of the ever-present dread of the sudden and rapid spread of infection."¶

Nor is the danger confined to the notifiable zymotic diseases. It was given in evidence on high authority that the very great mortality from phthisis—a disease to which no less than one-seventh of the total cost of the Poor Law is said to be directly or indirectly due**—is to be attributed in no small degree to the fact that sufferers are not encouraged to present themselves for treatment in the early stages of the disease,†† when it is often curable, but when they are still capable of going to work, and are not regarded as destitute and thus not technically eligible for a Medical Order. Under the present arrangements of the Poor Law medical service, such cases are left outside its ken, until in due course the ravages of the disease have reached a stage at which the sufferer, having in the meantime perhaps infected other members of the family, becomes simultaneously eligible for Poor

* Even in the country "the health of the children suffers somewhat," admitted a rural District Medical Officer, owing to the restriction of relief. (*Ibid.*, Appendix No. LXXXVI. (Par. 7) to Vol. VII.)

† *Ibid.*, Appendix No. XLV. (Par. 2) to Vol. IX.

** Evidence before the Commission, Q. 38213.

†† "At the Out-relief Committees," reports a Local Government Board Inspector, "one hears of men and women who have struggled with the disease (phthisis) as long as possible before applying for relief, often sleeping in small rooms with children. . . . Out-relief is generally given till finally the sufferer enters the Workhouse infirmary to die, in the meantime, possibly, having infected other members of his family" (*Ibid.*, Appendix No. XI. (A), Par. 133, to Vol. I.). "Those people," said one District Medical Officer, "are very often too far gone for one to do any good to them" (*Ibid.*, Q. 51899). They do not "come under the Poor Law Medical Officers," deposed the Medical Inspector of the Local Government Board, "until . . . the patient is probably . . . incurable as far as being returned to work fit as an able-bodied man" (*Ibid.*, Qs. 10216-8). "We have had very rarely what are called curable cases, or cases in the first stages of phthisis pulmonalis, under treatment by Poor Law Medical Officers or in Poor Law medical institutions" (*Ibid.*, Q. 10482). "The whole of my experience up to now is that it is very unusual indeed for what is called a curable case to come to the Poor Law" (*Ibid.*, Q. 10687).

Law medical relief and incapable of deriving from it any real advantage. In fact, the Poor Law doctor seldom knows phthisis in any but its incurable stage, shortly before the sufferer enters the Workhouse to die. In some places, we were informed, one-third, and even one-half, of the deaths from phthisis take place in the Poor Law institutions.* Much the same may be said of cancer, which fills so many Workhouse beds, but which the Poor Law doctor hardly ever sees at a stage at which he can operate with any advantage. "Every year," we were authoritatively informed, "many persons die of cancer whose lives could have been saved had they sought medical advice in time. Especially is this true of the poor."† The Poor Law medical officers, says our Medical Investigator, see any amount of "inoperable cancers, and incurable Bright's disease, and overlooked rheumatic fever in children, causing heart disease later on."‡ Less dramatic, but even more frequent, are the cases of chronic disability brought about by rheumatism and gout, heart disease in its various forms, varicose veins and ulcerated legs, and other affections which account for so many of the premature invalids among the workhouse inmates, and which could have been cured, and many years added to the working life of the sufferers, if they had received proper medical treatment at an early stage, before neglect of the incipient disease had led to actual cessation of wage-earning and consequent destitution.§ "I have carefully examined over 4,000 cases of consumption," deposed the Medical Superintendent of a Poor Law Infirmary, "and of these people approximately 60 per cent. would never have come within the range of the Poor Law had they not had that disease."|| In short, as one witness significantly put it, "Guardians who deter the poor from coming for medical relief are themselves causing pauperism, for, as Mr. Joseph Chamberlain has said, 'preventable disease is the great agent for filling our Workhouses.'"¶

(D) THE HOSPITAL BRANCH OF THE POOR LAW.

As we have seen, the authors of the 1834 Report, and the Poor Law Commissioners of 1834-47, never contemplated the establishment, under the Poor Law, of institutions for the hospital treatment of the sick poor.** What they visualised was a continuance of the practice of granting to the sick Outdoor Relief and the services of the District Medical Officer. In the course of a generation, however, the Workhouses were found to be very largely peopled by the infirm, the disabled, the chronically sick, and even the sufferers from acute diseases. By 1869 it was recognised that what was then officially termed "the hospital branch of Poor Law administration"†† had reached large dimensions. The policy of the Central Authority thenceforth definitely took the form, so far as the sick were concerned, of pressing for the provision of the most efficient institutional treatment that could be obtained. "There is one thing," said the President of the Poor Law Board in 1865, "that we must peremptorily insist on, namely, the treatment of the sick in the Workhouses being conducted on an entirely different system, because the evils complained of have mainly arisen from the Workhouse management—which must, to a great extent,

*"More than half the deaths from this disease in Finsbury occur in institutions, and, with few exceptions, Poor Law institutions" (evidence of Dr. Newman, Medical Officer of Health, Finsbury, *Ibid.*, Q. 94287, Par. 7).

† Evidence of Dr. G. F. McCleary, Medical Officer of Health, Hampstead, *Ibid.*, Appendix No. XLV. (Par. 9) to Vol. IX.

‡ Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. McVail, p. 108.

§ A grave problem which, in our judgment, cannot be any longer ignored, is that presented by the widespread suffering of the poor from venereal diseases. "These," testified a medical expert, "constitute one of the greatest evils of the age. I am not sure that they do not give rise directly and indirectly to more suffering and more injury to us as a nation than even tuberculosis." (Evidence before the Commission, Q. 52840, Par. 15.) Here the lack of medical attendance has very grave results. The Boards of Guardians habitually refuse a Medical Order in such a case, if they become aware of it. Thus one Union puts in its bye-laws: "Persons affected with venereal disease to be granted indoor relief only." (Rules of Docking Board of Guardians.) We are told that: "Provident associations, friendly and trade societies rigorously exclude persons suffering from these (venereal) diseases from their medical benefits. Most general hospitals refuse to admit them." (Evidence before the Commission, Q. 52840, Par. 16.) A very large number of cases thus remain untreated in the early stages of the diseases, with terrible effects in the contamination of innocent persons, and of a new generation. Presently, when the ravages of disease have gone so far as to make life outside an institution quite impossible, the sufferers enter the Workhouse—too late to be really cured—to be, at great cost, relieved, patched up, and discharged; returning often again and again until eventually they die in the Workhouse.

|| *Ibid.*, Q. 38219.

¶ *Ibid.*, Q. 25373, Par. 63. We do not need again to call attention to the prohibition by the Scottish law of any medical relief to the sick dependents of an able-bodied man.

** Report on the Policy of the Central Authority from 1834 to 1907, p. 5. We have been informed that, until 1865, there was no medical inspector or adviser regularly attached to the Poor Law Commission or the Poor Law Board. (Evidence before the Commission, Q. 22913.)

†† Twenty-Second Annual Report of Poor Law Board, 1869-70, p. x.

be of a deterrent character—having been applied to the sick, *who are not proper objects for such a system.*” * If you have a sick man upon your hands,” said one of the Local Government Board Inspectors in 1888, “the best thing you can do with him is to give him the best possible attention, to cure him and restore him to his work again.” † Such an improvement in the institutional treatment of the sick seemed, to the Inspectorate of 1869–1886, a useful auxiliary, if not the logical complement, of their crusade against all Outdoor Relief. ‡ Especially since the establishment of the Local Government Board has the pressure of the Central Authority on the Boards of Guardians to get them to provide better structural accommodation, new infirmaries, elaborate hospital equipment, trained nurses, and additional medical staff § been persistent and unrelenting.

Unfortunately, the great majority of the Boards of Guardians have failed to carry out this policy. We have had it brought to our notice by the Medical Inspectors of the Local Government Board, by accredited representatives of the medical profession, by philanthropists acquainted with the Workhouses in the rural Unions and the smaller towns, as well as by Poor Law Guardians and their officers, that two-thirds of the sick now receiving institutional treatment at the hands of the Destitution Authority—amounting as we have reason to believe, in England and Wales alone, to something like 60,000 persons—are still in the General Mixed Workhouse that we have described. We were informed that they were, in many cases, receiving treatment inadequate to their needs and inappropriate to their diseases; and that this was resulting, not only in unnecessary personal suffering, but also in a prolongation of the period during which they were maintained at the public expense, and, in too many cases, in their premature permanent disability. On the other hand, so deterrent are the conditions in these General Mixed Workhouses that many poor persons suffering from incipient disease—sometimes of a contagious character—and requiring institutional treatment, refuse to enter their doors, until they are driven in by actual destitution in a moribund state. So grave an indictment led us, in view of the importance of the subject to Public Health, to obtain much medical evidence, to visit many sick wards, and to appoint our own Medical Investigator. We regret to have to report, after considering all the evidence, that the continued retention, in the General Mixed Workhouses—never even contemplated by the Report of 1834—of a large number of sick persons requiring curative treatment, amounts at the present time to a grave public scandal.

We may conveniently consider first the small rural Workhouse, of which there are about 300 with fewer than fifty sick beds in each. Such a Workhouse—containing habitually a score of men and women with chronic rheumatism and asthma, and suffering more or less from senile imbecility and paralysis; half-a-dozen children from one to thirteen subject, from time to time, to the usual diseases of childhood; the “village idiot,” and various harmless lunatics and feeble-minded of both sexes and all ages; every few months a lying-in case; a few phthisical patients; occasionally individuals with all sorts of ailments; and now and then a tramp with smallpox upon him—is, over nearly half the superficial area of England and Wales—the only institution in the nature of a hospital available for the country side. || These 300 small rural Workhouses accordingly deal, in the aggregate—apart altogether from the “chronics,” and the persons suffering merely from senility—with thousands of sick persons annually, who require curative treatment.

In most of these rural Workhouses, the buildings—which, as we have seen, were never intended for the reception of sick patients—are, to quote the words of a Local Govern-

* Mr. Gathorne Hardy (*Hansard*, Vol. CLXXXV., p. 163.)

† Q. 381, in House of Lords Committee on Poor Relief, 1888.

‡ “It was admitted,” says one witness, “by the sterner opponents of Out-relief, that the success of their restrictive regulations rendered necessary proper provision for the remedial treatment of the sick poor elsewhere than in their own homes, where the conditions were ‘destitution’ of the means necessary for recovery.” (Evidence before the Commission, Q. 43626, Par. 9.)

§ Report of the Departmental Committee on Nursing; “Nursing in Workhouses and the Report of the Departmental Committee,” by Dr. Arthur Downes, in Report of Poor Law Conferences, 1903–4, pp. 91–106.

|| Over half the superficial area of England and Wales—largely the same half—there is, it seems, also no isolation hospital accommodation provided by the Public Health Authority. Medical practitioners and benevolent neighbours often attempt to send acute (non-infectious) cases, and those requiring more than the simplest surgery, to the voluntary hospital in the county town, but there is, even for these cases, frequently no such hospital available within fifty miles. In the Atcham Union, for instance, celebrated for the relentless persistence with which Outdoor Relief has been refused, “pauper infectious cases of all sorts have to be treated on the Workhouse premises, in the midst of a community of 400 or 500, many of whom are children” (Evidence before the Commission, Q. 70186, Par. 3). Scarlet fever epidemics and isolated small-pox cases have been so dealt with. (*Ibid.*, Qs. 70197–8.)

ment Board Inspector, "old and ill-adapted to meet modern requirements . . . for the treatment of the sick."* Some of them, reports our Medical Investigator, were not even erected "for Workhouses, but for factories or other purposes; and in one or two cases the institution consists of a curious conglomeration of old houses of various sorts, set up anywhere within the boundary walls, and apparently altered or added to in irregular fashion as occasion arose In at least one case the buildings are much too crowded on the site The floors . . . were of wood, often old wood, with wide seams for dirt to lodge in." More than one-fourth of the wards that he had measured "failed to comply with requirements," as to the minimum cubic space per inmate. In more than one-third of those visited, the hot water supply—"an absolute essential for the proper management of a Workhouse or Workhouse infirmary"—was "more or less defective."† The bathing and sanitary accommodation for the sick is, as we have ourselves noted, often sadly old-fashioned. Perhaps the most important consequence of the structural defects of the old Workhouse building—with its small and often ill-ventilated rooms, its old wooden floors and absorbent walls, and its primitive sanitation—is that they often involve a disposition of the patients that is, to say the least of it, neither comfortable nor curative. "At present," reports an Inspector, "in the sick wards of a small country Workhouse, it sometimes happens that children and adults, persons suffering from phthisis, offensive cases, and imbeciles are not separated from each other, and it seems to me that classification in this respect is what is most needed."‡ One of our own committees found, on visiting the sick wards of a provincial Workhouse, "that one mentally deficient patient keeps crying out, day and night, at frequent intervals, disturbing the other patients. He seemed to be in great discomfort, if not pain; but is not removed on the ground of economy."§

But however desirable may be the structural advantages of a modern hospital building, with its elaborate classification by wards, we are bound to say that we regard the somewhat primitive buildings of the old rural Workhouses as the least of their drawbacks. We have come across, in Workhouse sick wards, no such scandalous instances of overcrowding, dirt, and insanitation as were formerly revealed in Workhouse inquiries; and, as we are glad to add, no such neglect and inhumanity. The worst defects of the rural Workhouse sick wards of the present day, apart from the general conditions of admission, centre round the medical attendance and nursing. None of these 300 rural Workhouses has, or indeed needs, a resident Medical Officer; but the conditions under which the medical attendance is afforded are, in our judgment, such as to make curative treatment almost impossible. The Guardians appoint one of the local practitioners to be the Medical Officer of the Workhouse, and expect him, at the most meagre stipend, to do all that is required for all the patients. These stipends—we have it on the authority of the Medical Inspector of the Local Government Board—are, in the majority of cases, "miserably inadequate."|| In one Workhouse that we happened to visit, containing as many as sixty-seven sick patients, we found that the Medical Officer, who has held the post for thirty years, received only £70 a year, out of which he stated that he sometimes spent as much as £25 in medicines.¶ We desire to bring no accusation against a hard-worked and ill-remunerated class of doctors. "It would be easy," we are told, "to name Medical Officers whose work is beyond praise Unfortunately, there is another side to the picture."** We are unable to escape from the conclusion that, in not a few Unions, the Workhouse Medical Officer finds himself able to attend only irregularly and infrequently, and to give only

§ Reports of Visits by Commissioners, No. 65 C., p. 134. Our adverse judgment on the General Mixed Workhouse in the rural Unions, as, for half England, the "hospital branch of the Poor Law," does but follow the verdict of the medical profession. The *British Medical Journal* in 1895, after an elaborate investigation of the sick wards of the rural Workhouses, summed up as follows in terms which, we fear, are still in the main, true: "The buildings match the service; we read of no bathrooms; no supply of hot and cold water, but such as is carried from a distance; sanitary arrangements defective or absent; no proper provision for the comfort or privacy of lying-in women; no surgical supplies; no screens for decency; overcrowding in wards where the helpless sick live, sleep, and eat all the year round; miserable dark rooms for the use of the coarsely termed 'dirty cases'; no classification; no means of isolation; dreary airing courts; indeed, an absence of all intelligent appreciation of the needs of the sick." (*British Medical Journal*, June 1st, 1895, p. 1231.)

a perfunctory service. We learn that "instances may be quoted where (making all allowances for the possible inaccuracies in the porter's book) a few minutes in the house two or three times a week constitutes the ordinary attendance of the Workhouse Medical Officer."* Nor can they afford to spend much time when they do attend. "Entries recently taken from porters' books in several Unions," declares the Inspector, "show that some Medical Officers frequently only stay for a few minutes in the house, and very rarely long enough to make an examination of the bodily condition of the patients and of their surroundings. The Medical Officer should certainly, and with sufficient frequency to ensure the object, thoroughly examine each of the patients, and particularly the bed-ridden ones, as to bodily condition and cleanliness, also the beds, bedding, appliances, and all other details connected with the proper treatment and nursing of the cases."† Our impression of the inadequacy of the medical treatment afforded to the sick poor in some of the small rural Workhouses does not rest on such general evidence only. "It is most desirable," said to us one of the General Inspectors of the Local Government Board, "that the Medical Officers should be much better remunerated than they are. They should be so remunerated that they could fairly be called upon to do the work as it ought to be done. There is a difficulty now if you say to a Medical Officer, 'I find that you have been very little in the Workhouse,' and he says 'I do all that I consider necessary; that is my business, not yours' I have come across striking instances in which I have been able to show a complaint. I remember going into a Workhouse when the Medical Officer was not there. I said to the nurse 'Have you any bed sores?' She said: 'There is not a bed sore in the place.' I went into some of the wards, and I saw one man looking very miserable. I said to the nurse 'Is that man all right?' She said 'Yes.' I said 'Let me see his back.'" She turned him over. He had a bad bed sore. I looked at several other cases, and I found many bed sores. I sent for the doctor 'I am horrified,' he said If (he) had been properly paid to do his work thoroughly, he would probably have examined those patients. But he took the nurse's word for it because he was receiving an inadequate salary, and did as much work as he thought the money was worth."‡ We ourselves found on our visits some confirmation of this testimony. In one Workhouse where the sick ward seemed unsatisfactory, our committee saw the Workhouse Medical Officer, and on questioning him, he "quite frankly admitted that he was not able to give to the patients as much attention as they ought to have. This he laid at the door of the Guardians, who, he said, would neither remunerate him sufficiently, nor provide him with an assistant."§ With the meagre remuneration of the Workhouse Medical Officer goes the system—in the rural Workhouses, still, we are informed almost universal||—of requiring him to provide, at his own expense, all the medicines that he prescribes. This system leads to serious results. It encourages, we are told, the Workhouse Medical Officer to prescribe alcohol (which the Guardians pay for) instead of the other remedies of the pharmacopœia.¶ The Workhouse Medical Officer practically finds himself limited to the simplest remedies. "Human nature," says one of the Inspectors, "will not allow him to use anything which is very expensive. He cannot try the up-to-date drugs which may save a person's life. . . . It is a very important point, and I believe the present system may cost the life of an inmate of a Workhouse."** What is far worse is the fact that "there is nothing to prevent an unscrupulous Medical Officer," as a Workhouse doctor himself pointed out to us, "from using inferior drugs and stinting his patients with medicine."†† That such things do happen is unfortunately borne out by authoritative evidence. "About three weeks ago," testified the Medical Inspector of the Local Government Board, "I was inspecting a Workhouse, and I noticed a case in bed: I asked the Medical Officer what the case was, and he told me that it was a case suffering from syphilitic disease, and apparently, from what he said, it was curable. I asked him if the case was having drug treatment. He said, 'No, I cannot afford it; my salary is not sufficiently adequate for me to find the expensive drugs necessary.' I asked

§ Reports of Visits by Commissioners, No. 20, p. 45.

|| *Ibid.*, Qs. 4943, 10779, 11781. This system is now deplored by the Local Government Board, and the Boards of Guardians are advised—often in vain—on the making of a new appointment to agree to provide the drugs. But the more common practice has not yet been forbidden by the detailed regulations in which the Local Government Board minutely prescribes the conditions of the appointment (*Ibid.*, Qs. 4943, 10194–10203, 10453–8, 11782–3, etc.).

him then whether he had reported this matter to his Guardians, and he said 'No,' and I advised him to do so . . . I think," added Dr. Fuller, "*that is a very good example of cases that frequently come under my notice.*"*

The inadequacy of the medical attendance in the small rural Workhouses is rendered more disastrous by defective nursing. In spite of all efforts of the Local Government Board, which have, in the past two decades, effected great improvements, there are still many rural Workhouses without even one trained nurse; † there are still scores in which there is absolutely no nurse, trained or untrained, available for night duty; ‡ there are even some, so far as we can ascertain, in which there is no sort of salaried nurse at all. Everywhere the Master and Matron have still to employ pauper assistants to help in attending to the sick. In spite of all that has been done, "the Reports of the Local Government Board inspectors . . . show very clearly that this deplorable system of pauper assistants is far from decreasing in as rapid a manner as may have been hoped after the issue of the Nursing Order of 1897."§ "Looking at the facts with regard to the individual rural Unions which I visited," reports our Medical Investigator, "I have concluded that the nursing staff is insufficient in the majority of them. . . . In one Workhouse the sick wards contain twenty-four beds, of which sixteen were occupied, nine of them by bed-ridden cases, and one of these with a bed sore. For all this work there was only a single nurse, both for night and day service, and her duty included attendance on confinements in the lying-in ward, though these fortunately were infrequent. . . . In only two or three of the rural Workhouses have I been able to form the opinion that the staff is sufficient."||

It does not need statistics of the mortality and of the recoveries in Workhouses, which unfortunately are lacking, to persuade us that, under such conditions as we have described, curative treatment of the thousands of sick patients in the 300 small rural Workhouses is, to say the least, difficult. The phthisis cases, of which there are many hundreds, seem to be given up as hopeless, there being usually no sort of special provision for them.¶ The acute cases needing prompt treatment, constant nursing or expensive remedies, appear sometimes to fare almost as badly. "When I [came to this Workhouse]," said a nurse, "I was told 'the pneumonia cases generally die with us.'""** A dim appreciation of the medical conditions in these small rural Workhouses, combined with the stigma of pauperism, explains why the sick poor insist on remaining in their own homes, however insanitary and overcrowded these may be. The General Mixed Workhouse is, in fact, as long as possible, shunned even by those who would benefit by it, to the grave detriment of the public health. Where such conditions exist—and we fear that they are characteristic of the majority of the rural Unions—the Guardians, as it seems to us, would not be warranted in adopting a policy, so far as the sick are concerned, of "offering the house," and refusing Outdoor Relief. Any suggestion for entrusting to the Destitution Authority powers of compulsory removal to such a General Mixed Workhouse as we have described—even of the worst cases of neglected sickness and dangerous insanitation—appears to us quite out of the question.

We do not wish to suggest that the structural conditions and medical and nursing attendance characteristic of the 300 small rural Workhouses, with their few thousands of

[*] * *Ibid.*, Qs. 10610–1.

† The Nursing Order of 1897 requires that, where there are three salaried nurses, one of them must possess training, and hold the position of Superintendent Nurse. But there is nothing in the Order or elsewhere, making it obligatory on the Board of Guardians to employ three salaried nurses; or, indeed, any salaried nurses at all. The result is, that there is, as the Senior Medical Inspector of the Local Government Board informed us, "some little tendency . . . to evade the Order by calling the nurses anything but nurses, or in some cases, perhaps, by not appointing an extra nurse which would just bring them within the Order" (*Ibid.*, Q. 23144). In some Workhouses the Order is evaded by appointing what are called "ward maids" to do the work of nurses (Memorandum from the Workhouse Nursing Association; Evidence before the Commission, Appendix No. LVII. (Par. 2) to Vol. IX.)

‡ In one Inspector's district, he reports: "In fourteen Workhouses it has not been found possible to provide a night nurse." (*Ibid.*, Appendix No. LVII. (A) to Vol. IX.)

§ *Ibid.*, Appendix No. LVII. (Par. 2) to Vol. IX. One Inspector actually reports, in his district, an increase in the number of pauper attendants in the sick wards. On January 1st, 1905, there were 159, and on January 1st, 1908, there were 175.

|| Report . . . on the Methods and Results of the Present System of Indoor and Outdoor Medical Relief, by Dr. McVail, 1907, pp. 28, 29.

¶ See the Return by the Medical Inspector of the Local Government Board, Evidence before the Commission, Appendix No. XXI. (D), to Vol. I. "Generally speaking," says an Inspector, "there is no provision for the treatment of these (phthisis) cases in the Workhouse." (*Ibid.*, Appendix No. XI. (A), Par. 133 to Vol. I.)

** Memorandum from the Workhouse Nursing Association, *Ibid.*, Appendix No. LVII. (Par. 2), to Vol. IX.

sick, are equally characteristic of the 300 General Mixed Workhouses of the urban or more populous Unions, in which, as we regret to infer, there are ten times as many sick cases. In London, and a score of other large towns, there have been developed separate Poor Law Infirmaries, which we shall presently describe. But short of this development there is, among the General Mixed Workhouses of the 300 urban Unions, every possible variety in the character and efficiency of their provision for the sick. Some of these General Mixed Workhouses are as old, as ill-adapted for use in the "hospital branch of the Poor Law," as badly equipped, and furnished with as inadequate a medical and nursing staff* as the worst of the small rural Workhouses that we have seen. But under the constant pressure of the Local Government Board there has gone on, for forty years, a steady process of improvement. Here and there we find new sick wards added to the old Workhouse building; the Guardians have begun to provide the drugs and medicines; the pauper attendants have been gradually replaced by salaried "ward-maids," and these by nurses; the nurses have got trained and a superintendent nurse has been installed; occasionally on the occurrence of a vacancy we find that a young resident doctor has been appointed; the Superintendent Nurse and the Resident Medical Officer gradually win greater independence from the Master and Matron; until finally, when the Workhouse has long been overfull, the Guardians have perhaps yielded to the repeated suggestions of the Inspector, the criticisms of the Medical Inspector and the injunctions of the Local Government Board itself, and agreed to erect an entirely new and independent Poor Law Infirmary.† We have not found it possible to estimate how many Unions, and what proportion of their aggregate sick population of thirty or forty thousand, are, at this moment, at each of these various stages of development. But all these sick wards of General Mixed Workhouses, however far they may have developed along the lines of improvement, seem to us—from the standpoint of curative treatment of the sick—to suffer from the blight of being, and being felt to be, pauper establishments. This blight shows itself in the inability of the Boards of Guardians wholly to exclude—even from Workhouse infirmaries having a dozen paid nurses—the pauper "wardsman" and the pauper attendant;‡ it is seen in the incapacity of the Guardians to realise the necessity, in what is becoming virtually a hospital ward, of a medical and nursing staff out of all proportion to what had formerly been customary in the Workhouse day room or night

* In one Inspector's district alone there was, in 1906, out of forty Unions, one Workhouse having 352 sick patients, and there were four having between 200 and 300 sick patients, without a resident Medical Officer; there were two Workhouses having over fifty sick patients without a Superintendent Nurse; there were a dozen in which there were more than fifty patients to each nurse on night duty, and a dozen also in which each nurse on day duty had more than half that number to attend to. (*Ibid.*, Appendix No. XXII. (C) to Vol. I.)

† Unfortunately some large towns have not yet taken this step. "The most conspicuous exception," observes one Inspector, "is at Plymouth, where the Guardians, some years ago, decided to build a new infirmary, but subsequently rescinded their resolution, and have since expended a good deal on old buildings without a satisfactory result. The wards are old-fashioned, ill-constructed and ill-ventilated; they are so scattered as to make proper administration and supervision very difficult; they have been repeatedly reported as quite inadequate for the cases requiring admission; a good many of the nurses have to live in the town for want of room, and the whole workhouse has been overcrowded. The Medical Officer has frequently represented to the Guardians the serious evils of the present arrangements, but so far nothing effectual has been done." (Thirty-Fourth Annual Report of the Local Government Board, 1904-5, Appendix B., p. 219, Mr. Preston Thomas's Report). And at Bristol, where hundreds of sick of all kinds are crowded together in most unsuitable buildings, old and even unsanitary, there is a deadlock between the Guardians, who want a cheap scheme, and the Local Government Board, which refuses to sanction such a scheme but cannot, apparently, compel the adoption of any other, (Evidence before the Commission, Qs. 5362-4.)

‡ To take only one Inspector's district out of twelve, such pauper attendants are still to be found in the sick wards of no fewer than sixteen Workhouse infirmaries, having over fifty sick patients, including some with several hundred sick patients, and definitely organised staffs of paid nurses. (*Ibid.*, Appendix No. XXII. (C) to Vol. I.) We regret to infer that between 2,000 and 3,000 paupers are still thus employed in England and Wales, to eke out the deficiencies in the nursing staff. "So long, however, as the employment of paupers in sick wards as 'attendants' is tolerated," says an experienced Inspector, "it is almost impossible to be sure that the somewhat undefined line which separates the duties of an 'attendant' from those of a nurse is never overstepped. The placing of the larger Workhouse infirmaries under separate management, which is viewed with increasing favour, will, however, do more than anything else to free the sick wards from all paupers other than the patients themselves." (Twenty-Seventh Annual Report of the Local Government Board, 1897-8, Appendix B., p. 125, Mr. Jenner Fust's Report.) These so-called "wardsmen" gamble with the patients at dominoes (Evidence before the Commission, Qs. 36465-70), and are said even to divert eggs and other things from the sick, to sell them to others. (*Ibid.*, Q. 36472.)

dormitory;* it shows itself in the friction which so frequently arises between the Resident Medical Officer or the trained Superintendent Nurse, and the Workhouse Master and Matron, who remain in command of the whole institution;† and it is manifested, above all, in the repugnance of the sick poor to enter even an institution for curative treatment when admission brings them plainly into contact with the Workhouse itself.‡

We have now to pass to the separate Poor Law Infirmaries which form, in the Metropolis and some other large towns, the most extreme development of, to use the official phrase, "the hospital branch of the Poor Law." These institutions, erected on separate sites apart from the workhouse, independent of the Master and Matron, administered by their own Medical Superintendents, having their own resident staffs of doctors and nurses, and wholly free from pauper attendants, are increasing annually in number, in size and in cost per bed, and now probably accommodate, though in only a few score of the most populous Unions, at least a third of the aggregate total of sick persons for whom the Boards of Guardians provide institutional treatment.§ Here undoubtedly, to quote the congratulatory words of a Northern Board of Guardians, the sick poor "receive care and attention such as the average ratepayer would find it difficult to provide for himself and his family."|| Their "most significant feature," we are informed, "is that they have become largely surgical,"¶ some of them having daily operations under general anæsthesia.** In some places, the Poor Law Infirmaries receive a large proportion of acute cases of many different kinds; in some, there are frequent cases of measles, whooping cough, chicken-pox and other infectious diseases; in one or two the number of tuberculous cases is very large; in others there are many cases of accident; the maternity ward is sometimes non-existent, sometimes a speciality; and in one we have it noted that it has a specially large amount of "surgical operative work, . . . five-eighths of its cases belonging to the hospital as distinguished from the infirmary class."†† We do not feel competent to determine how far the claim often made on behalf of these Poor Law Infirmaries ‡‡—that they are now fully equal to the endowed or voluntary hospitals—can be substantiated. But we notice certain general characteristics of these most modern of the institutions of the Destitution Authority. The structure tends to be elaborate, ornate and expensive. The lighting and heating, the ventilation and sanitation, the operating room and the dispensary, are all of the most costly, if not always of the most useful character. On the other hand, it is clear that, in the proportion of doctors and nurses to patients, and in the variety and specialisation of the staff, even the best Poor Law Infirmary falls markedly below the standard of the London hospitals.§§ It has been suggested to us that this is at once caused and justified by the fact that the Poor Law Infirmaries, though receiving yearly an increasing variety of diseases and accidents, still

* "The majority of Guardians," observes the Medical Inspector of the Local Government Board, "naturally do not understand or appreciate the necessary standards of medical and nursing administration which should obtain." (*Ibid.*, Appendix No. XXI. (A.), Par. 14 (i), to Vol. I.) Even in some of the large urban Workhouses, our Medical Investigator, after taking all the circumstances into account, came to the conclusion "that the medical staff is hardly ever sufficient. The amount of medical work is too great to permit of its thorough performance." He reports, in particular instances, "the nursing staff . . . insufficient"; in one case "seriously inadequate." (Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, pp. 45, 49.)

† "The dual control now exercised by the Workhouse Master, Matron, Medical Officer, and Superintendent Nurse," testifies the Clerk of a large Lancashire Union, "gives rise to friction, and is not to the advantage of the sick poor. Difficulties arising from this dual control have been experienced frequently in this Union within the last few years." (Evidence before the Commission, Q. 36693, Par. 1.)

‡ Where the infirmary is in the Workhouse building there is, we were repeatedly informed, "quite a great aversion" to enter it. (*Ibid.*, Q. 51479.) The spirit in which it is regarded by the Destitution Authority, may be inferred from the fact that at Birmingham in 1885, the Board of Guardians actually made a rule, to which the Local Government Board extended its express approval (Local Government Board to Birmingham Board of Guardians, December 9th, 1885), that patients desiring admission to the infirmary should be made to enter it through the main Workhouse gate, upon orders of admission to the Workhouse itself, in order to impress upon them that they were making themselves paupers. (Q. 381, in Report of House of Lords Committee on Poor Law Relief, 1888.)

§ As already indicated, there is a tendency for the sick wards of the large progressive Union to pass, by insensible gradations, into the Poor Law infirmary. In several cases, where the last stages of the evolution are not yet quite completed in form, the institution has become substantially separately administered.

habitually contain a large proportion of chronic cases, requiring neither specialised medical skill, nor continuous nursing. To some extent, no doubt, this contention is valid,* but we think the weight of medical evidence is in favour of the view that, so far at any rate as the surgical and acute cases are concerned, there is, even in the best of the Poor Law Infirmaries, still inadequacy of medical attendance and nursing. "My general conclusion is," says our Medical Investigator, "that even where Guardians provide excellent, or perhaps extravagant, modern buildings, and equip these most elaborately with the most modern medical and surgical appliances, and furniture and furnishings, yet when they come to the appointing of a staff to do the work of these fine institutions, liberality of policy fails them, and parsimony takes its place. They may have most advanced views as to the manner in which the poor should be housed and fed, but when they come to medical work they are likely to adopt unknowingly a policy of sweating both as to the amount of work required and as to the payment made for it."† We are inclined to attribute the backwardness in medical attendance and nursing, not only to the inadequate salaries, but even more to the lack of other *stimuli*. The medical staff of a Poor Law Infirmary has not the advantage of being under the supervision and inspection of the medical profession; the Boards of Guardians publish no medical reports of their work; they are tested by no statistics of recoveries or case mortality, and encouraged by no inquiries from the Guardians or the Local Government Board as to their remedial treatment or their surgical successes. And whilst their doors are, by Local Government Board order, shut to medical students,‡ and their work is divorced from the general current of clinical research, they suffer also from being equally divorced from the laboratory experiments and statistical investigations of the officers of the Public Health Authorities.

Perhaps the most striking contrast between even the best of the Poor Law Infirmaries and a good London hospital is the lack of specialism in the institution of the Destitution Authority. The Medical Superintendent has to admit every case sent to him by the Relieving Officers, and these non-medical functionaries naturally go more by urgency and destitution than by the kind of disease. In some Unions, indeed, the Guardians assume that all cases requiring medical attendance and nursing should be sent to the Infirmary, which has, accordingly, simultaneously to treat a congeries of hundreds of patients of the most diverse kinds—the acutely sick and mere "chronics"; the expectant mother and the senile feeble-minded; children with measles or whooping-cough, and the sufferers in advanced stages of venereal disease;§ the phthisical, the cancerous, and the rheumatic; the man knocked down by a motor car and the charwoman with bronchitis. "Children suffering from . . . infectious diseases have to be mixed up with adult patients."||

* It is, however, a mistake to suppose that the cases so common in a Workhouse infirmary do not require a staff of nurses, almost as large as do the acute or surgical cases. "A general principle in nursing in Workhouses," says the Medical Inspector of the Local Government Board, is "that helpless, or wet and dirty cases, or cases bordering upon or actually suffering from senile dementia, require much more skilled care and attention from suitably trained nurses, and should take up, necessarily, much more of their time night and day than average cases of illness, such as pneumonia, rheumatic fever, etc., after the very acute stage is passed." (Memorandum from the Workhouse Nursing Association, Evidence before the Commission, Appendix No. LVII. (A) to Vol. IX.)

† Report . . . on the Methods and Results of the Present System of Administering Indoor and Outdoor Medical Relief, by Dr. J. McVail, 1907, p. 46. "These Poor Law infirmaries," said one of our witnesses, "should have special surgeons and physicians appointed to them . . . a visiting medical staff. . . . They should not be left altogether in the hands of the resident superintendents." (Evidence before the Commission, Qs. 36971, 36972.)

‡ The attendance of medical students at the "sick" asylums to be provided under the Metropolitan Poor Act, 1867, was expressly authorised by that Statute (Section 29); but this provision was expressly repealed in 1869 (32 and 33 Vict. c. 63, sec. 20); and the Local Government Board declined in 1884 to sanction the admission of medical students to the Kensington Poor Law Infirmary (*Selections from the Correspondence of the Local Government Board*, Vol. III., 1888, p. 224), apparently on grounds of Poor Law policy, as the then Medical Officer of the Board was strongly in favour of their admission as being advantageous to the patients, and not displeasing to them (Qs. 5474–8, 5501–8, in House of Lords Committee on Poor Law, 1888). As to the desirability of such admission, see Evidence before the Commission, Qs. 39237–41. It was suggested by Mr. C. S. Loch that the utilisation of the Poor Law infirmaries for medical instruction might have the effect of causing patients to be detained in the infirmary as "interesting" cases, longer than need otherwise take place. (Q. 4204 of House of Lords Committee on Poor Law, 1888.)

§ "All cases of venereal disease are now practically debarred from the general hospitals . . . it has to be taken up by the Poor Law as a last resort." (Evidence before the Commission, Qs. 37927, Par. 10; 37928–29.)

|| *Ibid.*, Qs. 23318, 23529. This drawback was pointed out long ago. "There is no ward set apart for sick children," noted the Investigator into Workhouses of the *British Medical Journal* in 1895, "in health, they are carefully kept from mixing with the adults, but when sick are put among the older people, and in a short time all the result of careful training may be undone." (*British Medical Journal*, January 5th, 1895, p. 26.)

There are not even any mutual arrangements among the thirty Poor Law Infirmaries of the Metropolis by which each of them, in addition to its general wards, could provide specialised accommodation for one particular class of disease. In every Poor Law Infirmary—and some of them exceed in size the largest voluntary hospitals in the Kingdom—all the cases have to lie in the common wards, and be diagnosed, physicked and operated on by the overworked Medical Superintendent and his two or three assistant medical officers. The absence, even in the Metropolis and the largest towns, of visiting physicians and surgeons is here a patent drawback of these extraordinarily mixed institutions. We do not, however, gather that there has been any official encouragement to specialisation, but rather the contrary. The development of the “hospital branch of the Poor Law” has, in fact, brought us to the dilemma that it may become apparently too efficient. Boards of Guardians have been officially advised to provide for their lying-in cases in the General Mixed Workhouse, rather than develop a maternity ward at the Infirmary, on the ground that the former course would deter applicants, whereas “there would be considerable danger of the Infirmary becoming a lying-in hospital, as there is great readiness and facility for obtaining admission to an Infirmary of cases that would not come into the Workhouse.”* The far-sighted provision, by the Bradford Board of Guardians, of an admirable sanatorium for cases of incipient phthisis, and the actual encouragement, by a circular to all the medical practitioners of the town, of such patients to come in and be treated, before they are actually destitute, has caused some apprehension among those who cling to the idea of restricting the area even of the medical side of the Poor Law. All specialisation in medical treatment, it is suggested, whether phthisis sanatoria, Finsen Light or Röntgen Rays, or the new serums, should be excluded from the Poor Law institutions.† “Unless some organisation and co-ordination of the relief is arranged,” urged the Senior Medical Inspector of the Local Government Board, “we shall have expensive specialisation set up for persons who qualify for its receipt by becoming paupers.”‡ “It would be a temptation to a man to come to the Poor Law,” in order to obtain these privileges.§

For good or for evil the Poor Law Infirmaries are growing rapidly in popularity.|| The excellence of the dietary and the accommodation—even, as has been suggested to us, the freedom from the perpetual observation and discipline of the students and nurses of a voluntary hospital—are attracting, to these Poor Law institutions, an ever-increasing stream of non-destitute persons.¶ It has become the custom, in certain residential quarters of the Metropolis, for the servants of wealthy households freely to use the Poor Law Infirmary. In the more industrial quarters, the skilled artisans and the smaller shop-keepers are coming to regard the Poor Law Infirmary—especially when, as in Camberwell, or Woolwich, or Wandsworth, it happens to be the only general hospital in the locality—much as they do the public park or library—as a municipal institution, paid for by their rates, and maintained for their convenience and welfare. To use the phrase of more than one of our witnesses, the Poor Law Infirmaries “are fast becoming rate-aided hospitals.” “It seems to me,” observed to us the Chairman of one of the most populous Unions, “an important point for the Commission to decide whether this state of things should be allowed to continue and increase, or whether it should be retarded.”**

We did not have time to make any systematic investigation into the Poor Law Medical Service of Scotland, which was the subject of enquiry by a Departmental Committee in 1904. From the information that we obtained we formed the opinion that

§ *Ibid.*, Q. 35117.

|| *Ibid.*, Qs. 32790–2, 33127, 33128.

¶ “The Workhouse infirmary has in this and similar districts come to be looked upon as the general hospital for the district.” (*Ibid.*, Qs. 34233, Par. 9, 34351, 34352, 34468, 34469, 36142–5.) “Practically,” notes one of our Committees, after visiting a great Poor Law infirmary in the north-west, “this . . . is a rate-supported hospital. . . . There is no reluctance to enter it on the part of the poor, and all acute cases (except confinements) are freely admitted. . . . Last year, over £2,000 was recovered from patients.” (Reports of Visits by Commissioners, No. 2 C., p. 10.) To quote the words of the Clerk: “The old idea of its being a degradation or a disgrace to go into a Poor Law infirmary has quite ceased” (Evidence before the Commission, Q. 36146). “The infirmary,” says another of our committees, “is practically a general hospital, and caters for a class slightly better than the ordinary *habitués* of a Workhouse. A considerable sum is recovered each year from relatives, as much as 10s. a week being paid in some cases. One patient, a paralytic, was mentioned as being the brother-in-law of one of the richest men (in the town), who repaid the whole cost of treatment, etc., to the Guardians.” (Reports of Visits by Commissioners, No. 25 B., p. 68.) See, on the same point, the Report of House of Commons Select Committee on Metropolitan Hospitals, 1892.

** Statement of the Chairman of the Wandsworth Board of Guardians (Canon H. Curtis).

Poor Law Medical Relief in Scotland did not differ essentially from that in England and Wales, and that it was open to the same criticisms. The General Mixed Poorhouses seemed to us to exhibit the same defects, as institutions for the treatment of the sick, as the General Mixed Workhouses of England and Wales. There is the same tendency to the development of a "hospital branch" of the Poor Law. "Owing to the splendid equipment of our modern Poorhouse hospitals," reports the Departmental Committee on the Methods of Administering Poor Relief in Eight Great Towns of Scotland (1905), "it is not thought a degradation to have relatives treated in them. They are, to a large extent, taking the place of public hospitals or infirmaries, and being separate establishments their connection with the Poorhouse is altogether lost sight of. In the case of the three hospitals recently erected by the Glasgow Parish Council, the name "Poorhouse" has been dropped." (p. xxv.) On the other hand, the largest Poorhouses, even in the most important towns, appear to be sometimes terribly understaffed. One of our committees gave us the following report after visiting two of the most important Poorhouses in Scotland. "In one of the Workhouses there were about 600, in the other about 800, inmates of all kinds, the numbers rising 25 to 30 per cent. in the winter. *Each of these vast Workhouses had only a single resident medical officer*—in both cases a young woman. Aided only by a consultant visiting thrice a week, her duties were to examine thoroughly every inmate on entrance, in order to discover what exactly was his or her disease or infirmity; to certify which of the adults—all presumably non-able-bodied—were fit for the "test" (work); to settle the diet and treatment of all persons actually sick; and to supervise the arrangements for the children and infants. In each of the Workhouses the "hospital cases" alone numbered between two and three hundred. In one of them at any rate there was a phthisical ward, a surgical ward, an ophthalmic ward, a lying-in ward, and, strangely enough a male venereal ward—all under the sole charge of the same young lady doctor who had the medical supervision of the rest of the establishment. The nursing staff was far below an English standard, extensive use being made of pauper inmates. In many of the large wards that I entered there was no trained nurse in attendance, even in the daytime. In one of these institutions (I forgot to ask in the other) there were only three night nurses for all the hundreds of patients. The operations—some abdominal sections, and others of apparent difficulty—were performed by the same one young lady doctor with the help of the consultant, who was a physician! No record of the results was kept. The same one young lady doctor had to extract the teeth of patients requiring this service.

"Altogether, I venture to suggest to the Commission that the condition of the hospital wards in these two large Workhouses demands special investigation."*

(E) THE DEFECTS OF THE POOR LAW MEDICAL SERVICE TRACED TO THEIR ROOT.

We have, therefore, to report that the Medical Branch of the Poor Law, now becoming an exceedingly costly service, is, in our opinion, far from being in a satisfactory condition. There is, to begin with, all over the Kingdom, a remarkable lack of uniformity between district and district in the treatment accorded to the sick poor. In respect of domiciliary medical attendance we find in some places the doctor's services lavished on all who ask for them, whilst in other places they are refused to any one who is not actually destitute of the means of subsistence. "It is indefensible," rightly declares the Poor Law Medical Inspector of the Local Government Board, "that a sick and destitute person who happens to be ill in one Union should be less well nursed than his *confrère* who falls ill in the next Union, where he is well cared for and restored to the community at a much earlier period on this account alone, while his *confrère* in the neighbouring union, owing to the inadequacy or inefficiency of the nursing staff, or both, becomes a permanent charge upon the rates."† Yet the institutional treatment provided for the sick poor varies from mere reception in the General Mixed Workhouse that we have described, with little or nothing beyond pauper nursing and the scanty visits and inefficient treatment of an underpaid Medical Officer, unable to afford either the time or even the remedies required by the disease, up to the almost luxurious maintenance and relatively excellent medical care and nursing of the newest Poor Law infirmaries, not unjustly called rate-supported hospitals. These

* Reports of Visits by Commissioners in Scotland, not yet in volume form. That the Poor Law Medical Service of Scotland was, in spite of great improvements, still extraordinarily inadequate, was repeatedly testified to us. "The health of the community suffers grievously owing to the insufficiency both in amount and quality of the medical assistance." (Evidence before the Commission, Q. 65889, Par. 10.) "The system is not adequate," said the Medical Member of the Local Government Board (*Ibid.*, Q. 56605, Par. 111). "Many die without being seen by a medical man." (*Ibid.*, Q. 53510, Par. 117). "Pauper nursing is still legal" (*Ibid.*, Q. 60852).

† Statement of Dr. Fuller (Evidence before the Commission, Appendix No. XXI. (A.), Par. 53 to Vol. I.).

extremes of deterrence and attractiveness in the institutions provided by the Destitution Authority in different districts for the sick poor, result in an even greater diversity in the classes of persons maintained in them under the common designation of paupers—varying from those miseries whom nothing but the imminent approach of starvation drives into the hated General Mixed Workhouse, up to the domestic servants of the wealthy, the highest grades of skilled artisans and even the lower middle class, who now claim as a right the attractive ministrations of the rate-maintained Poor Law hospitals characteristic of some of the great towns. But the absence of national uniformity, which the authors of the 1834 Report regarded with such disfavour, appears to us, in 1909, the least of the evils to which we have to call attention. What seems, from the standpoint of the community, most urgently needing reform is the deterrent character which, in all but a few districts, clogs and impedes the curative treatment offered to the sick under the Poor Law. It has been demonstrated to us beyond all dispute that the deterrent aspect which the medical branch of the Poor Law acquires through its association with the Destitution Authority, causes, merely by preventing prompt and early application by the sick poor, an untold amount of aggravation of disease, personal suffering and reduction in the wealth-producing power of the manual working-class. Scarcely less harmful in our eyes is the unconditional character of the “medical relief” given under the Poor Law. The District Medical Officer finds it no part of his duty—for it, indeed, he is neither paid nor encouraged—to inculcate better methods of living among his patients, to advise as to personal and domestic hygiene, or to insist on the necessity of greater regularity of conduct. No attempt is made to follow into their homes the hundreds of phthisical and other patients discharged every week from the sick wards of the Workhouses and Poor Law infirmaries, in order to ensure at any rate some sort of observance of the hygienic precautions without which they, or their near neighbours, must soon be again numbered among the sick. From one end to the other of the Poor Law medical service, costly as it now is, we find, in fact, a complete and absolute ignoring of the preventive aspect of State medicine. To the Relieving Officer it is officially a matter of indifference whether the applicant is most likely to recover, or to recover most rapidly or most completely, in the Workhouse or in his own home. It is no part of his duty to consider whether the applicant’s wife and children will suffer most in health by his removal to the infirmary, or by his struggling on in his avocation, with his lungs getting steadily worse, in order to avoid the stigma of pauperism. If a poor family takes measles or whooping cough badly, and cannot afford competent medical attendance, it seems to the Destitution Authority a wanton incitement to pauperism to urge them to apply for the attendance of the District Medical Officer; though abstention may mean, through neglected *sequelæ*, the lifelong crippling of the health of one or more of the children. The prevalence of ophthalmia of the newly born, with its result of entirely preventable blindness, will not appear as any matter of reproach to those Destitution Authorities which have managed to restrict their Midwifery Orders. Nearly the whole of the children of a slum quarter may go on year after year suffering from adenoids, inflamed glands, enlarged tonsils, defects of eyesight, chronic ear discharges, etc., which will eventually prevent many of them from earning their livelihood, without inducing the Relieving Officer and the Destitution Authority to notice anything beyond the total sum coming in to the household of each applicant for a Medical Order or other relief. Even to the average Poor Law doctor, it does not seem so important to prevent the spread of disease, or its recurrence in the individual patients, as to relieve their present troubles. In short, from beginning to end of a Poor Law expenditure of over £4,000,000 annually upon the sick, there is no thought of promoting medical science or medical education, practically no idea of preventing the spread of disease, and little consideration even of how to prevent its recurrence in the individual. The question cannot fail to arise whether so large an expenditure on mere “relief,” with so complete an ignoring of preventive medicine, can nowadays be justified.

Under these circumstances we cannot recommend any extension of Public Medical Service by the Destitution Authority. We do not think, for instance, that it is desirable for the Destitution Authority to undertake the urgently needed service of the treatment of tuberculosis in its early stages—still less that it should, as at Bradford, actually encourage persons to become paupers in order to be treated. We agree with the Senior Poor Law Medical Inspector of the Local Government Board in deploring the tendency for the Destitution Authority to “set up . . . expensive specialisation” in the treatment of the sick “for persons who qualify for its receipt by becoming paupers.”* An equally pressing public need, urged upon us by every sort of witness, is some power of compulsory removal to

* *Ibid.*, Q. 23193.

an institution of persons found lying neglected, dangerously sick or contaminating their surroundings. Yet so long as the institutions for the sick poor are in the hands of a Destitution Authority, with its stigma of pauperism, its deterrent machinery and its failure in many districts to provide anything better for the unwilling patient than the General Mixed Workhouse that we have described, no responsible Minister of the Crown could propose, and no Parliament would permit, the concession to an Authority dominated by the idea of "relieving destitution" of any such power of compulsory removal. Thus, all the defects and all the shortcomings of the Poor Law Medical Service as it at present exists are inherent in its association with the Destitution Authority.

(F) THE TREATMENT OF THE SICK BY VOLUNTARY AGENCIES.

It has been represented to us that the whole provision for the sick now made by the Destitution Authority, alike in its domiciliary treatment and in its "hospital branch"—being legally confined to the destitute—is but the fringe of a more general provision for the sick made by other agencies; that these other agencies impinge upon the medical work of the Poor Law, and are themselves impeded by it; and that, if the Poor Law medical work were brought to an end or seriously restricted, they might with advantage undertake the whole service. These voluntary agencies in some cases provide their service gratuitously; others claim to be wholly self-supporting; whilst others again exact a partial contribution for their benefits. Across this classification runs the cleavage between those voluntary agencies maintaining residential institutions, and those supplying only domiciliary treatment.

To begin with the domiciliary treatment of the sick poor, we find overlapping the work of the District Medical Officer, (a) the Free Dispensary or "Medical Mission;" (b) the out-patient department of the voluntary hospital; (c) the doctor's medical club, or the Friendly Society or other "contract practice"; and (d) the Medical Provident Association started by a combination of the local doctors, or the Provident Dispensary managed by a philanthropic committee. These four classes of agencies for domiciliary treatment of the sick poor differ widely from one another in their geographical extension, the doctor's medical club or contract practice being, for instance, widespread over town and country alike, and the out-patients' department being confined to the Metropolis and a few large towns. They differ also in the degree to which, in one place or another, they impinge upon or overlap the Poor Law.

The free dispensaries and "medical missions," on the one hand, and the out-patients' departments of the voluntary hospitals on the other, have in common the attribute of offering medical attendance and medicine gratuitously to those who come for it at prescribed times and places—sometimes without the slightest fee or formality, sometimes on presentation of a subscriber's letter, and sometimes on payment of a few pence for the medicine supplied. Started originally on a small scale, in order to afford relief to the suffering poor who had access to no other doctor, these centres of gratuitous doctoring now minister, in the Metropolis and in certain other towns, to literally hundreds of thousands of cases annually. Here, at any rate, we have unrestricted access to medical treatment—a widely advertised gratuitous provision which to some extent mitigates the hardship of a restriction of Poor Law Medical Relief, and which goes far to explain, in the Metropolis and the other towns in which it exists, the slow growth of any form of medical insurance. "In our great cities," states a great hospital authority, "and especially in the Metropolis, the vast out-patients' departments of the voluntary hospitals, with their ever-open doors, offering gratuitous treatment to all comers, are a standing obstacle to any efficient reform of the home treatment of the sick poor. No organisation of Provident Dispensaries or Public Medical Service, no system of mutual insurance for medical attendance, no scheme based on thrift, supplemented by State-aid, can hope successfully to compete with the open hand and high prestige of the great voluntary hospitals." * This objection to the out-patient departments—that of preventing more self-supporting forms of medical treatment—will, however, not be conclusive to those who desire that the sick poor should have every possible access to medical assistance in their hour of need. What appears more serious is the assertion that the treatment afforded to the bulk of the patients is, from the standpoint of preventive, or really curative treatment, wholly unsatisfactory. "These great institutions," continues the eminent physician of Guy's Hospital whom we have already

* "The Future of the Voluntary Hospital and its Relation to a reformed Poor Law Medical Service," by Dr. Lauriston Shaw, Physician at Guy's Hospital, *British Medical Journal*, June 20th, 1908, p. 1,472.

quoted, "while preventing the proper development of other agencies, are quite unable efficiently to fill their places. They cannot carry their services to within reasonable distance of every patient's door, nor can they follow the patient to his home when too ill to attend at the out-patient department, and not ill enough, or not suitably ill, for admission to the wards." * Indeed, from the necessarily hurried way in which the work has to be done, no less than from the crowding together of all sorts of sick persons—sometimes men, women, and children of all ages—with sores and ulcers, with coughs and expectorations, not infrequently with a case of zymotic disease among them, kept waiting for hours cooped up in dirty and insanitary waiting-rooms, we cannot help regarding these mammoth out-patients' departments as positive dangers to the public health. Nor is this merely our own opinion. "As a matter of well-known fact," testified a medical practitioner of experience, "the out-patient department is so crowded that the work has to be done in a slipshod fashion, and unless the case happens to be an 'interesting' one, the patient is put off with the stereotyped 'How are you to-day?' 'Put out your tongue.' 'Go on with your medicine.' No one who knows the system can blame the infirmity doctors, as they are notoriously overworked. Many people go there who could well afford to pay for outside advice, and whose complaints are of the most trivial character. The consequence is that cases which really require time and consideration frequently fail to get it from the overworked house-surgeon or physician." † However profitable may be the out-patients' department in attracting the subscriptions of the benevolent; however convenient it may be as a means by which the hospital can pick out "interesting" cases which are wanted inside; and however genuinely useful it may be as a preliminary diagnosis which promptly sifts out and admits the cases requiring institutional treatment, we are bound to conclude that, to a large proportion of the patients dealt with, it is, so far as any preventive or really curative effect is concerned, little better than a delusion. It is, indeed, difficult to take seriously in the twentieth century, as an organisation professing to treat disease, the typical arrangement under which an overworked and harassed house-surgeon gives a few minutes each to a continuous stream of the most varied patients; without knowledge of their diet, habits or diathesis; without any but the most perfunctory examination of the most obvious bodily symptoms; without even the slightest "interrogation of the functions"; and without any attempt at domiciliary inspection and visitation. "At present," summed up one experienced medical practitioner, the out-patient department of the voluntary hospital "is to a great extent a shop for giving people large quantities of medicine." ‡

We need not describe the Free Dispensaries and "Medical Missions" which abound in the slum districts of a few large towns. All the arguments against the gratuitous, indiscriminate and unconditional medical attendance afforded by the out-patients' departments of the hospitals appear to us to apply, in even greater strength, to the Free Dispensaries and Medical Missions; with the added drawbacks, that they are not, as a rule, under responsible and specialised medical supervision, and that they are not able to offer immediate institutional treatment to those of their patients whom they find to require it. The "Medical Missions," in particular, were stated to us to be "the worst of the whole lot . . . mixing up medicine and religion," and seeking to attract persons to religious services by the bait of "cheap doctoring." § In our opinion, all these centres for the gratuitous, indiscriminate, and unconditional dispensing of medical advice and medicine, far from meriting encouragement, or offering opportunities for extension, call imperatively—at any rate where they involve the gathering of crowds of sick persons in halls and passages—for systematic inspection and supervision by the local Medical Officer of Health, in order to ensure that they are not actually spreading more disease than they are curing.

We pass now to those agencies for domiciliary treatment which are based on contributions from the persons attended to, wholly or partially covering the cost of the service. The most widespread of these agencies is the more or less formally organised medical "club," or "contract practice"—it may be a regular friendly society giving also sick pay; it may, on the other hand, be merely a scratch enrolment of members got up by the doctor himself for his own convenience and profit—the members in either case paying a small sum weekly or quarterly whilst they are well, in order that, when they happen to be ill, they

† Evidence before the Commission, Q. 51859, Par. 4; see also Q. 50873; Qs. 33240–33245; and Q. 41888, Par. 10. Where "the home life" is not "properly attended to," sums up a medical witness, "the relief they get at the out-patient department" of the great hospital is "of very little value."

‡ *Ibid.*, Q. 51896.

§ *Ibid.*, Qs. 33690, 33691.

may obtain medical attendance and medicine free of charge. This "club practice" which has, in one or other form, greatly increased during the past few decades, has plainly some advantages. The poor pay something towards their own doctoring, and the feeling that they are themselves paying for it increases their independence and self-reliance. They pay for it, too, by the device of insurance, by which the cost of the years of sickness, being spread over a large number of persons, falls in effect upon the years of good health, when the small periodical instalments can be borne with the least inconvenience.

Notwithstanding these advantages, there is, we notice, a feeling of uneasiness among the medical profession,* and, we think, also among the clients of this club or contract practice—as to the real benefits of the arrangement. The contracts so extensively made by the organised Friendly Societies for medical attendance on their members are constantly producing strain and friction in the relations between the societies and the local practitioners whom they employ, breaking at intervals into open warfare. The doctors allege that the remuneration allowed to them is so insufficient as hardly to cover expenses, whilst many persons of substantial means take advantage of the society membership.† The members of the friendly societies, on the other hand, complain that they get only perfunctory attendance, that the doctor favours the committeemen or other influential members, and that he seeks to recoup himself by charging fees for all the other members of the family. We need not consider these mutual recriminations, except in so far as they reveal conditions inherently inimical to the cure and prevention of disease. We have it in evidence that "the club doctor is not infrequently regarded as an inferior kind of practitioner. I have known," says a Medical Officer of Health, "several cases where members of clubs on the occurrence of serious illness in themselves or their families, have discarded the services of the club doctor and incurred the expense of employing a private practitioner. A few weeks ago I was asked by a workman whether I thought a 'club doctor' was competent to treat a case of scarlet fever. . . . From my own experience in club practice, I can testify to the extremely unsatisfactory conditions under which it is carried on. The examination of a patient should be conducted on the principle laid down by Trousseau: 'Interrogate all the functions,' but in a busy club practice it is impossible to interrogate even one function with sufficient care."‡ But besides the adverse influence on the public health which medical attendance upon such conditions must necessarily exercise, the contract practice of Friendly Societies fails altogether to provide for some of the classes for whom the provision of medical aid is, in the public interest, most essential. Speaking broadly, the Friendly Societies do not provide medical assistance for any woman, whether married or single,§ or for children. They do not, if they can help it, admit "bad lives," against which all Friendly Societies protect themselves by a medical examination prior to admission, or any persons suffering from constitutional defects, or incipient disease. Nor do they provide for persons, even if already admitted to membership, who suffer from venereal diseases, or the results of alcoholic excess. Taken together these excluded classes must amount to more than three-fourths of the population.

Much the same objection applies to the private medical clubs established by doctors for their own profit. It is true that, unlike most of the Friendly Societies, they do provide

* It has been represented to us that the great growth of these medical clubs and of "contract practice" in some districts has seriously undermined the remuneration of the local medical practitioners; and that a large part of the growth has been actually at their expense. In view of the facts that the work of the Poor Law Medical Officers has certainly not decreased, and that of the Public Health Authorities and voluntary hospitals has steadily increased, it appears probable that the increase in club and contract practice represents, in part, at any rate, an absorption of those who formerly paid fees as individual patients.

† A vivid picture of this friction and conflict was given in *The Battle of the Clubs*, by the Special Commissioner of the *Lancet*. Much of the conflict is waged round the so-called "income-limit." "Clubs," said one of our witnesses, "were originally started to afford sick pay and medical attendance to the class immediately above paupers, that of artisans, labourers, etc., and the contributions were so arranged as to pay the doctor something, perhaps half of what he would have charged, taking an average; but they have now been taken possession of by a higher class which ought to pay better fees, and the contributions are utterly inadequate to pay for modern medical attendance, involving, as it does, estimation of opsonic index, bacteriological investigation of secretions, serum therapy, etc., and the performance of many operations which were unthought of when the rates were fixed" (*Ibid.*, Q. 70631, Par. 7).

‡ *Ibid.*, Appendix No. XLV. (Par. 29) to Vol. IX.

§ The Friendly Society contract for medical attendance habitually includes members only, not their dependents. Friendly Societies for women are objected to. The doctors, we are told, "boycott female Courts." In one town, the Medico-Ethical Society, to which all the best doctors in the town belong, have a rule that: "No female club be accepted by any member of the Society" (*Ibid.*, Appendix No. CI. (Par. 26) to Vol. V.).

for children and also for wives, though midwifery is not included. But the remuneration is practically never sufficient* to enable the doctor to devote the time and attention necessary for really curative work. There is the same exclusion of "bad lives,"† with the additional drawback that, in the doctor's own medical club, there is no obligation to continue the membership of any member who develops chronic disease, or even to continue the club at all if he thinks that the average sickness becomes too great.‡ Needless to say there is no idea of prevention, or even of taking precautions against the communication of disease. "The long waiting in the crowded waiting rooms at the doctor's surgery," we are authoritatively informed, "tends to spread infectious disease, to injure the health of the patient and to cause a considerable loss of time, which in many cases inflicts inconvenience or even actual loss on the poor. Moreover the doctor should take account of the home conditions of the patient. In the home there are various influences which assist or retard recovery, and the doctor should make himself acquainted as far as possible with those conditions and endeavour to modify them in the interest of the patient. For instance, sanitary defects should be reported to the sanitary authority, and advice should be given as to the due sanitary ordering of home. The overworked club doctor, however, has time for none of these things. He reduces his domiciliary work as much as possible and encourages the patients to come up to his surgery for treatment, and it is extremely rare for him to report anything to the sanitary authority except cases of notifiable infectious disease."§ There is the same temptation to supply only the cheapest medicines that we have seen to prevail where the Poor Law Medical Officer has himself to provide drugs. There is even a tendency, it is said, to pander to the medical superstitions of the sick rather than correct their bad hygienic habits. "To the poor people who crowd his surgery," as one overworked club doctor explained, "he must be equally subservient. They must not be allowed to grumble about the club medical man; and to ensure their goodwill it is best to treat them more in accordance with their palates than with their symptoms. To satisfy these patients it is necessary to give them a lot of medicine. It must be a dark medicine with a strong taste, preferably of peppermint."|| Hence we are not surprised to be informed by a responsible medical witness that, to the "medical profession, club practice is most distasteful. No practitioner remains a club doctor any longer than he can possibly help. The disadvantages of club practice constitute a burning question for the medical profession at the present time. In various parts of the country practitioners are banding together to resist what are spoken of as the 'sweating' methods of the clubs, and the weapon of the strike (with the concomitant ostracism of the 'blackleg') is being freely employed by these associations of medical practitioners in their struggle for better conditions of club practice."¶ To quote the words used by a medical witness, himself a Poor Law Guardian, "the clubs are a failure, both for the patients and for the medical men." **

It is, we think, impossible to avoid the conclusion that the spontaneous and competitive organisation of medical insurance—far from being in a position to supersede the Poor Law Medical Service—has, in all its varied forms, proved in practice to be inimical alike to the medical profession and to the public health. This result has gradually forced itself upon the conviction of philanthropists and the medical organisations. In certain provincial towns the local medical practitioners have combined to establish "Provident Medical Associations," on a plan which, after some hesitation, has received the endorsement of the British Medical Association.††

* "The amount paid by these clubs to medical men," says one witness, "is generally 3s. per annum per member, and as the doctor provides all medicines this does not give a living wage to the doctor, hence the work is often unsatisfactory" (*Ibid.*, Appendix No. LXXXIII. (Par. 15) to Vol. IV.) "Club fees are so low," deposed a local secretary of the British Medical Association, "that the medical men cannot do justice to the patients. The fees vary from 3s. to 4s. a member per annum" (*Ibid.*, Appendix No. CIV. (Par. 2) to Vol. IV.) "I may state this with the greatest positiveness," states a Medical Officer of Health, "that medical men would much rather be without any such form of contract practice than have it. They simply take clubs . . . in order to keep somebody else out" (*Ibid.*, Q. 38844). "I . . . am opposed to them on principle," testified a hospital surgeon, "because . . . it means a sweating of the medical profession on the one hand, and a perfunctory and inefficient performance of duties on the other" (*Ibid.*, Appendix No. LXXXVI. (Par. 17) to Vol. IV.).

† *Ibid.*, Qs. 74818-74822. "They take very great care," deposed Sir William Chance, "only to take in cases they know will pay them" (*Ibid.*, Q. 29297).

†† *Ibid.*, Q. 39153, etc.

These Provident Medical Associations differ from the medical clubs got up by individual doctors, and from the contract practice of the Friendly Societies, only in the fact that all the medical men of the locality who are willing to take part share in the practice and in the contributions, in exact proportion to the number of members who select each of them as their doctor. "We consider it undesirable," testified the representatives of the British Medical Association, "that there should be the existing monopoly in contract practices; we think they should be thrown open so that all the patients should have a choice of all the medical men in the district." * The Provident Dispensaries established by philanthropists in London and some other places, are, for the most part, based upon the same plan of allowing the contributing member a choice of doctors, and sharing the contributions among all the doctors on the list in proportion to the number of patients whom they severally attract. These deliberately organised arrangements for combining medical insurance with free choice of doctors have made little headway; owing, it is said, to the difficulty of inducing the doctors to combine, and, in the Metropolis and other large centres of population, also to the rivalry of Free Dispensaries and Medical Missions and the out-patients' departments of the hospitals that we have already described. But as it has been suggested to us by responsible witnesses that charitable persons might be urged to foster the Provident Dispensaries and Provident Medical Associations; that Poor Law Medical Relief might be so restricted as to compel all poor persons to join them, as the only way by which they could obtain medical assistance in their hour of need; † and even that some such system of Provident Medical Insurance, with free choice of doctors, might well receive a state subsidy, and might actually be made to take the place of the Outdoor Poor Law Medical Service, we have felt compelled to examine with some care both its results and its possibilities.

After careful consideration of the working and results of medical insurance in all its various forms, our conclusion is that we should hesitate before recommending to the charitable any deliberate extension of it, even at its best. "It must be borne in mind," observes a Medical Officer of Health, "that the 'self-supporting' character of a medical club is largely an illusion. There are many diseases that a club doctor does not attempt to treat. The vast majority of notifiable cases of infectious disease, lunacy, and an increasing number of cases of tuberculosis are treated in rate-supported institutions. Abdominal surgery, ophthalmic surgery, any surgical operation except the most trivial, and many other conditions are treated in hospitals that are supported by private charity. If these institutions were not available, clubs and provident dispensaries could not be conducted on their present conditions, and, therefore, it is true to say that, in a sense, these so-called 'self-supporting' medical agencies are partly supported by the rates and partly by private charity." ‡ But even with regard to the kind of sickness with which they actually deal; the indigestions, the chronic catarrhs, the sores and eruptions, the palpitations, the dragging pains of the woman worker, the rheumatism and lumbago of the outdoor labourer—the quality of their ministrations leaves, as we have seen, much to be desired. In nearly all these cases, as has been over and over again pointed out to us in evidence, what is needed is not so much "a bottle of physic" or an ointment, as some alteration in the unhygienic methods of living to which so many of the poor, whether from ignorance, from sheer poverty or from lack of self-control, are unfortunately addicted. But this is just where all the forms of provident clubs or dispensary practice fail. To quote the words of an experienced physician "they give people a bottle of medicine, but they do not do much else. They take no supervision of their home surroundings, and no supervision of the general hygiene, and they never provide anything in the way of food and nourishment. It is very often much more food that is wanted, for instance, with the children. The cost of feeding an infant alone is 3s. a week, and the people cannot always afford it. They only get an attempt at food in the shape of cod-liver oil or something of that kind from the hospital." § "The amount of medicine consumed," deposed a medical expert with regard to perhaps the largest and most flourishing of the Provident Dispensaries, "is out of all proportion to the amount of advice taken." || All this applies

* *Ibid.*, Q. 59151.

† It is claimed that this has been done at Bradfield. By making Poor Law Medical Relief more irksome and even more costly to the recipient, than belonging to a medical club, it has been practically superseded by a great growth of such medical clubs (*Ibid.*, Qs. 29895, 29896).

‡ *Ibid.*, Appendix No. XLV. (Par. 31) to Vol. IX.

§ *Ibid.*, Q. 36946.

|| *Ibid.*, Appendix No. CXXXII. (Par. 38) to Vol. IV.

with even greater force where, to the device of medical insurance, there is added a free choice of doctors. The medical practitioner who is chary with his drugs, but prodigal and plain spoken in his advice about giving up bad habits and injurious excesses in eating and drinking, is seldom popular among the poor. To give either public encouragement or public aid to any system of medical attendance among the poor that was based on a free choice of doctors, and on their remuneration according to the number of patients that they severally attracted, could not fail, in our opinion to perpetuate and intensify the popular superstition as to the value of medicine and the popular reluctance to adopt hygienic methods of life; and—as we fear we must add—could not fail also to foster the injurious “medical demagoguery” to which, in the stress of competition, these popular feelings already give occasion.*

Apart from the general shortcomings of any system of medical insurance so far as its contributing members are concerned it is, in our judgment, for other reasons quite impossible to employ it as a substitute for the Poor Law Medical Service. We note, to begin with, that neither the Medical Association nor the Provident Dispensaries have themselves had any hope of including in their membership those for whom the Poor Law Medical Service is provided, namely, the destitute. It has, however, been suggested to us that the Local Authority, instead of having a Poor Law Medical Officer, might enrol all the persons now or hereafter entitled to medical relief as members of the local Provident Association, simply by paying the requisite contributions in their names. But, if this were done, or done whenever any case might prove to require medical aid, we fail to see what motive there would be for any person to pay his own contribution to the Association. We have it in evidence that one of the strongest inducements at present to join a medical club or otherwise to pay for one's own doctoring, is the free choice of doctors which is thus secured. The poor, we are told, strongly resent having to go to one particular doctor whether or not they like him or have confidence in his treatment. But if the labourer who has neglected to contribute to the Provident Medical Association finds himself, when illness overtakes him, with just the same privilege of choosing his own doctor and of changing with equal facility from one doctor to another,† as if he had himself contributed, it is difficult to see why anybody should be at the pains of contributing at all. Thus the use of these Provident Medical Associations by the Destitution Authority, in order to provide for the paupers requiring medical treatment, would very shortly bring the self-supporting side of these associations to an end.

It has been suggested that the difficulty would be avoided if the Provident Medical Associations were fortified by a compulsory enactment, requiring every adult to become a member for himself and his dependents. The short answer to this suggestion is that it is in this country, under present conditions, totally impracticable. For the Government to extract any weekly contribution—let alone the substantial contribution that would be necessary—from the millions of unskilled and casually employed labourers of our great cities, from the hundreds of thousands of homeworkers in the sweated trades, from the women workers everywhere, from the tens of thousands of Vagrants and their dependents, would be an impossible task. To bring the Government into the field as a rival collector

* To the Chancellor of the Exchequer the proposal to supersede the present Poor Law Medical Service by a system of State-subsidised medical insurance, involving free choice of doctors, will appear impracticable for quite other reasons. Any such system of provident insurance, coupled with the boon of free choice of doctors, must necessarily be offered simultaneously to the poor all over the country. The 3,713 District Medical Officers in England and Wales, the 800 in Scotland, and the 845 Dispensary doctors in Ireland, hold definite salaried appointments, nearly always during good behaviour, from which they could not be displaced without the usual compensation. This, upon the customary basis, would involve a lump sum payment of about £5,000,000. On the other hand, the mere transference of these officers, at their existing emoluments, to a re-organised Public Health Medical Service, which could take place simultaneously all over the country, leaving desirable readjustments to be made only as vacancies occurred, would involve no compensation.

† It is an incident of the absurd popular belief in medicine, and the anarchy fostered by the full choice of doctors, that there is already any amount of overlapping. “It is quite possible,” says a Medical Officer of Health, “that a Poor Law doctor, a club doctor and the doctor in charge of the hospital out-patient department may attend the same patient at the same time. I once heard of a case where the patient had secured in this way three bottles of medicine from three different doctors, and took from one in the morning, from the second in the middle of the day, and from the third in the evening. (Evidence before the Commission, Qs. 41888, Par. 8, 41921–41923.) “It is common,” testifies a District Medical Officer, “for people to use two institutions (for outdoor medical treatment) at the same time . . . and to throw away one or both lots of medicine.” (*Ibid.*, Q. 43998, Par. 50.) Apparently 11 per cent. of all the out-patients at the voluntary hospitals of London are, or have recently been, in receipt of Poor Relief (Report . . . on the Overlapping of the Work of the Voluntary General Hospitals with that of Poor Law Medical Relief, by Norah B. Roberts).

of weekly pence in the skilled trades—whether or not deducted by the employer from the wage — would excite the strongest opposition not only from those doctors who have large medical clubs of their own, but also from the whole Trade Union movement, from all the friendly societies and from the tens of thousands of agents and collectors and the millions of policy-holders of the industrial insurance companies—an irresistible phalanx! Nor would such a method of levying the revenue required to pay for universal medical attendance be, in accordance with the classic canons of taxation, economically justified. It would, in short, be in the nature of a poll-tax; and England has not had a poll-tax since 1381. Finally, for the Government in this way to guarantee the revenue of these Provident Medical Associations would, we suggest, involve the Government in the necessity of guaranteeing the management. We should thus have got round again to a State Medical Service, but this time to one of gigantic dimensions.

We have left to the last the objection that seems to us the most serious against the proposal to supersede the Poor Law Medical Service by any system of medical insurance, whether voluntary or compulsory, which involves the free choice of doctors by the persons for whom the medical attendance is provided. In the treatment of poor persons, the problem is complicated by the frequent necessity for supplementing the medical attendance and medicine by “medical extras,” that is to say, nourishing food and stimulants of one sort or another. It must necessarily be left to the doctor to recommend authoritatively in which cases this extra nourishment is required for curative treatment. If the patient can choose his doctor, he will inevitably choose the one who is most addicted to ordering “medical extras,” and the medical practitioner whose remuneration is dependent on the number of patients whom he attracts will be under a constant temptation to recommend, for any person who looks anaemic, at the cost of the ratepayer, the additional food or stimulant for which all poor patients have a craving. To give to the destitute, at the cost of the rates, not access to the particular medical treatment that their ailments really require, but the power to choose, and to enrich with their fees, that one among all the doctors of the town who most commends himself to them, would be, we suggest, most disastrously to aggravate all the existing temptations to “medical demagoguery.”* To expect this freely-chosen doctor to give, not the “strong medicine” beloved by the poor, or the appetising “medical extras” for which they crave, but the stern advice about habits of life on which recovery really depends—to look to him to speak plainly about the excessive drinking or the unwise eating which cause two-thirds of the ill-health of the poor; or to stop the overcrowding and bad ventilation that encourage tuberculosis; to insist, in measles or whooping-cough, on the troublesome precautions against infection which may check the spread of these diseases; or to press for the removal of his patients to an institution whenever he believes that they would be better cured there—would clearly be chimerical.† What would tend to be provided under such a system would be, not preventive or curative treatment or hygienic advice, but, in the literal sense of the words, medical *relief*, and that wholly without conditions. On all these grounds, the proposal to supersede the Poor Law Medical Service by any system of universal medical insurance appears to us, not only politically impracticable, but also entirely retrograde in policy, and likely to be fraught with the greatest dangers to public health and to the moral character of the poor.

We have still to consider the institutional treatment of the sick provided by voluntary agencies. This is practically confined to the endowed and voluntary hospitals, and, of these, fortunately, the merits are so well known as to enable us to be brief. They are already made use of freely by the very poorest, and Boards of Guardians everywhere transfer suitable cases to them from the Workhouse infirmary, usually making, as is recommended by the Local Government Board, a contribution towards the cost of mainten-

* We had it given in evidence that any plan of letting the pauper choose his own doctor “would be very bad because the pauper would not . . . be under proper discipline” (Evidence before the Commission, Q. 34179).

† The lack of connection in the public mind—even the divorce in the minds of medical practitioners themselves—between the medical treatment of an ailment, and “the cure of the . . . bad habit” which (*Ibid.*, Q. 38758, Par. 28) are actually producing that ailment, seems to us, from the standpoint of Public Health, one of the strangest anachronisms of the present day. We were actually informed by some medical practitioners, in one and the same statement, that the arrangements for the medical attendance of the poor left nothing to be desired, and that the infants were dying in heaps; that no further medical attention was required, and that the people were living most unhealthy lives. “The poor,” says one doctor, “do not suffer from insufficiency of medical attention. . . . [There is] an utter want of knowledge . . . of the ordinary rules of health and treatment of minor ailments. The treatment of babies by young mothers, from ignorance, is appalling.” (*Ibid.*, Appendix No. LXXXII. (Pars. 8, 9) to Vol. VII.

ance either of these particular patients or of the institution as a whole.* But the endowed and voluntary hospitals are very far from sufficing for the needs of the sick poor.† They appear to provide in the aggregate little more than 25,000 beds, which is only about one-fourth of the number of sick beds already actually occupied in the Workhouses and Workhouse infirmaries. Moreover, instead of being distributed geographically as required, the voluntary hospitals, whether general or special, are mainly concentrated in London and the sixty or seventy larger or more ancient provincial towns, where physicians and surgeons and their students love to congregate. The selection of the diseases which these hospitals are willing to admit for treatment is, alike from the standpoint of preventive medicine and from that of the needs of the poor, equally arbitrary. It was because the voluntary hospitals refused to provide for zymotic diseases, or for any epidemic, that the municipal hospitals arose. It was because they would not deal with cases of chronic disablement that the Poor Law had to develop its "hospital branch." "No general hospital," stated a Local Government Board Inspector, "will admit a man who is suffering from delirium tremens: hence the Poor Law Infirmaries are charged with such cases."‡ "All cases of venereal disease," says a Poor Law Medical Officer, "are now practically debarred from the genuine hospitals, to the great detriment of the community."§ To-day there is no sign of any development of medical charity competent to provide institutional treatment all over the country for the two gravest national diseases, tuberculosis and syphilis. In fact, what the voluntary hospitals like to deal with is the acute case and the unique or "interesting" case—just those which are least prevalent and which, in all probability, are, to preventive medicine, the least important. Moreover, even where voluntary hospitals exist, and even in those diseases which they select for treatment, their provision, excellent as it is so far as it goes, has the capital drawback of disconnection with domiciliary inspection and supervision before and after the acute stage of the illness. In fact, as it has been paradoxically put, the voluntary hospital is not concerned with the treatment of disease: what it treats and treats so magnificently is collapse from disease; until the patient is so ill that he cannot continue at his employment, he does not enter the hospital. As soon as he is well enough to be discharged, his case disappears from the ken of the hospital staff. And it has been given in evidence that this tendency to get rid of a case as soon as the acute stage is passed, or as soon as it is apparent that the disease is a chronic or incurable one, is leading more and more to the prompt transfer of such patients from the hospital to the Workhouse or Poor Law Infirmary.|| Thus, whilst it may be foreseen that the Local Authority dealing with the sick poor will, under proper conditions as to payment, be able to make increasing use of the voluntary hospitals for the treatment of the acute stages of certain diseases, and especially for operative surgery, these hospitals, far from rendering unnecessary "the Hospital Branch" of the Poor Law Medical Service, will, on the contrary, tend more and more to reject or to transfer all other cases to rate-supported institutions of one kind or another.¶

(G) THE TREATMENT OF THE SICK BY THE PUBLIC HEALTH AUTHORITIES.

The voluntary agencies treating the sick poor are not the only rivals whose work overlaps or surrounds that of the Poor Law Medical Service. It has been formally brought to our notice by the Medical Officer of the Local Government Board for England and Wales,** by the Medical Member of the Local Government Board for Scotland,†† and by the Medical Commissioner of the Local Government Board for Ireland,‡‡ as well as by the Medical Officer of the Board of Education for England and Wales,§§ that ubiquitous and expensive as is the Poor Law Medical Service, it is not the only one maintained out of

the rates. Every part of the United Kingdom is now provided with an equally ubiquitous, quite as highly qualified, and nearly as costly a service of public medical officers, maintained by the Local Sanitary Authorities. To mention only England and Wales, under the various Public Health Acts, the Municipal and Urban District Councils on the one hand and the Rural District Councils on the other, are charged, under the supervision of the County Councils, with explicit responsibility for the health of their several districts—that is to say, for the maintenance in health of all the inhabitants thereof. To this end the councils have been granted elaborate statutory powers, both of regulation and provision, some of them optional and some obligatory. We have had described to us by the responsible heads of the medical departments above mentioned, as well as by numerous medical officers of the Local Authorities concerned, the very extensive functions which those Authorities are now fulfilling in the treatment and cure of the sick poor amounting, in fact, to the provision of medical advice, attendance or medicine, in one way or another, for possibly nearly as many patients—certainly as many acutely sick patients—as are under the care of the Poor Law Medical Service. And it has been given in evidence by the responsible heads of the Departments concerned, as well as by the Medical Officers of Health themselves, that neither in legal theory nor in practical administration are the destitute sick excluded from their ministrations. We have, in fact, in every part of the Kingdom, two public medical authorities legally responsible for, and in many cases simultaneously treating the same class of poor persons, sometimes even for the same diseases. So extensive and costly an overlapping has compelled us to explore in some detail and to describe at length the various developments of the Public Health as well as of the Poor Law service.*

(i) *Municipal Hospitals.*

Starting from the provision of temporary isolation hospitals for cholera patients and then for those attacked by smallpox, the Public Health Authorities now maintain over 700 permanent municipal hospitals, having, in the aggregate, nearly 25,000 beds,† or nearly as many as all the endowed and voluntary hospitals put together. These vary in size and elaboration, from the cottage or shed with two or three beds set aside for an occasional small-pox patient, up to such an institution as the Liverpool City Hospital, divided into seven distinct sections in as many different parts of the city, and having altogether 938 beds, served by six resident and seven visiting doctors, and treating nearly 5,000 patients a year, for an average period of seven or eight weeks.‡

The Manchester Town Council maintains the Monsall Fever Hospital, with 415 beds, which makes no charge whatever to the patients; another at Baguley, with 100 beds; and a third at Clayton Hill for small-pox cases.§ The Birmingham Town Council has a couple of hospitals, having together 610 beds.|| The Leeds Town Council provides a series of hospitals and isolation dwellings, principally for scarlet fever, diphtheria and small-pox, accommodating over 600 persons, where patients are admitted “without any charge whether they belong to the families of ratepayers or of paupers.”¶ These towns are typical of many others. Mention must here be made of the hospitals of the Metropolitan Asylums Board, because, though administered by a body largely made up of representatives of Boards of Guardians, and actually maintained out of the poor rates,** they have become, both by statute and by Local Government Board decisions, practically public health institutions. The dozen great hospitals thus maintained for small-pox, scarlet fever, enteric fever and diphtheria, now admit all cases recommended by any medical practitioner, irrespective of the patient’s affluence. The maintenance and treatment, once made matter of charge, is now by virtue of the Public Health (London)

* See the Report by Mrs. Sidney Webb on the Medical Services of the Poor Law and Public Health Departments of English Local Government in their relation to each other, to the public and to the prevention and cure of disease; and “Some Notes on Public Health, and its Relation to the Poor Law in Ireland,” by Dr. T. J. Stafford, Medical Commissioner of the Local Government Board for Ireland.

† We regret that no official return of these Municipal hospitals has been published; and that no more complete list is available than that given in Burdett’s *Hospitals and Charities Annual*, for 1908; or that to be gleaned from the return of deaths in public institutions in the Annual Report of the Registrar-General of Births, Deaths and Marriages in England and Wales.

Act, 1891, universally free. The inmates, originally exclusively paupers, are now explicitly declared to be not pauperised, the treatment, and even the maintenance, being (by the Diseases Prevention Act of 1883) expressly stated not to be parochial relief and to involve no stigma of disqualification whatsoever. The 3,000 to 6,000 patients in these hospitals, costing nearly £1,000,000 a year, may, therefore, be reckoned, though under a Poor Law authority, as virtually patients of a Public Health Department, and they are accordingly excluded by the Local Government Board from the statistics and computed cost of pauperism. The municipal hospitals of the provincial towns, provided in the first instance usually for small-pox, have had their spheres extended to scarlet fever, enteric fever, and usually diphtheria; in addition to any stray cases of plague, cholera or typhus that may turn up. But they do not stop there. The Public Health Acts do not prescribe the kind of disease to be treated in the hospital which they authorise,* and whatever may have been the primary object for which it was established there is nothing to prevent the Local Authority from admitting any sick patients whatsoever.† Hence, although it is generally assumed that these so-called "Isolation Hospitals" are for infectious cases only, the list of diseases dealt with is steadily growing. In most towns of any size the municipal hospitals are willing to deal with puerperal fever (as at Crewe)‡ and with serious erysipelas. Cases of chicken-pox are occasionally found in them; children suffering from scabies and pediculosis are occasionally admitted for temporary treatment;§ and the door is now being opened to the two most deadly diseases of children beyond infancy. The Liverpool Town Council has decided to receive in its municipal hospitals "infants suffering from whooping cough and measles . . . together with the mother or other natural guardian of the child if necessary,"|| so far as there is room; and since it is recognised that "the isolation of the infectious sick in hospital is important and necessary," special steps have been taken to make room. "Provision of hospital accommodation for a limited number of cases," reports the Medical Officer of Health, "has now been made for measles."¶ Moreover, "isolation for a limited number of [whooping cough] cases has been found."** At Liverpool, indeed, the municipal hospitals admitted and treated during the year 1905 nearly 200 cases, and in 1906 between 500 and 600 cases, of other diseases, including gastro-enteritis, pneumonia, tubercular meningitis, bronchitis, tubercular peritonitis, cystitis and nephritis, erythema, influenza, varicella, septicæmia, abdominal tumour, empyema and tubercle, psoas abscess, tetanus, syphilis, tonsillitis, laryngitis, pharyngitis, angina ludovici, and appendicitis, besides four cases of poisoning. It appears to us difficult to believe that these can all be explained as being cases of mistaken diagnosis.††

The assumption that the power of the Public Health Authority in the provision of hospitals is limited to contagious or infectious disease is, indeed, a mistake, though a common one. There are no such words of limitation in the sections of the Public Health Acts dealing with the matter.‡‡ For a long time, however, probably influenced by the common impression that their powers applied only to infectious diseases, no Public Health Authority sought to establish anything but an isolation hospital. In 1900 the Barry Urban District Council (which sends its infectious cases to a joint isolation hospital at Cardiff, and provides home nurses for such of them as are not moved), established, with the express sanction of the Local Government Board, a free municipal hospital exclusively for non-infectious cases, intended principally for accidents and urgent surgical cases. This municipal hospital has a medical staff of eight visiting surgeons and physicians, an organised nursing staff, and maintains seven beds.§§ The Widnes Urban District Council,

* *Ibid.*, Qs. 37989, 39302, and Appendix No. XXXVIII. (Par. 10) to Vol. IV. It is only the Isolation Hospitals Act of 1893 permitting combinations of Public Health Authorities to establish hospitals for infectious diseases, that is limited to notifiable diseases. There is equally no limitation in Scotland under the Public Health (Scotland) Acts, 1867 and 1890.

† It is somewhat remarkable that there is neither systematic governmental inspection nor central audit of these municipal hospitals. Beyond sanctioning the loans for hospitals under the Public Health Acts, the Local Government Board, we understand, has no other official knowledge of this branch of civic activity than it can glean from the Local Taxation Returns, and from reading the Annual Reports of the 1,800 Medical Officers of Health, with which it is supplied, but which it does not tabulate, summarise, or review statistically. There appears to be no official statement how many sanitary authorities, or what proportion of the whole, either maintain their own hospitals, or make arrangements to use other hospitals, or make no provision at all.

which runs a fever hospital and a temporary small-pox hospital, was definitely informed by the Local Government Board that it was free to start also an accident hospital, and accordingly did so.*

But the greatest recent development has been in the provision for tuberculosis. The Brighton Municipal Hospital in 1906 actually dealt with more cases of phthisis than of any other disease, they forming a third of its whole number of patients, and amounting to nearly 2 per 1,000 of the entire population of the town. The object of their admission is not so much immediate cure as treatment with a view to instruction in good hygienic habits. They are therefore admitted preferably at an early stage, before being invalided, and they are retained only a few weeks, passing then to their homes, where they are periodically visited. About half of all the known consumptives in Brighton have already been thus through the municipal hospital, with the result, it is believed, of great prolongation of life.† Special hospital provision for tuberculosis primarily with educational objects is accordingly now being made, one way or another, by many public health authorities. At Manchester, the Town Council not only pays for beds at the Delamere and Bowden Sanatoria, but has for several years opened special phthisis wards at its Clayton Vale Hospital.‡ At Leicester, the Town Council has set aside a special hospital block for curable cases, no charge being made for maintenance and treatment during the first month. They may stay for a second, a third and even a fourth month, on payment of 10s. a week.§ It is, however, not only by admission to hospital that the public health authorities now treat individual cases. In certain instances, and for particular purposes, individual cases of disease are dealt with out of hospital. Alike in numbers and in degree this municipal outdoor medical service is rapidly growing. In Scotland it has even been definitely laid down by the Local Government Board that it is for the Local Health Authority to treat all cases of phthisis; and that sufferers from this disease should not come under the Poor Law at all.||

(ii.) *Notification and Disinfection.*

We may notice first the notification of disease, the inspection as to isolation, the treatment of "contacts," and the arrangements for disinfection. This organisation, at first dependent on voluntary, and only subsequently on obligatory notification, has been extended from disease to disease, until it now covers not only plague, cholera and typhus; erysipelas, puerperal fever, small-pox, scarlet fever, enteric and diphtheria; but also, in one town or another, for this or that period, influenza, measles, and chicken-pox. Puerperal fever, too, has become in a sort of way also separately notifiable by midwives. Arrangements for the voluntary notification of phthisis have been made in numerous towns (including Liverpool, Blackburn, Brighton, Northampton, Southwark, Finsbury), a payment of 2s. 6d. being made for each case. At Sheffield and Bolton this notification of phthisis has been made obligatory by a Local Act. Scotland has gone still further. Under the Infectious Diseases (Notification) Act, 1889, phthisis is compulsorily notifiable in Edinburgh and a large part of the country, including the whole of Lanarkshire outside Glasgow; and with or without compulsory notification, the local Health Authorities are now required to deal with phthisis as with other infectious diseases. And now, throughout England and Wales, the Local Government Board has ordered the Poor Law Authorities everywhere to notify to the Local Health Authorities every case of phthisis that is observed in the pauper population. Arrangements are also made by direction of the Board of Education for the Medical Officer of Health to receive weekly notifications, from the head teachers of all the public elementary schools, of all cases in which the children stay away on account of such diseases as measles, whooping cough, chicken-pox, mumps, ringworm, scabies, etc.¶ A Board of Guardians has strongly urged that ophthalmia should be made compulsorily notifiable.** Medical Officers are now suggesting that not only pneumonia, influenza, and diarrhoea, but also

** Kensington Board of Guardians to Kensington Borough Council, 1900; Monthly Report of Medical Officer of Health for Kensington, October, 1900, p. 109.

cancer should be added to the list of notifiable diseases.* “As the result . . . of recent additions to our knowledge of cancer,” reports one Medical Officer of Health (and this is only an echo of similar proposals made at Finsbury and elsewhere during the past decade), “I am of opinion that it is a disease which calls for public health measures; not indeed of a stringent nature, but dealing more with the necessity of destroying the dressings of cancerous ulcers, and for issuing warnings that persons dressing these cases should be careful to protect cuts or wounds of the hands, and to boil sheets and pillow-cases used by patients.†

(iii.) *Supply of Medicines and Anti-Toxin.*

The importance, in certain diseases, of the prompt administration of specific remedies has led the Public Health Authorities to supply these gratuitously to all who will accept them: just as vaccination has, since 1840, been performed by the Poor Law Authorities free of charge, on all who will submit to it. The Manchester Town Council, and various other bodies, distribute bottles of diarrhoea mixture to anyone in need of them, using all the police stations as distributing agencies. But the remedy usually distributed gratuitously is the anti-toxin serum for diphtheritic cases. The extreme importance of promptitude in the administration of this remedy, and the great saving of expense implied by the prevention of the spread of diphtheria, have led very many Public Health Authorities, sometimes after a vain attempt to enlist the co-operation of the Board of Guardians, to supply it gratis, on demand, to any medical practitioner; sometimes, as at Blackburn, through the police stations among other agencies.‡ In some cases the Municipal Authorities have gone further, and have paid Poor Law doctors and private medical practitioners to use it. Thus, the urban district council of Fenton, in Staffordshire, decided in October, 1905, on the advice of the Medical Officer of Health, and as being less costly to the ratepayers than institutional treatment, to undertake the domiciliary treatment, so far as the injection of anti-toxin was concerned, of all diphtheritic patients, and of all who had come in contact with them. For this purpose every medical practitioner in the district, including the District Medical Officers of the Board of Guardians, was, in effect, made, temporarily, an additional officer of the Urban District Council as Public Health Authority, and paid a fee for each case so treated—amounting, for the next few months, to three or four per week.§

(iv.) *Municipal Out-patients' Departments.*

Another direction in which the Public Health Authorities have extended their treatment of individual cases is by opening an out-patients' department. At Willesden, finding that from 25 to 50 per cent. of the cases were without any sort of medical treatment, the Public Health Authority, on the recommendation of the Medical Officer of Health, has established an out-patients' department at its isolation hospital for persons suffering from ringworm, impetigo, scabies, or ophthalmia.|| At Newcastle-on-Tyne, where the Town Council subscribes 100 guineas a year to the Dispensary, something like eight hundred “letters” are, in return, placed at the disposal of the Municipality. These “letters” each entitle the bearer to two months' gratuitous treatment, including domiciliary visits where required, and, in practice, recommendations for admission to various voluntary hospitals, etc. if institutional treatment is necessary. At present, these “letters” are distributed by Town Councillors. The Town Council also maintains salaried Health Visitors, who go round the town under the direction of the Medical Officer of Health, and who thus discover many cases of disease, but have, at present, no organised method of securing medical attendance. “The Medical Officer of Health himself has . . . recently suggested to the Corporation that they should increase their subscription to the Dispensary . . . with the object of getting more letters, and that these letters should be distributed by the Health Visitors.”¶

¶ *Ibid.*, Qs. 51466 (Pars. 12, 14, 16), 51511, 51601-51607.

(v.) *Pediculosis and Scabies.*

For the particular bodily affections of pediculosis and scabies—which, as being morbid conditions of the body susceptible of treatment and cure, must be classed as diseases—Parliament has expressly authorised gratuitous provision, which is not to be deemed parochial relief or charitable allowance.* “Baths and disinfecting chambers for the cleansing and purifying of the bodies and clothing of persons infested with vermin or parasites” are now provided by various municipal authorities. “No charge is made for the use of these facilities, and applicants will be treated with every consideration.”† This small “attempt in the treatment of certain skin diseases,” as it has been apologetically described, represents, it is admitted “a departure from the principle of not treating disease, but it has its justification in the contagious nature of such disease”—a justification which would carry us far. But even for pediculosis alone one Public Health Authority (that of Marylebone) has successfully treated 32,500 patients in seven years.

(vi.) *Health Visiting.*
